HANDBOOK.DPS

by Lexa Kirk  
Independent Journalist

In discovering the HandBook, we found what could be the first product in a new category of portable PCs. It's smaller and lighter than a notebook, but it's bigger and much more functional than a palmtop. The HandBook's performance is comparable to a 286 system. Real PC features include a bright, backlit screen, a bonafide hard drive and comfortable keyboard (no chiclet keys). Yet it weighs only 2.75 pounds. You can travel with the HandBook and not even know you're carrying it. When you get home, downloading information from your HandBook to your office computer is easy with the serial cable and file transfer software provided.

Press ALT to choose commands.

GATEWAY 2000  
HANDBOOK

Actual size and screen display

# TRY OUR NEW LIGHT MENU.

The new HandBook™ from Gateway 2000 is lighter, smaller and thinner than regular notebook PCs. But don't let its diet size fool you. It's a real PC!

The HandBook uses Chips & Technologies' "PC on a chip," which minimizes the number of chips on the system board and, via superstate, allows software to control many functions that are normally hardware controlled. Less hardware means smaller size and less weight. The HandBook with battery weighs only 2.75 pounds, yet it runs all DOS applications with 286-class performance.

This HandBook photo was taken with the actual display running, and is printed in actual size so you can appreciate its brilliant screen, comfortable keyboard and tiny footprint. Imagine this little machine tucked into your briefcase. You'll never know you're carrying a notebook! You'll like the light price, too! Just give us a call for more information on the perfect portable for those who are weight-conscious.

## **HANDBOOK**

- Weight 2.75 Lbs. (HandBook & Battery)
- Dimensions 5.9" x 9.75" x 1.4"
- 4.5-Hr.\* NiMH Battery, 1.25 Lb. AC Adaptor/Charger, 6.5" x 2.5" x 1.5"
- Traveling Weight 4.0 Lbs. (HandBook, Battery & Charger)
- C & T® Processor, 286-Class Performance
- 1MB RAM upgradeable to 3MB
- 40MB hard drive
- Backlit 7.6" Double-Scan CGA Screen, 640 x 400 Resolution
- 1 Parallel/1 Serial Port
- 78-Key Keyboard, 101-Key Emulation, Inverted T Cursor Pad
- MS DOS® 5.0, File Transfer Software & Serial Download Cable
- Introductory Bonus Pack
- Carrying Case

**\$1295**

*Options: FieldMouse™ pointing device, 2400 bps modem, alkaline battery pack, portable printer, combo unit (3.5" floppy drive with serial port and parallel port), extra batteries.*

*\*Battery life was measured using PC Magazine's Battery Rundown Test with power management enabled. Results may vary.*

# So Powerful It Can't Be A PC.

## Transform Your PC With The INTERACTIVE UNIX System.

Unleash the 32-bit power in your PC with the INTERACTIVE™ UNIX® System from SunSoft. Charge through applications at record speeds. Use real-world multitasking and networking. Get on the path to a distributed computing future.

### Just Say No To SCO.

Why? The INTERACTIVE UNIX System is easy to use, simple to administer, all at a great price.

*Open Systems Today\** says the INTERACTIVE UNIX "system management...is easier to use and more comprehensive" than SCO™ and "is simply a masterpiece of good design."

Looking Glass Professional™ desktop manager makes the INTERACTIVE UNIX System easy enough for novices, yet powerful enough for experienced UNIX users. And the award winning Easy Windows makes setting up graphic environments infinitely simpler.

You can't afford *not* to take advantage of the already low cost of the INTERACTIVE UNIX System.

And SCO UNIX/XENIX® users can save an additional 50% by switching to the INTERACTIVE UNIX System today. That's something to say yes to.

## Everything You Like About Your PC—And A Lot More.

INTERACTIVE UNIX System V/386 Release 3.2 supports hundreds of the most popular Intel-based platforms and peripherals. So getting started is fast, easy, and cost-effective.

Thousands of UNIX and XENIX applications are at your command. And our VP/ix package runs virtually all DOS software.

You get Lotus®, WordPerfect®, and Oracle®. You get SCO applications. You get it all.

### See What Develops.

The INTERACTIVE UNIX System is the environment of choice for 80X86 application development. You get access to a full range of development tools including compilers, debuggers and libraries. And for graphical applications, the X11 INTERACTIVE environment is a revelation.

### Partner With Power.

The INTERACTIVE UNIX System is a powerful business partner for companies who know something about power. Companies like BMW, Goodyear, Leica, and Dunlop to name a few. That power can be yours, too. All from SunSoft, the leading supplier of 32-bit UNIX system software.

Call today and save 50% on UNIX power that's so cost-effective, it can't be anything *but* a PC. 1-800-227-9227.

# All the power of a desktop. And a lot better mileage.

You've dreamed about a computer like this.

One that would have power and display capabilities equal to, or greater than, the desktop computer you're using now.

One you could take along to all of those different places you need to work.

One you wouldn't need a furniture dolly to move.

And here it is.

The Toshiba T6400.

With dimensions of 15.4" W x 10.5" D x 3.3" H (4.1" H with the color screen), it's small enough to fit in a briefcase.

With a spirited clock speed of

*In addition to a 1.44MB floppy drive, you can choose a 120 or 200MB hard disk.*

33 MHz, a powerful 486 DX micro-

processor, 8K internal cache and full 32-bit architecture, it's big enough to handle all those jobs normally performed in an impressive office building.

And if a combination like that doesn't make the T6400 portable better than the desktop computer you're currently using, we'll eat our collective hat.

This remarkable machine comes equipped with an internal 1.44MB, 3½" floppy drive and a

*The 101-key keyboard, connected to the CPU by a coiled cord, can be removed from the case.*

120 or 200MB hard disk. Plus 4MB RAM, expandable to 20MB. (Try finding any application that needs more memory than that.)

There's also a full-length, IBM-compatible, 16-bit expansion slot so you can take full advantage of your network card, SCSI controller or any of a myriad of other special purpose cards.

For even more expandability the T6400 comes complete with a 150-pin expansion port for direct input/output

you to connect storage and communications devices. Plus an internal dedicated

modem slot, as well as built-in parallel, serial, mouse and Super VGA video ports.

Depending on your particular needs, you can choose one of two display screens.

A state-of-the-art active matrix Super VGA color display with Thin Film Transistor technology, to deliver a higher quality image than you can get with most desktop monitors, and capable of displaying 256 simultaneous colors at 640x480 resolution.

Or a gas plasma display featuring 16 gray scales, also at 640x480 resolution, and a 100:1 contrast ratio—seven times the contrast of standard LCD displays, with ten times the displayspeed.

Both have a diagonal measure of 10.4" and provide simultaneous viewing capability with external Super VGA displays.

To complete the

*The AC-powered T6400 has full desktop expandability, including an IBM-compatible, 16-bit expansion slot.*

metamorphosis from desktop to portable, we took a 101-key keyboard

with full-size keys and keyspacing, separate numeric keypad and eight dedicated cursor control keys, and nestled it into a compact 11.7 lb. package (12.9 lbs. with color screen). Then attached it to the CPU with a coiled cord, so you can remove

it and use it on your lap (or other convenient surface).

Now, having read all of the above, you'd probably welcome more information on the T6400. If so, call us at 1-800-457-7777.

The more you learn about our products the more you'll come to

understand the Toshiba philosophy: that portables are the future of personal computing.

Of course, with the introduction of the T6400 portable, it's a future that's already here.

LabWindows® 2.0  
for DOS-based computers

LabVIEW® 2  
for Macintosh computers

# All You Have To Do Is Choose!

In the 1980s, National Instruments pioneered two paths to the future of instrumentation. LabWindows, an automatic code generation and program development system for the C and BASIC programmer. And LabVIEW, the first graphical programming system to offer ease of use without sacrificing programming flexibility and performance.

LabWindows and LabVIEW address all of your instrumentation needs. You can control GPIB, VXI, and RS-232 instruments, and plug-in data acquisition boards. You can integrate data analysis. And, you can build your own graphical user interfaces.

Today, LabWindows and LabVIEW are leading the revolution in instrumentation software. Through innovative programming methodologies and powerful development tools, LabWindows and LabVIEW are paving two paths to the future—a future in which *The Software is the Instrument*. All you have to do is choose!

# Soon, Eight Hours Computing Will

(actual size)

## AMD Introduces The World's First 386 Microprocessor With 3-Volt Technology.

Two standard dry-cell batteries. There's really nothing special about them. Aside from the fact that they can run a powerful, portable 386 computer for a full eight hours. Provided, of course, that portable is built around a low-voltage Am386™ microprocessor.

*The 25MHz DXLV and the 25MHz SXLV are available in POFP packaging.*

Thanks to the low-voltage Am386 microprocessors, laptop, palmtop and notebook computer designs will become smaller, lighter, and more powerful than ever before.

With battery life of up to eight hours or more. That's a full day's worth of 386 performance—the per-

# urs Of Portable Look Like This.

formance you need to run sophisticated applications like Windows™ 3.0.

And rest assured, the low-voltage Am386 microprocessors are proven compatible and comply fully with JEDEC standards for low-power, 3-volt computing. We can even supply you with the 3-volt EPROMs your systems will need. Other 3-volt system logic is also readily available.

For more information on the low-voltage

Am386 microprocessors call AMD today at **1-800-222-9323**. You'll never look at dry-cell batteries the same way again.

## HOW TO CONTACT THE EDITORS

We welcome your questions, comments, complaints, kudos, and submissions.

**MAIN OFFICE:** One Phoenix Mill Lane, Peterborough, NH 03458, (603) 924-9281.

**San Francisco:** 425 Battery St., San Francisco, CA 94111, (415) 954-9718

**Los Angeles:** 15635 Alton Pkwy., Suite 290, Irvine, CA 92718, (714) 753-8140.

**New York:** 1221 Avenue of the Americas, New York, NY 10020, (212) 512-3175.

**UK/EUROPE:** Wimbledon Bridge House, One Hartfield Rd., Wimbledon, London SW19 3RU, England, 011-44-81-543-1234.

**ELECTRONIC MAIL:** On BIX, send to "editors." All BYTE editors and columnists also have individual mailboxes on BIX for easy access.

**MCI:** 250-0135 BYTE Magazine. Many editors also have individual MCI addresses in their own names.

**OTHERS:** Many editors also are reachable through unet, AppleLink, CompuServe, and numerous other services.

**U.S. fax:** Editorial: (603) 924-2550

**Advertising:** (603) 924-7507

**U.K. fax:** 011-44-81-540-3833

## SUBMISSIONS

**Authors:** We welcome article proposals and submissions. Unacceptable manuscripts will be returned if accompanied by sufficient return postage. Not responsible for lost manuscripts or photos.

**Vendors:** We welcome news of your new products; please call the News department or the BYTE Lab at the earliest possible date. We cannot be responsible for unsolicited product samples.

## SUBSCRIPTION CUSTOMER SERVICE

**Inside U.S. (800) 232-BYTE;** outside U.S. (609) 426-7676. For a new subscription—(800) 257-9402 U.S. only, or write to BYTE Subscription Dept., P.O. Box 555, Hightstown, NJ 08520. Subscriptions are \$29.95 for one year, \$54.95 for two years, and \$74.95 for three years in the U.S. and its possessions. In Canada and Mexico, \$34.95 for one year, \$64.95 for two years, \$87.95 for three years. In Europe, £29 (U.S. \$50) for fast surface delivery, £41 (U.S. \$70) for air delivery. Non-European countries U.S. \$50 for surface mail, or U.S. \$75 for air mail. Single copy price is \$3.50 in the U.S. and its possessions, \$4.50 in Canada. Foreign subscriptions and sales should be remitted in U.S. funds drawn on a U.S. bank. Please allow six to eight weeks for delivery of first issue.

## PHOTOCOPY PERMISSION:

Where necessary, permission is granted by the copyright owner for those registered with the Copyright Clearance Center (CCC), 27 Congress St., Salem, MA 01970, to photocopy any article herein for personal or internal reference use only for the flat fee of \$1.50 per copy of the article or any part thereof. Correspondence and payment should be sent directly to the CCC, 27 Congress St., Salem, MA 01970. Specify ISSN 0360-5280, \$1.50. Copying done for other than personal or internal reference use without the permission of McGraw-Hill, Inc., is prohibited. Requests for special permission or bulk orders should be addressed to the publisher. BYTE is available in microform from University Microfilms International, 300 North Zeeb Rd., Dept. PR, Ann Arbor, MI 48106 or 18 Bedford Row, Dept. PR, London, WC1R 4EJ, U.K.

# We slash interface development time across DOS, UNIX, POSIX, VMS... (and we can prove it!)

**C-Programmers:**  
See for yourself how  
**Vermont Views™**  
can help you create  
powerful user  
interfaces—whatever  
your environment!

If you want to create sophisticated user interfaces—and save *tremendous* time and effort doing it—Vermont Views is exactly what you need.

Vermont Views isn't just a common interface package. It's a deep, flexible, menu-driven screen designer supported by a C library of over 580 functions. It lets you create the ultimate user interfaces for

complex database applications—in a fraction of the time it would take to code them yourself!

With Vermont Views, you create screens *interactively*. Designing is fast, and creative. And changes—both tiny adjustments and huge reworks—are incredibly easy.

Pull-down menus, window-based data-entry forms with tickertape or memo fields, scrollable form regions, choice lists, context-sensitive help... All these interface objects (and more) are immediately accessible. And with Vermont Views, even terminal-based applications can have the elegant features usually found only on micros.

© Copyright 1991  
Vermont Creative Software

**Fast prototypes,  
faster applications.**

With most systems, you have to throw away your prototypes when coding begins. But with Vermont Views, *prototypes become the actual applications!*

Menus, data-entry forms, and all screen features are usable in the final applications without change. So not only do you avoid creating code from scratch once, you don't have to do it twice!

**It's the  
universal solution.**

Vermont Views operates completely independent of hardware, operating system, and database.

Any interface you create can be ported easily among DOS,

UNIX, POSIX, and VMS.

You can use Vermont Views with any database that has a C-language interface (including Oracle, Informix, db\_Vista, and C-Tree). You can run it on PCs, DEC, NCR, HP, AT&T, and other systems. You don't have to pay runtime fees or royalties. And full library source is available, too.

What's more, your DOS applications can have full mouse control, and work in

# PS/2

\*NSTL test conducted against 386 SX and 386 DX systems. \*\*Sale or delivery of the IBM PS/2 486SLC2 Processor Upgrade is subject to FCC approval. Planned availability of the IBM PS/2 486SLC2 Processor Upgrade is 4th quarter 1992. Offer available from June 11 through October 1, 1992. HelpWare available only in U.S.A. IBM, PS/2 and OS/2 are registered trademarks and HelpWare is a trademark of International Business Machines Corporation. Windows is a trademark of Microsoft Corporation. ©1992 IBM Corp.

# This PS/2 SLC is so fast, it comes with its own speeding ticket.

With our advanced SLC processor, the PS/2® Models 56 and 57 are clearly on a fast track. They're already the fastest systems in their class.\* And with this special IBM PS/2 486SLC2 Processor Upgrade, we plan to keep them that way.

Buy a PS/2 Model 56 or 57 SLC before October 1, 1992, and you'll get information on how to upgrade to our powerful 486SLC2 processor at a special low price of \$259.\*\*

**486SLC2 Power  
for \$259\*\***

OS/2® 2.0 comes pre-installed on both models, so you can run DOS, Windows™ and OS/2 applications. And every PS/2 comes with HelpWare™, a full range of services and support including a toll-free number.

The PS/2 Models 56 and 57 offer so much, other computers might as well hit the road. For more information about our specially priced 486SLC2 upgrade or for the IBM authorized dealer near you, call our HelpCenter™ at 1 800 PS2-2227.

- *PS/2 486SLC2 Processor Upgrade for just \$259.*
- *Faster than any system in its class.*
- *Comes pre-installed with IBM OS/2 2.0.*
- *HelpWare: services and support nobody else can touch.*
- *To learn more about our 486SLC2 upgrade, call 1 800 PS2-2227.*

ALLEN

## EDITORIAL

# THE GLOBALIZATION OF BYTE

**D**o you notice anything different about BYTE? On the cover, beneath the BYTE logo, look for our new tag line: "The worldwide computing authority." That statement is more than just a claim—it's a fact that is easily illustrated in this issue.

Notice the datelines in Microbytes and First Impressions. You'll find information on U.K.-based Acorn's new A4 notebook that uses the ARM (Advanced RISC machine) chip (page 72) and Italian computer maker Olivetti's new 2¼-pound subnotebook, called the Quaderno (page 70).

Read our feature article "The Greening of Computers" (page 147), and you'll learn

how computer makers and users are taking ecology-minded steps in computing around the world. Read the lead article, "Photonics: Revolution or Evolution?" (page 168), in our State of the Art section, and you'll discover the newest developments in optical computing occurring in England, Germany, Japan, and the U.S.

Find out about fascinating computer industry happenings in the newly formed Commonwealth of Independent States by reading Rich Friedman's Report from Moscow (page 41). A recent trip there for a BYTE-sponsored computer show in Moscow gave Rich occasion to think about the programming talent in that country.

If you've been following the commodity price war of personal computers, you'll be interested in Alan Joch's Report from Taiwan (page 44). Alan and Rich Malloy visited the Computex show in Taipei to learn firsthand that Taiwanese clone manufacturers are trying to innovate products that bypass the commodity price war being fought by American manufacturers.

Why all this worldwide coverage? Simple. Computer technology, and therefore the computer industry, is not confined within the shorelines of North America. Nor does it stretch just to Japan. Exciting new developments are taking place worldwide.

Germany, for example, hosts the largest computer trade show in the world in Hannover. It's attended by more than half a million people. And that country is also the home of Siemens Nixdorf. Singapore, which has long been a major source for hard drive manufacturing, has a software development project that the country hopes will leapfrog the rest of the industry. Israel has both an active software development community and a community of

hardware developers—many concentrating on LANs.

To be *the* authority on computing means being the *worldwide* authority, and that's what BYTE is doing. We know that it is not enough to focus just on what happens in the computer industry in North America while wearing blinders as to the rest of the world.

BYTE's unique standing in the global computer industry makes all this possible, and BYTE's unique publishing position is a tremendous strength. Not only is BYTE distributed in virtually every country in the world (our circulation outside the U.S. is larger than that of any other computer magazine), BYTE is also translated and reprinted in about a dozen languages. Our publishing partners and their local editorial offices are part of the BYTE network. They're located in Argentina, Australia, Brazil, France, Germany, Greece, Italy, Japan, Mexico, South Korea, Spain, Taiwan, and Turkey. Add to that BYTE's own editorial bureaus in London, New York, San Francisco, and Los Angeles, and you get an idea of BYTE's reach.

In my first editorial as Editor in Chief (February), I promised that BYTE would continue with its authoritative voice to separate truth from marketing hype and to put computing technology into a usable perspective. This globalization of BYTE is part of that commitment. BYTE's worldwide coverage provides you with a perspective that no other computer magazine offers, and it doesn't end there.

More to the point, look at our recent cover stories. In this issue, our writers and editors explore the answers to the question, "Is Unix Dead?" It's one of the most important computing stories of the year, and you won't find it anywhere else. The Unix-specific magazines cannot afford to raise the question, and the PC magazines don't cover the subject. Watch for more articles like this from BYTE in future issues. We think that it's exciting, and I hope you will, too.

—Dennis Allen  
Editor in Chief  
(BIX name "dallen")

# Borland's Turbo Pascal is the fastest way from inspiration to application

## Jump start your Windows or DOS application with object-oriented Turbo Pascal

When you're inspired to write a program, you want to spend your time developing code that solves your problems. Not hours and hours writing common routines for event handling, data management or user interface.

Now, you can jump start your applications development for either Windows or DOS by programming with the world's #1 Pascal compiler, Turbo Pascal®.

## Application frameworks speed you along

Now you can take advantage of the power of application frameworks to boost your productivity and cut development time. ObjectWindows™, the application framework included in Turbo Pascal for Windows, gives you a robust graphical user interface with pull-down menus, overlapping windows, mouse support and more in just a few lines of code. Turbo Vision™, included with Turbo Pascal 6.0 for DOS, delivers a great-looking user interface in a character-based environment.

Borland's Turbo Pascal family of products spans the range of programming needs—select one that's right for you

# Borland's Why it's smart

## The #1-selling database

dBASE® is the #1-selling relational database in the world. It offers the most complete set of tools for developers and users to access and manage their corporate data.

Today, more than three million people use it to build applications that help them run their businesses and maintain a competitive edge. And with the world's largest community of trainers, consultants, and add-on software extensions, it's little wonder that dBASE is the standard for corporate applications development. Now, new dBASE IV version 1.5 makes it smarter than ever to go with #1.

## New! Version 1.5 is here

Now there's an easier-to-use, faster, and more powerful dBASE. It's packed with the features you've asked for most, making it smarter than ever to use the world's #1 PC database.

## Working smarter is faster

**OPTIMIZATION**  
**IQ!**  
**TECHNOLOGY**

With new dBASE IV, you get the job done faster because you work smarter. Smarter because new **IQ!**™ optimization technology

## The Worldwide Standard

### What's new in dBASE IV v1.5:

automatically selects the fastest method to retrieve your data. Smarter because you can create tables, forms, reports, queries, and menus in record time—without programming.

Smarter because of different work areas for easier management of large applications. Plus mouse support, fingertip access to an enhanced RUN function to run popular DOS applications from within dBASE, and comprehensive multi-user capabilities. All of which means you maintain tight data integrity, more flexibility and more support than ever before.

## Advanced design tools build applications faster

dBASE IV's easy-to-use Control Center comes complete with an innovative set of design tools, including report, form, and label generators that help you create your applications quicker. And the Control Center's open architecture makes it easy to enhance or customize your own applications by incorporating third-party add-on products available for dBASE.

# dBASE IV<sup>®</sup>

## er to go with #1

### Faster applications development

The industry-standard dBASE language comes with a host of improvements that speed development:

- Integrated debugger and a built-in applications generator
- More than 40 new commands, functions, and keywords—Template Language now included
- C language-like low-level file I/O
- IBM® SAA-compliant SQL
- Advanced BLANK support

### 100% commitment to dBASE

Now that it's from Borland, your investment in dBASE is secure. dBASE gives you all the benefits of complete compatibility and application portability that come with *the* database standard. And Borland is the acknowledged database technology innovator, so you're on the winning team for the long haul. Get dBASE IV v1.5 today. You'll see why it's smarter than ever to go with #1.

Get NEW dBASE IV v1.5 today and receive more than \$250 in additional software,

## FREE!

See your dealer or call now

## Color PostScript Rebuttal

Readers can print color PostScript documents for a fraction of the \$8000 that the printers reviewed in "Color at a Reasonable Price" cost by using inexpensive color printers, such as Hewlett-Packard's DeskJet or PaintJet, and Ghostscript software. This program does all the work in the PC instead of in the printer, so you can improve printing performance by simply upgrading the PC. Ghostscript supports the full set of PostScript extended color operators.

Ghostscript is freely available on the Internet for personal or in-company use, and it is distributed as part of the GNU software collection. Aladdin Enterprises will supply it on disk, with permission to copy, for \$28.

The freely available version comes with no support. A commercial license, with support, is available by writing to Aladdin Enterprises, P.O. Box 60264, Palo Alto, CA 94306.

L. Peter Deutsch  
President, Aladdin Enterprises  
Palo Alto, CA

*The GNU Ghostscript PostScript language interpreter can be compiled for Unix, DOS, and VMS machines. You'll find version 2.4 in the "listings" area on BIX as "ghost24.01." The files are in Unix compressed tar format.—Eds.*

Tom Thompson's review of color PostScript printers ("Color at a Reasonable Price," June) begins by giving credit to QMS for introducing the first color PostScript printer and then neglects to mention any of QMS's four offerings. This is a disservice to readers who are considering color printer options, and it may give readers who aren't familiar with the QMS ColorScript line the impression that QMS is not an active player in this market.

During the article's planning phase, we were told that QMS ColorScript printers would not be among those reviewed because BYTE had reviewed one of our older models in years past and this article was to focus on newer models. Unfortunately, the article never explains what criteria were used to select the products reviewed. This gives readers the impression that you canvassed the market for all solutions that cost less than \$8000.

QMS offers two such printers: the \$6995 ColorScript 100 Model 10 and the \$5995 Model 10p. Furthermore, several of the printers featured in your article were not much newer than the latest QMS offerings.

Terry Harbin  
Director, Marketing Communications  
QMS, Inc.  
Mobile, AL

We excluded the ColorScript 100 Model 10 because we reviewed it in the December 1989 issue (see "What Price Color PostScript?"). We inadvertently omitted the reference to this review in our June roundup of color PostScript printers. We contacted QMS about the Model 10p, but this unit was not available in time for inclusion in the June roundup.—Eds.

As lead development engineer at Seiko, I have some concerns after reading "Color at a Reasonable Price."

You neglected to mention that the Personal ColorPoint can print on postcards

and B4-size paper.

The Personal ColorPoint, which comes with a parallel port only, has a list price of \$3995; the ColorPoint PS, which has an AppleTalk port, lists for \$4995. The review did not make this distinction clear; it sounded as if the customer would have to buy an extra board for our printer.

The CalComp ColorMaster Plus, Tektronix Phaser II PXi, and Seiko Personal ColorPoint all offer enhanced screening that improves halftoning. Yet the only printer you mention as having this feature is the Phaser II PXi.

Mark Bate  
Seiko Instruments U.S.A., Inc.  
San Jose, CA

## The Scoop on Zinc

I'd like to clarify a few points made in "Zinc-Air Batteries: Long May You Run" (Microbytes, May, page 28). We designed our stand-alone 12-volt battery system to operate portable computers—not cars—for 10 to 30 hours. The battery will power a computer and a printer together for more than 16 hours. -

The prototype battery demonstrated at Technologic Partners Pen Computing '92 weighs 2½ pounds. The battery pack weighs 1½ pounds, but that includes a 1-pound air manager. When the battery system is designed into a computer, the computer manufacturer incorporates the battery's air manager into the computer's housing. With proper design, the air manager will add no more than 1 or 2 ounces to the computer's weight.

Also, the prototype shown at the conference did not optimize the battery's footprint. We can fit a 5-V battery into an 8½- by 11-inch package.

Frank M. Harris  
Vice President, Marketing and Sales  
AER Energy Resources, Inc.  
Atlanta, GA

## Digital Deceptions

I enjoyed reading Steve Moore's "Digital Deceptions" (Stop Bit, May). While I agree with his statements on the possible misuses of digital manipulation, he far underestimates its potent effect. Had digital video manipulation been a bit more advanced at the time, we might have seen Saddam Hussein telling his troops to pull out of Kuwait

WE WANT TO HEAR FROM YOU. Address correspondence to Letters Editor, BYTE, One Phoenix Mill Lane, Peterborough, NH 03458, send BIXmail c/o "editors," or send Internet Mail to letters@bytepb.byte.com. Letters may be edited.

All I really wanted to do  
was simplify my job.

So I bought Windows. I  
added extra RAM. I bought a  
bigger hard disk. I replaced  
my video card and monitor.  
I bought a half-dozen new  
programs, installed a mouse,  
configured the system, and  
as I sit here watching my  
spreadsheet crawl on my PC,  
I'm thinking to myself,

"This is making  
it easier?"

**Then there's Macintosh.** The only personal computer designed from the very first chip to work the way people work. That's why Peter Lewis of *The New York Times* wrote the Macintosh is simply "better than DOS or Windows." That's why *Byte* wrote, "If you use a GUI to keep your computing tasks sorted out, the Mac does it best..." That's why J.D. Power and Associates ranked Apple the #1 Personal Computer Company in Customer Satisfaction Among Business Users.\* There's no personal computer on earth quite like it. And none more imitated. The affordable, compatible, connectable Macintosh personal computer. The power to be your best.®

Macintosh from Apple.

\*J.D. Power and Associates' 1991 Computer End User Satisfaction Study™. Phase II: Business End User Summary. Responses from 5,811 end users at 4,396 business sites. long before multinational forces pushed them out. The technology for jamming and transmitting TV signals is here now, and believable digital impersonation will be here soon. The military applications of this technology will, without a doubt, have a profound effect on the way wars are fought in the future.

Don Barton  
*Grand Junction, CO*

## Electronic Books and IBM

I was in a state of shock after reading "Electronic Books" (June). I know that there are many people in the U.S. who automatically tune you out when you mention IBM, but when a company leads the industry in a particular area, it should at least get some sort of acknowledgment.

IBM has had a cross-platform product for reading and building on-line books for over five years. BookManager is available for VBS, VM, PC-DOS, and OS/2. It provides full hypertext linking and bookmarking, lets you add personal notes, and offers other features. It also lets you use the same source files for both hard-copy and on-line books.

BYTE shows a negative bias toward IBM by ignoring the availability of several thousand IBM manuals that are usable in both hard-copy and on-line form.

Roger A. Root  
*Raleigh, NC*

## Infoglut Solved!

Regarding Dennis Allen's editorial titled "Managing Infoglut" (June): The best-kept secret in the world can now be revealed. The best manager of information, whatever the format, is not a software product at all. It's a librarian! Hire one today.

Frank White  
*Automation Librarian  
University of Windsor  
Windsor, Ontario, Canada*

## Internet Kudos

Thank you for providing an Internet address for sending letters to the editor. I hope that this community updates you with Internet mail so that the connection proves worthwhile.

Rich Oesterling  
*Idaho Falls, ID*

## Image Correction

In his review of WinRix 1.1 ("Image Magic," Windows Special Report, June), Dana Hudes erroneously reports that the package lacks several features.

WinRix supports calibration for scanner, screen, and printer. You accomplish this by creating a custom lookup file and applying it to the scanner, edit window, or printer. This allows you to not only calibrate the device but also

calibrate for known differences in source or output attributes. For example, photos taken under fluorescent lighting have a more greenish tone than other photos. With the methodology that we at Rix Softworks have implemented, you can create a lookup file for these photos. In our opinion, you don't always want WYSIWYG.

Our scanner interface supports the changing of the scan resolution if the feature is available on the scanner that is being used. WinRix supports several scanners that were not listed in Hudes's review, including those from Logitech, Marstek, Genius, Ricoh, and OBM. It supports object and raster (i.e., bit-mapped) fonts and displays a visual sample of the selected text in the dialog box to assist user selection. WinRix custom lookups support individual RGB-channel or global adjustments and gamma-curve manipulation.

The package also fully supports rubber-band area-selection tools. You can stretch and relocate all selected areas before committing to the selection you've made. We intentionally reduced the number of icons to eliminate redundant screen clutter. The square and circle entries are only forms of the more general rectangle and ellipse.

We appreciate Hudes's testimonial to our display quality, but the choice of screen dithers is just that—a choice. You can choose ordered (Windows standard), diffused, or halftone dithering from the View Preferences Display menu.

As with our competition, you can use the WinRix 1.1 magic wand and other area-selection tools for bucket fills. The ScanRix scanning application for DOS does not ship with WinRix; SnapRix, our screen-capture application, does. WinRix costs \$395.

In light of the aforementioned comparison deficiencies, we believe WinRix to be the best buy.

Joseph R. Fisher  
*Vice President, Marketing/Sales  
Rix Softworks, Inc.  
Burlington, NC*

## FIXES

- The correct toll-free number for Hercules Computer Technology, Inc. ("Flying Windows," June), is (800) 532-0600.
- The maximum storage configuration for the Sparcbook ("SPARCs on the Road," May) is not 125 MB. The Sparcbook can accommodate up to 240 MB of data on two internal hard drives.
- The sentence in "Displays: The Human Factor" (July) on page 196, column 3, paragraph 2 under the subhead "Luminance Perception" that says "Roufs's work is now a..." should read "Nonlinearity is now a..." On page 197, column 1, paragraph 4 under the subhead "Fixing Flicker," the sentence that states "display cost closely follows the field rate" should read "display cost closely follows the frame rate." In addition, Bernice E. Rogowitz's title is Research Staff Member at the IBM T. J. Watson Research Center.
- Prentice-Hall is the publisher of *The Decline and Fall of the American Programmer* (Book and CD-ROM Reviews, July). ■

# I FEEL LIKE I'M BEING PECKED TO DEATH BY DUCKS.

At \$149.95 per PC, Windows sounded like a deal. Then I bought all new programs at about \$500 a pop. I shelled out a couple hundred per machine for extra memory. I ponied up \$300 each for networking cards. The mouse ran \$100 and a bigger hard disk ran \$275. And as I stare at the invoice for what it's going to cost me to connect them all together, I think to myself,

## "THIS IS MAKING IT EASIER?"

**Then there's Macintosh.®** There are no hidden costs. There are no cards to buy for networking, file sharing, sound, video or peripheral support. That's why *Computer Shopper* magazine said, "Let's not be coy. If you want the best GUI money can buy, get a Macintosh." That's why *MacWeek* said, "Apple has shown that it can be technologically brilliant and price competitive at the same time." And that's why J.D. Power and Associates ranked Apple the #1 Personal Computer Company in Customer Satisfaction Among Business Users.\* There's no personal computer on earth quite like it. And none more imitated. The affordable, compatible, connectable Macintosh personal computer. The power to be your best.®

Macintosh from Apple.

### Kaleida Hopes that X Marks the (Multimedia) Spot

**W**hen IBM and Apple announced their joint-venture software company Kaleida, officials said that the new company would license existing technology from the parent companies and create uniform specifications and file formats for multimedia data. Kaleida would then license these multimedia technologies back to IBM and Apple and other third parties.

IBM and Apple revealed little else about what Kaleida was developing, leaving observers to speculate about who would direct the company and the mysterious projects it was involved in that had names like Sweet Pea and Script X. In just one week in late June, however, all that changed.

First, Apple and IBM said that Kaleida's president and CEO will be Nat Goldhaber, venture capitalist and founder of the company that developed the TOPS distributed file-server LAN for incompatible computers. Once named Kaleida's CEO, Goldhaber revealed that Apple and other companies, such as Japanese consumer-electronics giants Sony and Toshiba, will use Kaleida technology in their PDA (Personal Digital Assistant) systems.

Goldhaber told BYTE that two technologies currently under development at Kaleida for hand-held personal multimedia/communications devices are Script X, a universal multimedia scripting language, and COS (consumer operating system), a real-time kernel designed for small portable devices. "We won't manufacture the devices but will play a major role [in their development], either through design or through creating the tools to do the design work," he said. Goldhaber said that the information units "require not only communication links and devices but also a big body of beautifully and intelligently wrought information software."

Goldhaber said Script X will provide the basis for the formation of these intelligent programs. It will execute on devices ranging from Sweet Pea, the CD-ROM-based PDA currently being developed, to the Mac and other future systems, including the PowerPC.

"Script X will be linked intimately to the TV set," Goldhaber said. "Script X is designed to be that language that, for the most part, an author of a title [i.e., an intelligent infotainment program] can produce that title just once for multiple platforms." Plans call for Script X to run on Macs, Windows, OS/2, and Unix platforms. "QuickTime will also be part of the Script X environment," Goldhaber said, adding that Script X-compliant PDAs will play QuickTime movies. He also said that Script X will execute natively on COS. Although he didn't discuss specific release dates, Goldhaber said that COS and Script X are fairly well along.

In discussing Kaleida and what he hoped it would provide for all people, Goldhaber referred to several speeches he delivered in the 1980s, including one he made in October 1989 to the Boston Computer Society. In that speech, Goldhaber spoke of a truly intuitive multimedia device that merged TV and the PC with an HDTV-quality display. Users would—through an interface that Goldhaber said would need to be far more intuitive than anything currently offered on PCs, Macs, or VCRs—be able to indicate the topics of interest to them and have those topics delivered to the system automatically. At Kaleida, Goldhaber has an opportunity to turn his vision into reality.

Goldhaber told BYTE that Kaleida will participate in projects that IBM is working individually with Time Warner and Bell Atlantic to provide video on-demand services. He added that Kaleida may also participate in a similar project with Hewlett-Packard.

—David Andrews

### NANOBYTES

In discussing the technologies that Kaleida is now working on, newly appointed Kaleida CEO **Nat Goldhaber** said that one of the key considerations is to create products that present information

in an entertaining way: "The problem with the computer metaphor is it's very intimidating for many people. It lacks that warm and fuzzy quality

that makes it interesting to explore." He said that if a device is to succeed in providing information to all people, not just computer users, it must be accessible. □

Unconfirmed reports say **Apple** is asking companies, including Japanese consumer-electronics companies **Matsushita, Toshiba, and Sony**, to contribute millions of dollars to support its Bento multimedia specification. In return, the companies who support Bento will also get early access to technologies developed at Kaleida. Bento is a cross-platform standard for documents containing multiple data types. □

**Toshiba Corp. of Japan** is working with Apple to develop a CD-ROM-based multimedia player called **Sweet Pea**. Details on the system are scarce, but a Toshiba spokesperson told BYTE that the player will span the entertainment, information-on-demand, and life-long-learning markets. It is expected to ship in mid-1993. Toshiba said it is also negotiating with Time Warner to provide consumers with a "wide spectrum" of multimedia titles for consumers. □

Sitting in coach between  
two sumo wrestlers,

I pull out my laptop and try to get  
some work done. I futz with the clip-on  
trackball. Untangle the cord. Meanwhile,  
my screen flickers at me like a dim bulb.  
I notice the guy across the aisle is  
struggling with a mouse, trying to use  
the back of the seat as a mousepad.  
And I think to myself,

"This is making it easier?"

**Then there's Macintosh® PowerBook.™** The one notebook designed from the beginning for anywhere/anytime computing. The trackball is built into the keyboard. Palm rests make it extraordinarily comfortable to use. That's why *Byte* said, "These new Macs with their ability to read DOS floppy disks, transparently connect to an office's AppleTalk network, and print to fax, make on-the-go computing easier and more productive than ever." That's why PowerBook was the only personal computer to make the Product of the Year lists of *Business Week*, *Fortune* and *InfoWorld*. And the only notebook computer to be named one of the Best Designed Products of the Year by *Time*. That's why J.D. Power and Associates ranked Apple the #1 Personal Computer Company in Customer Satisfaction Among Business Users.\* The affordable, compatible, connectable PowerBook personal computer. The power to be your best.®

Macintosh from Apple.

## IBM Gets the Ambra Light

**L**ONDON—In a roughly \$15.2 million (£8 million) blaze of publicity more suited to a soft drink sales campaign, IBM has burst onto the European low-cost clone scene. Its new product range, comprising two desktops and a notebook, has been christened Ambra, with the first TV advertisement featuring images of taut young bodies exercising in a gymnasium. The machines, which have racy names like Sprinta, Hurdla, and Treka, come in various configurations at prices ranging from about \$1600 (£885) to \$2700 (£1449). The desktop PCs are powered by AMD's 25-MHz 386SX and the notebooks by a 20- or 25-MHz Intel 386SL. A 486 model is expected later this year. The machines are based around the ISA bus rather than IBM's Micro Channel architecture bus.

IBM's new wholly owned subsidiary company, called Individual Computer Products International, will source and sell the machines. It expects to sell up to a third of its machines directly, with the remainder being sold through the reseller channel and retailers such as the Wildings U.K. office equipment store. The PCs will also be shipped directly from the Far East to an IBM subsidiary in Canada.

ICPI's direct selling prices exclude VAT (value-added tax). They do, however, include preinstalled DOS and Windows, a one-year on-site warranty, and use of a technical-support hotline. Resellers can set their own prices as low as they like, but the IBM connection and the advertising may help retailers avoid a price war.

—David Tebbutt

## VeriFone Banks on Synaptics' Neural-Network Chip

**V**erifone has released the Gemstone Onyx check reader, a device for the PC that uses a neural-network chip designed by Synaptics to intelligently recognize and process numeric information that appears on bank checks. According to Ashok Narasimhan, vice president and general manager of VeriFone, the new device, which processes image information in a manner similar to the way in which the human eye does, offers retailers a more efficient and faster method of processing checks than traditional motorized check readers. VeriFone and Synaptics say that the device is the first commercial application of neural-network technology,

which mimics the way a human brain processes information.

At the heart of the Gemstone Onyx check reader is the Synaptics I-1000 neural-network chip. The I-1000 chip integrates an imager (with image preprocessing), an analog neural-network classifier, and digital electronics. A silicon eye in the device reads images through a lens at a resolution of 18 by 64 pixels; the image is then sent to the I-1000 chip, which determines what the object is. The Onyx check reader has achieved a 99.6 percent accuracy rate in recently completed independent lab tests conducted by SRI International.

—Patrick Waurzyniak

## Department of Justice Official: Managers Need More Proactive Security

**W**ASHINGTON, D.C.—Information systems managers need to be more proactive in detecting computer crimes, according to a U.S. Department of Justice official. Speaking to about 250 attendees at LAN/SEC 92, Scott Charney, chief of the Justice Department's Computer Crime Unit, noted that the appearance of inexpensive modems has helped spawn a criminal industry. Unfortunately, security devices and security practices are costly, and management is reluctant to pay for them when a problem is not immediately evident, Charney said.

Charney said that hackers' attempts to obtain passwords by running the entire dictionary past the password request work about 20 percent of the time. A more devious technique is to substitute a program that looks and acts identical to an actual sign-on screen.

"Don't wait until you're hit; use non-dictionary passwords, educate users," Charney advised. If you are the victim of computer crime, "keep audit trails, keep the records in a safe place—not where intruders can find (and alter) them," he said.

—Stephen Banker

## NANOBYTES

IBM's **Pennant Systems** (Norwalk, CT) and **Hitachi** (Tokyo) and its affiliate company **Hitachi Koki** have agreed to work together in developing what an IBM spokesperson said will be "the next generation of printers." Hitachi Koki will manufacture high-, medium-, and low-speed print engines for continuous and cut-form printers. Either Pennant Systems or Hitachi Koki will produce the controllers, and software will be developed by Pennant Systems. IBM will market the final products worldwide. □

**Northgate Computer** (Minneapolis, MN) and **Everex Systems** (Fremont, CA) have discontinued discussions regarding a possible merger. Soon after rumors surfaced that IBM might buy Northgate, Everex signed a letter of intent to buy it. Northgate now says that an investment group will purchase 51 percent of Northgate's common stock and provide at least \$3 million in financing. □

**Symantec** (Cupertino, CA) has acquired **MultiScope** (Mountain View, CA), developer of MultiScope Debuggers for Windows, DOS, and OS/2, and **The White-water Group** (Evanston, IL), developer of the Whitewater Resource Toolkit and Actor, the OOP (object-oriented programming) language package for Windows application programming. Symantec's move brings it two steps closer to its master plan of being a multiplatform development tool provider, explained Neal Goldman, product manager of PC language products at Symantec. Both of the acquired companies will retain their corporate identity. □

Starting this fall, Compaq's new **Peripherals Division** will release a series of network printers. The division will be headed by David Black, who previously directed the development of Compaq desktop and portable PCs. □

# WATCOM SQL

## PC-based Client/Server SQL Tools

### Four Good Reasons to get your copy right away:

#### 1. True Client/Server for reliability and performance

Your databases are protected from corruption by features such as referential and entity integrity, as well as true transaction processing. Client/server architecture and our 32-bit database server software help deliver increased performance for applications running on your PC LANs.

**2. Royalty-free run-time** For just \$99 you get royalty-free run-time support. It lets you distribute applications for standalone PCs and include our single-user run-time database server. It also lets you distribute your applications on an unlimited number of client machines in network environments.

**3. Scalability** Whether you implement applications using the ACME front-end or write them in C or C++, they can be designed to run without change in environments ranging from standalone 640K single-user PCs to large networks running our

high-performance multi-user database server.

**From entry level PCs...** You can use DOS PCs with just 640K memory as database server machines for small networks. For single-user standalone environments, the SQL database server together with an application can run on DOS PCs equipped with a minimum of 640K memory.

**...to high end servers.** The WATCOM SQL database server automatically adapts to utilize the available memory on your system for increased performance. The 32-bit version unleashes the power of 386/486 PC's to efficiently serve many clients in large networks.

#### 4. For a limited time it's yours for just \$395

WATCOM SQL Developer's Edition has a suggested retail price of \$795 but for a limited time you can get it at the introductory price of only \$395. Even better, as a registered user of the Developer's Edition you'll be able to get a copy of the 6-user Network Server Edition for only \$99 (Suggested retail price: \$795).

#### Developer's Edition

**Complete Client/Server Development Tools Package Including Standalone Single-user SQL Database Engine**

The Developer's Edition allows you to develop and deploy single-user standalone applications, and to develop applications for use with the WATCOM SQL Network Server Edition. You get the **ACME (Application Creation Made Easy)** front-end application development system. It combines visual forms design with simple event-driven programming to allow rapid prototyping and development of client applications without C programming. The Developer's Edition also includes IBM SAA standard embedded SQL support for C/C++ application development with WATCOM, Microsoft and Borland compilers.

**Package components include:** Single-user standalone database server (both 16 and 32-bit versions) • Interactive SQL • ACME front-end application development system • Embedded SQL/C preprocessor • SQL libraries for use with WATCOM C, WATCOM C/386, Microsoft C/C++, and Borland C/C++.

#### System Requirements:

**Hardware:** IBM PC compatible with hard disk, 640K minimum memory  
**Software:** DOS, Windows DOS box, or OS/2 DOS box

**Special Introductory Offer: \$395** (Suggested retail price: \$795)

**Special offers available to registered users:** (details inside package)

- **Royal y-free run-time support:** \$99
- **6-user Network Server Edition:** \$99 (Suggested retail price: \$795)

#### Network Server Edition

**High-performance Multi-user SQL Database Server for PC LANs**

The Network Server Edition provides client/server support for multiple concurrent users in a local area network environment. The WATCOM SQL database server supports ANSI standard SQL and provides advanced capabilities, including bi-directional scrollable updatable cursors, referential integrity, row-level locking and symmetric multiprocessing of requests. WATCOM SQL also gives you comprehensive security capabilities, data encryption and data compression. Compatible programming interfaces let you implement applications that run without change using either the standalone single-user database or the Network Server Edition.

**Package components include:** Multi-user network database server (both 16 and 32-bit versions) • Interactive SQL • Network requestor and request manager.

#### Client System Requirements:

**Hardware:** IBM PC compatibles, 640K minimum memory  
**Software:** DOS, Windows DOS box, or OS/2 DOS box

#### Database Server System Requirements:

**Hardware:** IBM PC compatible with hard disk, 640K minimum memory  
**Software:** DOS

**Network Requirements:** NetBIOS or Novell Netware (IPX)

**Suggested Retail Price:** 6-user version: \$795  
Unlimited version: \$1,595

The Leader in Development Tools

Circle 186 on Inquiry Card.

# OS/2

# To a software developer, this is what heaven looks like.

Most people wouldn't know what to make of a screen like this. But developers like you know a screen like this can help make all kinds of applications. With OS/2<sup>®</sup> 2.0, you can develop the DOS, Windows<sup>™</sup>, OS/2 and host-based apps end users need. And you can do it faster and easier than ever before. Because OS/2 2.0 can make the most of your 386 or 486 processor.

Now you can edit in one window, compile in another, profile in a third and test in a fourth. Pre-emptive multitasking makes everything run smoothly and responsively. And OS/2 Crash Protection<sup>™</sup> helps shield running applications from each other, so if one goes down it won't affect the others. Instead of rebooting, you just restart the affected app and continue. And since OS/2 2.0 is a 32-bit operating system, programs are easier to write and run faster, too. Which all adds up to improved productivity and reduced development cycle time.

But maybe the best part is that for less than the cost of DOS and Windows, OS/2 gives you a whole lot more. And to keep your cycle rolling, a full range of services and support are available, like on-line help through OS/2 Support line, Bulletin Board and IBM Link. Or you can join the IBMOS2 and OS2DEV conferences on CompuServe<sup>®</sup>, where you can meet IBMers, users and developers who can find fast answers to your questions. For an IBM authorized dealer near you, or to order OS/2 2.0 from IBM, call 1 800 3-IBM-OS2.\*

- OS/2 Crash Protection helps shield applications from each other.
- The integrating platform of choice for DOS, Windows and OS/2.
- Preemptive multitasking for responsive, reliable execution.
- 32-bit flat address space for productive programming.
- A full range of IBM services and support.

Circle 117 on Inquiry Card.

## WordPerfect Wises Up

**W**ordPerfect (Orem, UT) is trying to position its market-leading word processor at the center of a universe that includes the supporting role of E-mail, group scheduler, and calendar through WordPerfect Office, and, in the future, new products such as forms creators and document managers. The new strategy, recently unveiled as WISE (WordPerfect Information System Environment), comprises three basic activities: information processing, information sharing, and information presentation. The company's development plans center around delivering applications within these three categories on six platforms. Complete interoperability—both of data and procedures—among DOS, Windows, OS/2, Macs, Unix, and VMS is a major engineering goal.

At the heart of the information-processing segment is the WordPerfect word processor. The company now sees the program as a vehicle for delivering information to the desktop. To position WordPerfect documents as the center of the office, the company will improve links between documents and other data. Better ties to spreadsheets and databases are in the works, and the company is developing an open API that will permit other programs to use WordPerfect support facilities (e.g., a third-party database could call the WordPerfect spelling checker). These changes will like-

ly mean the end of DataPerfect and PlanPerfect, the company's database and spreadsheet products.

To promote information sharing, WordPerfect will reposition WordPerfect Office as an E-mail and multiuser scheduling facility. The company will also add support for methods of mail transport such as the emerging OCE (Open Computing Environment), VIM (Vendor-Independent Messaging), and MAPI (Messaging Application Programming Interface), and even the Open Software Foundation's DCE (Distributed Computing Environment) protocols. As part of its information-sharing thrust, WordPerfect plans to deliver document management and forms design and fill packages this year.

The final activity of WISE, information presentation, has support for printing, document viewing, and multimedia. Like viewers from Frame Technology, Interleaf, and Adobe, the document viewer will let you read WordPerfect and documents on systems that lack these creating applications.

The success of this new strategy may depend on how quickly WordPerfect can develop all these new products for six different environments. To speed up the process, WordPerfect is moving away from assembly language toward a portable C and C++-based core-code design.

—Andy Redfern and Andy Reinhardt

## Starlight Networks Adds Jostens as Investor in Network Multimedia

**S**tarlight Networks (Mountain View, CA), a company that plans to announce this fall a network server and software that promise the transmission of stored video over a network without image degradation, has added Jostens Learning as an investor. Jostens Learning (San Diego, CA), a developer of instructional technology programs, has also signed a multiyear, multimillion-dollar contract with Starlight to use its technology in its recently announced Jostens Learning InterActive-Media curriculum products, Starlight says.

The transmission of stored video from a server to a client presents a problem for packet-based LANs. Unlike other types of data, video must be able to flow without interruptions, which degrade its quality. A Starlight Networks spokesperson said the company is developing a technology that lets workgroups have simultaneous access

to full-motion video over current LANs and WANs (wide-area networks). Video applications will be able to coexist with desktop computer applications on the same network. Starlight Networks plans on supporting multiple types of LANs, including Ethernet, Token Ring, and FDDI (Fiber Distributed Data Interface).

Jostens Learning plans to use Starlight's products in what it is calling its next generation of instructional curricula, which is based on networked multimedia. A Jostens representative said that the curriculum relies on interactive full-motion video to grab and hold a student's attention.

Founded in 1990, Starlight Networks' investors include Bass Associates; Accel Partners; InterWest Partners; Merrill, Pickard, Anderson & Eyre; and Nynex Venture Company.

—David Andrews

## NANOBYTES

To achieve better market leverage, **WordPerfect** is undertaking an aggressive program of partnering with other companies. WordPerfect has entered a cooperative product development and support program with Novell, the major element of which will be the creation of WordPerfect Office as an NLM (NetWare loadable module). Other announcements include the licensing of Adobe Type Manager's rendering technology and support for the TWAIN image and document manipulation specification already adhered to by Aldus, Caere, Kodak, Hewlett-Packard, and Logitech. □

In another break with the past, WordPerfect announced its first acquisition, Illinois-based **MagicSoft**, which makes the communications software used in WordPerfect Office. WordPerfect making acquisitions? This may be only the beginning. □

**Olivetti** (Milan, Italy) and **Novell** have signed a master business agreement that will expand the already-close relationship between the two companies. Included in the agreement are plans for full support of Novell NetWare under the Olivetti OSA (Open Systems Architecture), joint marketing events, and a new rigorous training program for technical employees. The first step toward NetWare integration calls for native NetWare support in OSA. □

A start-up company in Boston is developing a spreadsheet for Next workstations that reads and writes Lotus WKS and WK1 files and executes Lotus 1-2-3 release 2.3 macros. **Athena Design** ((617) 734-6372) says its Mesa spreadsheet is the only traditional spreadsheet written exclusively for the NextStep environment. David Pollak, president of Athena Design, says Mesa has received considerable interest from Wall Street financial houses that now use Next computers. □

# The world's fastest PC database comes with a commitment that will last forever.

## And an offer that won't.

© 1992 Microsoft Corporation. All rights reserved. Printed in the USA. \*Plus \$10.00 freight and applicable sales tax. Reseller prices may vary. \*\*Free; you don't even pay freight. †dBASE IV Benchmarks performed by Micro Endeavors, Inc. DB2 Benchmarks performed by Patrick O'Neil, "The Set Query Benchmark," in "The Benchmark Handbook for Database and Transaction Processing Systems," Morgan Kaufman Publisher, 1991. You must currently be a licensed user of a database product to qualify for this special upgrade offer. To qualify for this offer at your reseller you must bring proof of purchase with you: 1) the original disk from your program, 2) title page of the manual, or 3) a copy of the sales receipt. You must register your copy of Microsoft FoxPro 2.0 to qualify for a free upgrade to version 2.5. (If you get your upgrade directly from Microsoft, you will be automatically registered.) You will then be notified when your free upgrade is available.

# Send me the Microsoft FoxPro 2.0 upgrade, fast! And Microsoft FoxPro 2.5, free!

To upgrade to the Microsoft® FoxPro® database version 2.0 with a free upgrade to version 2.5 as soon as it's available, complete and mail this order form with your payment. Or to order by phone, call (800) 228-7007, Ext. AC9 (6:30 A.M. - 5:30 P.M., Pacific time).

If you are not completely satisfied, you may return the product within 90 days for a full refund.

Special Upgrade Offer  
PO Box 3018  
Bothell WA 98041-9907

**Trade up to FoxPro 2.0 from other database products for only \$199 and get a free 2.5 upgrade.**

If you use dBASE,\* Paradox,\* Clipper™ or any other PC database, here's an offer you'll want to nab before it's gone forever: Microsoft® FoxPro® database version 2.0 for just \$199,\* and a free\*\* upgrade to version 2.5 for MS-DOS\* or for Windows™ operating systems as soon as it's released.

It's our way of celebrating the Microsoft and Fox merger. And of introducing you to the fastest, most powerful X-BASE solution available. This is a solution that's sure to stay at the head of the database pack, with Microsoft's full commitment.

**The fastest PC database.**

FoxPro 2.0 gets unequalled results, thanks to superior technology. Our Rushmore™ Query Optimization lets you get the fastest speed of any PC-based database — up to 4 times faster than DB2\* and 10 times faster than dBASE IV.\*†

**The most productive environment.**

It's intuitive and graphical to make your life easier. With Relational Query-By-Example (RQBE) you can simplify complex tasks. And with our exclusive Graphical Browse, you can choose the way you view your data.

With the Screen Builder you can quickly design data-entry forms by simply dragging objects into place. And for really quick turnaround, try the Application Generator. It creates complete, fast applications for you — applications you can then customize to fit your needs.

Then there are the other powerful tools like Trace and Debug windows, Project Manager, Menu Builder, Report Writer and Label Writer. With all these tools, you'll write the most powerful, robust apps imaginable.

Is it any wonder that FoxPro 2.0 received the *Byte* Award of Excellence, *InfoWorld* Product of the Year, *PC Magazine's* Technical Excellence Award and *PC Magazine's* Editors' Choice Award, as well as the *Data Based Advisor* and *DBMS* Readers Choice awards?

**Your investment is secure.**

It's so easy to learn and use, you won't have to worry about losing any time getting up to speed.

You won't lose any of the work you've done, either. Microsoft FoxPro 2.0 is compatible with dBASE III PLUS\* and extends dBASE IV. This means you can move your apps over right away. In fact, you'll find they work even faster in FoxPro.

If you're thinking about what'll happen to your applications tomorrow, relax. The applications you build today under Microsoft FoxPro 2.0 will run on Microsoft FoxPro version 2.5 for Windows, MS-DOS, Macintosh\* and UNIX\*.

**Special offer for users of FoxPro.**

We have especially good news if you're a registered FoxBASE+ for MS-DOS or FoxPro 1.x user. You can upgrade to version 2.0 for only \$175 with a free upgrade to version 2.5 when it is available.

**The Microsoft commitment.**

With Microsoft's resources and Fox's expertise, we're even better positioned to develop the best products and support in the industry. We've been meeting with Fox User Groups around the country. We're planning to hold the largest Fox Developers Conference ever in Phoenix this year. And we're keeping the dialog going on the popular CompuServe® forum, FOXFORUM.

Finally, we support the initiative to create an ANSI standard for the X-BASE language. We stand behind Microsoft FoxPro 2.0 with a full 90-day money-back guarantee and great product support.

But although our commitment is long-lived, this special offer is not. So get a move on and move up to Microsoft FoxPro 2.0, fast. Because when this offer is gone, it's gone forever.

**Rush to your dealer. For the name of a dealer nearest you or to order by phone call now, toll-free:**

Making it easier

## SPARC Vendors Enhance Chip Specification

**B**URLINGAME, Calif.—SPARC International has come out with a new chip specification offering several performance improvements, including a 64-bit address space that the nonprofit consortium claims will carry the SPARC architecture well into the next century.

Besides the SPARC architecture version 9, which extends SPARC's address space to 64 bits, the specification also includes an enhanced instruction set specifically designed for superscalar implementations, as well as improved support for the Unix operating system and better multiprocessing support.

"What we're doing is what's called 'roadmapping,'" said Sun Microsystems' chairperson and CEO Scott McNealy. "Seriously, you have to [look at the SPARC world's future] because people think you are dead if you don't," he commented. In response to the promise by DEC that its competing Alpha architecture will carry its customers through the next 25 years, McNealy said, "In keeping with that, version 9 will take you into the year 3000—beat that, Alpha!"

The SPARC version 9 specification offers full 64-bit extensions to the previous SPARC version 8, on which two recently introduced superscalar implementations,

Texas Instruments' SuperSparc and Cypress Semiconductor's HyperSparc processors, are based. The version 9 specification extends all the version 8 integer registers to 64 bits, and all register commands work on the full 64-bit register with full hardware support for 64-bit arithmetic, including multiplication and division, according to SPARC International.

Several new instructions have been added to increase the performance of both superscalar and superpipelined machines. David R. Ditzel, who is chairperson of the SPARC architecture committee and the director of advanced systems at Sun Microsystems Laboratories, said the new specification adds about two dozen instructions to those of the previous SPARC version 8, bringing the total instruction set to slightly over 100.

The new SPARC specification provides fault-tolerance capabilities through a compare and swap instruction. The specification also includes a new fast-trap model and context switching for increased performance.

SPARC International emphasizes applications written for previous SPARC machines are compatible with the new specification.

—Patrick Waurzyniak

## Symantec and Apple Announce Cross-Platform Development Tool

**N**EW YORK—Symantec (Cupertino, CA) and Apple announced at PC Expo that they have entered into a development and marketing agreement that will provide an application framework for developers that will allow the same code to run on both Macs and Windows-based PCs. Based on the "Bedrock" technology that Symantec has used internally for two years, both companies hope that the framework, which uses C++ and object-oriented approaches, will be extended in the future to support OS/2, Unix, Windows NT, and other operating systems.

An application framework provides a common set of building blocks, or *objects*, that provide the basic structure for an application. MacApp, Apple's framework, already provides an object structure for Mac developers. Apple and Symantec envision a framework that acts as a buffer between a program and the target platform of the processor and native operating system. Symantec is providing the Bedrock framework,

which will be combined with elements of Apple's MacApp. Apple and Symantec officials said the two companies will use the Bedrock framework technology internally and work together to support the developers' transition to Bedrock. Symantec will own the technology.

Bedrock maps abstract objects such as Documents, Panes, and Menus into platform-specific functionality instead of just Mac-specific functionality. The three major elements of Bedrock include the Bedrock Class Library (i.e., components for building an application in C++), Bedrock Resource Information (e.g., view positioning, dialog boxes, and screens), and the Bedrock Utility Manager (i.e., machine-specific services).

Slated to be finished in the first half of 1993, the product will be available through both Apple and Symantec distribution channels. Apple said that it will provide an upgrade path for current MacApp users.

—Larry Loeb

## NANOBYTES

Palm Computing (Los Altos, CA), developer of software for consumer palmtop pen computers, has named **Donna Dubinsky**, former international vice president and cofounder of Claris, as its new

president and CEO. "The technologies in miniaturization and handwriting recognition are getting us to the point

where we can get a powerful open system in the palm of your hand," she said. But she added that companies are still researching what the market wants these applications to be, whether it's a pager, software player, Rolodex, or something else. "It's going to be a bit murky here for a while, and anytime you're developing an open system, it's going to be a battle of the platforms," Dubinsky said. □

Windows has been criticized for not being accessible to the visually impaired. However, thanks to Window Bridge from **Syntha-Voice Computers** (Hamilton, Ontario, Canada, (416) 578-0565), a new program that supports commercially available voice synthesizers, Windows applications can now be accessed via voice output by blind computer users. □

**KnowledgePoint** (Petaluma, CA, (707) 762-0333), a vendor of programs that enable you to write personnel policies and employee handbooks, has released **DescriptionsWrite Now**, a PC-based program that custom-writes complete job descriptions. KnowledgePoint says that the program helps companies comply with the new ADA (Americans with Disabilities Act): Written job descriptions are an important piece of evidence in both justifying and defending employment decisions, says Michael Troy, KnowledgePoint's president. □

## Complete Network™

**All the Hardware.**

**All the Software.**

**All from One Source.**

### Industry Standard Hardware

Complete Network has Intel® EtherExpress16™ LAN Adapters for your network connections. Installation is easy because the cards are totally software configurable and automatically adjust for 8 or 16 BIT card slots. These Plug 'N' Forget™ cards from Intel set the standards for Ethernet LAN adapters.

### High Performance Software

Complete Network features the WEB® 3.0 Network Operating System, winner of the LAN Times 1992 Best of Times award. WEB 3.0 is a fast and flexible system which is simple to learn and easy to use. It supports DOS and Windows™ and is Novell® compatible. WEB 3.0 provides the first peer-to-peer network to equal or exceed the performance of most dedicated server based systems.

**WEB® LICENSED TECHNOLOGY**

### Everything Else You Need

Complete Network has everything else you need to set up your network: cable, connectors, terminators, and even a cable stripping tool.

# CONVENTIONAL WISDOM HAS IT THAT COMPAQ HAS THE BEST FEATURES, AND ZEOS AND GATEWAY THE LOWEST PRICES.

## IT ALSO SAID DISCO AND COMMUNISM WERE HERE TO STAY.

Pardon us while we mess with your reality.  
But the new Dimension line from Dell® is about to  
make conventional wisdom look pretty dumb.

Introducing Dimension, a line of high-quality,  
full-featured PCs. From notebooks to i486 floor-  
standing systems.

Dimension systems can be up to \$500 less than  
equivalent PCs from Compaq, Gateway or Zeos.\*\*  
Each Dimension desktop comes with at least three  
drive bays and four ISA slots, versus two in some  
competing systems. And with Dimension PCs you  
don't pay for a load of software you may not need.

We don't skimp on service either. We offer  
on-site second-business-day service, toll-free help,  
24-hour TechFax,<sup>SM</sup> and a 30-day money-back  
guarantee.<sup>A</sup> All from a FORTUNE 500® company.

So if you want a great computer at an incredible  
price, just give us a call. You'll find Dimension is  
anything but conventional.

### PC Price Wars: Bad Omen for R&D?

**C**all it a period of retrenchment for PC makers: IBM has forged alliances with former enemies like Hitachi and Apple. Compaq has abandoned the ACE (Advanced Computing Environment) initiative to better shore up its Intel-platform products. Companies such as Zenith Data, CompuAdd, and NCR have announced price cuts across product lines. Dell, too, has increased its cost-cutting campaign to better compete in the current PC price war: Even its top executives have taken a pay cut.

Does the current price war translate into less money for research? No company will own up to cutting R&D funds, but when times are tough, R&D funds often become expendable. At the very least, the current price war is causing companies to refocus R&D toward whatever will most quickly distinguish the company and spoon in more market share. "A prescription for going out of business is cutting your R&D spending," said Andrew J. Neff, managing director of the New York investment research firm Bear, Stearns & Co. "The companies that do will be the ones to go in the shakeout."

Looking at the top microcomputer makers, such as IBM, Compaq, and Apple, it's difficult to see anything amiss. In addition to the Apple/IBM joint ventures Taligent and Kaleida, work at IBM's primary research centers in Yorktown Heights, New York, and Japan has resulted in gee-whiz products such as the ThinkPad pen-based computer and Ultimedia PS/2. Compaq recently announced a new peripherals division, enhancements to its DeskPro/M line as well as new computer lines, and a new triple-bus TriFlex architecture for its Systempro. Apple made a splash with its new PDAs (Personal Digital Assistants).

Even the big guys, however, are finding new revenue sources at the PC low end. For example, Compaq is counting on high-volume sales of its low-end ProLinea line yet is scrambling to produce machines fast enough to keep corporate buyers away from other companies' products. Despite its huge R&D budget, IBM needed Paralan's technology to bring it into the superserver market.

Companies with proportionately smaller R&D budgets must take a wait-and-see attitude. Lee Cannon, director of marketing at Acer America, said he could only speculate on whether the price war would soon result in decreased R&D spending at Acer. "We hope we reduce our costs and still keep our investments up to historical levels," he said.

"Toshiba's investment in technology hasn't slacked off a bit," said Steve Lair, vice president of marketing for Toshiba America's Computer Systems Division, "but we are being extremely careful about the investments we make in that they are targeted directly at customer requirements." And Gene Kunde, chief operating officer of Epson America, notes: "We have tried not to let today's economic reports impact our R&D efforts too much. We've not hit the panic button."

What helps some vendors are sugar-daddy parent companies. For instance, Zenith Data Systems got help in developing its new low-cost PC line from owner Groupe Bull, which has largely phased out its own PC business in Europe. NCR can conceivably get help from AT&T. And U.K. PC maker Apricot—the first company to release a 486 system in 1989—gets heavy R&D investment from Mitsubishi.

Part of the problem in assessing the extent of a company's R&D efforts is in judging the true nature of R&D figures on company balance sheets. "R&D is a flexible number," said Donald Collier, president of the Santa Barbara-based financial analysis firm ProLytix. "By your accounting methods, you can choose to put it as pure R&D or you can lump in engineering, which is more like cost of goods sold."

#### Marketing, Not Innovation

John Logan, an analyst for the Boston research firm Aberdeen Group, has noticed a shift in R&D funds to individual component makers and components, such as processors, chip sets, and RAM, and away from the vendors charged with building quality price-competitive systems. "Look at computer-magazine benchmark tests of 486 systems, and you'll see the performance differences growing smaller and smaller," he said. In other words, the same group of suppliers is providing components for virtually every system sold.

This leaves vendors with a myriad of options for how best to juggle OEM components into a well-designed system that can sell at a competitive price. It also sends them in two directions: improving service and support and introducing systems for specific niche markets, such as multimedia and network workstations, in an attempt to differentiate their product lines in an increasingly segmented market. ■

—Ed Perratore, with additional reporting by Andy Redfern, Gene Smarte, and Patrick Waurzyniak

### NANOBYTES

At the announcement of Unix Systems Laboratories' System V release 4.2, which pundits are now calling the last chance for Unix (see "Is Unix Dead?" on page 134), USL president **Roel Pieper's** (right) and Open Software

Foundation president **David Tory's** presence together signified a

truce in the Unix world. The disarrangement between the two companies comes in the form of concessions between USL and OSF. The next release of SVR4 will be made to comply with OSF's AES (Application Environment Specification); OSF's DCE (Distributed Computing Environment) is already compatible with SVR4. Looking further in the future, USL has agreed to support the ANDF (Architecture-Neutral Distribution Format) promulgated by OSF. □

**Destiny Technology** (Milpitas, CA), developer of ASICs (application-specific ICs) that accelerate and improve the output of laser printers, has extended its patented Edge Enhancement Technology to enhance the quality of all elements on a page, including text, line art, and halftone images. This single-chip solution will let printer manufacturers enhance their printers for less than \$20 per unit. Output is good enough in some office applications to eliminate the need for using imagesetters, the company says. EET-X supports PostScript interpreters, PCL (Printer Control Language), and other imaging models and provides a perceived resolution of 2400 dpi for halftone images. When implementing either the ASIC's dual-frame-buffer approach or compression technology, images that would normally require 5 MB or more to be rendered would require as little as 1.5 MB. ■

<b>OVERALL AVERAGE</b>					

This year's spreadsheet shootout is over. And like last year, the big winner is CA-SuperCalc.®

Coincidence? Hardly. Because once again, the judges were the people who know spreadsheets best – the ones who sell, install and support them for a living. Hundreds of dealers and resellers who know a good program when they see it.

CA-SuperCalc gives them plenty to see: spreadsheet linking, 3-D graphics, beautiful, presentation-quality output...and it runs on just about any PC.

According to the experts, it also outruns Lotus® 1-2-3® and Microsoft® Excel. What's more, Computer Associates' spreadsheet for

DEC® users, 20/20, beat 1-2-3 as well, giving us two of the top four programs reviewed by VARBUSINESS.

As you can see, CA-SuperCalc dominated the product support categories, so you can buy it with confidence. And when you factor in the price – just \$149 – you can buy it with ease.

**Windows™ Version Coming Soon!**  
**Dial 1-800 CALL CAI To Receive A Free DOS Or Windows Demo Disk.**

Shouldn't you be using the spreadsheet that beat the big boys? CA-SuperCalc. Number One in number-crunching.

**COMPUTER ASSOCIATES**  
Software superior by design.

# CorelDRAW 3.0!

## The first ALL-IN-ONE business graphics solution!

In the information-packed '90s, good graphics are more important than ever to get your message across quickly and effectively. And now it's easier than ever to use graphics – with CorelDRAW 3.0! **Everything you need is in one value-packed box.** There is no longer any need to buy separate illustration, charting, painting, and presentation packages now that CorelDRAW 3.0 does it all with **unmatched power and ease of use!**

And, as an **unprecedented bonus**, Corel has included a CD-ROM with over **14,000 clipart images** and over **250 fonts!** You'll get fingertip convenience for software that would otherwise occupy over 500 floppy disks and cost thousands of dollars. It's **incredible value** for the price – and Corel has made it easy for you to experience the **exciting power** and effectiveness of **super graphics.** That's why we put it all in one box!

NEW

### CORELDRAW!

*The world's #1 illustration package with even more power*

- Powerful text handling: includes 250 TrueType fonts
- Creative freedom: live blends, enveloping, 3D extrusions
- Precision and power: unlimited layers, snap-to objects
- Easy to use: online help, exciting interface innovations

NEW

### CORELCHART

*Powerful and versatile data-driven charting and pictographs*

- Great looking charts & pictographs: quickly and easily!
- True 3D charting: with powerful manipulation options
- Wide range of chart types: from bar to 3D to pictographs
- Powerful data management: DDE links or import from popular packages

NEW

### COREL PHOTO-PAINT

*Photo retouching and bitmap creation*

- Powerful tools: create stunning bitmapped pictures
- Automatic retouching filters: edit scanned or Kodak™ Photo CD pictures
- Color control: work in black & white and 24 bit color
- Easy to use and versatile

NEW

### COREL SHOW

*The easiest way to create a presentation*

- Powerful document integration: bring all your OLE information together
- Easy slide show creation: play animated flicks too!
- Free run-time player: anyone can view your presentations even without CorelDRAW

**DRAW IT!**  
**CHART IT!**  
**PAINT IT!**

# RUSSIA'S PROGRAMMERS WAIT TO BE DISCOVERED

**M**OSCOW—Abaci outnumber PCs in the former Soviet Union by a wide margin. Depending on who's counting, there are between 700,000 and 2 million PCs scattered throughout the major cities and university towns of the CIS (Commonwealth of Independent States). High import duties, which run from 40 percent to 80 percent, coupled with a free-falling ruble and a shortage of hard currency (e.g., American dollars) have raised the price of a basic 286-based PC in the CIS to about \$1100—what you'd pay for the next-generation 386 PC in America.

If PCs are scarce in the CIS, shrink-wrapped applications from big-name American software developers are even rarer. American companies have been reluctant to sell their programs in the CIS because, until recently, there were no copyright laws (in June, the Russian parliament passed its first software copyright-protection law, which, of course, only applies to Russia) and software piracy is rampant. To date, only 50,000 PC programs have been sold in the CIS, according to several sources. Programming languages from Borland and Lotus 1-2-3 are the best-sellers.

Understandably, because of the rapid political and economic changes sweeping the former Soviet Union, considerable uncertainty and apprehension were expressed by several attendees of the third ICF (International Computer Forum), Moscow's biggest computer show. A cross-section of about 16,000 mostly male academics, government officials, businesspeople, and scientists came to the computer show with a great hunger for any type of PC information. About 50 companies exhibited wares, ranging from an entrepreneurial university student selling a 5¼-inch disk that contained a graphical tour of the Kremlin to the latest Russian version of Borland's Turbo C++.

During the lunches and receptions, some of the attendees' fears and cynicism surfaced. One physicist told me that research projects in the CIS are being funded for periods of no longer than three months. A great deal of cynicism was also expressed regarding how the CIS would spend the billions of dollars of loans requested from the West.

Besides the nascent ICF, the best way for computer-interested folks in the CIS to exchange information is through user's groups. The largest in the CIS is BUGA, the Borland User Group Association, led by 37-year-old president Andrew Zotov. For the past two years, Borland has sponsored a software developer's contest throughout the Soviet Union. This year, 250 developers

submitted entries. There is plenty of programming talent in the CIS, but it remains a well-kept secret, largely because of a lack of understanding of what is required to copyright, patent, and market programs abroad.

The winning application in this year's contest was FotoRobot, a program that lets you place and search on digitized photographs or sketches within a database. Yury I. Rassadkin, a lecturer at the Moscow State Technical University, headed the development team.

Masha, a program developed by the Ozero Association in Irkutsk to help English speakers learn Russian, captured second-place honors. Masha zeros in on five grammatical parts of Russian that are especially troublesome for non-native speakers: verbs of motion, verbs with reflexive particles, noun cases, verbs in the perfect and imperfect cases, and participles. The program highlights each grammatical point with multicolored pictures. Animated figures keep the student entertained.

The third-place winner, MACRO\_DLL, provides a fully functional scripting language that developers can easily add to their Windows applications. The easy-to-learn language is a subset of Pascal. Once you have developed your application's basic functionality, you can use MACRO\_DLL to send events, open dialog boxes, request information from the user of an application, and generally control your application from a set of easily modified scripts. MACRO\_DLL was written by Anishenko Evgeny and Sushkov Vitaly from the Radio-technic Institute of the Russian Academy of Science in Moscow.

These three programs are a fair representation of the many exciting programming ideas waiting to be discovered outside the CIS. With a little luck—and a lot of help—the CIS should begin to make an important contribution to the worldwide PC community. ■

# A FLIRTATION WITH INNOVATION

**T**AIPEI—Locals didn't seem to mind that the Canadians won Taipei's Dragon Boat Festival races in June, which this year coincided with Computex, Taiwan's largest computer exhibition and a showcase for foreign computer distributors. For a small country with a growing presence in the world market, placing second in the 2000-year-old race may have been nothing less than graciousness toward its international visitors.

The Dragon Boat Festival honors a poet who drowned himself to protest a corrupt emperor. The poet's friends threw rice dumplings into the water to feed hungry fish who might otherwise devour his remains. In a computer market that's constantly redefining "low-cost," Taiwanese manufacturers at Computex are like those ancient Chinese citizens: They're hurriedly packaging low-cost hardware to feed a demanding world.

At first blush, Computex, with its 150 exhibitors, seems like the computer shows in Las Vegas or New York. The largest and most glittering booths housed the island's leading vendors, such as Acer and Mitac. At an international pavilion, Micropolis erected a faux marble booth with white pebble walkways, and Intel flew large balloons outside the convention center to remind passersby that there was a computer show in town. (It was hardly necessary, however: At a traditional tea house miles away from the show floor, Chinese, Europeans, and Americans spread out computer spec sheets on the low wooden tables as they sipped the local oolong.)

Smaller and, in some cases, more innovative companies had modest booths consisting of little more than products and signs. Digging around these displays was sometimes productive. For example, Visionetics International demonstrated the VIGA+ Videographics card, a Targa-compatible graphics adapter. Sun Joy's multimedia subsystem included a SCSI connector, built-in speakers and microphone, and a CD-ROM drive. Primax showed the Colormobile-424A, a hand-size color scanner with a motorized mechanism that pulls the unit down a page at the correct speed and without any side-to-side movement.

Unlike at other computer shows, getting basic product information at Computex can be difficult. Vendors resist quoting prices, especially early on in the show. This is because vendors prefer to wait until they find out what sort of prices their competitors are quoting. This elaborate ballet shows the extent to which price remains the main differentiator between Taiwanese products.

Sales figures bear this out. According to International Data Corp., Taiwan accounted for 6 percent of Asia's

PC shipments in 1991. However, Taiwan received only 2 percent of the region's \$15 billion in sales.

Even more telling are the facts that, in 1991, less than half the Taiwanese-sold PCs carried their own brand names, and the branded market grew by only 5 percent from the previous year. Taiwanese companies are still tied to international distributors that relabel systems.

Nevertheless, Computex vendors gave lip service to backing away from commodity products and clones in favor of technological innovation. New realities in the computer market are pushing Taiwan in this direction. Its PC vendors could survive on 4 percent profit margins when Compaq and other companies charged premiums for brand loyalty. But in the age of low-cost systems from first-tier vendors, Taiwan must find new ways to compete.

Last year, Taiwanese computer companies spent only about \$11.2 million for R&D. In addition, the government's industrial parks serve as models of how the computer industry might evolve. Three parks near Taipei are devoted to software or hardware development, and companies that build manufacturing operations in the parks are given tax breaks and employee housing.

But the proliferation of less expensive PCs and the fledgling nature of Taiwan's R&D mean the country's manufacturers will continue to compete on price for the time being. Some vendors at Computex said they're building ties to mainland China by establishing manufacturing plants there or sourcing commodity items such as VGA cards. Taiwan's mixed success in the late 1980s and the 1990s means that its low wages don't always provide an economic edge internationally. The challenge now is whether Taiwan can grow at the low end long enough to become a leader in innovative technologies. ■

# AutoCAD Gets a Face-Lift

PATRICK WAURZY尼亚K

**The best-selling PC CAD software adds a GUI-like interface and speed enhancements**

Nearly 175 enhancements and a more intuitive interface breathe new life into the dean of PC CAD programs. Cascading pull-down menus, programmable dialog boxes, and context-sensitive help bring GUI-like functionality to AutoCAD release 12, which remains essentially a DOS-based package. AutoCAD release 12 could help the fortunes of Autodesk, which now ranks

as the world's sixth-largest PC software company following the drop in its stock value earlier this year. Autodesk is counting on the new features in release 12, such as support of SQL (Structured Query Language) and PostScript data exchange, to help the company broaden its horizons and open doors to markets outside its formidable strength in desktop CAD.

The new AutoCAD's improvements in terms of ease of use and raw speed became apparent as soon as I loaded the production-shipment version of the software. Installing it is a breeze with Autodesk's installation program. You should be aware, however, that AutoCAD makes significant demands on hardware in terms of memory and disk space, requiring at least 8 MB of RAM and about 25 MB for full installation of all program, help, and tutorial files.

*With the newly integrated AVE Render feature's 3-D rendering capabilities, AutoCAD users can more easily create 256-color or full 24-bit, true-color 3-D visualizations of any 3-D drawing while working in AutoCAD release 12. This includes AME solid models.*

My test machine was an AST Power Premium 4/50d (see the text box "AST 486 Packs an Expandable Punch" on page 47) with an Intel 486DX2 processor, 10 MB of RAM, and a 210-MB hard drive. Thus, running the new version of AutoCAD was no problem. Although Autodesk says the program will run on low-end 386 systems, my impression is that most users won't run AutoCAD without a reasonably fast 386 processor and the requisite math coprocessor, a generous amount of memory, and lots of free hard disk space.

## A Quick Study on Proteus

When talking about the new GUI-like interface, one Autodesk executive likened release 12 to the Greek god Proteus, who was able to take on the characteristics of others yet still kept the same personality underneath. In fact, AutoCAD is supposed to adopt the face of the native environment on which it is running—be it a Mac, Windows, or a SPARC machine. Incidentally, with this program update, Autodesk for the first time simultaneously issued a new AutoCAD release for more than one platform, providing upgrades for both DOS-based PCs and Sun Sparcstations.

I was unable to verify whether the Proteus AutoCAD had such chameleon-like powers, because I ran release 12 only under DOS. Autodesk currently has two ongoing product developments, one for a release 12 running under Windows 3.1 with a Watcom extender product, and a version that will run under Windows NT.

With release 12's new interface, I found myself playing with the program even before bothering to open anything in the 45 pounds' worth of manuals accompanying the program and its companion products, Extension for Windows and AutoShade. Using the mouse, I found release 12 fairly easy to understand even before settling in on the documentation and a short stint with the on-line tutorial.

The release 12 software now greets you with the AutoCAD drawing editor screen, rather than the text-based main menu of previous versions. Most of AutoCAD's major commands can be invoked through clicking on release 12's pull-down menus, which cascade into smaller menus. Pop-up menus can be activated by pressing the Shift key and the right mouse button.

## Integrated Rendering

Among the performance highlights, Autodesk says the program offers much faster

## AST 486 Packs an Expandable Punch

**F**ollowing an old strategy recently popularized by a host of competing PC makers, AST Research has once again produced an expandable line of PCs, the Power Premium 486, that is designed to give users virtually painless access to future CPU developments. AST has been manufacturing so-called expandable PCs since the advent of its Cupid-32 architecture almost four years ago.

I tested a top-of-the-line, Intel 486DX2-based AST Power Premium 4/50d, a small-footprint desktop EISA system optimized for Windows graphical environments. Sporting an integrated Western Digital accelerated graphics subsystem on the motherboard with 512 KB of VRAM (video RAM), which is expandable to 1 MB, the Model 213V test machine also came with an optional 210-MB hard drive and optional 14-inch Super VGA-LR monitor (which costs \$545).

To run AutoCAD release 12, I had to add RAM to bring the 4/50d up to speed in meeting Autodesk's recommended 8-MB memory requirement. With the Power Premium line, AST touts an easy upgrade and expansion path, something I can indeed attest to:

Adding 4 MB of memory to each of two SIMMs was simple. The 4/50d's cover, secured by three hand-tightened screws, popped off easily. Once I got inside, I could easily pull out the processor board, which can be populated with up to 16 MB of memory, from the motherboard to quickly snap in the SIMMs. The whole process took about 15 minutes.

With regard to expandability, the 4/50d's processor board conveniently

offers an empty Intel Overdrive socket next to the DX2 processor into which you can later add Intel's clock-doubling chips to speed up older systems in the future. In addition, you can upgrade AST's Power Premium 386SX- and 386DX-based systems to the 486DX2 by inserting an AST Fastboard upgrade.

Aside from being blazingly fast, one of the AST machine's real strengths lies in its ability to quickly perform graphics operations. Using Western Digital's WD90C31 graphics chip with BitBlt and a hardware cursor, the 4/50d accomplishes Windows operations in a fraction of the time they take on 386-class systems. It moves windows without the usual flicker found on such systems with

standard VGA graphics.

As for sheer CPU performance, BYTE's low-level DOS benchmarks showed that the 4/50d clearly outdistanced competing systems, such as the Tandon 486/25, while making machines like the Compaq Deskpro 386/25e look a bit long in the tooth. In short, the 4/50d is one system that likes to do Windows fast, while holding the promise of easy upgrades to next-generation processors in the future.

zoom and pan capabilities through the use of 32-bit vector space technology that virtually eliminates regenerations of drawings after you alter them. An enhanced Hide command uses virtual memory and an advanced algorithm to dramatically speed up hidden-line removal in AutoCAD drawings. I found this to be particularly true when doing regenerations on drawings that I had altered through additions or when removing the hidden lines.

One of release 12's nicest features is the integrated AVE (AutoCAD Visualization Extension) Render facility, which replaces the optional AutoShade 2 package as a way of doing basic rendering and shading of 3-D objects within AutoCAD. If you want more complex, photo-realistic 3-D renderings, you can buy the AutoShade 2 with Renderman package. This incorporates technology that Autodesk licensed from Pixar.

With the integrated Render command, I was able to generate 3-D visualizations of AutoCAD sample drawing files, such as a kitchen scene (see the screen), by just calling up a wireframe drawing and clicking on the Render menu at the top right-hand side of the screen. With Render selected, AutoCAD quickly processed 3-D renderings of drawings to a separate screen that can be captured in a frame buffer and saved in one of several formats, including

TGA, TIFF, and GIF. The speed of the rendering process varied between the drawings, but the kitchen scene took slightly over 2 minutes.

The AME (Advanced Modeling Extension) module has been improved. Version 2.1 has a new interface featuring pull-down menus and dialog boxes. The module also adds render support in which AME solid models that are rendered with the AVE Render feature are automatically meshed to produce higher-quality renderings.

With a list price of \$3750 (a \$250 increase over release 11), AutoCAD release 12 is not exactly an impulse buy. However, engineers requiring a serious full-fledged drafting package along with tools for mechanical modeling and 3-D visualization may find the program worth the hefty expense. ■

*Patrick Waurzyniak is a news editor for BYTE in San Francisco. You can reach him on BIX as "patrickw."*

### THE FACTS

#### AutoCAD release 12

\$3750

Advanced Modeling Extension, \$495;  
AutoShade 2 with Renderman, \$1000

#### System requirements:

A 386-based PC with a math coprocessor, 8 MB of RAM (11 MB is recommended), 11 MB of free hard disk space, DOS 3.3 (DOS 5.0 is recommended), an AutoCAD-supported video display and pointing device, and a plotter or printer-plotter.

#### Autodesk, Inc.

## DATA COMPRESSION LIBRARIES™

PKWARE's® Data Compression Libraries™ allow software developers to add data compression technology to software applications. The application program controls all the input and output of data allowing data to be compressed or extracted to or from any device or area of memory.

- All Purpose Data Compression Algorithm Compresses Ascii or Binary Data Quickly with similar compression achieved by the popular **PKZIP** software, however the format used by the compression routine is completely generic and not specific to the PKZIP file format.
- Application Controlled I/O and memory allocation for extreme flexibility.
- Adjustable Dictionary Size allows software to be fine tuned for Maximum Size or Speed.
- Approximately 35K memory needed for Compression. 12K memory needed for Extraction.
- Compatible with most popular Languages: C, C++, Pascal, Assembly, Basic, Clipper, Etc.
- Works with any 80x86 family CPU in real or protected mode. \$295.00
- No runtime royalties.

## RUNNING OUT OF EXPENSIVE DISK SPACE?

**PKzip** can help! **PKzip** compresses your files to free up disk space and reduce modem transfer time. You can compress a single file or entire directory structures with a single command. Compressed files can be quickly returned to their normal size with **PKunzip**.

Software developers can reduce the number of diskettes needed to distribute their product by using **PKzip**. Call for Distribution License information.

The included **PKzip** utility lets you store compressed files as a single self-extracting .EXE files that automatically uncompresses when run. Only \$47.00

# HERE'S A HOT TIP: GATEWAY 2000 IS A SURE THING!

Before you put your money down, study the statistics on the contenders. The current trend in the PC industry is to cut prices by stripping down systems and replacing quality components with inferior parts. Even companies with long-standing traditions of quality are doing it. At Gateway, we've never lowered our prices in response to market pressures. We've never needed to. And we'll never sacrifice features or quality to make prices look better. Our race strategy has always been to offer the best price, quality and service in the market.

## Price

Gateway's price advantage is simple business economics. We have huge volume buying power. The little guys don't. We have low overhead. You don't pay for glass palaces with us. And we operate on conservative margins. While we've grown big and strong on these margins, our margins are a starvation diet for some of our competitors. We lower prices whenever we can. And we've been quietly doing this since day one.

## Quality

When surveyed recently by *PC Magazine*, Gateway customers gave their systems the **highest reliability rating** among 35 of the nation's top PC manufacturers. That's certainly an indication that our great prices aren't a trade-off for quality or performance. Gateway systems are loaded with top-of-the-line components and performance features. We know you don't want a cheap computer. You want a great computer at a great price. You want a Gateway!

## Service

We know how important service is to you. That's why we're constantly working to provide the best in the business. Service is one of the reasons we received the **highest customer satisfaction rating** in *PC Magazine's* service survey. Gateway scored "significantly better than any other manufacturer" when PC users were asked, "Would you buy again from the same manufacturer?"

**Price. Quality. Service.** This simple formula still equals the best value in the industry. Add Gateway's ability to bring you the latest technology at the best prices, and you have a triple-crown winner. So put your money on a sure thing. With Gateway 2000, you're guaranteed to come out a winner!

## GAIN THE WINNING EDGE WITH 486 PERFORMANCE

Gateway's powerful 486 models give you the winning margin! And when you recap our new price reductions and compare us feature-for-feature against other runners, you'll find you won't even have to play your hunches — Gateway 2000 is the odds-on favorite.

### 25MHz 486SX

■ \$1895

This is the hottest value on the market! You get 486 technology, including an 8K internal cache and burst mode, at a 386 price. And besides being faster than any 386 on the market, the 486SX/25 is upgradeable to 50MHz if you need increased performance in the future.

### 33MHz 486DX

■ \$2395

We recently increased performance and lowered the price of our best-selling, award-winning 486DX/33 by adding an ATI<sup>™</sup> Graphics Ultra video card and a faster, 200MB Western Digital hard drive with 13ms access time. At \$2,395, the price/performance ratio on this machine is hard to beat. Plus, you can upgrade this system to 66MHz.

## 50MHz 486DX2

■ \$2695

Gateway 2000's new 486DX2/50 systems, ISA and EISA, incorporate Intel's speed-doubler technology. The internal core of the DX2 processor executes at 50MHz while communicating with the external memory bus at 25MHz. Our benchmarks show a 35% increase in performance over a 33MHz 486DX.

This system also has the new, faster Western Digital 200MB hard drive and the high-performance ATI Graphics Ultra video card.

## 50MHz 486DX2 EISA

■ \$3695

Our EISA system comes standard in a floor-standing tower model, and includes a large, fast SCSI drive and an EISA SCSI controller as standard equipment. RAM cache is expandable to 256K.

## 66MHz 486DX2

■ Call for details.

Gateway 2000 systems come fully configured with all the performance features you want, including two floppy drives, a programmable 124-key AnyKey™ keyboard, a Microsoft® mouse, MS-DOS® 5.0, Windows™ 3.1 and your choice of one application software option. See the back pages of this ad for complete configurations and information about software options, upgrades and peripherals.

 **GATEWAY2000**  
*"You've got a job in the business."*

486 SYSTEMS

# GATEWAY 2000 NOTEBOOKS PUT YOU IN RACING FORM

## The Nomad Series

Our small, lightweight Nomad notebook computers let you take desktop computer performance anywhere you go. Nomad models come with VGA graphics, a FieldMouse™ (portable pointing device), built-in floppy drive, and an 80 or 120MB hard drive, depending on the model. A patented power-management system gives you hard-to-beat battery life benchmarks — over six hours of operation from a single battery on the 25MHz 486DX system!

The Nomads have a bright, crisp, backlit, 10-inch triple supertwist VGA screen — resolution is 640 x 480, 64 gray scale, on the LCD. With simultaneous video, you can also display on an external monitor.

*All these features ... and the Nomads are made in the U.S.A.!*

### Nomad 325SXL ■ \$1995

25MHz, 386SXL processor

■ 4MB RAM ■ 80MB hard drive

### Nomad 420SXL ■ \$2695

20MHz, Intel® 486SXLP processor

■ 4MB RAM ■ 80MB hard drive

### Nomad 425DXL ■ \$3495

25MHz, Intel 486DXLP processor

■ 4MB RAM ■ 120MB hard drive

## For The Power User On The Go

### Nomad Combo ■ \$3995

Since the Nomad 425DXL has all the power of a 486DX desktop system, it's the ideal portable/desktop combination system! Save with this combo package!

**Combo Highlights:** Nomad 425DXL ■ 15" CrystalScan 1572FS color monitor

■ programmable 124-key AnyKey™ keyboard

## The HandBook™

If you like to travel light, you can't go wrong with the HandBook. It weighs only 2.75 pounds and measures roughly 6 x 9 inches — smaller than this magazine! Yet it has 286-class performance and real PC features including a bright, backlit screen, a bonafide 40MB hard drive and a comfortable keyboard (no chiclet keys). Downloading information from your HandBook to your office computer is easy with the serial cable and file transfer software provided.

### HandBook ■ \$1295

## For The Executive On The Go

### HandBook Combo ■ \$3995

Combine the portability of our HandBook with the power of our 33MHz 486 desktop system with communication capabilities — and you have a terrific combo, Gateway value-priced!

**Combo Highlights:** HandBook with 2,400 bps external modem and communication software

■ 33MHz 486DX system with 120MB IDE hard drive ■ TelePath™ fax/modem package

PORTABLES

# GATEWAY 2000 ADDS A FREE SOFTWARE BONUS

## Choose Your Free Software Option

With the purchase of any Gateway 2000 mini desktop, desktop or tower computer system, you receive your choice of one application software option at no additional cost. We'll install your software on your hard drive, optimally configured for your system and Windows, and provide master diskettes and manuals. You may also purchase a second application software option, pre-installed, at extremely competitive prices.

Installation and setup errors are responsible for over one-third of all software problems. You can eliminate that possible source of problems by purchasing your system from Gateway with software pre-installed, tested, and ready to run the moment your system arrives. Add that advantage to the hard-to-beat prices, and Gateway is the only logical choice for PCs and software!

*Choose one of the following application software options:*

### Option #1-Microsoft Excel for Windows™ 4.0

■ New version of this powerful spreadsheet, includes online help for Lotus 1-2-3® users

### Option #2-Microsoft Word for Windows™ 2.0

■ Best-selling word processor for Windows. New version 2.0 adds online help for WordPerfect® users

### Option #3-Microsoft PowerPoint for Windows™ 3.0

■ Easy-to-use desktop presentations program creates high-quality overheads and 35mm slides

### Option #4-Borland® Paradox® 4.0

■ The award-winning database from Borland

### Option #5-The Entrepreneur Pack

■ Includes the latest Windows versions of Microsoft Works™, integrating word processing, spreadsheet, and database in one easy-to-use program; Microsoft Publisher™ for creating page layouts; Microsoft Money™ to help you write checks, set budgets, track expenses; PLUS an Entertainment Pack with eight games, including Tetris®

### Option #6- The Windows Programmer Pack

■ Includes everything you need to create programs for Windows: *Microsoft QuickC for Windows*™, *Windows Control Development Kit*™, *Windows Help Compiler*™ and *Windows Programmers' Online Reference*™.

### Option #7-Microsoft Project for Windows™ 3.0

■ Flexible and easy project management program

*NOTE:* If you would rather replace an option with *Microsoft Office*™, it is available for \$175. This package includes *Word for Windows*, *Excel* and *PowerPoint*.

### More Software At A Great Price!

The following applications are only available with the purchase of a system, pre-installed, or to Gateway customers.

**Central Point® Anti-Virus 1.2 For Windows ■ \$75**

**Central Point Backup™ 7.2 for Windows ■ \$75**

**The Norton Desktop™ 2.0 and Prisma Your Way 2.0 For Windows ■ \$95**

*These offers include the identical applications contained in retail packages but will not include the retail box. You get all master diskettes and manuals, shrink-wrapped and packaged in a Gateway 2000 box.*

## Peripherals

### The 15-Inch CrystalScan 1572FS

You'll enjoy your new Gateway 2000 computer even more if you choose the new 15-inch CrystalScan color monitor option. The CrystalScan 1572FS has a flat, square, non-glare screen to reduce distortion around the corners and provide edge-to-edge display area.

The CrystalScan 1572FS is an upgrade option only with the purchase of a 386DX or 486 system for an additional \$195.

### The Gateway 2000 TelePath™ Fax/Modem

The Gateway 2000 TelePath is a 14,400 bps mode, V.32bis, with 9,600 bps fax capability. The TelePath comes with WinFax Pro™, Crosstalk™ for Windows, Qmodem™ and a free 30-day basic services CompuServe® membership — all for only \$195!

■ Fax mode: V.17, V.29 and V.27ter

■ Data mode: V.32bis, V.32, V.22bis, V.22, V.21, Bell 212A and 103, V.42 and MNP 2-4 error correction, V.42 bis/MNP 5 data compression

### Included With Every System:

■ One-year limited warranty ■ 30-day money-back guarantee ■ Lifetime toll-free technical support ■ Free on-site service to most locations (*factory service only for notebooks*) ■ Free bulletin board technical support ■ C.O.D. terms and major credit cards honored ■ Net 30-day credit terms and leasing options available to qualified commercial customers

*Sorry — we sell peripherals only with the purchase of a Gateway 2000 system, or to people who are already Gateway 2000 customers. For fastest service, call our new direct line for the **Component Add-On Division: 800-252-3333**. Please have your customer ID handy when you call.*

# Acquiring Data Through Windows

ANDY REINHARDT

**LabView for Windows uses advanced visual programming, but the learning curve is steep**

The new LabView for Windows from National Instruments marks yet another turning point for data acquisition: The software not only is incredibly powerful within its niche, but is also a leading example of the industrywide trend toward visual programming. This package lets you design complex real-time data collection and analysis routines using only icons, without typing a single line of code. Although it's not the only such software for data acquisition, LabView may be the first that

Data acquisition has come a long way since the days of the DEC MINC. The arrival of add-in cards for the Apple II and IBM PC in the early 1980s heralded a lower-cost, more personal approach to collecting and analyzing laboratory data. Ever since then, microcomputer-based data acquisition systems have gotten more sophisticated—although not necessarily much easier to program.

does not sacrifice flexibility and configurability in the name of ease of use.

As with other nonprocedural visual programming tools, however, there is a price to be paid for LabView's approach: The learning curve is steep to create even a simple procedure, such as reading a voltage and displaying it on a graphical strip-chart recorder. And when your procedure gets very sophisticated, structuring and debugging the application can become fiendishly difficult.

## Getting the Data

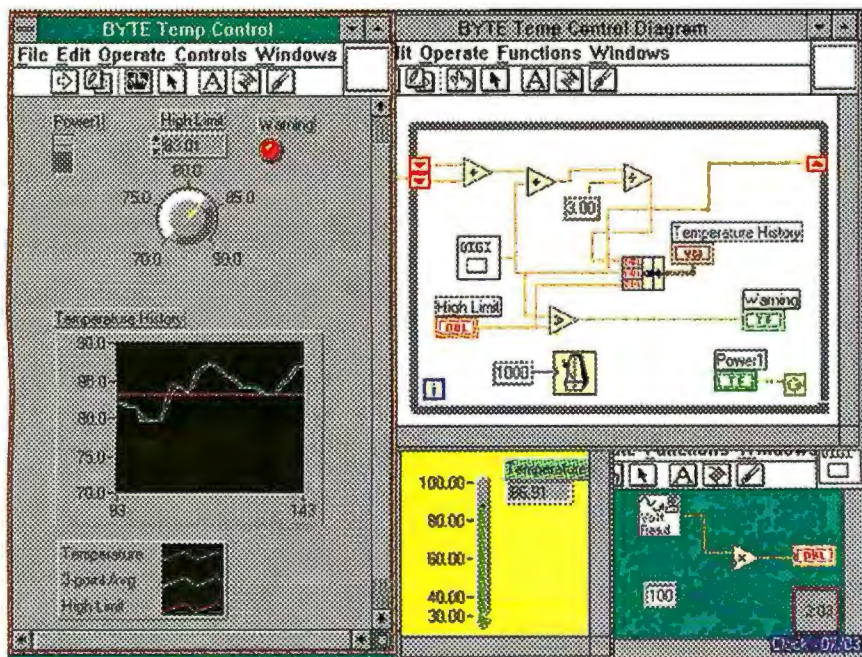

Applications for data acquisition range from biological research in university labs to materials testing at auto makers. Because these uses vary so widely, the hardware and software tools to automate data acquisition must be general, yet specific enough to obviate custom programming.

The typical data acquisition setup includes transducers that measure real-world phenomena (e.g., temperature, pressure, and light) and convert them to voltage. The sensors are wired to A/D conversion hardware, either a stand-alone instrument that outputs formatted digital signals—RS-232 or GPIB (general-purpose interface bus)—or a card installed in the backplane of a PC, Mac, or workstation. Many applications also include TTL-level digital inputs. Data acquisition software packages need to support these basic I/O functions with precise timing control.

Once acquired, digital data is usually stored in RAM and/or saved to disk, displayed on the screen, and analyzed in real time or off-line. The software must create data arrays, support rich graphics, and include mathematical and statistical functions for data analysis. In some automated research applications, the computer also controls actuators that open and shut valves, start and stop motors, or turn on lights.

LabView for Windows is designed to work with the wide array of A/D and D/A hardware sold by National Instruments, as well as with serial and GPIB instruments from companies like Hewlett-Packard and Fluke. It does not directly support third-party boards. The minimum computer necessary to run LabView is a fast 386 PC with a math coprocessor, 5 MB of RAM, 15 MB of free disk space, Windows 3.1, and a mouse. A color display and a printer are desirable.

Because Windows is not a real-time operating system, National Instruments

LabView uses a CAD-like technique that lets you draw your data acquisition application. In this example, the instrument panel on the left is driven by the diagram on the right. The Digi icon encapsulates the display and diagram at the bottom right.

includes with LabView virtual drivers for DMA and interrupt service that replace those supplied with Windows 3.1. These alone won't make Windows a preemptive multitasker, but assuming that the acquisition hardware samples data at precise intervals and stores it in a buffer, LabView's

drivers ensure that data gets routed to the system before it is overwritten.

### The Virtual Instrument

LabView for Windows is designed around the notion of the *virtual instrument*, which is a pictorial representation of an instru-

ment's front panel. The power of LabView is that you can create a data acquisition application largely by designing what you want it to look like. Implicit in this approach is an object orientation, because the screen icons represent functions whose inputs and outputs you also specify graphically and that, once defined, can be reused.

When you load LabView, you start with a blank page onto which you drag icons that symbolize controls (e.g., knobs, slider bars, and user input fields) and readouts (e.g., numerical LEDs, bar charts, and alarm indicators). As each component is added to the display screen, a schematic of it is simultaneously added to a matching diagram that parallels the virtual instrument. To create the relationships between the components of the display, you link them (or *wire* them) on the diagram.

For example, you could start by selecting a graph display icon for the virtual instrument. On the diagram, this graph will show up as an output. You must then specify the source of the data that will be pumped into the graph by selecting the actual instrument (i.e., card location and port or device and channel). When these two icons are connected using the wire tool, the software connection is made as well. If you want to amplify the voltage by 100 before delivering it to the graph, you drop in a multiplication icon and a constant and rewire the drawing.

In more complex displays, you can select from hundreds of icons for numeric values, Boolean readouts and switches, strings, arrays, graphs, and decorative elements. On the diagram, you can select constants, math functions (e.g., arithmetic, trig, and log), comparators, programming constructs (e.g., FOR loops), strings, arrays, data-conversion routines, and specialized analytical tools (e.g., signal processing, linear and nonlinear filtering, and regression). The diagram menus also give access to file and data I/O functions.

Setting up applications in LabView involves creating layers of displays and diagrams, which can be encapsulated into icons. This is where the object orientation comes into play. The display you see when running an application is only the top layer. Below that is the diagram, which can contain icons that are themselves defined in other display/diagram pairs. Once a sequence is defined, you can design an icon for it and add it to the library. For example, in the screen, the diagram in the bottom right-hand corner belongs to the display

# BEFORE PROTECTING YOUR SOFTWARE...

SEE US AT  
**COMDEX/Fall '92**

...against piracy and unauthorized use, make sure that your protection system has all the following qualities:

## A GOOD HARDWARE KEY

Hardware-based software protection systems are now the standard worldwide. However, not all keys are the same. A good key should have all the following features:

- ✓ Compatibility and transparency. The key should work without any problem on your customers' computers. The user should be able to forget the key after connecting it.
- ✓ Unbreakable electronics. A customized ASIC (Application Specific Integrated Circuit) component should be integrated in the key. This prevents reverse engineering and makes cracking virtually impossible.
- ✓ A unique and inaccessible software developer's code burnt into the ASIC. (This code should not be held in the key's memory, where it can be read and altered.)
- ✓ A Read/Write Memory inside the key should be available on demand. The memory should be writable in the field, on any PC, without any special programming equipment.
- ✓ Very low power consumption, enabling the key to work even under the worst power conditions, on PCs and laptops, with or without a printer.

## POWERFUL SOFTWARE

Since it's practically impossible to crack or duplicate a key having all the features mentioned above, a pirate will usually go for the software linking the protected program to the key. Therefore, check that your protection software has all of the following:

- ✓ A Linkable Protection Module with which calls can be made to the key from any point in the protected program.

- ✓ An "Envelope" installation program. Such programs enhance security while making it possible to protect a software even without its source code.

- ✓ Sophisticated antidebugging and encryption mechanisms.

## HASP®, THE PROFESSIONAL SOFTWARE PROTECTION SYSTEM, OFFERS YOU ALL THESE FEATURES AND MORE:

HASP was designed by a team of computer experts, professional cryptologists, and electrical engineers. As a result, HASP keys are supported by what is probably the best software in the market, and the HASP system has worked on every computer it has been tried on. In addition to all the features mentioned above, HASP provides:

- ✓ A Full Authorization System for protecting dozens of programs using only one key.
- ✓ A Pattern Code Security System (PCS) enabling parallel processing of multiple calls by the Linkable Protection Module.
- ✓ A Virus Detection option that can be incorporated in the protected program to check whether it has been infected by a virus or tampered with in any way.
- ✓ Several HASP keys can be daisy-chained.

## NETHASP, SOFTWARE PROTECTION FOR NETWORKS

- ✓ Only **one** NetHASP key is needed to run a protected program from many stations in a network. NetHASP provides full support for protecting DOS and WINDOWS software under network environments, including Novell dedicated & non-dedicated servers, Lan Manager, Lantastic, Banyan, DLink, and NET-BIOS based LANs.

**IN A TEST CARRIED OUT BY AN INDEPENDENT LAB, HASP WAS THE ONLY KEY WHICH WAS NOT BROKEN\*.**

## OPERATING ENVIRONMENTS

- ✓ **PC:** DOS, WINDOWS, OS/2, SCO UNIX, SCO XENIX, AIX, AUTOCAD, DOS EXTENDERS
- ✓ **MAC (ADB Port):** System 6.0.5 and up
- ✓ **NEC (Serial Port):** DOS, WINDOWS

## AND THE BOTTOM LINE:

We offer some of the most competitive prices in the market.

Since 1984, HASP has enabled thousands of software producers in more than 40 countries, including several Fortune 500 companies, to protect their software.

To learn more about why so many professionals have chosen HASP, please contact:

next to it, which, in turn, defines the Digi icon in the active window.

If all this sounds a little overwhelming, it is. National Instruments has made the job of getting started with LabView a bit easier by providing examples, a good tutorial walk-through, and canned icons for basic activities (e.g., reading a voltage). But the fact remains that it is probably more difficult to set up a simple application using LabView than with procedural code. As with any program, some of the learning curve is semantic and syntactic, but much of it has to do with the *inherent invisibility* of the layers of diagrams and the non-procedural flow of the program.

Making even a simple change to a diagram (e.g., adding a second plot to a graph) involves complex steps, such as including a shift register in the program loop and a bundle icon to group multiple inputs into a single graph. Some diagrams involve dozens of icons, and each may have been separately defined. To change

them requires drilling down through many layers to find the right diagram. Also, the user interface was at times inconsistent.

On the other hand, LabView is remarkably powerful and complete. Although an API is available for accessing external code modules, few applications will require this because practically any data acquisition process can be designed graphically. LabView also includes debugging features that make it possible, for example, to find the source of a data value, set breakpoints, step through a block diagram, and highlight the sequence of execution.

Despite having been designed specifically for data acquisition and control, LabView for Windows is a shining example of visual programming. Setting up a data acquisition procedure is not much different than writing any event-driven program, and the model employed by LabView allows for reusability and freedom from coding, as well as a high degree of complexity. This package deserves to be con-

sidered by anybody involved in data acquisition—as well as by anybody eager to study a sophisticated example of state-of-the-art visual programming tools. ■

## ProPC/TV

COMPUTER TO TV CONVERTER DEVICE

### AMAZING!

Aitech International... the innovative leader in multimedia and desktop video has gone and done it again!

ProPC/TV is the world's finest and most cost effective external device used to take computer text, graphics and games and allows you to show them on your TV screen.

### THE BETTER SOLUTION

Every notebook or portable computer user knows the disadvantages of using their monochrome display. Aitech's ProPC/TV provides a better solution to the high cost of large screen monitors.

## AItech

Vision for Multimedia

### EFFORTLESS INSTALLATION

ProPC/TV is about the size of a cassette tape case, weighing just a few ounces. It installs quickly and easily, and comes with all required cables.

Call an Aitech sales representative today for more information about the ProPC/TV.

830 HILLVIEW COURT, SUITE 145, MILPITAS, CA 95035 1-800-882-8184

## The Olivetti Quaderno: A New Voice In Portable Computing

**L**ONDON—Perhaps the most interesting aspect of the **Olivetti Quaderno** is the integration of a DSP (digital signal processor) into the basic design, providing some limited support for speech. The 8086-based subnotebook is a 2¼-pound DOS-compatible machine with a 20-MB hard drive. The machine is packaged in a stylish case, and its proportions are similar to those of a hard-back book; it is approximately 8 inches wide, 5 inches deep, and just over 1 inch high.

The top of the case has a cutout for a small LCD screen that shows the time and some system status features. Six buttons (i.e., stop, pause, play, record, fast forward, and rewind) control the speech module while the Quaderno is still closed. This lets you create speech memos in those situations where you have insufficient time to open the machine and type the information in.

Along the right side of the case are a number of connectors and controls, including serial, parallel, and headphone connectors; a reset switch; and a speaker volume control. The serial and parallel ports are of the mini-DIN-8 variety, but the manufacturer does include a cable converter. The only other external feature is a PCMCIA 1.0-compatible slot.

Opening the clamshell-style machine reveals an unusual keyboard and a mediocre 7-inch screen with support for eight levels of gray. The screen isn't backlit, and, although it supports Olivetti's 640-by 400-pixel super CGA mode, I found that it was difficult to read in all but the best light.

The 93-key keyboard layout is similar to the standard Toshiba layout except that the up-arrow key is located between the Slash and Shift keys. This was done to leave the arrow keys in the familiar inverted T shape. But by moving the Shift key, Olivetti has made the keyboard difficult to use. Using both this keyboard and a normal keyboard regularly could be confusing. Above the main keyboard is a useful soft-key numeric keypad. The on/off switch is located to the left of the numeric keypad and has a raised ridge around it to prevent accidental activation.

Internally, the machine is designed

around the 16-MHz NEC V30HL 8086-compatible processor. It has 1 MB of RAM, of which 384 KB is configured as expanded memory. The DSP is provided by Analog Devices, and future Olivetti machines may well provide additional functionality through the DSP. Currently, only a speech module is provided, which creates speech files compatible with a number of other vendors who use the Analog Devices DSP. The files are not compatible with Sound Blaster files, and no conversion utility is available yet.

The Quaderno's power comes from a rechargeable nickel-cadmium battery pack, although six standard AA batteries can be used if needed. Battery life varied depending on the processor speed selected and whether the serial port was used, but around 10 hours seems to be the average.

The Quaderno ships with DOS 5.0 installed and includes a configurable suite of utilities written by Olivetti. The software includes a notepad, calculator, schedule, phone book, file manager, voice memo manager, and configuration program. The facilities are basic, and I found that I used only the voice memo manager and the configuration program with any regularity.

The voice software is a good but rudimentary first attempt. It simply lists recorded messages in order, with timings noted in seconds. Individual memos can be selected and played back. I'm looking forward to future machines that use the Analog Devices DSP a bit more fully.

Upon installing a copy of Quarterdeck's Desqview, I found some problems with Olivetti's keyboard driver. The Desqview pop-up key did not operate, and Desqview's useful Ctrl-Alt-Del trapping mechanism failed, too. This left Desqview severely crippled.

Testing this machine revealed some interesting problems with Microsoft's notebook power management software. Running an identical Quattro Pro spreadsheet recalculation on the Quaderno and a slower Toshiba T1000XE revealed that the recalculation took eight times longer on the Olivetti machine.

After some investigation, I discovered that the power saver's processor pause period interfered with the back-

ground processing that the recalculation routine used. To remedy the situation, I had to disable the power saver, reducing the potential battery time.

The Quaderno has many virtues, including size, weight, and performance. However, I was left feeling that the software for the system was a rough cut and that future versions of the Quaderno and other additions to Olivetti's subnotebook range would provide refinements to the seemingly rushed software.

—Andy Redfern

## A4 Notebook Reveals Acorn Is ARMed and Ready

**L**ONDON—When U.K. system manufacturer Acorn developed a machine based on a processor it had designed itself, few gave the company much chance of surviving. Acorn, an Olivetti subsidiary, developed the 32-bit ARM (Advanced RISC machine) processor to replace the 6502 used in its previous machines. Now that Apple has announced its intention to use the ARM processor in its Newton products, ARM-based systems are taking on new appeal.

Acorn Computers' latest machine is an ARM-based notebook to complement its desktop Archimedes line. The new notebook, called the **Acorn A4**, comes in two variations. The entry-level system has 2 MB of RAM and a 2-MB floppy drive; the high-end model has 4 MB of RAM and a 60-MB hard drive. Both machines run version 3.0 of Acorn's proprietary RISC OS graphical operating system, but they can also run DOS programs by software emulation.

The A4 has an edgelit LCD screen with VGA resolution of 640 by 480 pixels and 16 levels of gray. The system features an 83-key U.K.-style keyboard, and there are connectors for an external analog RGB monitor and an AT keyboard. A serial port and a bidirectional parallel printer port are fitted, but for unknown reasons, the latter will not support LapLink. The A4 weighs 6½ pounds, a quarter of which is due to the massive rechargeable nickel-cadmium battery pack. Despite the size of this pack and the use of power-saving design techniques, it provides a disappointingly average 2½ to 3½ hours of use.

The system comes with a three-button conventional mouse, although in cramped spaces you can emulate a mouse by using the special Fn modifier key with the Q, W, E, and cursor arrow keys. There's a neat LCD fuel gauge-type battery indicator below the keyboard. The separate AC power unit trickle-charges the batteries during normal use and can handle any nation's supply voltage.

Driven by a 12-MHz ARM3 RISC processor capable of 12 MIPS, the machine is roughly the equivalent of a fast 486 PC or a high-end Mac in terms of computing

power. The 2 or 4 MB of RAM is contiguously addressable and is managed by Acorn's sophisticated MMU (memory management unit) chip, which lets you allocate more memory to applications or to system resources interactively at run time.

The RISC OS operating system is held in 2 MB of ROM, with a windowing GUI and a set of core applications; bit-map, vector graphics, and font editors; and a powerful, structured BASIC. Long before Microsoft Windows 3.0 or Apple's System 7.0 appeared, RISC OS featured a fully multitasking, windowing interface with support for data types such as antialiased outline fonts and stereo sounds in a more integrated way than either competitor.

The A4 is a formidable portable-computing platform when running RISC OS applications like the excellent Impression desktop publishing system. It outstrips the PowerBook 170 in terms of raw CPU speed and video and graphics performance, but the choice of software is limited. My only serious criticism is that the mouse cursor was far less visible on the gray-scale LCD screen than on the color screens to which I'm accustomed, and it tended to get lost when moving rapidly. However, you can use RISC OS's global palette control to improve matters somewhat by assigning the cursor full-intensity white while dimming your applications' backgrounds to a light gray.

The optional Acorn PC Emulator program creates what appears to be an ordi-

nary DOS 3.3 session within a RISC OS window, and its fidelity is good enough nowadays to run Flight Simulator, Lotus 1-2-3, Sidekick Plus, and even Microsoft Windows. The snag is that even the nippy ARM processor takes a big hit when software-emulating an 8086. Thus, DOS performance is at the level of a slow 286.

However, you can run text-based DOS applications like word processors very well, and there are good cut-and-paste facilities between DOS and RISC OS; you can cut screens as either text or bit maps and paste them straight into RISC OS without the need to store an intermediate disk file. RISC OS can read and write DOS-format floppy disks.

The A4 will appeal mainly to existing Archimedes users. It's reasonably priced for its power when running RISC OS, but it would not be a sensible purchase merely to run DOS. However, Apple's support of the ARM processor may make Acorn a company to watch.

—Dick Pountain

# What Comes After Spreadsheets?

## Introducing New CA-Compete!

Up to 12 different dimensions you can navigate through with the click of a mouse.

Uses simple English—no column or row references needed.

Name and save multiple views. Look at up to 12 at a time.

Extra sheets available for custom reports and additional calculations.

The screenshot shows the CA-Compete! interface with a menu bar (File, Edit, Formula, Format, Options, Tools, Window, Help) and a toolbar. The main window displays a 'Variance Report by Product Eastern Region - 1989'. The report is organized into two main sections: 'Product Actuals - 1989' and 'Variance Report'. The 'Product Actuals' section shows data for LPs, CDs, and Tapes across various metrics like Units, Price, Sales, COGS, SG&A, Total Cost, and Profits. The 'Variance Report' section compares Actual, Plan, and Variance for the same metrics. The interface uses a color-coded system with blue, yellow, and red highlights to distinguish different data areas.

Global formulas you can apply to a range of cells.

Presentation-quality output with fonts, borders, and shades.

Looks like a spreadsheet with standard commands you know, like cut, paste, copy, and annotate.

Chosen "Best of 1990" by PC Magazine.\*

Welcome to the world of multi-dimensional modeling & viewing.

Unlike two-dimensional spreadsheets, CA-Compete! lets you model up to 12 different dimensions and navigate between them

### Ami Pro 3.0 Sets a New Standard

I'm dating myself when I say that I remember when computer word processing meant putting plain ASCII text on the screen. To put it mildly, things have changed. **Ami Pro 3.0**, the latest entry in the explosive battle of Windows high-end word processing packages, ups the ante in the fight among the Big Three: Ami Pro, Microsoft Word for Windows 2.0, and WordPerfect for Windows.

The line between word processing and desktop publishing is fast becoming more and more blurry. Features in Ami Pro 3.0 are considerably more advanced than those found in true desktop publishing packages just a year or so ago.

Ami Pro 3.0 is certainly a major upgrade to version 2.0, which was introduced about a year ago. Some of the features (e.g., drag-and-drop text editing) are obviously reactions to the capabilities of Word for Windows 2.0. But Ami Pro goes beyond reactive design. It's full of clever features that make your work easier and faster.

My reaction to Ami Pro 3.0's fast format ability was, "Why didn't anyone think of this before?" Like many writers, I start by putting all the words down on the screen. I go back and worry about the look and feel later. With other packages, changing text attributes (e.g., bold and italic) or fonts is a multistep process of marking the text and using multiple menus or icons to choose the look and feel. With fast format, all I need to do is point to some text and click on a key. Ami Pro "remembers" the format. I can then go anywhere else in the document, mark text, and instantly change it to match that earlier style. (It's a

lot faster to do than to explain.)

One of the things I like best about Ami Pro 3.0 is that it comes preconfigured with loads of useful items. There are 55 style sheets, with predefined styles for everything from business letters to faxes to newsletters. Graphics haven't been forgotten, either: There are over 100 pieces of predefined clip art that you can integrate into your documents. (You can, of course, import any graphical images.)

It would take thousands of words to cover all the features in Ami Pro 3.0. There are the usual bells and whistles you'd expect in a high-end package, such as automatic envelope and label printing, checking the grammar and spelling, and an elegant and easy-to-use mail merge. Unique features include SmartClick, which uses the often-ignored right mouse button for quick descriptions and quick changes. There's also Clean Screen, a nod toward WordPerfect users who like the minimum amount of distracting elements on the screen.

Last but not least, I have to mention

SmartIcons, the customizable icon sets that are available in all of Lotus's Windows packages. The concept has been extended in Ami Pro 3.0 with seven sets of icons that you can mix, match, and edit to your heart's content. It's a useful way to make your work go faster and smoother.

Ami Pro 3.0 is a large program. Like Word for Windows 2.0, it requires about 15 MB of hard disk space. There's also a laptop installation option that loads the minimum features in 3.5 MB.

Choosing among high-end Windows word processors is not easy. The competing packages all have a core of similar features coupled with individual personalities. It's like choosing among a Ford, a Chevy, and perhaps a Toyota. At the bottom line, Ami Pro 3.0 sets a new standard that the competitors will rush to match.

—Stan Miastkowski

### New Gigabyte Drive Is Portable but Pricey

The old bromide that "programs expand to occupy existing storage" still holds true. For MacFolk working with digital video, 24-bit-deep high-resolution scanned images, complex artwork, or color desktop publishing, the huge files created by these applications easily overwhelm hard drives that hold several hundred megabytes. Worse, in many cases you can't back up these files, even though you may need to

transport them to a prepress house to create output.

Storage Dimensions offers an elegant solution. Its new **MacinStor MACB** transportable SCSI hard drives provide high-capacity storage of 235 MB, 500 MB, and 1 GB in a small, lightweight package. A 3½-inch SCSI drive, power supply, cooling fan, SCSI ID selector switch, and dual SCSI connectors are packed into a svelte

3¼- by 5¼- by 8-inch housing that tips the scales at 4½ pounds. The company uses a high-performance DEC SCSI drive that has a 10-millisecond seek time, a 512-KB read/write cache, and platters that spin at 5400 rpm to reduce latency.

A version of these drives (called 2Fast) implements a complete SCSI-2 interface that achieves data transfer rates of up to 10 MBps. Due to interface differences, the

2Fast drives won't work with the PowerBook.

I received a shipping version of the MacinStor 1-GB transportable drive (the MACB-1000F) for evaluation. The drive

comes with a SCSI cable, a disk format and partition application, a Control Panel for mounting and working with disk partitions, two manuals, and a copy of Central Point Software's MacTools Deluxe disk utility software.

How do you test a disk drive? You make it do all the things you demand of a drive. I started by installing A/UX 3.0 from a Mac IIci onto the MACB-1000F. The drive's manual explains how to do this, but I let the A/UX Installer application handle the job because it now supports third-party drives. The process went without a hitch, and although Installer used a default A/UX partition size of 160 MB, A/UX ran perfectly.

Next, I reformatted the drive and used it as a shared volume on the IIci. I was able to set access rights without problems, and the drive immediately became the holding tank for huge scan files created by BYTE staff projects. The drive was then put into temporary duty as an AppleShare volume on our AppleShare file server. No problems were encountered here, either, because AppleShare 3.0 relies on much of System 7.0's features to function.

I finally connected the MACB-1000F to a PowerBook 170 with the appropriate SCSI cable and was able to use files on

the drive. Because the drive runs off external power, you'll need to be near an outlet to use it this way.

The MacinStor's one fault is its \$5059 price tag. Comparable 5¼-inch SCSI drives can be purchased for under \$3000. However, its small size and weight make it attractive to graphics professionals who need to carry megabytes of drawings, images, or magazine pages to a prepress shop for output on a color typesetter. If transporting huge amounts of data is a big issue with you, the MacinStor 1-GB transportable drive is worth it.

## NetOctopus 1.1 Manages Mac Network Resources and Software

Here's a network management product whose strange name accurately describes its function. NetOctopus 1.1 is a network resource manager that lets a network administrator reach across an AppleTalk network (both LocalTalk and Ethernet) to manage the hardware and software resources of networked Macs. NetOctopus comprises a single management application and an InfoReporter Control Panel module that's installed on every Mac.

A network administrator uses the NetOctopus application to query a selected InfoReporter, which reports back the host Mac's hardware and software configuration. You can gather file information (e.g., names, creator, type, and version number) across the network and save it in a database for future reference. For example, you can query a zone of Macs about their CPU type, disk

space, and memory to decide whether to install System 7.0 on your network and how much additional hardware you must budget for if you do.

New to version 1.1 of the software is support for System 7.0; a number of Apple events have been defined, so NetOctopus can be driven by other applications (e.g., UserLand Software's Frontier). NetOctopus now supports Apple Installer scripts. Thus, software like drivers or System software (e.g., Tune-Up) can be installed across the network. You can remotely change the Mac's printer selection, its owner name, or other user settings. NetOctopus is compatible with AppleTalk Remote Access, so a network administrator can manage company networks across the country.

Finally, you can perform software auditing with NetOctopus. You can specify

New! 286DOS-Extender Version 2.5

Microsoft C/C++ 7.0 and  
Borland C++ 3.1 compatible!

# Phar Lap DOS-Extenders

## When your reputation's at stake...

We know how much work you put into building your product. Why use inferior tools that often create more problems than they solve? With a Phar Lap DOS-Extender, you know you're getting industry-leading, market-tested tools that have worked reliably for thousands of developers. Other DOS extenders simply can't measure up. Let Phar Lap show you what a DOS extender should be.

## Build multi-megabyte DOS programs with Phar Lap's DOS-Extenders!

**286DOS-Extender™ — it's never been so easy!** With our 286DOS-Extender and your Microsoft C/C++, Borland C++ or Microsoft Fortran compiler, you've got all the tools you'll need to quickly and easily build multi-megabyte protected-mode applications — often by simply relinking without making source code changes. Now you can build protected mode applications that access up to 16 megabytes of memory on any DOS-based 80286, 386, 386SX, or i486 PC — without changing development tools! 286DOS-Extender is also compatible with both Borland's Turbo Debugger and Microsoft's linker and CodeView debugger.

**386DOS-Extender™ — the ultimate in 32-bit power.** 386DOS-Extender turns DOS into a true 32-bit operating system with a flat, 32-bit address space. Your program can access all the memory available in the machine — up to 4 gigabytes! 386DOS-Extender runs on any DOS-based 80386, 386SX, or i486 PC, and has been used in over 800 applications, including AutoCAD 386 and IBM's Interleaf Publisher. It is backed by a full complement of 32-bit languages, including C, C++, Fortran, Pascal, Ada and Assembler. With true 32-bit performance, you can finally build workstation-class applications for the PC.

Trademark holders: 286DOS-Extender™, 386DOS-Extender™ - Phar Lap Software, Inc.; Interleaf Publisher™ - Interleaf, Inc.; Windows™ - Microsoft Corp.; DESQview™ - Quarterdeck Office Systems. # The Colormate

*At NEC we make  
a full line of  
advanced monitors  
ideally suited to the  
Colormate family.  
The MultiSync®  
4FG™, 5FG™ and  
6FG™ all deliver  
exceptional clarity  
and they all  
feature our  
amazing AccuColor™  
Control System.*

The more presentations you have to make, the more you need the NEC Colormate™ PS printer. Because the Colormate pays for itself in no time. Legally. For as little as 49¢ a page. Imagine color on paper or transparencies at only a tenth of the cost of sending work out. And what's more, at just \$4,799 (MSRP), it's the lowest priced PostScript™ language printer on the market.

The colors are as dazzling as the figures. Everything from soft pastels to brilliant primaries. And all Pantone® approved. 300 dpi graphics means sharp, clear output. The Colormate PS integrates readily with any network, PC or Mac®. Plus, it's compatible with all popular graphics software.

Imagine all the freedom and control creating presentations in house will give you. Last-minute changes can be made in minutes. Just think, for a few dollars you can have output that looks like a million bucks.

# PS pays for itself.

For information, dial 1-800-NEC-INFO (in Canada, 1-800-343-4418). Or via fax, call NEC FastFacts™ at 1-800-366-0476 and request # CMPS (2677). NEC GSA # GS00K91AGS5241.

Because  is the way you want to go.

# NEC

Circle 134 on Inquiry Card.

how many legitimate copies of an application the company owns and let NetOctopus perform a tally of the actual copies present on the network. You can load a listing file that contains the names and number of copies of all the company's registered software before beginning an audit. If bogus copies are present, a network administrator can either delete the offending files (if this operation is allowed by the user's InfoReporter settings) or send the user a message to clean up his or her act.

I examined a beta release of NetOctopus 1.1 on BYTE's Mac network. This network is composed of both Ethernet and LocalTalk cabling, two bridges, and several zones. You scan a zone and then select a Mac to examine by clicking on its name in the Workstations window. Double-clicking on the Mac's name brings up a toolbar that lets you examine the system's hardware, System software, SCSI peripherals,

NuBus boards, parameter RAM, and more.

The Apple script feature is a delight; I popped the System 7.0 Tune-Up 1.1.1 floppy disk into my Mac IIci, picked two new Macs on the network, and selected the Installer Scripts command. The floppy disk whirled and a log window appeared, informing me which files were removed or updated. I issued a remote Restart command to the two Macs, and the job was done.

Some of NetOctopus's file operations seem awkward; first you command a file search, and then you open a report window. The reason for this order of events is that you often scan numerous Macs simultaneously when gathering information for a software audit. Then you make a report from the collected data. This minor detail should be explained in Balloon Help, but it isn't. However, once you get the hang of this, NetOctopus becomes a ca-

pable tool for software inventory and control. Network administrators who must manage both the Macs and the software they run should check out NetOctopus.

—Tom Thompson

## The Oxford English Dictionary Second Edition on CD-ROM

**L**ONDON—The *Oxford English Dictionary* is the definitive reference guide to the English language. Unfortunately, the 20 huge volumes occupy over four feet of shelf space. Also, the set costs \$3000. In 1987, Oxford University Press (OUP) released a CD-ROM version of the OED, but it was based on the 12-volume 1929 version. Thus, any words, quotes, or derivations that came after that date were not included. Nevertheless, BYTE found that version of the OED so useful that we presented it with a 1989 Award of Distinction (see the January 1990 BYTE).

The **OED Second Edition on CD-ROM** runs under Windows and is based on the second edition of the paper-based OED that was launched in 1989. Having said that, the CD-ROM actually contains the most up-to-date information available on OUP's computer system, which in this case means late 1991. So the OED on CD-ROM is even more timely than the paper edition.

The OED is a treasure of information about the English language. The actual word you are considering is only a small part of the information provided. A single

word (called the *head word*) will usually have a pronunciation, a part of speech, a list of variant forms, an etymology, a definition, a list of related head words, some phrases that use the word, and a vast number of quotations showing how the word has been used through the decades. This means that the entry for a single word can be very large. For example, the word *set* has a 750-KB entry that runs to some 60 pages in the paper edition.

Before you even install the software, I suggest you read *A User's Guide to the Oxford English Dictionary*, which explains in detail how each entry in the paper ver-

sion is constructed. This short book is supplied with the OED on CD-ROM in addition to the CD itself and a software user's manual. A Macintosh version of the CD-ROM is expected in early 1993. The amount of data and indexes crammed on the disc is now close to the absolute maximum at 640 MB.

The beta version of the OED I tested still had no installation routine, and I simply copied the files from the floppy disk onto my hard disk. After loading Microsoft's CD extension, you load Windows and launch the OED application. You are

presented with a blank window with the usual array of menu titles across the top. The most obvious place to start is with a search, which gives you five alternatives: word, text, etymology, definition, and quotation.

Selecting any of the searches presents a dialog box and a scrolling window containing all the entries for that data type in the dictionary. You can enter a word or phrase in the dialog box or jump to the scrolling window and interactively search the list by typing the first few letters of the word you want. I found the latter much more satisfying, because I could see when

# Pick up the number one real-time operating system.

## And run with it.

In today's competitive market, it's important to run with the best. And when it comes to real time, the iRMX® operating system is the clear favorite.

You see, iRMX has a 13-year track record for proven reliability. In fact, only DOS runs on more X86 systems. Now, iRMX for Windows provides the first real-time operating system with guaranteed response time that runs DOS and standard-mode Windows on the i386™ and i486™ architecture. That's right, true real time on a PC†

iRMX for Windows brings more than just

affordable hardware to real time. It also gives you a head start on development with access to the huge installed base of DOS applications and tools. In fact, you even have the option to run Windows†† (including Windows 3.1).

So take the first step, call (800) GET-iRMX (800-438-4769)\* and ask for Lit. Pack. #2A. And start running real time with your favorite DOS and Windows software.

**intel**®

an entry wasn't listed rather than having the unhelpful "No entries found" message returned.

The results of any search are displayed as a scrolling list box, and you can select and view individual entries. There is a maximum of 8000 entries in a list box. If a search returns more than 8000 hits, it lists the first 8000 entries. You can paste search results into another Windows application or save them to disk.

There are some 600,000 individual references to words on the CD-ROM, but the most fascinating feature is the database of 2.5 million quotations. These quotations are included to show the usage of a particular word. The first quotation in any list can be considered the first published usage of the word. For example, looking up WYSIWYG reveals that BYTE has the first recorded usage of this acronym on page 264 of the April 1982 issue. What follows is a list of subsequent uses in magazines and newspapers.

The speed of a search is impressive when you consider the volume of data stored on the disk. Although timings are not final because this was a beta version, a search on the word *paper* returned 8157 entries in 12 seconds; a failed search takes just 3.5 seconds to report that no entries were found. Multiple word searches take

longer. Because optimization is used, however, the least common word is searched for first, and subsequent words are searched only through the current hit list. For example, the phrase *Library of Congress* took 30 seconds to return a handful of entries, with *Congress* being used as the first search word.

Using the dictionary interactively is good for ad hoc queries, but for a serious language researcher, the process of accessing the information is just as important as the search results. Such users will want to take advantage of a query language that uses a SELECT statement to construct requests for information. The statements are easy to create, but for most people there is little point in doing this, because you can achieve most of what the query language does interactively.

My only reservation about this product is that it is addictive. While looking at it, I would quickly get sidetracked on an interesting reference. If you're self-disciplined, this isn't a problem. However, if you've got time on your hands, the OED on CD-ROM provides excellent entertainment. Now, did I mention that Jimi Hendrix and Pink Floyd get only one entry each in the dictionary? Well, actually this leads to...

—Andy Redfern

## GammaFax MLCP-4/AEB: High-End Fax, Long-Range Potential

It's the latest in cutting-edge fax technology. Using your fax machine's phone, you dial a number and hear "Welcome to XYZ Company's fax information service. For information on widgets, press 1. For..." The automated system leads you through a menu and instructs you to press "start" on your fax or hangs up to call back your device.

Such services are not new. What is relatively new is GammaLink's **GammaFax MLCP-4/AEB** board. When coupled with a Dialogic multiline voice communications system, it lets systems integrators create voice/fax response applications for multiple-line, simultaneous access from a single PC slot. The MLCP-4 lists for \$3995, but OEM volume discounts will be available.

The voice-synthesis board I used was

Dialogic's \$1150 Dialog/41D, which includes a DOS development kit. This board supports up to four channels for dial-up or—for heavy-demand services using an additional adapter like Dialogic's \$2300 DTI/124—a digital T1 line. (Heavy fax broadcasting applications without voice synthesis require a direct connection from the MLCP-4 to the T1 board.) Dialogic

also offers a 12-channel version, and multiple GammaLink and Dialogic boards can be installed in a single system for as many as 24 channels.

GammaLink was the first company to introduce fax hardware and software for the PC. It has now left behind the market's commodity-based low end to concentrate on high-end products like the MLCP-4. This product combines the features of the GammaFax CP network fax

board with the AEB (Analog Expansion Bus) connection required for voice telephony.

Each fax channel on the MLCP-4 has its own dedicated 16-MHz 80C188 processor and 512 KB of DRAM, which eliminates the need to use interrupts or DMA. (All Dialog/41D boards that you install will share an interrupt.) The host system

Circle 200 on Inquiry Card.

recognizes the channels as I/O ports whose I/O-base addresses are set via four switches on the board.

The 16-bit board itself offers no direct telephone interface; rather, it relies on the separately sold voice-synthesis board (or a T1 adapter) to handle calls. A P3 20-pin ribbon cable connects the MLCP-4 with the voice-synthesis board through their respective AEB connectors, and you must give the cable a twist to properly align the pins. Beyond this, the MLCP-4's reference material and diagnostic programs (as well as those of the Dialogic board) prove sufficient to get the system up and running.

One necessary feature of the MLCP-4 is the CCITT Group 3 ECM (error-correction mode), which guarantees error-free fax transmission when the recipient's device supports it. If your application uses callback, however, your fax-connect time per call (and the resulting phone bill) will be even higher because of all the error cor-

recting going on.

As with the standard GammaFax CP boards, you can use standard GammaFax applications like FAXMEXE (the menu program) or the command-line GammaFax Command Language from DOS. You can run these from Windows 3.1 as well, and an OS/2 version should be available by the time you read this. But to develop applications where a board like Dialogic's will make fax requests to the MLCP-4 or for automated fax broadcasting—the \$995 GammaFax Programmer's Interface is the ticket. Included as part of this DOS or OS/2 C-language GPI is a library whose four basic commands directly correspond with Dialogic's own API for control of the dispatcher, queue file, image handling, and real-time voice/fax processing.

GammaLink's GammaFax MLCP-4/AEB is a worthy entry into the market of shared and commercial fax applications, particularly in conjunction with a voice-synthesis board or a T1 board. Combined

with the GPI, the potential for custom development is already putting a new spin on information retrieval. ■

—Ed Perratore

**PC** users are finally getting the whole picture. With PC/TCP Plus® you can connect to just about every operating system, from mini-computers and mainframes. PC/TCP Plus simplifies networking so that you can grab game files from underground R&D hosts and check a mainframe-based company-wide calendar from your home PC. You're able to print new documentation on the accounting department's high-speed laser printer, back up quarterly spreadsheets to a Unix box and even notify employees of an upcoming softball game.

PC/TCP Plus gives you unprecedented compatibility with other software products. For frustrated PC users, that means gaining the ability to query marketing and accounting databases from within Windows. Or being able to use X-Windows to create CAD drawings. PC/TCP Plus even enables you to access graphic Computer Integrated Manufacturing applications and copy graphics files directly from your VAX to your NetWare or VINES server.

Learn how PC/TCP Plus can help your PC draw on a vast number of information systems.

# Hauppauge announces an end

## Modular Local Bus PC's from Hauppauge Computer Works

**Bust the bottleneck.** Hauppauge introduces its 486M series: Modular, LocalBus PC's designed for tomorrow's Windows applications...yet affordable today. The 486M PC's bust the 8-MHz I/O bottleneck by using a local bus with a direct connection from the Intel 486 CPU chip to the graphics processor. There's also up to 1 MByte of CPU cache RAM and lots of system memory (from 4MB to 64MBytes). Features you can afford today. Features you'll appreciate in the years ahead.

**Avoid future shock with  
Hauppauge CPU modules**

**Full throttle graphics.** Designed by our engineers and built here in the U.S.A., our 486M PC's are for Windows users who need more performance at an affordable price. And for users who have seen the dizzying change in technology and don't want to buy a new computer every two years. We know you don't want to replace your computer every time a new trend develops.

**Fly non-stop.** New generations of CPU's and software are being intro-

duced at a rapid pace. Hauppauge's LocalBus PC's are designed to be upgraded in three ways: CPU upgrade, Module upgrade and Module addition:

**CPU upgrade.** Hauppauge 486M PC's are designed to accept any 486 CPU chip. Simply remove the old 486 from its LIF socket and replace it with a newer, faster CPU and you're off and running with the latest 486 processor power.

**Module upgrade.** As new generations of CPU chips come to market, CPU upgrade will not always be possible. The Hauppauge LocalBus is designed as a 64-bit bus to allow upgrades to future CPU generations with maximum performance.

**Module addition.** Wondering what future software might require of your hardware? Our 486M PC's have a LocalBus slot for hardware accelerators that can solve long-term software problems.

# Local

**Local bus graphics.** For the absolute highest in Windows graphics performance, we've put our GUIacc

(Graphical User Interface accelerator) right on the LocalBus. It includes the S3 graphics accelerator plus 1MByte of high speed Video RAM and a HiColor DAC. The GUIacc runs at the CPU speed, giving you the highest performance graphics combination available anywhere! Run your favorite true-color paint or drawing program with super performance.

### An Integrated System

**T**he Austin Executive Package includes an Austin 486/50 ISA system, a 210-MB hard drive, and 8 MB of RAM. It also has an NEC 4FG 15-inch noninterlaced flat-screen monitor, a Diamond Stealth VGA card with an S3 chip, and a Lexmark keyboard. The Austin Executive is preloaded with DOS 5.0 and Windows 3.1. An upgrade package for most Austin computers includes the monitor, the keyboard, and the VGA card.

**Price:** Austin Executive Package, \$3890; upgrade package, \$1290.

**Contact:** Austin Computer Systems, 10300 Metric Blvd., Austin, TX 78758, (512) 339-3500; fax (512) 454-1357.

**Circle 1271 on Inquiry Card.**

*Austin Computer Systems' Executive Package integrates high-performance components for number-crunching and graphics applications.*

### Notebook Travels with 486 Power

**T**he Model T50 486NoteBook, based on the 486-DX2 microprocessor, has 4 MB of RAM, 2.5 MB of which is 25-ns, 32-bit CMOS RAM. Total RAM is expandable to 10 MB. The 10-inch-diagonal, black-on-white, triple-supertwist VGA LCD has a resolution of 640 by 480 pixels with 16 gray

scales. The Model T50 includes an 80- or 120-MB 2½-inch hard drive and an internal battery. The 5-pound notebook is 1½ inches thick. Options include a battery pack and an internal 2400-bps data/send fax modem. Standard software on the machine is DOS 5.0, LapLink Pro, and Battery Watch.

**Price:** With an 80-MB hard drive, \$5599; with a 120-MB hard drive, \$5899.

**Contact:** Notebook Computer Co., 13100 Northwest Frwy., Suite 100, Houston, TX 77040, (713) 939-0486; fax (713) 939-1486.

**Circle 1272 on Inquiry Card.**

*The 50-MHz Model T50 has an optional internal adapter for an external CRT monitor.*

### Ethernet for Everyone

**A** 386SX Ethernet workstation, the Lanco 320se runs at 20 MHz and has 2 MB of RAM (expandable to 8 MB). The unit includes an integrated 512-KB silicon RAM disk (expandable to 1.44 MB). Video consists of an ultra-VGA video interface that will support 1280- by 1024-pixel 16-color resolution or 1024- by 768-pixel 256-color resolution, and 512 KB of video RAM, expandable to 1 MB on the motherboard. The machine also has an analog and TTL monitor interface. All circuitry in the 6-pound machine is loaded on a single surface-mounted CPU board.

The 320se has Ethernet 10Base-2, 10Base-5, and 10Base-T connectivity; a bidirectional parallel printer port; and dual asynchronous serial I/O ports. Its user-selectable remote or local boot capability lets the

network administrator make immediate system upgrades and control changes from the server. Software drivers are included for all disk or network operating systems.

**Price:** \$1495.

**Contact:** Lanco, Inc., 800 West Airport Frwy., Suite 1100, Irving, TX 75062, (214) 438-4955; fax (214) 438-1571.

**Circle 1273 on Inquiry Card.**

### Versatility at the High End

**T**he full-size Dasher II-486/33LE EISA PC can be a NetWare LAN server or run Unix as a multiuser system. Connected to an Aviiion server, the unit becomes a workstation; it also works as a single-user system.

Expandable to a 50-MHz unit via an exchange of motherboards, the system's basic configuration consists of a 33-MHz CPU, 4 MB of RAM (expandable to 28 MB via SIMMs and to 60 MB via a board), a 1.44-MB or 1.2-MB floppy drive, and a Super VGA card with 1 MB of video RAM that supports up to 1024- by 768-pixel resolution in 256 colors. The machine is designed to support Intel's 33-/66-MHz microprocessor when it becomes available.

The Dasher II-486/33LE includes five available 32-bit EISA bus-mastering slots and four half-height drive bays. You can configure three of the drive bays with a second floppy drive and as many as three hard drives, for a maximum of 1.5 GB of storage. The unit ships with DOS 5.0 and Windows 3.1. Optional 128-KB direct-mapped cache memory is available.

**Price:** \$4095.

**Contact:** Data General Corp., 3400 Computer Dr., Westborough, MA 01590, (800) 328-2436 or (508) 366-8911.

**Circle 1274 on Inquiry Card.**

### 3 GB of Optical Storage

**T**he HyperSpace Shuttle for SGI, based on the HyperSpace rewritable optical drive, is a plug-and-play desktop library for Silicon Graphics workstations. Able to handle up to five 600-MB cartridges in its magazine, the Shuttle's on-line storage capacity is 3 GB.

The 3600-rpm HyperSpace drive in the Shuttle has a 1-MBps sustained data transfer rate, an average access time of 37 ms, and an average seek time of 28 ms. The optical cartridges are compatible with other ISO-standard optical-drive products. The HyperSpace Shuttle is targeted at data-intensive graphics environments, such as CAD/CAM, animation, and imaging.

**Price:** \$9990.

**Contact:** Ricoh File Products Division, Ricoh Corp., 3001 Orchard Pkwy., San Jose, CA 95134, (408) 432-8800; fax (408) 943-9364.

**Circle 1275 on Inquiry Card.**

### PostScript Color Printing

**O**ccupying less desk space than a laser printer, the Personal ColorPoint PS thermal printer offers a resolution of 300 dpi with 16.7 million colors. The printer lets you produce three- or four-color and monochrome images on paper or film.

The Personal ColorPoint PS provides full PostScript compatibility, supports HPGL (Hewlett-Packard Graphics Language) 7475A emulation, and provides 39-font Apple LaserWriter II emulation with bit-map smoothing.

Standard interfaces include serial, parallel, and Apple-Talk. An optional video interface allows high-speed image

*The HyperSpace Shuttle for SGI allows data access across heterogeneous Unix networks.*

capture, and you can store additional fonts on an external hard drive via an optional SCSI connector. The printer lets you increase the buffer memory size from the standard 6 MB to 22 MB.

The Personal ColorPoint PS also features linear Pantone color matching. Software drivers are included for Windows 3.0 and Mac OS environments.

**Price:** About \$7622 (£3995). **Contact:** Ambitron Ltd., 13 The Paddock, Hambridge Rd., Newbury, Berkshire RG15 5TQ, U.K., 44-635-36555; fax 44-635-32055.

**Circle 1276 on Inquiry Card.**

### Projections in Color

**C**olorWorks LCD projection panels from Proxima use color-stripe filters with a passive-array LCD for high-quality color and light weight. The color-stripe filter technology, which permits all three color filters to be placed on one panel, enables the panels to project up to 24,389

colors with a contrast ratio of 20 to 1 and a resolution of 640 by 480 pixels.

With ColorWorks panels, you can add brilliant saturated color to charts, graphics, spreadsheets, and text. As a dynamic medium, ColorWorks lets you incorporate special effects and limited animation in your work.

The entry-level 9-inch-diagonal A502C and 11-inch-diagonal A522C ColorWorks panels are compatible with PCs, Macs, and Apple IIs. The panels have a full-duplex serial port and come with wireless remote control and cabling needed for high-impact VGA and Mac II presentations. The A522C includes presentation utility software and additional cabling. Both panels are compatible with

Proxima's Cyclops interactive pointer system. **Price:** A502C, \$3995; A522C, \$4995.

**Contact:** Proxima Corp., 6610 Nancy Ridge Dr., San Diego, CA 92121, (619) 457-5500; fax (619) 457-9647.

**Circle 1278 on Inquiry Card.**

### Computer-to-TV Link

**T**V Link connects any VGA-equipped computer to a TV, TV monitor, or video projector. Able to display at resolutions of up to 640 by 480 pixels, the 3-pound unit has NTSC composite and S-Video outputs. **Price:** \$1165.

**Contact:** KDI Corp., 3975 McMann Rd., Cincinnati, OH 45245, (513) 943-2000.

**Circle 1314 on Inquiry Card.**

*The ColorWorks panel projects true color economically.*

### Desktop Video Publishing

**V**ideoVision brings video publishing to your desktop. The interface card contains built-in video input, video output, 24-bit graphics display capabilities, comprehensive software controls, and an external connector panel for video and audio connections. The integration of these capabilities lets you implement an idea in a number of different ways, such as in interactive on-screen demonstrations and as slides. The Mac-compatible card also allows you to input and output analog and digital video.

A built-in encoder provides flicker-free images directly to videotape and has on-board international-standards-conversion capabilities. Instantaneous variable window resizing without loss of resolution lets you display video at resolutions of up to 768 by 576 pixels. The card is bundled with Diva's VideoShop and MacroMedia's Action.

**Price:** \$2399.

**Contact:** Radius, Inc., 1710 Fortune Dr., San Jose, CA 95131, (408) 434-1010; fax (408) 434-0770.

**Circle 1279 on Inquiry Card.**

*VideoVision integrates video with sound and display.*

### Graphics Fly in True Color

Two boards follow different paths to fast graphics in true color.

**A** 32-bit graphics coprocessor board, Number Nine Computer's #9GXiTC supports the display of 16.7 million colors at resolutions as high as 1024 by 768 pixels. The board also creates a virtual workspace that supports 65,000 colors at resolutions of 1152 by 870 pixels and 1280 by 1024 pixels. In the virtual area, you can open multiple applications at the same time.

The card's HawkEye Feature Set offers unique capabilities. HawkEye Zoom lets you instantly magnify your entire screen by two, four,

eight, or 16 times by pressing a hot key or a mouse button. HawkEye Chameleon Cursor lets you change the color of the cursor by clicking on an icon and selecting a color from a pop-up menu. HawkEye Resolution Exchange lets you click on an icon to select the desired resolution and number of colors you want to display; the Resolution Exchange changes the resolution, reboots your computer, and returns you to Windows. **Price:** \$2295.

**Contact:** Number Nine Computer Corp., 18 Hartwell Ave., Lexington, MA 02173, (617) 674-0009; fax (617) 674-2919.

**Circle 1280 on Inquiry Card.**

**V**ideo Dynamics' XTC/2000 24-bit graphics display adapter for PCs supports 2 MB of VRAM (video RAM), allowing displays of up to 256 colors at 1280- by 1024-pixel resolution. The board supports up to 65,536 colors at 800- by 600-pixel resolution, and up to 16.7 million colors at 640- by 480-pixel resolution.

The XTC/2000's hardware-accelerated graphics coprocessor speeds up critical graphics functions to more than 10 times the speed of standard Super VGA, according to Video Dynamics. Drivers on the board include support for AutoCAD, Windows 3.1, GEM, X Window System X11.5, Lotus

1-2-3, Ventura Publisher, and WordPerfect.

**Price:** With 1 MB of VRAM, \$399; with 2 MB of VRAM, \$499.

**Contact:** Video Dynamics, Inc., 1550 Bryant St., San Francisco, CA 94103, (800) 243-3527 or (415) 863-3023; fax (415) 863-2979.

**Circle 1281 on Inquiry Card.**

### Upgradable CPU Cartridges

**T**he i486DX/50 and 386DX/40 upgradable CPU cartridges from Positive can be used in any of Positive's CPU-upgradable systems. The 486DX/50 is based on the 486DX microprocessor for high speed and power. The 386DX/40 has a math coprocessor and a built-in RAM cache.

**Price:** 486DX/50, \$1499.99; 386DX/40, \$599.

**Contact:** Positive Corp., 405 Science Dr., Moorpark, CA 93021, (805) 523-0340.

**Circle 1282 on Inquiry Card.**

### Boost Your IBM AT

**B**ased on AT&T's DSP32C digital-signal-processing CPU, the DSP32C board provides your IBM AT with 25 MFLOPS of computing power. The board combines a 50-MHz version of the 32-bit DSP with 640 KB of 35-ns wait-state static RAM and a 32-bit bidirectional parallel port, which runs at full processor speed. The AT's bus can make memory transfers while the DSP32C is executing.

**Price:** About \$2862 (£1500).

**Contact:** Neural Computer Sciences, Unit 3, Lulworth Business Centre, Nutwood Way, Totton, Southampton SO4 3WW, U.K., 44-703-667775; fax 44-703-663730.

### Bidirectional Data Mover

**D**esigned around Trantor's P3C ASIC chip, the T348 MiniSCSI Plus parallel-to-SCSI host adapter enables you to move full 8-bit data blocks in both directions between the host computer and SCSI devices connected to the parallel port without losing the use of your printer. Transfer speed is similar in both directions.

The portion of the adapter that contains the active circuitry is adjacent to the SCSI device, eliminating the need for a separate SCSI cable. The adapter is particularly suitable for use with CD-ROMs, according to Trantor. **Price:** \$229.

**Contact:** Trantor Systems, Ltd., 5415 Randall Place, Fremont, CA 94538, (510) 770-1400; fax (510) 770-9910.

**Circle 1283 on Inquiry Card.**

### Sonic Digitizer

**W**ith the GP-10 Sonic Digitizer, you can digitize blueprints, drawings, maps, x-rays, film, and projected images without using a tablet. The single-piece unit lets you choose from eight output formats or program it for your own output; it has an on-screen menu for format selection via a one-time initialization. The digitizer is compatible with PCs and Macs, as well as with major software packages. **Price:** \$1775.

**Contact:** Science Accessories Corp., 200 Watson Blvd., Stratford, CT 06497, (203) 386-9978; fax (203) 381-9270.

**Circle 1284 on Inquiry Card.**

*The MiniSCSI Plus connects CD-ROM and SCSI devices to laptops.*

### Keep Your CPU Cool

**A** commercial heat sink and miniature fan combination, the CPU Kooler complies with Intel's temperature specification for housing its 486 processors, providing an internal environment of from 32° to 185°F measured at the top center of the ceramic pin-grid array. Available in several heights to fit different cabinets, the CPU Kooler comes with a 12-V motor that connects to a floppy drive cable. **Price:** \$39.95.

**Contact:** PCubid Computer Technology, 6705 Silverthorne Cir., Sacramento, CA 95842, (916) 338-1338.

**Circle 1285 on Inquiry Card.**

### Fast Printing

**K**ansai's high-speed printer buffers feature a DMA architecture on all I/O ports, achieving buffering throughput of up to 300 KBps. The EDB-30 (three ports), EDB-40 (four ports), and EDB-50 (five ports) buffers allow printers to receive data as fast as CPUs and bus architectures can transmit it. The buffers are available with 1, 2, 4, 8, or 12 MB of SIMM memory installed. You can daisy-chain multiple buffers,

which don't require special software or drivers, the company says.

**Price:** \$599 and up.

**Contact:** Kansai Electric USA, 2005 Hamilton Ave., Suite 220, San Jose, CA 95125, (800) 733-3374 or (408) 377-7062; fax (408) 377-7085.

**Circle 1287 on Inquiry Card.**

### Virus Hunter

**V**ersion 2.0 of the PC Rx Antivirus uses a binary searching method that scans two to three times faster than the previous version in DOS and Windows to detect more than 1650 viruses. The program's pattern-independent TSR virus filter monitors suspicious programs for nine virus behaviors.

In Windows, PC Rx 2.0 lets you continue working while it scans in the background. This scanning reduces the PC Rx scanning meter to an on-screen icon, letting you view the progress. If PC Rx finds a virus, a scrollable Virus Found List pops up that gives you the option of clicking on one or a group of infected files and instructing the program to delete or rename the files or

clean the virus.

**Price:** \$69.

**Contact:** Trend Micro Devices, Inc., 2421 West 205th St., Suite D-100, Torrance, CA 90501, (800) 228-5651 or (310) 782-8190; fax (310) 328-5892.

**Circle 1286 on Inquiry Card.**

### Power Protector

**A** computer and modem surge-protector strip, the EG556TC from Intermatic continuously monitors the incoming power line for a surge or spike. The unit responds within a nanosecond to absorb any overload while allowing normal voltage to continue to pass through the line. After the power returns to normal, the surge strip automatically resets to monitoring mode.

**Price:** \$36.95.

**Contact:** Intermatic, Inc., Intermatic Plaza, Spring Grove, IL 60081, (815) 675-2321.

**Circle 1317 on Inquiry Card.**

### Font Card for Okidata Printers

**T**he TurboCard font card from UDP Data Products expands the usefulness of the Okidata 400/800 series of LED printers. The card provides Swiss and Dutch equivalent fonts, as well as the company's interpretation of typefaces such as Dom Casual, Copperplate, Old English, Brush, and Copper Black. Compatible with Windows 3.1, the TurboCard includes drivers for popular word processing packages.

**Price:** \$249.

**Contact:** UDP Data Products, 2908 Oregon Court, Building I-2, Torrance, CA 90503, (800) 888-4413 or (310) 782-9800.

# The Monitor for Windows

The ViewSonic 7 was the original, "Big Screen for Windows" monitor. Here's what some editors said about it:

*Byte* (May 1992) "... *The ViewSonic 7 gets our vote as the best overall monitor*".

*Windows Magazine* (May 1992) "... *The ViewSonic 7 is the best value in the test*".

*Infoworld* (Sept 1991) "*The ViewSonic 7 captured the top spot in our tests*".

## Introducing the NEW 14" ViewSonic 5E and 15" ViewSonic 6FS.

The best of all worlds ... ideal Windows' monitors to fit the size and budget requirements of every customer.

## Now you have a choice.

These three great non-interlaced monitors have a lot in common, including minimum resolution of 1,024 x 768 at 72Hz refresh up to 1,280 x 1,024 non-interlaced. That's flicker-free! Plus they're multi-frequency and have a non-glare screen.

The two larger monitors both have a flat square screen and microprocessor-based memory with programmable preset modes for screen adjustments. And, for a safer environment, they are MPR-II certified for low radiation.

If you're particular about which monitor is best for Windows, make it a ViewSonic. You get a choice ... of size and price range along with the excellent ViewSonic quality and reputation.

COMPACT 14" ViewSonic 5E

MID RANGE 15" ViewSonic 6FS

FULL SIZE 17" ViewSonic 7

# There Are 174 In AutoCAD

3. Phenomenal 3D rendering. Capabilities that used to come only with AutoShade® are now built into AutoCAD® Release 12. And hidden line removal is up to 100 times faster.

4. AutoCAD SQL Extension (ASE) allows you to access data in standard database management systems via SQL. ASE provides commands for manipulating external nongraphic data and linking it to graphic entities in AutoCAD drawings.

5. Region Modeler creates intelligent 2D models. Allows you to quickly create 2D shapes with holes and complex boundaries. Automatically finds area, perimeter and inertial properties of a region.

6. Automatic timed save at user-selected intervals.

7. Now you can use PostScript® typefaces in AutoCAD drawings.

8. You can also import PostScript files into AutoCAD, and plot them.

9. New boundary polygon command surrounds an area with a closed polyline automatically.

10. New Fence or Polygon window crossing selection feature speeds selection of entities in dense and complex areas of drawings.

11. No Main Menu! You now enter directly into the AutoCAD drawing editor, where you can perform standard file handling and configuration operations, as well as work on your drawing.

12. Dramatically improved entity selection speed in large drawings.

13. Nested entity dimensioning. Entities within blocks or external references are now easily dimensioned.

14. Locked layers feature prevents accidental modification of drawing data.

15. PostScript output feature lets you enhance AutoCAD drawings by using PostScript-compatible imaging programs.

16. Release 12 and Release 11 drawings are forward and backward compatible.

17. Support for 255 individual pen widths for laser and electrostatic plotters.

18. You can plot without leaving the drawing editor. (And without losing the UNDO file.)

19. Now you can import TIFF, GIF and PCX raster images into your drawing.

20. GripEdit feature allows interactive editing of selected entities without running a command.

21. PickFirst feature lets you select entities prior to executing a command.

22. Improved external references. You can attach, reload or bind Xref files while the "master" is being edited.

23. Enhanced hatching. Automatically hatch bounded areas with a single pick.

24. New continuous polyline line-types facilitate contour mapping and other applications.

25. Programmable dialog boxes can be customized for your particular working environment or by third-party application developers.

26. AutoCAD's new integrated calculator performs calculations based on

existing geometry and includes extensive algebraic and geometric functions.

27. New ALIGN command lets you move and rotate entities in 2D or 3D.

28. 3D ROTATE command rotates entities about an arbitrary 3D axis.

29. 3D MIRROR command mirrors entities on an arbitrary 3D plane.

30. CHANGE command enhancements simplify entity property modifications, such as elevation, color, layer, linetype and thickness.

31. Advanced, multipoint tablet calibration allows compensation for map projections or stretched drawings.

32. Platform-independent menus and dialog boxes that follow operating system standards. So AutoCAD works like other programs on your computer.

33. An improved graphical interface makes the power of AutoCAD more accessible to everyone.

34. Cascading pull-down menus that put more power at your fingertips.

35. Pop-up menus at the cursor location for often-used items.

36. Screen menu is automatically updated to reflect the currently running command.

37. Shift and Control key combinations allow you to invoke more commands with your mouse and digitizer buttons.

38. Single mouse click-and-release action for selecting pull-down menus.

39. Automatic Drawing Conversion. Full support for any drawing created by any version of AutoCAD.

40. Enhanced CONFIG command allows for configuring AutoCAD from the drawing editor.

41. New dialog boxes give you control of dimension variables and styles.

42. Dimension dragging feature provides visual feedback while creating dimensions.

43. RECTANGLE command now allows you to create a rectangle with just two screen picks.

44. Enhanced Write Block command helps developers maintain "smart" drawings (entity handles).

45. Enhanced command transparency lets more commands be used inside other commands.

46. Transparent "Object Filters" dialog box allows more flexible definition of selection sets.

47. ZOOM Window is now the default.

48. DXFIX utility reads R12 DXF™ files and translates them into R10 files.

49. New COMPILE command compiles shape files, font files and Type 1 PostScript fonts.

50. Now you can fill closed polylines with PostScript patterns for extremely high-quality output.

51. Network users can view and plot AutoCAD drawings without using server authorization.

52. Database-specific drivers link AutoCAD and external nongraphic databases, such as dBase®, Paradox®, Oracle® and others.

53. Create New Drawing command now allows you to start with an unnamed

# Now All Upgrades To AutoCAD Release 12 Are Only \$500.

**Offer Expires October 31, 1992.**

Depending on what version of AutoCAD® you're using, the normal price of upgrading to new AutoCAD Release 12 could be as much as \$3000. Act now and you can upgrade for only \$500.\*

# New Features Release 12.

drawing or specify a prototype drawing.

54. OPEN command presents "Open File" dialog box to simplify loading of existing drawings.

55. SAVE AS command now changes the current drawing name to new name specified.

56. END and QUIT commands prompt you for a file name when exiting an unnamed drawing, to prevent you from losing data.

57. Several AutoLISP® enhancements, including much faster loading of LISP routines.

58. A wide range of new and enhanced system variables, especially created for the power user.

59. DD Modify command allows for interactive editing of entity parameters.

60. New Units Control dialog box shows all units, angles and direction values on-screen as well as precision settings.

61. New special context-sensitive help dialog boxes allow you to browse through available help files.

62. New View Control dialog box allows selecting with a pick instead of typing in view name.

63. You can plot AutoCAD drawings as bit map files in PCF, TIFF, TGA and GIF formats. You can even automatically FAX your drawings to a subcontractor or client.

64. 24-bit, true color rendering is supported by appropriate hardware.

65. PostScript files can be brought in as outlines or fully rendered images.

66. Modify Entity dialog box enables you to edit an entity's properties directly.

67. Mirrored blocks can now be exploded.

68. List and load standard AutoCAD SHX fonts as well as Adobe Type 1 PostScript fonts from dialog box.

69. New option allows a box to be drawn around dimension text automatically.

70. Insert a text string before or after dimension text automatically.

71. Configuring for ADI® drivers has never been easier, with the new feature that displays all drivers in the appropriate menu when configuring AutoCAD.

72. HP LaserJet legal-size paper output is now supported by a new, improved device driver.

73. ADS applications can now be compiled by inexpensive "real mode" compilers; no need for costly development tools.

74. AutoLISP and ADS can now be used to drive the PLOT command.

75. Linetype scaling adjusts to view scale in Paper Space.

76-174. Unfortunately, we're out of space. But you get the idea. Release 12 is the most significant enhancement of AutoCAD ever. Its improved performance will pay off for every AutoCAD user. So the cost of an upgrade can pay for itself in a couple of weeks.

If you're still not convinced, call your Authorized AutoCAD Dealer. Your dealer can give you an even more complete list of the new features. And tell you what you need to do to upgrade. If you need more information or the number of your nearest dealer, call 1-800-964-6432, ext. 770. Outside the U.S. and Canada fax 415-491-8303.

## But Either One Of These Alone Makes It Worth The Price.

*1. Something every AutoCAD® user has been waiting for: new technology that virtually eliminates regens. A new built-in 32-bit display list permits pans and zooms without regens. So you can spend your time editing your drawing, instead of waiting for regens.*

*2. The plot quickens. Now you get WYSIWYG plot preview, on-the-fly plot device selection and the ability to save plot configurations.*

## Internal Modems for the PowerBook

**H**igh-speed data access and faxing come to the PowerBook with Global Village Communication's PowerPort Gold internal fax/data modem. A V.32bis modem with V.42bis error correction and data compression the PowerPort Gold provides error-free transmissions at a speed of 14,400 bps; faxes are transmitted at 9600 bps. The board also lets you connect transparently to AppleTalk networks at speeds similar to those of desktop access.

Also new are the PowerPort Silver and the PowerPort Bronze. Designed for moderate users of on-line services, the PowerPort Silver includes data access and has 9600-bps fax send and receive speeds. The PowerPort Bronze, geared for heavy users of fax services who sometimes need to communicate on-line, has 2400-bps data-access, 9600-bps fax-send, and 4800-bps fax-receive speeds.

Each modem works with any PowerBook. GlobalFax software wakes up a PowerBook to receive a fax and then returns it to sleep mode. **Price:** PowerPort Gold, \$795; PowerPort Silver, \$595; PowerPort Bronze, \$295.

**Contact:** Global Village Communication, 1204 O'Brien Dr., Menlo Park, CA 94025, (415) 329-0700; fax (415) 329-0767.

**Circle 1288 on Inquiry Card.**

*PowerPort Gold makes location-independent computing a reality with your Mac PowerBook.*

## Integrate Voice, Fax, and Network Traffic

**M**icom Communications' remote Ethernet bridge, NetRunner, integrates voice, fax, and data traffic with LAN traffic over low-speed leased lines. With NetRunner, you can transmit synchronous and asynchronous data, voice, and fax over the same line.

The company uses its Rapid Relay technology with NetRunner to squeeze voice and data traffic together with bridged LAN traffic. Data compression provides an average 100 percent increase in capacity of the leased-line bandwidth. Speech compression lets you combine speech with bridged LAN traffic without slowing down the performance of your LAN.

NetRunner supports all LAN protocols and traffic. It has integrated modem and CSU/DSU (channel service

unit/digital service unit) board options and built-in management functions. You can integrate up to six voice/fax channels with your LAN traffic.

**Price:** Starts at \$3500.

**Contact:** Micom Communications Corp., 4100 Los Angeles Ave., Simi Valley, CA 93063, (805) 583-8600; fax (805) 583-1997.

**Circle 1289 on Inquiry Card.**

## Instant Serial Ports

**Q**wikSwitch is a serial-port expander/data switch that increases the number of serial ports on your PC or laptop to five. You can direct data to any of five connected devices after you have selected the device from your keyboard. If you have a device that you use more frequently than others, QwikSwitch will default to that port.

With any-to-any port connections, QwikSwitch lets any PC access any other PC or device. A PC accelerator permits data transfer rates as high as 115,000 bps. The 1- by 4- by 7-inch unit connects to your PC's existing COM port.

**Price:** \$175.

**Contact:** Western Telematic,

Inc., 5 Sterling, Irvine, CA 92718, (800) 854-7226 or (714) 586-9950; fax (714) 583-9514.

**Circle 1290 on Inquiry Card.**

## TSR Reboots Network Stations Automatically

**A** TSR program that brings back to life a NetWare network's print servers and gateways after a file server has crashed or been shut down, Lazarus periodically polls network integrity. When a network error or power outage occurs, Lazarus becomes active and continuously checks the network for activity. When the network is restored, the utility automatically reboots the stations on which it is installed and restores related services.

**Price:** Single copy, \$74.99; server license, \$299; site license, \$2999.

**Contact:** Software Marketing Group, Inc., 108 Third St., Suite 202, Des Moines, IA 50309, (800) 395-0209 or (515) 284-0209; fax (515) 284-5147.

**Circle 1291 on Inquiry Card.**

## LAN Snooper

**T**he Snooper, a source code toolkit, helps developers build custom protocol analyzers for additional protocols used by applications software. Able to run on any PC, the analyzer captures live traffic on Ethernet networks. It then saves the captured packets for analysis through summary, hexadecimal, or decoded protocol displays.

**Price:** \$350.

**Contact:** General Software, Inc., P.O. Box 2571, Redmond, WA 98073, (206) 391-4285; fax (206) 746-4655.

*NetRunner integrates data, voice, and fax on leased lines.*

# Married. With children.

The traditional modem is a dying breed. And in its place comes a new generation of products.

Introducing the Intel family of faxmodems—a combination of our award-winning modem technology and SatisFAXtion® Board that brings you a no-compromise modem and fax in one. All for about the price of a data modem alone.

Our top-of-the-line product, the

SatisFAXtion® Modem/400, is 50 percent faster than a traditional 9600bps modem. Plus it features unequalled fax capabilities. The Model 400e is the powerful external brother to the Model 400. And Models 200 and 100 are excellent values if you have less need for speed.

So don't settle for just a modem.

For the ultimate performance, features

and compatibility only Intel can give you, tie the faxmodem knot now.

Experience our no-obligation, 14-day Test Drive program. For the

Intel Test Drive dealer nearest you, call 1-800-538-3373, ext. 63.

**intel®**

### Many-Featured Modem

**P**atton Electronics' Model 1080 Universal Short Range Modem operates in synchronous and asynchronous RS-232 environments. The modem works over a 13-mile distance and at data rates of from 1200 to 19,200 bps. The unit supports point-to-point and multipoint communications.

The Model 1080 operates at full or half duplex over two unconditioned twisted-pair wires and at half duplex over a single pair of wires. Additional features include V.54 diagnostics, automatic equalization, transformer isolation, surge protection, and six front-panel LEDs.

**Price:** \$295.

**Contact:** Patton Electronics Co., 7958 Cessna Ave., Gaithersburg, MD 20879, (301) 975-1000.

**Circle 1292 on Inquiry Card.**

### A Fax Management System for Unix

**R**eplix, a Unix-based fax management software system, lets you send, receive, route, view, and manage faxes from your desktop system. Incorporating an advanced GUI with a full feature set, Replix can be fully integrated with other software products and is based on a client/server architecture. The system automatically notifies you of incoming faxes and the status of outgoing faxes. It supports PostScript and is scalable, letting you add multiple clients, servers, and fax modems.

**Price:** \$2395 and up.

**Contact:** Samsung Software America, 1 Corporate Dr., Andover, MA 01810, (800) 899-7724 or (508) 685-7200; fax (508) 685-4940.

**Circle 1293 on Inquiry Card.**

*The Model 1080 Universal Short Range Modem operates at distances of up to 13 miles and can pass two hardware-control signals—one in each direction.*

### Version 3.0 Expands the Web

**V**ersion 3.0 of the Web network operating system consists of six loadable modules that you can install separately based on the individual requirements of each network station. You load each module into upper memory blocks, leaving intact the conventional memory area.

Web, which fully supports NetWare, replaces the NetWare client software on workstations, giving each station simultaneous status as a NetWare client and a Web peer. Web's emulation of NCP (NetWare's Core Protocol) enables the seamless sharing of files with an unlimited number of NetWare servers without a designated machine for bridging functions.

A new proprietary burst-mode technology in version 3.0 supports burst mode for up to 127 packets per transaction. The company's dynamic data compression increases data throughput by as much as 1400 percent in all topologies, according to Webcorp.

The system now supports large packet sizes of up to 16,384 bytes.

Able to freely mix peers, clients, and servers on the same network, Web 3.0 can also mix Web peers, clients, and servers with Novell servers. An independent setup program provides a single-user interface for local or remote modification of all station configuration and optimization options.

**Price:** Single-user, \$99; 5-user, \$449; 10-user, \$765; 15-user, \$975; 30-user, \$1495.

**Contact:** Webcorp, 3000 Bridgeway, Sausalito, CA 94965, (415) 331-1449; fax (415) 331-0911.

**Circle 1294 on Inquiry Card.**

### Standby UPS

**A** 600-VA UPS (uninterruptible power supply) with a built-in LAN port, the BC 600LAN is compatible with such diverse network operating systems as LANtastic and AppleShare. The unit features four spike and noise-filtered AC outlets.

**Price:** \$377.

**Contact:** TrippLite, 500 North Orleans, Chicago, IL 60610, (312) 329-1777; fax (312) 644-6505.

**Circle 1319 on Inquiry Card.**

### Cordless Serial Communications

**N**ow you can communicate via serial interfaces without cables at distances ranging from 7 to 70 meters. The Infralink 818 provides an enhanced infrared transmitter/receiver unit that allows quick cableless data exchange between PCs and modems or between computers.

During serial operation, the device provides a net data transmission rate of 115,200 bps. The Infralink 818 uses full-duplex communication with invisible, modulated infrared light on eight switchable channels, enabling any number of PCs or peripherals to communicate with eight other units. Computer/printer recognition is always automatic.

The unit displays the address and target address, as well as the status. An independent microprocessor-supported protocol assures data integrity, and the Infralink 818 uses a 9-bit identification code for error correction.

The Infralink 818 is available as an external unit or a built-in version that is suitable for laptops, notebooks, and notepads. Separate optical transmission/receiver unit accessories are also available for range optimization.

**Price:** About \$299 (about DM 450).

**Contact:** Infralink GmbH, Am Fuchsberg 8, D-4040 Neuss-Uedesheim, Germany, 49-2101-3-50-53; fax 49-2101-3-27-91.

### Customize Your Visual Basic Image Displays

The Dazzle/VB add-on control library for Visual Basic lets you customize your VB programs with a variety of graphics effects. Dazzle/VB's custom control and DLL routines let you display images in up to 256 colors, add more than 30 fade and wipe screen-transition effects, and adjust colors within your images.

The Dazzle/VB DLL lets you use its partial image block copy routines to create your own wipe effects. To access and set Dazzle/VB properties, you simply click on the appropriate function, as listed on the VB properties menu, and it's set.

A more advanced version, Dazzle Professional, offers all the features of Dazzle/VB but adds tools for gray-scale and full-color negative image display, utilities to compress and decompress BMP files, color image enhancement, and palette control.

**Price:** Dazzle/VB, \$299; Dazzle Professional, \$499. **Contact:** TeraTech, 3 Choke Cherry Rd., Suite 360, Rockville, MD 20850, (800) 447-9120 or (301) 330-6764; fax (301) 963-0436.

**Circle 1296 on Inquiry Card.**

*TeraTech says that Dazzle/VB is the only true image controller currently available for Visual Basic.*

### Generate Code for Windows APIs

Now you can automatically produce code for your MFC (Microsoft Foundation Class)-based Windows APIs. According to its developer, Case:W 4.0 is the only code generator for the MFC library for C/C++. The product also supports the other two most popular Windows interface builders, the Windows C API and Borland's ObjectWindows. Case:W's modular structure lets you port code among the three environments by generating code for one environment, "snapping on" a knowledge base of implementation details, and

generating again to create the same interface in a different class library.

**Price:** Case:W with one knowledge base, \$995; additional knowledge bases, \$395 each.

**Contact:** Caseworks, Inc., 1 Dunwoody Park, Suite 130, Atlanta, GA 30338, (404) 399-6236; fax (404) 399-9516.

**Circle 1298 on Inquiry Card.**

### Peek into Windows

DeMystifiers lets Windows programmers see how their applications interact with the internal components of the Windows operating system. Five independent tools capture information on memory management, message processing, graphic device interface display and device capabilities, systemwide environment settings, and screen image detail. The Voyeur component analyzes events occurring to windows and provides information on window characteristics (e.g., parentage, dimensions, class, and location). Colonel looks at the Windows kernel and

shows you how memory is distributed within it. Mechanic looks at your hardware devices and drivers and lets you see related fonts and font characteristics. Ecologist gives you information on the Windows environment, including your current mode, Windows and DOS versions, your directories, cursor position, and more. Finally, the BlowUp module magnifies a region on your screen to help with window alignment, icon dithering, and other tasks.

**Price:** \$129.

**Contact:** MicroQuill Software Publishing, Inc., 4900 25th Ave. NE, Suite 206, Seattle, WA 98105, (206) 525-8218; fax (206) 525-8309.

**Circle 1297 on Inquiry Card.**

### DOS and Windows Compiler Support

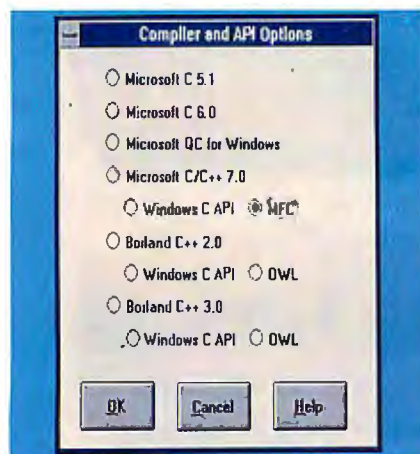

The version 3.0 upgrade of Zinc Software's multi-platform application framework for C++ provides compiler independence and single-source compatibility to developers of DOS and Windows software. Zinc Interface Library 3.0 features push-button access to windows objects such as check boxes, scroll bars, and radio buttons.

Developed first under Windows, the DOS version features a Windows-like look with push-button access to tools. You can work in either text-to-graphics or graphics-to-text mode. The Zinc application framework provides support for Borland, Microsoft, and Symantec (Zortech) C++ compilers.

**Price:** \$399.95; \$499.95 with source code.

**Contact:** Zinc Software, Inc., 405 South 100 East, Second Floor, Pleasant Grove, UT 84062, (801) 785-8900; fax (801) 785-8996.

**Circle 1299 on Inquiry Card.**

*With Caseworks' snap-on knowledge bases, you can generate code for the Windows C API, as well as for MFC and ObjectWindows class libraries.*

# Raima Database Engine Captures Fortune 500 With Record Speed

Now Raima Data Manager™  
Formerly db\_VISTA III

## Accelerated Database Performance

Compared to conventional relational databases, retrieval of records can be 10—20—even 50 times faster with Raima Data Manager from Raima Corporation.

## Propelling The Biggest Names In Business

Companies like General Motors, Hewlett-Packard, IBM, Eastman Kodak, Rockwell and others are using Raima Data Manager in their competitive environments. Today's most critical, most demanding applications demand the high performance of Raima Data Manager.

## Powerfully Efficient Leading-Edge Technology

Raima's combined technology merges the flexibility of relational databases with the lightning speed and efficient

**Raima Data Manager™**  
*The High Performance DBMS*

### Specifications

Relational B-tree indexing. Network data model. Relational SQL query and report writer. Single & multi-user. Automatic recovery. Built-in referential integrity. Supports: VMS, QNX, ULTRIX, UNIX System V, Berkeley 4.2, AIX, SunOS, SCO, MS DOS, MS Windows, and OS/2. Most C Compilers and LANs supported.

**Raima Corporation** 3245 146th Place S.E., Bellevue, WA 98007 USA (206)747-5570 Fax: (206)747-1991

In Washington state or international, call: (206)747-5570

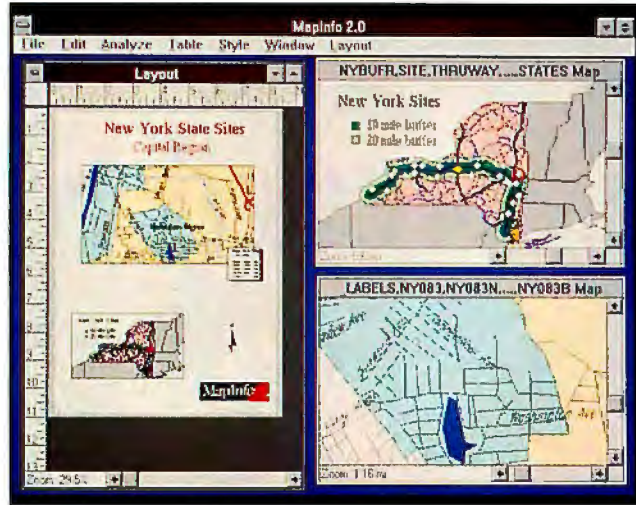

### Build Your Own MapInfo Programs

**M**apInfo 2.0 for Windows uses a built-in SQL (Structured Query Language) relational database management system to let you access and display data geographically from databases, spreadsheets, and delimited ASCII files. You can overlap these data files to compare their contents. By displaying data such as a ZIP code or city name in relation to its location, you can see patterns, relationships, and trends that might otherwise go unnoticed.

New features include buffering, which lets you search around lines or areas by creating a specific border or corridor around them; support for object, line, and other query searches; SQL queries for "within," "contains," or "intersects" limits; 18 projection methods; and support for hundreds of coordinate systems. Enhanced presentation options include a page-layout window, improved graphics tools, and support for Windows 3.1 TrueType fonts and label text rotation.

MapBasic, designed for use with MapInfo 2.0 for Windows, lets you use a BASIC-like language to create your own MapInfo applications. Besides standard tools, such as an interface builder and program debugger, MapBasic lets you perform complex database queries using standard SQL. You can also add graphical geographic objects to your maps, create buffers, and find perimeters and distances.

According to the company, all MapInfo files and applications developed in MapBasic are portable across Windows, Macintosh, Sun, and Hewlett-Packard platforms.

*In MapInfo's upper right window, a buffer search around the New York State Thruway shows all the user-specified hits within a 20-mile drive.*

**Price:** MapInfo 2.0 for Windows, \$995; MapBasic, \$795.  
**Contact:** MapInfo Corp., 200 Broadway, Troy, NY 12180, (518) 274-6000; fax (518) 274-0510.

**Circle 1300 on Inquiry Card.**

### Manage Complete Fills the Small-Business Bill

**M**anage Complete 2.0 for DOS offers a variety of business-oriented tools within a single program. At the heart of Manage lies a complete accounting program, geared toward small-business owners, that provides tools for accounts receivable, accounts payable, general ledger, checkbook, invoicing, sales order entry, bids and proposals, payroll, and inventory management. You can import data in 17 file formats. In addition to the accounting functions, Manage includes contact management, report writing, text editing, personnel files, applicant tracking, and other tools.

Manage is based on a Fox-Pro 2.0 database engine, which allows for real-time access to all your records. All

Manage modules share a single set of data files, so you don't have to do updates across the system. Manage's network version shows you who is working on a record at any given time, and system administrators can limit access to certain tools.

**Price:** \$299.95; \$499.95 for unlimited nodes.

**Contact:** Management Information Software, Inc., 3301 Gandy Blvd., Tampa, FL 33611, (800) 825-5647 or (813) 832-3449; fax (813) 1311.

**Circle 1301 on Inquiry Card.**

### ManagePro Takes Over Your Goals

**M**P (ManagePro) relies on a combination of scheduling, database, reporting, and expert system tools to provide goal management and people management tools in one program. MP for Windows outlines goals in a timeline format, displays your final goal as a composite of related tasks, and monitors

the progress of those tasks.

The people-oriented tools in MP let you track and report on performance expectations and achievements, compensation, relationships between people and goals, and coaching of employees. The Management Advisor provides on-line access to professional advice. Password protection secures personnel data when you use the program over a network.

**Price:** \$395.

**Contact:** Avantos Performance Systems, 5900 Hollis St., Suite C, Emeryville, CA 94608, (510) 654-4600; fax (510) 654-1276.

**Circle 1302 on Inquiry Card.**

### Let Your PC Play the Stock Market

**W**ith AIQ TE (Trading-Expert), your PC can track market indexes and equities and make trading recommendations. The program's expert system analysis of stock price, volume, and market indexes lets you monitor your picks using sector and group analysis, live trend lines, and weekly charting. TE makes recommendations based on updates of price and volume data. Its tracking capacity is limited only by your disk space, although AIQ Systems says that most users of the system monitor between 500 and 1500 equities.

TE users have the option of electronically accessing current and historical pricing on all equities for a monthly flat rate. Dial Data and Interactive Data provide this service to TE customers.

**Price:** \$1499; on-line stock pricing data fee, \$25 to \$60 per month.

**Contact:** AIQ Systems, Inc., P.O. Box 7530, Incline Village, NV 89452, (800) 332-2999 or (702) 831-2999; fax (702) 831-6784.

**Circle 1303 on Inquiry Card.**

# The only Windows™ statistics package you'll ever need.

**NEW**  
SYSTAT® for WINDOWS

## #1 for DOS and Windows

Rated "the best general-purpose statistics program" for the PC by *Software Digest*®, SYSTAT for DOS is now joined by SYSTAT for Windows. This addition to the SYSTAT family takes full advantage of Windows, with pull down menus, dialog boxes, sizable windows, and the ease of use you expect in a Windows package.

SYSTAT for Windows runs in standard and 386 enhanced modes and can take advantage of Windows advanced memory management. No matter how large or complex your analysis is, you can use SYSTAT.

SYSTAT delivers a balance of power and simplicity. It lets you analyze and manipulate data

with a comprehensive range of advanced statistical procedures, and present your results with stunning graphics.

## Just point and click

SYSTAT is a full-fledged Windows application. Just point and click. SYSTAT's QuickStat™ buttons give you simple, single-click shortcuts to common statistical analyses.

## More statistics, from the basic to the most sophisticated

A full range of univariate and multivariate statistics—from *t* tests to multidimensional scaling. With a few clicks you can turn most statistics into graphs and perform:

- multiway crosstabs with log linear modeling
- nonparametric statistics
- principal components and factor analysis
- cluster analysis
- time series
- nonlinear estimation
- correlation matrices
- means, effect, and dummy models
- post hoc tests

SYSTAT offers the most advanced multivariate general linear model available for Windows.

## The most graphics

No other statistical or graphics package can produce all the scientific and technical graphs that SYSTAT can—nor surpass its ease of use. Graphics capabilities include:

- histograms
- single, multiple, stacked, and range bar graphs
- single and grouped box plots
- stem-and-leaf diagrams
- pie charts
- scatterplot matrices
- 3-D data and function plots
- contour plots
- control charts
- maps with geographic projections
- Chernoff faces
- complete color spectrum
- log and power scales
- confidence intervals and ellipses
- linear, quadratic, step, spline, polynomial, LOWESS, exponential, and log smoothing

## A compatible family of products

Whichever you choose—SYSTAT for Windows, SYSTAT for DOS or both—you'll enjoy the most powerful statistics and scientific graphics software available for the PC.

# Now! Northgate® Provides Novell®

How do you know the computer you get is really Novell certified? Typically, if you specify even the slightest deviation from the original certification, Novell no longer recognizes the system as certified.

Northgate knows the importance of Novell certification. That's why we have qualified to self-certify our network servers and workstations.

Northgate can assure you we'll ship your custom-configured, Novell-certified system in as few as four weeks, rather than the several months it takes to be certified at Novell. And, because we do all the lab work, your certified system will very likely cost less.

Self-certification capability is just one more reason why corporations coast-to-coast now rely on Northgate for all their networking needs. Northgate has your solution, too!

Powerful File Servers and Workstations! Select from 386 and 486 file servers, as well as a variety of workstations featuring our popular 386SX/25 systems. All are FCC Class B certified.

## Make the Editors' Choice Elegance™ 486/33e The Heart Of Your LAN!

“The Northgate Elegance 433e is a turnkey NetWare® computer with a laudable price...”

“...Northgate gives network administrators everything they need – a turnkey system with hard disks optimized for NetWare, excellent expansion capability and good performance...”

“The Northgate Elegance 433e, with its well-rounded and sensible configuration has it all; a performance/features score that's better than average and a dynamite price which together create a higher-than-average Bang for the Buck score. The server is even Novell certified.”

# Certification For Most Configurations!

LAN solutions from the company ranked #1 in customer satisfaction for technical support by *PC Magazine* readers.\* Services include technical support 24 hours a day, seven days a week, comprehensive hardware warranties and more. Plus, our technicians are backed by Certified NetWare Engineers. This is your assurance of the best support possible.

**Choice of Topologies and Operating Software!** Select from ARCNET™, ETHERNET Thin Net, ETHERNET 10BASE-T, Token Ring or wireless LANs. Plus, NetWare® 3.11, 2.2, NetWare Lite® and LANtastic®.

Get up to 4GB of fault-tolerant disk storage with the OmniArray parallel disk array. Northgate RAID technology uses four drives plus a fifth parity drive giving you true high disk fault tolerance and high data availability. Novell certified.

**486 EISA Speed And Upgradability At Our Lowest Price Ever!** Northgate's 486 ZXP EISA workstation is upgradable across the entire range of Intel processors including: 486SX/20, SX/25 DX/33, DX2/50 – even the new DX2/66! Features up to 128 MB RAM, 32-bit EISA controller, EISA bus and more. Call for specs and pricing!

### A Scientific Swiss Army Knife Program

**W**ith the HiQ computational program for the Macintosh, you can create, solve, and present scientific and engineering problems in a single environment. HiQ's object-oriented architecture lets you manipulate your data with more than 600 built-in functions, interactive 2-D and 3-D graphics, and its own 4GL (fourth-generation language).

From within the system's mathematical solution interfaces, you enter functions, parameters, and other data. HiQ tabulates the results and plots the information as a 2-D or 3-D graph. As the system solves your equation, it simultaneously generates code written in its own programming language. You can use this code to create a larger, customized program for solving more sophisticated or specialized programs. Once you accumulate your desired graphs, notes, and other data, you can organize them into a single document.

According to its developer, HiQ lets users who specialize in different disciplines share tools and information without having to understand the intricacies of one another's work.

**Price:** \$695.

**Contact:** Bimillennium Corp., 101 Albright Way, Los Gatos, CA 95030, (408) 866-2010; fax (408) 866-2305.  
**Circle 1304 on Inquiry Card.**

### Filter Program Tests DSP Data

**R**unning under DOS, Adaptive Filters 2.5 lets you analyze your DSP (digital signal processor)-based data's adaptations as the data is affected by filter conditions

*HiQ's Project Worksheets let you group all your related data into a single document. From here you can click on an editor to change the Worksheet content.*

that you create. Using several styles of least mean squared, fast recursive least squares, and other algorithms, you can design filters with single- or multidimensional input signals. Adaptive Filters supports transversal, lattice-ladder, and QR-rotation architectures. You can also design all filters within floating-point or fixed-point arithmetic and implement tests of real-world or simulated conditions.

**Price:** \$399.

**Contact:** The Athena Group, 3424 Northwest 31st St., Gainesville, FL 32605, (800) 741-7440 or (904) 371-2567; fax (904) 373-5182.

**Circle 1305 on Inquiry Card.**

### New Tools for Unix Element Analysis

**T**he latest release of the LUSAS finite-element-analysis program combines new analysis elements with an updated menu- and form-driven interface. Unix-based LUSAS 11.0 runs under Motif and provides elements

designed to examine linear and nonlinear stresses and vibration, and dynamic and thermal properties.

LUSAS uses an eight-node solid element, which its developer claims is faster than 20-node solid elements in the analysis of 3-D structures. New algorithms provide information on impact problems involving sliding friction between two or more surfaces, and a new creep facility lets you model time-dependent data. The super-element structure provided in version 11.0 lets you make changes to part of a model without having to rerun the entire problem.

**Price:** About \$4800 to \$18,240 (£2500 to £9500), depending on configuration.  
**Contact:** FEA Limited, Forge House, 66 High St., Kingston upon Thames, Surrey KT1 1HN, U.K., 44-81-541-1999.

**Circle 1306 on Inquiry Card.**

### Molecular Modeling for Novices

**A**n introduction to molecular modeling is provided in a low-cost program

from Oxford Molecular. Nemesis Sampler is an interactive modeling system that lets you build molecules of up to 50 atoms, modify existing molecules, and rotate and scale your structures in 3-D. You can also calculate partial atomic charges and dipole moments and optimize overall molecule energy. Nemesis Sampler, based on the high-end Nemesis program, runs on both PCs and Macs.

**Price:** About \$55.50 (£29).

**Contact:** Oxford Molecular, Ltd., Magdalen Centre, Oxford Science Park, Oxford OX4 4GA, U.K., 44-865-784600.

**Circle 1307 on Inquiry Card.**

### Windows Data Acquisition in Real Time

**W**hat its developer claims to be the first real-time data acquisition and display software for Windows is available now from Labtech. The Notebook and Notebook/XE programs let you collect data, display it in real time, and simultaneously log it to a disk at processing rates of up to 1 kHz. A configurable buffer lets you collect data while performing other system tasks. Notebook provides 58 data-analysis functions, or you can add your own functions. Notebook/XE's advanced functionality offers such features as remote instrument support and support for multiple screens with up to 25 windows per screen. Notebook requires Windows 3.1 and supports DLLs and DDE.

**Price:** Notebook, \$1495; Notebook/XE, \$2495.

**Contact:** Labtech, 400 Research Dr., Wilmington, MA 01887, (508) 657-5400; fax (508) 658-9972.

Software superior by design.

**dBFast**™

### TypeReader Provides True OCR for the Mac

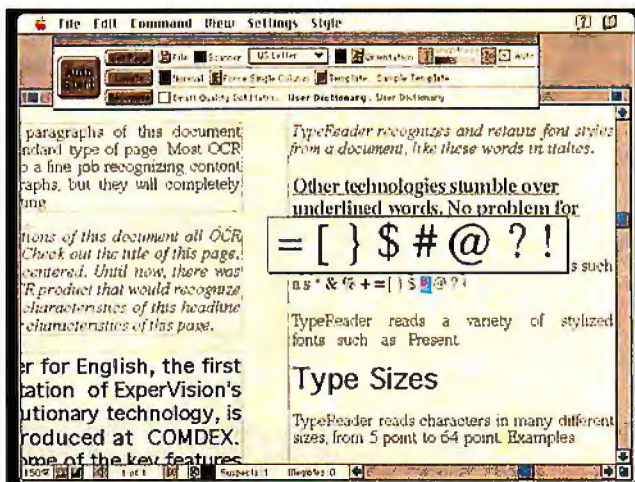

Using ExperVision's MLFA (Machine-Learned Fragment Analysis) technology, TypeReader for the Macintosh lets you scan clear, fuzzy, colored, and faded documents while retaining page-formatting characteristics. The software also recognizes thousands of typefaces, type sizes, word spacing, and paragraph returns. The program includes Adobe Type Manager and TrueType.

The program uses recognition dictionaries to reduce errors from suspicious characters. The context-sensitive postprocessing capabilities check for accurate use of similar characters. The On-Screen Verifier highlights suspect characters and lets you make changes on the fly. TypeReader includes three levels of verification, specialized spelling checkers, multiple file processing, double-sided-page scanning, and portrait or landscape orientation capabilities.

Developers of Windows applications now have the option of incorporating TypeReader's OCR capabilities into their own programs. RTK (for optical character recognition ToolKit) is available as a Windows DLL. The toolkit lets you specify what parts of an image to recognize when scanning. Your scanned data can then prompt such actions as message routing and updating a database. You can specify multiple areas to scan in each document. **Price:** TypeReader, \$695; RTK, \$2500 recoverable licensing fee plus volume-based royalties.

**Contact:** ExperVision, Inc., 3590 North First St., San Jose, CA 95134, (800) 732-3897 or (408) 428-9988; fax (408) 456-0823.

**Circle 1309 on Inquiry Card.**

TypeReader provides mirrorlike recognition of margins, text wrapping, columns, tables, and other page formatting.

### XTree Makes Its Windows Debut

An MDI (multiple document interface) lets the XTW (XTree for Windows) hard drive management utility list every drive to which you're connected and all the corresponding directory trees, file lists, documents, and ZIP archives. You can use XTW to display all these drive branches on a single customizable screen and then copy, delete, move, rename, and view files from this screen.

According to its developer, XTW offers more file viewers (over 50) than any comparable utility. In addition to viewing database, word processing, spreadsheet, and other files, the program lets you view ZIP-compressed files without extracting them. Other XTW features include application launching, a command toolbar, support for DOS-based networks, and

background processing. **Price:** \$49.95 until the end of October, \$99 thereafter. **Contact:** XTree Co., 4330 Santa Fe Rd., San Luis Obispo, CA 93401, (805) 541-0604; fax (805) 541-8053.

**Circle 1311 on Inquiry Card.**

### Task Switcher Adds Functionality

Version 6.0 of Software Carousel adds a screen saver and a personal reminder tool to the task-switching utility from SoftLogic Solutions. The DOS utility gives you hot-key access to up to 12 programs and lets you customize your task-switching methods.

Carousel's new personal reminder system lets you make note of time commitments (with or without an alarm) on a repeating or one-time basis. For an indefinite period of time, shipments of Carousel will include a

copy of the Memory Miser 386 memory management utility.

**Price:** \$89.95.

**Contact:** SoftLogic Solutions, Inc., 1 Perimeter Rd., Manchester, NH 03103, (800) 272-9900 or (603) 627-9900; fax (603) 627-9610.

### ZyIndex Gears Up for Windows

ZyIndex 5.0 for Windows encompasses several modules, which offer index-building, index-searching, and application-building capabilities. The index builder, ZyBuild, lets you create an index of documents that reside anywhere on your hard drive or network.

New searching techniques and tools include display of search hits in context, logging of searches, application launching, simultaneous searching of multiple indexes, a viewer for embedded graphics files, support for dBase files and other database file formats, document archiving, and support for Windows 3.1. You can perform various types of searches, including phrase, Boolean, user-defined concept, and wild-card.

The program's InfoApps function lets you create and manage groups of related documents. These groups act as customization tools for your searching and organization processes. InfoApps let you add hyperlinks, annotated self-stick notes, bookmarks, compression, and other features.

**Price:** \$395 for a single-user version; \$995 for a network bundle of three concurrent licenses.

**Contact:** ZyLab, 100 Lexington Dr., Buffalo Grove, IL 60089, (800) 544-6339 or (708) 459-8000; fax (708) 459-8054.

### SPREAD THE WORD

Please address new product information to New Products Editors, BYTE, One Phoenix Mill Lane, Peterborough, NH 03458. Better yet, use your modem and mail new product information to the microbytes.hw or microbytes.sw conferences on BIX. Please send the product description, price, ship date, and an address and telephone number where readers can get more information.

# YOUR DIRECT LINK CARD

For free product information, mail your completed card today. **For quicker response, fax to 1-413-637-4343!**

**Yes, I want FREE**

**following products!**

## 1. Circle the Numbers on Your Direct Link Card

Circle the numbers which are found on ads and articles in this issue or circle the product category number and receive information on all advertisers listed in that category.

## 2. Print Your Name and Address

Answer questions "A" through "E" and mail or fax card to  
1-413-637-4343.

## 3. Product information will be rushed to you from the selected companies!

Fill out this coupon carefully. Please Print.

## THE AMIGA REVISITED

I suppose I could start by saying it has been another hectic month, but then every month seems to warrant that. Of course, this is Chaos Manor.

I had hoped to get to OS/2 this month. It's not all my fault. OS/2 installs only from the A drive. Like most real-world systems, my machines take a 5¼-inch disk on the A drive and a 3½-inch disk on the B drive. For months IBM never sent me any copy of OS/2; now I have no fewer than 14 copies—and every single one is for 3½-inch drives. Now the solution is to open the Gateway 2000 486/50, swap cables for the drives, run Setup, and inform the computer of the change.

Alas, about the time I was ready to swap cables, I heard new rumors that IBM is coming out with a bug-fixed version of OS/2. I've got enough reports of known bugs that it makes sense to wait. In fairness: I also have reports from highly enthusiastic readers who say that OS/2 runs many DOS sessions in true multitasking; that it runs most important Windows applications flawlessly; that it was easy to set up, and there wasn't any messing about with a PIF (program information file) and the like; and that they have had few to no problems.

Anyway, next month, OS/2 for sure. IBM says they have a fix that lets you install OS/2 from the B drive, and they're sending that as well as 5¼-inch disks.

### Laptops

We went down to the beach house this month. The theory is that Larry Niven and I can pop down there away from the phone and do fiction without distractions. That works surprisingly well. Roberta and I also go there when I'm working on my own books; and, of course, it's an excellent place to experiment with concepts of computer portability. This time I may have gone a bit far.

I had with me Moby Brick, which is a 486 computer smaller than a box of Microsoft Windows software; an older 386 Brick; the ancient Zenith Supersport SX; the new Zenith Mastersport; an older Texas Instruments TravelMate 3000 WinSX; a Gateway notebook, the Nomad 420SXL, which appears to be identical to the WinSX except that it has a Gateway label and 2 MB less memory; the newest AT&T/NCR Safari; and probably a couple of others I lost track of. We had enough computing power to run the city of San Diego. I also had bags and bags of software. Our beach house looked like an electronics shop.

I hadn't really lost my mind. Much of my on-the-road software was scattered across several computers, and I hadn't had time to consolidate it preparatory to passing a

couple of those machines along to local schools. There was also a lot of uninstalled software. I got all that straightened out and took the opportunity to do a bit of comparison.

Ergo Computing's Moby Brick has been my main machine when I'm at the beach, and it still is. It's not something to carry on the road: we're about to take off for San Francisco and Silicon Valley, and I won't take it along. The advantage of Moby Brick is that when I get it connected up to a good color monitor, keyboard, and mouse, I can't really tell the difference between it and my main machine; or I couldn't until recently, anyway. I keep a power supply, a Microsoft "Dove bar" mouse, and a Northgate Omni-Key Plus "Pournelle-configuration" keyboard at the beach house, so all I have to carry back and forth is Moby Brick itself.

Ergo furnishes a heavy-duty padded case for transporting Moby Brick, but I confess I don't bother. My Moby Brick resides in an old Wingz shoulder bag, and there's room in there for the computer, telephone cables, a notebook, a pile of floppy disks, and some pencils. Obviously I don't throw it across the room, but I'm not all that careful with it; and so far it has survived many trips, as has its predecessor, the 386 Brick.

I also keep a "Niven-configuration" keyboard: my partner for some unaccountable reason likes old AT-style keyboards with the function keys across the top, and the Control key down by the Shift key, where Satan wants it. Having both keyboards makes it easy to set Moby Brick up for Larry.

Larry's not yet into Windows, so he gets a setup that, except for the smaller 15-inch Princeton monitor (as opposed to the 20-inch Nanao Flexscan he favors), is identical to his home operating environment, which is

# AN ORDINARY POWER SUPPLY JUST ISN'T ENOUGH.

*What power supply is inside your computer? If you are like most people, you don't know, and frankly, don't care.*

*But, because your computer's power supply is a critical system component, what you don't know, may hurt you. An inferior power supply can cause interference, rebooting, hard drive errors, and other nasty hard-to-track problems. So why take chances? Call the power supply specialists at PC Power and Cooling today.*

Turbo-Cool 300

Ordinary Power Supply

## HERE ARE TEN GREAT REASONS TO SELECT THE INDUSTRY'S BEST, THE TURBO-COOL™ 300 AND TURBO-COOL™ 450.

### 1. 50% TO 100% MORE POWER

The more power, the better! Our high-capacity units start drive motors with ease, run cooler, last longer, and allow for future expansion.

### 2. BUILT-IN LINE CONDITIONING

Turbo-Cool power supplies won't skip a beat when the line voltage sags. Their wide input range (85-135V, 170-270V) and heavy-duty input components protect your PC and its data from sags, surges and spikes.

### 3. FCC-B AND VDE-B LINE FILTER

A dual-stage EMI filter keeps electrical noise well below agency standards.

### 4. INDEPENDENT REGULATION

Turbo-Cool's superior independent-regulation design keeps output voltage tolerances 20 times tighter than that of an ordinary

power supply. This exceptional stability improves hard drive reliability during critical access periods.

### 5. ULTRA-CLEAN DC OUTPUT

A dual-stage output filter ensures that sensitive computer chips receive pure, low-ripple power.

### 6. PROTECTION CIRCUITRY

Our units offer the most complete protection from dangerous overvoltage, overcurrent, and short circuit conditions.

### 7. THERMASENSE™ COOLING FAN

The Turbo-Cool 300 features ThermaSense, our high-capacity, thermostatically-controlled, variable-speed fan. It's ideal! High-performance systems operate up to 35° cooler while standard ones run as much as 75% quieter.

### 8. UL/CSA/TUV APPROVALS

Our high-capacity units are safety approved by not only UL, but also by Canada's CSA and Germany's strict TUV.

### 9. TWO-YEAR WARRANTY

Turbo-Cools are designed and tested for MTBFs of over 100,000 hours. They come with a no-hassle 2-year warranty and a 30-day money-back guarantee.

### 10. GREAT VALUE

Loaded with premium features, a Turbo-Cool power supply will upgrade the performance of your PC or LAN file server at a retail cost of only 55¢ to 80¢ per watt. You'll be powered by a unit that is popular with award-winning PC manufacturers and recommended by experts such as the PC Magazine Advisor!

Turbo-Cool 450

**PC POWER & COOLING, INC.**

5995 Avenida Encinas, Carlsbad, CA 92008 • (619) 931-5700 • (800) 722-6555 • Fax (619) 931-6988

Circle 142 on Inquiry Card (RESELLERS: 143).

much, but Roberta liked it. I don't mind remembering that you type `mpower -on` to turn on the WinSX (on the Mastersport, it's machine modem on), but Roberta isn't much interested in memorizing details of machine operation. I wrote her a series of batch files for her older Zenith laptop. They'd turn on the modem, log onto the right directory, and invoke the proper communications program for BIX or GENIE. I didn't get around to that with the WinSX, because it had Lap Manager.

I'll have to do it for the Nomad, unless I find a way to install Lap Manager on it. While I'm at it, I'll jigger the AUTOEXEC.BAT file to give my name and fax number when the machine turns on. I'd done that on the Zenith laptop before it was stolen, and that's how the San Diego police knew to call me when they recovered the machine.

Roberta thinks all laptop machines ought to come with good on-line help systems describing the machine and any pre-

installed software. Many outfits put up readme files, but they tend to be too long and unindexed. What Roberta wants is hypertext on-line help files. She also points out that USRobotics prints the essential information from their manual right on the bottom of the modem. There's a lot of blank space on laptop bottoms....

### RoboHelp

If you have an application that can benefit from hypertext help systems for Windows, you need RoboHelp from Blue Sky Software. This really works to take the sting out of building help systems. The author of RoboHelp—who, curiously, is unnamed—says in the preface to the manual that “the day of the ASCII read-me file is over.” With luck, this is true.

RoboHelp requires Microsoft Word for Windows, Microsoft Windows 3.x, and the Microsoft Help Compiler 3.x. Given those, you can build hypertext help systems for just about every Windows application.

Using RoboHelp is straightforward. You'll need to know a bit about Windows and Word for Windows and how to use the Microsoft Help Compiler; otherwise, it's all explained simply enough. Do understand, this is a professional tool, but anyone who can use Word for Windows can use it. That certainly includes teachers.

I strongly recommend that anyone distributing a Windows product, or hardware with Windows installed, build real help files to include with the product. You'll make your customers much happier and end a lot of reviewer frustrations. RoboHelp looks to be the simplest way to do that; this makes Blue Sky a public benefactor and more than justifies a User's Choice Award.

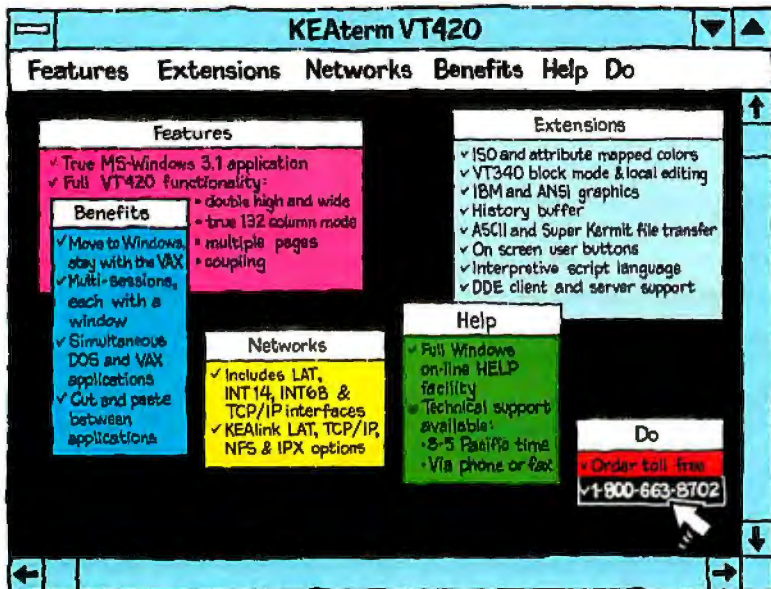

### Cursorific Pro

I'm still writing this in Q&A Write, but I'm now used to Windows and Microsoft Word; enough so that I've taken to running Windows on the Mastersport. The only problem I had with that was that I sometimes had trouble locating the Windows cursor on the desktop.

That was just about fixed by Cursorific Pro from Apex Software. This installs simply, ending up as a resource in your Windows Main program group. Invoke it and choose cursors for different conditions. You get a lot of cursor sizes, patterns, and shapes to choose from. One of them will be visible in almost any light condition.

This is one of those programs that does one thing, does it well, and causes no problems. If you have any trouble at all seeing your Windows cursor—or if you're just

## Move to Windows, stay with the VAX.™

### VT emulation under Windows

KEA has VT emulation and connectivity products for your PC: KEAterm VT emulation for MS-Windows; ZSTEM VT emulation for MS-DOS and SCO UNIX; the PowerStation VT layout keyboard for your PC; and KEALink network products for connecting to your VAX or UNIX host.

# AMI EISA

## The Only Game In Town

For EISA, there is only one player to consider—AMI. Whether it's motherboards, BIOS, utilities, or SCSI host adapters, AMI is the single source for advanced EISA technology.

### ADVANCED EISA & MODULAR CPU MOTHERBOARDS

With AMI leading the way in EISA motherboard designs, you will benefit from bulletproof performance and proven reliability.

- EZ-Flex—A new modular CPU design offering easy upgrades to future technology.
- Enterprise II—A proven EISA performer, popular for critical applications.

### THE LEADING EISA BIOS

AMI is the world-wide standard for BIOS. AMI's EISA BIOS provides the reliability, compatibility, and features you desire. Plus, it's compatible with AMI's BIOS Configuration Utility, providing on-site customization for the Integrator or OEM.

AMERICAN MEGATRENDS, INC.

800-U-BUY-AMI or 800-828-9264, 404-263-8181, fax 404-263-9381

### EISA UTILITIES MAKE THE JOB SIMPLE

AMI designed and developed the EISA Configuration Utility to make configuring EISA products a snap. Run the ECU and select the auto configuration option, or modify the I/O ports, interrupts, or DMA settings as you desire.

### EISA ADD-ON CARDS

The Fast Disk EISA SCSI Host Adapter, with a combination of 16 MB cache, and intelligent

386SX I/O management, is the fastest SCSI host adapter on the market today. Look to AMI for other EISA cards in the near future.

### THE AMI DIFFERENCE

AMI's expertise covers the entire EISA environment. With research, engineering and support functions under one roof, AMI is unmatched in knowledge and support. Call AMI, and you will understand why AMI's "monopoly" on EISA makes it the only game in town.

bored with your cursor—this is the program to get. It sure saved me some eyestrain. Recommended, and the winner of a User's Choice Award.

### K-U-I

If you don't care for trackballs and you have to run Windows on a portable, Softac's K-U-I—Keyboard User Interface—may be just what you need. This lets you set up a bunch of hot keys to launch applications, simulate a mouse, and do command-line control in a pop-up window. K-U-I also includes user-selectable cursors.

I find I don't at all mind either the Microsoft Ballpoint or the Logitech TrackMan Portable, so this isn't as useful to me as I thought it would be when I got it; but if you're tired of mousing around, this may be the remedy.

### The Amiga 3000T

This is a report, not a review. I don't have the time or space to go into all the features of the Amiga 3000T and the new Amiga 2.0 operating system. What I can do is give you some impressions and tell you why you might want to buy one.

The Amiga was the first personal com-

puter with a practical multitasking operating system. It also had stunning visuals integrated with a good sound system, so it was the first practical low-cost multimedia machine as well. As a result, it attracted quite a few users. Most were hobbyists. Some dropped along the wayside, but a few, like my colorful friend Leo Schwab, became real fanatics who thought themselves Keepers of the Sacred Flame. They went around denouncing IBM, which may or may not have helped get others to take the Amiga seriously.

Others, like David Joiner and Joanne Dow—you can find them on-line in the Amiga conference on BIX—were willing to overlook the machine's many and very real defects: weird documentation—many of its best features weren't documented at all, and they were passed along as folklore; a slow and insanely dumb disk drive system; hokey error messages; a start-up system that was just plain odd, involving a "Kickstart" and an icon-operated "Workbench," except that power users could use a command system called a CLI (command-line interface); mysterious terminology; and so forth. Of course, some of these were strengths rather than defects,

but the early Amiga was so poorly documented that many features were as confusing as bugs.

There were a number of revisions, and promises of more, but over the years the Amiga lost several chances to move up to real rivalry with the Mac. On the other hand, it's still here, with about a million units in the U.S. and perhaps 3 million worldwide; and while sales aren't exactly leaping along, they're not all that slow either. The Amiga has found a definite niche; and those who like it, like it a lot.

Moreover, the new version of the operating system that is incorporated into the 3000T fixes most of the problems described above. The floppy drive system is still a bit weird, but it's no longer intolerably slow. The hokey "Guru Meditation" messages you got if there was a system crash are gone, and, even better, so are the system crashes. The new operating system boots up from ROM and comes up when you turn on the machine: no more two-stage Kickstart-Workbench bootup. The operating system has many features you won't find in DOS systems, too.

For instance, quite good sound rendering is built in: no sound board is needed to

Rub lamp and say:

"I want vivid color from an affordable printer."

"I want vivid color from an affordable printer."

"I want vivid color from an affordable printer."

If that doesn't work call 1-800-835-6100, Dept. 22J.

The Phaser™ II PXe color printer produces 16.7 million of the world's brightest, most vivid colors. It prints at 300 dpi onto transparencies or paper using PostScript Language-Level 2. It works with PC or Mac applications, it's fast, it's networkable and at \$4995, unexpectedly affordable. Rub for awhile, then call.

get multimedia. The ProWrite word processor (it's much like MacWrite in use) will have the Amiga read the screen to you. It does a surprisingly good job, too.

Arexx, the Amiga version of the Rexx command programming language, is built into the Amiga operating system. Rexx is a very powerful language that lets you build highly complex and useful software robots to handle such things as communications and backup unattended; experienced Amiga users can do astonishing things with it.

About the time you read this, there will be a new addition to the Amiga 3000T operating system: the ability to read DOS files directly. That is already installed on my system. It makes text and source code transfers very easy. The 3000T I have has a high-density 3½-inch drive; that's at present an undocumented feature, but I presume Commodore will document and support it soon.

The Amiga 3000T has full SCSI capability. Attach any true SCSI device, including a hard drive, and it ought to work just fine; no controller card is needed. We tested the Amiga's SCSI capability by connecting up the Palindrome DAT (digital

audiotape) drive that normally runs off a Future Domain controller card. There was nothing to it: just connect it up, put in a blank tape, and bring up the backup program.

### **T**he current version of the backup program isn't very sophisticated.

The current version of the backup program isn't very sophisticated: it will do only incremental backups to a new tape, otherwise only full backups on a previously used tape. On the other hand, it works just fine, and it's fast (at least with DAT), so I can't complain. It will restore

single files or *drawers* (which is what directories are called on the Amiga). We erased some games and restored them from tape, and they ran as well as they ever did. I am told that any SCSI tape drive, such as those from Colorado Memory Systems, will work with the Amiga.

The next test was CD-ROM drives. First we tried a Denon drive (manufactured by Sony), which is supposed to be true Mac-compatible SCSI. It didn't work. Then we tried the Toshiba CD-ROM drive that came with the Corel Blockbuster package. That worked first crack. The Denon drive is older, but it works with most SCSI devices; I don't know why the Amiga 3000T didn't like it. The Toshiba is easily the fastest CD-ROM drive I have; it works just fine. So does the Pioneer read/write optical drive. An Amiga doesn't know about WORM files, so you can't run a WORM drive. All SCSI devices are not equal. I don't have any advice on how to tell which will work with the Amiga and which won't.

SCSI devices appear to the Amiga operating system as just another drive. The CD-ROM retrieval software I know about is all written for DOS or Mac operating

systems; I'm not aware of any for the Amiga. We were able to read DOS directory and filenames all right, and text files; but we couldn't run any of the retrieval software. We were able to view some CD-ROM screen images.

Art Department Professional is a wonderful program that converts just about any screen image format to something the Amiga can display, and we were able to look at, for instance, NASA GIF files just fine. The VGA quality is excellent, but

then you expect that from the Amiga.

Indeed, desktop video is the Amiga's strongest point. It's easier to make a good desktop presentation integrating visuals, animations, and sound with the Amiga than with any other system I know; certainly than with any PC-type system. Moreover, Amiga stuff can be output to tape and then played on any VCR: I recall a spectacular presentation by Klaus Heiss at Doug Trumball's studio in the Berkshires. It was a series of solar-sail space-

craft, drawn and animated by Georgetown University students using an Amiga 2000.

I'm supposed to do another space presentation at the White House, and I think I'll work up something on the Amiga. I've got some scanned images of my ships, there are plenty of space images for background, and Disney makes an excellent animation program; and there are several programs that will build presentations. Stay tuned.

I wouldn't recommend the Amiga as the only computer for a small business. You can manage: There are reasonable word processors, databases, and spreadsheet programs for the Amiga; but you will be out of step with everyone else. I'd hate to do my income taxes without Tax-view or MacInTax, and there are many small businesses using Quicken or Access to Platinum for accounting; neither of these has an Amiga version. My artist friend Kelly Freas likes the Amiga because of the graphics, but his wife finds the business software is driving her nuts. Of course, they haven't bought any new software in years. Still, in my judgment they'd do better to get a PC clone for the business and leave the Amiga for graphics and games.

The Amiga is used as a solo business machine in Europe, and knowing the Amiga and its European software base may be an edge for those wanting to do business over there. There's also a simple program that will change the Amiga video output from U.S. NTSC to the European PAL standard (which has more scan lines).

The Amiga fares better as a solo machine for students, provided that the student is curious about the machine's potential. Amiga users will get a very good grounding in both basics and slick tricks of computer use; Windows or the Mac should be a snap for an experienced Amiga user. College students may need software, such as dynamic simulation programs, that just aren't available on an Amiga; on the other hand, while I haven't seen it, Dr. Marvin Weinstein, an Amiga enthusiast at the Stanford Linear Accelerator Center, says that Amiga DOS Maple is as good as Mathcad or Mathematica. Most of the big CD-ROM databases don't have any Amiga access software. It might be possible to write an Arexx script that would do much of that, but I'd hate to try it.

Actually, it might be fun to try that, provided that you didn't have a fortune riding on the results. I don't recommend the Amiga as your only business machine, but I can recommend it as a second machine for people who just like to play with computers; I'd guess that about half the BYTE readership would find the machine worth having just for fun, and many of those

## ARE YOU SPENDING TOO MUCH TIME DRAWING FLOWCHARTS?

### YOU NEED FLOW CHARTING™ 3.

Every day, professionals worldwide save time and money using Flow Charting 3. It's fast, efficient, easy to use, and always produces presentation-perfect charts and diagrams.

With Flow Charting 3's built-in flexibility, you can create customized charts using a variety of shapes, lines, and text—placed where you want them.

Plus, Flow Charting 3 is now available in a LAN version. Making it easy to share files and set up work groups for specific projects.

And it's backed with free technical support and a 90-day no-risk guarantee. So if you're spending too much time drawing charts, call for a free demo and see for yourself what makes Flow Charting 3 the best-selling flowcharting software.

# Why do they call it a dongle?

He wasn't famous. He didn't drive a fancy car, but dressed in his favorite Comdex T-shirt and faded blue jeans, he set out to change the course of the computer software industry. Quite a task for a lonely software developer.

Sitting in front of his computer, drinking pots of coffee and smoking cartons of cigarettes, he'd write pages of code. It took time. Years in fact. But he did it. He wrote the most powerful computer program in the world. Now came the hard part. Selling it.

## The Most Powerful Program in the World

Determined to make those long years pay off, he called on every distributor, VAR and dealer in the world. He drove from Beantown to San Diego. Flew from Dublin to Borneo. Everyone loved the program.

So he sold a few. Only a few.

Back in Boston he waited. After a long year

with only 13 orders he set out to see what happened. As he drove across the

country and flew around the world he discovered everyone knew about his program. Everyone had it too.

## The Global Marketplace

From Paris to Prague, his program was everywhere in Europe. When he got off the plane in Hong Kong he found his program stacked to the ceiling in every computer store. Amazed in disbelief, he bought a hundred cartons of cigarettes and a hundred pounds of Indonesia coffee and flew back to Boston.

Beaten, battered and bruised he went back to the drawing board. This time he would really change the face of the software industry. He would develop a device that would prevent unauthorized distribution of software programs.

## Call It What You Like

He developed a hardware key. His peers applauded his efforts. Finally, a solid solution for revenue protection.

But he didn't know what to call it. He thought of naming it after an exotic place he visited in his travels. Madagascar was a bit too long, though.

"Name it after you, Don!", urged his peers. So he did. Soon everyone was calling the key a dongle, after Don Gall — the lonely software developer who did what he had to do.

## You've Come A Long Way, Baby

Today, dongles are different. Fact is, they've come a long way. Leading the

industry with security solutions, Rainbow Technologies has changed the face of hardware keys. They work with multiple applications, are programmable and network versions control concurrent usage. And they're always transparent to the end-user.

## Sentinel Family from Rainbow

Truth is, more and more developers are using keys. And the Sentinel Family is the most widely used in the world. In fact, over 6,000

developers use Sentinel from Rainbow. Why? They are simply the most effective, reliable and easy to implement keys on the market.

Learn more about securing

your software and how keys provide developers with extra value. Call for a free copy of "The Sentinel Guide to Securing Software." And see just how easy it is to

install a hardware key into your application in just minutes. Try it with our low cost Sentinel Evaluation Kit. Order one for your DOS, OS/2, Windows, Macintosh or UNIX based application.

And remember, when you need a dongle, you need Sentinel — the only dongle Don Gall would use.

Circle 155 on Inquiry Card (RESELLERS: 156).

but you may find yourself using it because it's just plain fun.

## Word for Windows

The adventure continues. I've just got a copy of the CD-ROM version of Word for Windows; it's integrated with Microsoft Bookshelf. Provided that you have a CD-ROM drive, it's neat, what with integrated thesaurus, dictionary, Columbia desktop encyclopedia, and other stuff, all built into your text editor. They've also put the entire Word for Windows manual on-line: the CD-ROM is completely filled, 600 MB of program and information.

I haven't had my copy long, but I've already told Larry Niven to order one. More next month, but I think this is my word processor for the future.

## CD-ROM Interim Report

Everyone needs a CD-ROM drive, and they're now down to a price that anyone can afford; I've seen drives with a stack of CD-ROMs in the DAK mail-order catalog for under \$200. Of course, the cheaper drives are very slow. You'd do better to spend another hundred for a faster drive. A slow CD-ROM is still better than no

CD-ROM at all, but you can use it only for text retrieval, not multimedia.

I think I was the first columnist to predict a big future for CD-ROM; that future is here, and in a couple of years you'll no more have computers without a CD-ROM drive than you'd have one without a hard drive.

One painless way to install CD-ROM is to purchase the Multi-Media Kit from Creative Labs. This package consists of a Sound Blaster Pro board with a SCSI controller, an internal half-height CD-ROM drive, and the software upgrades needed for multimedia operation with Windows 3.1. The result is a good, solid, fast CD-ROM drive.

A second way is to contact the Bureau of Electronic Publishing (141 New Rd., Parsippany, NJ 07054, (800) 828-4766 or (201) 808-2700; fax (201) 808-2676) for their catalog and decide what to do from there.

I've also had excellent results with any SCSI drive and Corel's SCSI controller board and software. Corel has the added advantage that it works well with the Pioneer Minichanger, which is coming into its own. In the future, I will want one CD-

ROM drive just for the Microsoft Word/Bookshelf integrated package; I can foresee when I will want several CD-ROMs on-line at all times and still need a drive for CD-ROMs used occasionally. The Minichanger is the obvious solution to that; indeed, my own setup now has a very fast Toshiba CD-ROM drive in a daisy chain with the Minichanger.

However you do it, you will soon find you can't do without CD-ROM.

## WinJet and LaserMaster

I've mentioned LaserMaster before. Their products come in two flavors: WinJet 800 and LaserMaster TrueTech 1000/4, which is a big laser printer. WinJet 800 converts your LaserJet II, IID, III, or IIID into an extremely fast PostScript printer with 300- or 800-dot-per-inch resolution.

The TrueTech 1000/4 is about the same speed, but it has 1000-dpi resolution. Alex and George Jumper installed the TrueTech 1000/4 on a Novell network system, and aside from a couple of glitches having to do with sequencing—the software must be installed before the hardware board is put into your PC, and the print output has to be directed to the proper queue before

# GREAT THINGS COME IN SMALL PACKAGES

*This powerful print server can tackle your biggest network printing problems*

- Connects any parallel printer directly to your Ethernet LAN
- Fully Novell Netware 286 and 386 compatible
- Can attach to 8 file servers simultaneously
- Fast and easy to install
- Combines high-speed printing and exceptional printer control
- Supports encrypted passwords, forms, notify, cancel, and others
- Full one-year warranty and unlimited free technical support
- Made in the U.S.A.

Voice\*

Caller ID\*

14,400 bps FAX

\$399<sup>95</sup>

14,400 bps DATA

5 Year Warranty

Never before has so much power & technology been packed into a SupraFAXModem! The SupraFAXModem V.32bis combines a potent mix of fax and data features — for explosive results! Maximum fax potential is achieved with Group 3 fax machine compatibility at up to 14,400 bps and Class 1 & 2 software compatibility. With raw data speeds from 300 to 14,400 bps, and up to 57,600 bps

with V.42bis compression, it *blasts* data over telephone lines. Plus its revolutionary display gives you 25 different status reports! For just a little more, you can add caller ID and voice capabilities later this year.

All this for the *dynamite* price of \$399.95! In addition to the stand-alone version (without software) SupraFAXModems are available in

Windows™, DOS™, and Macintosh™ packages.

# The World's Best Selling UNIX Clone Just Got Better.

## Now with full 32-bit implementation!

If you want to ignite your 32-bit hardware with the multi-user, multi-tasking power of UNIX, Coherent 4.0 has arrived. And if you're operating or selling small business network systems with dozens of users, that's really good news. Because Coherent 4.0 is what you want in UNIX at a price that's hard to believe.

## Run UNIX applications today!

Coherent is now binary compatible with UNIX. Most UNIX PC applications port with a simple recompile and many now run right out of the box. The list is growing everyday, so call for details.

## Yes, It's For Real!

How can it be? First of all, Coherent was independently developed by the Mark Williams Company, so you don't pay for UNIX licensing fees. You don't pay any mark-up or reseller costs either. Coherent is only sold directly to you.

six disk installation is a breeze compared to their 25. You'll also learn it faster and increase overall performance. All because Coherent is smaller, faster... and better.

## Small, But So Complete.

Make no mistake, Coherent is a wholly professional development system. You get a complete

C compiler, assembler and over 200 UNIX commands including full sets of functions for development, administration, maintenance and text processing.

Coherent also comes with UUCP capabilities that connect you to a world-wide network of free software, news and millions of UNIX users. And it's all clearly documented in Coherent's highly praised 1200 page manual.

# Coherent.™ Still \$99.95.

*"... (Coherent) maybe the best thing that has happened to UNIX yet."  
-William Zachmann, PC Week*

In fact, over 40,000 copies of Coherent have already been sold. And, like the ones we quote here, virtually every critic who's reviewed Coherent has raved about it.

## So Much Less, Yet So Much More.

As a virtual clone of UNIX, Coherent embraces the original UNIX philosophy: Small is beautiful. Small price, yes. But there's more, much more, to Coherent than its amazing price.

Requiring only 10 megabytes of disk space, Coherent can reside with DOS. So you can keep all your DOS applications and move up to Coherent. And it runs with as little as 1 MB of memory versus 4 MB for other UNIX versions.

## The World's Only Plug And Play UNIX Clone.

You'll have Coherent up and running with a fraction of the time and effort it takes for other UNIX versions. Our

\*Byte C Compiler Benchmark: Compiles per minute on 25 MHz 486.

## Experienced, Supported, Guaranteed.

Mark Williams Company has been developing professional programming tools since 1976. Our commitment to our products and users is unsurpassed. Users applaud our popular BBS and the widely acclaimed telephone support they get free from Coherent developers.

Still, we're not asking you to take a chance on Coherent. We've made it fool-proof to see for yourself—with a 60-day money-back, no hassles guarantee. So pick up that phone and order Coherent now. And the best way to UNIX will be on its way to you!

## 800-MARK WMS

(800-627-5967 or 708-291-6700, FAX: 708-291-6750)

## 60-DAY MONEY BACK GUARANTEE!

**Mark Williams Company**

60 Revere Drive, Northbrook, IL 60062

Coherent is a trademark of Mark Williams Company. UNIX is a trademark of USL.

forthcoming books with it.

WinJet 800, meanwhile, is plenty good enough for anything but slick paper typesetting. It, too, installs simply. A board goes into your PC, and an interface board goes into your LaserJet. The only problem is that the cable between the two boards is only 10 feet long; my printer and computer are not 10 feet apart, but the cable route is longer than that. WinJet 800 works so well, though, that I'm looking into ways to change the cable route so that

I can keep it; which probably says all that needs saying.

WinJet 800 takes all the sting out of Windows printing. It's fast and reliable, and the results are beautiful. A User's Choice Award, and highly recommended.

## Windowcraft

I haven't time to do this justice this month, but you'll be hearing about it a lot in the future. This is to Windows what HyperCard is to the Mac: an authoring system for de-

veloping Windows applications. It will automatically convert many Mac HyperCard stacks to Windows. It makes objects. It includes a paint program. It has a built-in debugging tool. It's powerful enough that I could use it to do a jazzy Windows version of Roberta's reading program, and that's likely to happen soon.

In a word: Windowcraft is what Tool-Book should have been; it's what Windows has been waiting for. A lot more later, but if you're interested in developing Windows applications, you can't afford not to know about this.

## Winding Down

Many books this month. Microsoft Press has a stack of Word for Windows books, all with some value, but you're probably better off getting the CD-ROM version of Word for Windows: it has the Word manual on-line, and it's much better indexed than any book index I've seen.

The computer book of the month is by Michael A. Banks, *The Windows Shareware Book* (John Wiley & Sons, 1992, ISBN 0-471-55817-6). I'd be astounded if you didn't find at least one of the shareware programs included worth the price of the book, and Banks does a good survey of the shareware scene.

The book of the month is by James Davidson and William Rees-Mogg, *The Great Reckoning: How the World Will Change in the Depression of the 90's* (Summit Books, 1991, ISBN 0-671-66980). I guarantee you won't agree with it all, but I bet you can't put it down once you start it.

The game of the month is Interstel's *Dusk of the Gods*. I guarantee the interface will drive you nuts, and you'll curse some of the implementation; but it's based on real Norse mythology, and provided you're interested in the Aesir and Vanir, it will be one of the most interesting games you'll ever see.

Next month, a wonderful science adventure game, operations research at Microsoft, new sound boards, and much more. ■

# ► FrameMaker.

## The ultimate Interleaf® “upgrade.”

Year after year you Interleaf users hoped for a newer, friendlier, better publishing solution—and what you got were promises.

- What you ought to get is FrameMaker.®
- With FrameMaker you'll get a document publishing program that's powerful, fully featured, and fully integrated—like Interleaf. But not fully frustrating—like Interleaf.
- You'll get a familiar, well-behaved user interface that increases your productivity, instead of a proprietary interface that increases your confusion. You'll get accessible, intuitive tools like FrameMaker's Conditional Text, instead of cumbersome, procedure-intensive nightmares like Interleaf's "Effectivity."
- You'll finally get files that are truly compatible—across all the major desktops and across future upgrades. Instead of Interleaf version 5 on your Sun™ that can't

be handled by Interleaf version 3 on your Macintosh.

► You'll get the same compatibility with FrameViewer,™ Frame's leading edge viewing technology that lets you distribute FrameMaker documents—or even converted Interleaf documents—electronically. So everyone in your organization can receive up-to-the-minute, accurate information on-line.

► And if you act quickly you'll get an even easier upgrade deal: a **free** Interleaf-to-FrameMaker file conversion filter\*—a \$995 value.\*\* Call **1-800-U4-FRAME Ext. 233** today for more information. And this time upgrade for good.

**FREE  
INTERLEAF  
FILTER**

 **Frame**®

# End PC Envy

## A Window on the Network

As you can see, DOS programs run alongside Microsoft Windows programs. You've seen this all before in our DESQview, right? Yes, but now there's more. DESQview/X lets you access and control a wide variety of PCs and workstations through your own PC. This feature is called remote computing.

In the example to the right, Lotus 1-2-3 is running in its own 386SX PC. The window at the top of the screen is a DOS window running on a remote 486 PC under DESQview/X. At the lower left is a FrameMaker program running on a remote IBM RS/6000 workstation in another part of the company.

## Brand and Platform Freedom

DESQview/X runs on 386SX PCs and above. And from within windows on those PCs, you can use programs\* running on any number of remote DESQview/X PCs if your network supports NetWare or NetBIOS. Add DESQview/X's optional Network Manager for TCP/IP networks and you can also access programs running on IBM RS/6000s to HP 9000s to Sun workstations. And it works the other way, too: these workstations can view and use DOS programs in their displays.

\* DOS graphics programs currently run only on your local PC.

## Works the Way You Want

You can change menus, add sub-menus. Add menu items that run remote programs.

Change commands. DESQview/X gives you a menu to use for your macros. And if you prefer a graphical desk top instead of a menu, DESQview/X's Application Manager gives you buttons for opening a set of programs used in a project or even for launching remote programs. What's more, you can specify window size and color. And if you are using DOS text programs, you can set them up so that the font changes size as you change the size of the window. We call this feature scalable DOS windows (see the Lotus 1-2-3 window at left).

## Looks the Way Users Want

DESQview/X supports sculptured menus, customizable backgrounds, graphic buttons for launching programs, icons and online context-sensitive help to make computing easy and fun. If you are a DESQview user, you'll find DESQview/X very familiar, with an improved look. But if you prefer a different look and feel, we offer two other interface options: OSF/Motif and OPEN LOOK.

# Introducing DESQview/X™ for DOS

# DESQview/X gives everyone access to the power of the fastest PC—or workstation—on the network.

## Remote Computing is a Reality

Set up and run programs on remote DESQview/X PCs on your network. Instruct and support users. Diagnose problems and solve them from your own PC. DESQview/X provides controlled access to every program on every PC.

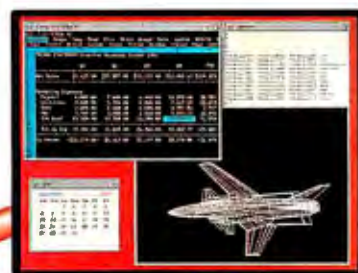

## Here's How You Might Use DESQview/X on Your Network:

Say for instance your company uses a particular database that requires lots of horsepower or lots of memory to run. You can set it up on a 486 PC loaded with memory — then allow appropriate users access as you normally do on the network. The difference is that the database will be running on the remote 486 instead of the local PC. Users can take advantage of the power they need, when they need it. And you'll be able to best assess who actually needs his/her own 486 PC.

## Easy to Set Up and Administer

DESQview/X asks three questions: Do you wish to transfer files to and from other computers? Do you wish to use programs on other computers? And Do you wish other people to have access to programs on your computer? That's all it takes for DESQview/X to set itself up. DESQview/X incorporates QEMM-386 to assure maximum memory utilization and Manifest for easy diagnosis and problem-solving.

Give your PC the key to unlocking and sharing the power of other PCs on the network.

DESQview/X is a graphical multitasking environment for DOS. It is so powerful that it literally turns DOS PCs into graphical workstations. With DESQview/X, you can run DOS and Microsoft Windows programs simultaneously, view them in windows, transfer between them, create DESQview/X-global or program macros and manage your files.

DESQview/X makes computing lots easier, more productive, and more fun.

With DESQview/X, you can now run programs and access files on other computers on the network and view them in windows on your own PC. Distribute tasks among computers based on their capabilities and available resources.

Remote diagnosis and support is now a reality. With DESQview/X you can support, instruct; even remotely demonstrate programs right at your user's computer.

If you have X Window workstations, our optional

'DESQview/X to Other X Systems' TCP/IP Network Manager allows you to run workstation programs remotely from PCs.

For all this power, DESQview/X is stunningly easy to set up and use, and can run on any 386 or 486 PC with as little as 4MB RAM and 40MB hard disk.

DESQview/X multiplies the power of networked PCs by erasing the boundaries between computers; between programs and between users. Welcome to the limitless future of enterprise-wide computing.

# Is Unix Dead?

As Unix faces the stiffest competition of its long life—  
Windows NT—can it survive?

**TOM YAGER AND BEN SMITH**

**A**mong operating systems, Unix is the grand old man. Over its long life, it has garnered respect and ridicule, awe and animosity. Never before has computer code managed to so passionately galvanize and divide, anger and excite otherwise level-headed technologists. Unix stories transcend reality. Wizards and demons abound. Gatherings of the faithful generate the kind of excitement usually reserved for evangelists' tents.

Today, however, Unix's seniority and mystique hold little sway. At least 25 different Unices exist now, and committees dispassionately choose from among various Unix versions, but six providers dominate: Sun Microsystems, The Santa Cruz Operation, Hewlett-Packard, Unix Software Laboratories, DEC, and IBM. The entry of Next, Univel (the joint venture between USL and Novell), Solaris (from SunSoft, Sun Microsystems' software subsidiary), and other new multiplatform Unix players will, odd as it may seem, help consolidate a confusing field of choices. But in the midst of that consolidation, Unix will face what may be its most powerful adversary to date: Microsoft Windows NT.

At this crossroads, it is appropriate to examine some key aspects of Unix: What makes it unique? How has it changed over the years? What are the threats to its survival, and how might it overcome them? And, most important, will it survive?

## Reports Greatly Exaggerated

Despite its problems, Unix is not dead; in fact, it's surprisingly healthy. Unix remains compelling because it is the only operating system to offer multitasking, graphics, and cross-platform compatibility in one package. Market researcher Dataquest estimates that, for 1991, Unix sales (including both systems and operating systems) totaled 1.2 million units, for \$18.2 billion in revenue. Unix revenue will climb to \$44.7 billion in 1996 on unit sales of 4.1 million, according to Rikki Kirzner, a senior industry analyst in Dataquest's software group (see figure 1).

Other analysts believe that Windows NT will slow Unix's growth. NT is a legitimate threat to Unix's domination of the workstation market and to its chances for success on the desktop. NT may be the strongest stimulus to date for inducing Unix providers to stop arguing and start cooperating in an endeavor to give software applications developers a standard software base. The Unix industry has answered that call with new versions aimed at the Intel-based desktop: USL's Unix System V release 4.2 (also known as Destiny), Next's NextStep, and SunSoft's Solaris.

*continued*

## Understanding the Unix Community

There are two distinct branches of the Unix user community. The first group could just as well be running VM, VMS, or any other operating system; it just so happens that its chosen applications run on Unix. These unwitting people may be the fastest-growing segment of Unix users. Participants in many information services—AT&T Easy Link, for instance—are Unix users and not even aware of it. Many retailers run their businesses on Unix. What these users have in common is that some technically knowledgeable person or firm set up and maintains their systems. For this group, Unix is an invisible tool.

The other, better known, Unix community comprises technically adept users, for the most part. They may be using workstations now, but they are the people who were running serial terminals not long ago. In contrast to the first group, these users understand the inner workings of the operating system. This uniquely dedicated group forms the core of the "Unix community," a near-cult with a strict hierarchy based on technical knowledge (see the text box "Unix: A Child of a Thousand Parents" on page 137). The people involved in the creation of Unix built it for people like these. But now that Unix is falling into the hands of the uninitiated, its role—and its shape—are beginning to change.

Those blissfully unaware users of the first group are Unix's future. In fact, they're the future for all multitasking operating systems. Ask today's user what he or she needs, and you'll hear multitasking, graphics, and cross-platform compatibility. These needs are keeping Unix alive, because it's the only operating system that delivers them all.

Unix users have come to take seamless file sharing, network printer services, remote application execution, client/server program support, and multiuser access for granted. MIT's efforts with the X Window System have made graphics part of the mix, providing a network-integrated graphical application environment that's still unmatched by any other popular system. These and other services make Unix a perfect choice for networked applications, and Unix is presently the only operating system that integrates these elements.

**Figure 1:** Unix's growth in dollar sales will actually outpace that of the market as a whole through 1996, according to market research firm Dataquest. The compound annual growth rate for Unix during this period is 27.5 percent, but only 5.9 percent for all platforms.

Thomas Giammo, assistant commissioner of information systems at the U.S. Department of Commerce's Patent and Trademark Office, agrees: "In the next year or two, there's no other player that can give us what we need," he says.

In spite of that commitment, Giammo echoes the sentiments of both large- and small-scale users who feel stuck with Unix: It solves their short-term problems, but it creates other problems that make it an unlikely long-term solution. Giammo predicts that, as a result, Unix will be effectively wiped out in the mid-1990s; his money's on Windows NT. And he's not alone.

Once Unix became a commercial property, it lost its unity of purpose. In the hands of vendors who knowingly built cross-version incompatibility into their offerings (partly to lock customers into a particular flavor), Unix has generally failed to track user demands adequately. While it meets needs like multitasking and networking well enough, it leaves lesser issues unaddressed. For example, it's still too hard to use and administer, not compatible enough across implementations, and, for the most part, too married to its old character-based, command-line, serial-terminal traditions. "[Unix] is a hacker's version of an operating system that has grown respectable over time," says Giammo.

## Overcoming the Problems

Improving Unix is much on the minds of Unix vendors. "If you have an X-based desktop with Mac-like features, the end user won't care that Unix is underneath," says Ken Arnold, an engineer at HP's Distributed Object Computing Program. As base-level machines get more powerful, they can better run the larger Unix operating systems. Then, to the end user, it is simply a matter of what off-the-shelf applications are available.

Avadis Tevanian, director of System Software at Next, agrees. He envisions a GUI that can run productivity applications side-by-side with user-made custom applications. "To get up to millions of units, you have to get rid of [the Unix shell]," he says.

But a GUI has not been an original, fully integrated part of Unix. Instead, it is usually a distinct layer poured over Unix's command line. In contrast, *everything* on the Mac is handled graphically, and the operating system is tuned for it. Even when the system crashes, a graphical dialog box tells you what went wrong. Most Unix systems boot and shut down in full-screen text mode, and when you need to jump into single-user mode for maintenance, you don't get graphical pull-down menus and radio buttons—you get a prompt. For graphics to contribute adequately to ease of use, it must be an integrated part of the system.

The Next machine provides a shining example of Unix with highly integrated graphics. Unless something goes terribly wrong, or unless you request otherwise, you'll always have graphics insulating you from the operating system (see screen a). Even the most experienced users—the programmers—work inside a cozy graphical environment with visual tools that make it easy to develop NextStep applications. There's almost nothing the command line offers that the graphical environment does not.

The Next computer, though not a best-seller, has proved that the concept of invisible Unix is a viable one and that graphical workstations can be safely placed on the desks of general users. Jerry Marger, president of the law firm Marger, Johnson, McCollom & Stolowitz of Portland, Oregon, is a believer. He converted his firm's DOS network to a Next system because of the latter's ease of use and performance. "NextStep is awesome. Operating a Next is like operating a Mac, except that it's got a truck engine instead of a four-banger," Marger says.

## PC Unix: Waiting for Standards

Plagued by bugs, incompatibilities (particularly in graphical and networking applications), and a lack of cohesive standards, PC

# Unix: A Child of a Thousand Parents

In the view of many, Unix is a living, evolving child with thousands of parents. If some Harvard M.B.A. had seen the plan for Unix in advance, the project never would have got off the ground. But for a time at least, Unix soared, and the concept of development not by committee but by *community* became a model for other large projects.

Not long after a small group of AT&T engineers created the earliest Unix in 1969, the work was taken up by an unaffiliated group: students. The best thing that ever happened to Unix was the handing of its source code to a bunch of kids.

Ken Arnold, now an engineer at Hewlett-Packard's Distributed Object Computing Program, was one of those students. Back in the early 1980s, he was part of the pack at the University of California-Berkeley that created BSD 4.0 Unix. BSD spawned a number of cornerstone technologies and went on to become a foundation for several successful commercial operating systems (including SunOS and NextStep).

"We basically took a lot of people's neat stuff [and] added it to the new things required to make the project go," says Arnold. It was this "neat stuff" that made Unix rich. "Frankly, I suspect most people didn't give a wet ball of lint for its educational value. It was fun, it was central, and we got to do it," Arnold adds.

Networking, the full-screen editor, the fast file system, and countless other necessities were all born at Berkeley. AT&T and its agents rolled pieces of Berkeley's work into its own product, and some vendors (e.g., Sun Microsystems and DEC) opted to use Berkeley's output directly rather than AT&T's adaptation of it. Even though BSD included AT&T code, that code was part of an older, less expensive version of Unix.

Before long, Unix source code found its way to universities all over the world, and, under the banner of "research," commercial Unix took shape. Students and corporate engineers worked (virtually speaking) side-by-

side in what remains the largest and most fruitful collective technical project of all time.

As AT&T raised license fees and imposed increasingly restrictive terms, it forced commercial implementers to look for alternatives. That's how the Open Software Foundation was born. The key OSF members, including HP, DEC, and Apollo, intended to get out from under AT&T's thumb by creating a Unix-like operating system that didn't require paying the latest (and most expensive) AT&T license fees.

The OSF's first product, Motif, took on a quick following as the first commercial toolkit for building professional-looking X Window System applications. OSF/1, a mix of Carnegie Mellon University's Mach kernel (as used on the Next) and IBM's AIX, is off to a shaky start, thanks to vendors who got tired of waiting for it. Other planned OSF technologies, like DCE (Distributed Computing Environment) and ANDF (Architecture-Neutral Distribution Format), have a brighter future.

On the operating-system side, the OSF served its purpose, putting the fear of failure into the giant AT&T, whose Unix Software Laboratories subsidiary now has responsibility for selling Unix. Shortly after the OSF was formed, AT&T spun around and completely revamped its licensing policies.

## A Tough Act to Follow

Unix's golden age gave way to an era of commercialization. Instead of getting Unix from AT&T or Berkeley, consumers began getting it from third-party packagers like Sun and Microsoft. The earliest Intel-based PCs ran a derivative of Unix called Xenix, made by the same upstart Microsoft that had created PC-DOS. While Sun and others established beachheads in scientific and technical shops, Microsoft turned Xenix into a vertical-market powerhouse. The workstation market grew by emphasizing single-user performance and graphics. Xenix and other early PC Unix derivatives grew by making it possible to give multiple users access to shared programs and data for the cost of

cheap terminals and serial cables.

Once it became possible for ordinary people to run Unix on their desktop PCs, companies sprang up to push the idea. The Santa Cruz Operation was born, the contract-programming shop Interactive Systems went public, and Microport carved out the low end. On the face of it, Unix was everywhere. You could run it on workstations, mainframes, minicomputers, and PCs. And now, a number of hungry vendors were adding their value to Unix.

The value each commercial player added increased Unix's girth but also chipped away at its benefits. As the system grew bigger, it got slower, and the sheer volume of code and number of contributors to it fostered bugs and incompatibilities. The flood of new features meant more for users to learn, and making the system easy to use had never been a priority. Stories of Unix's unwieldy and unreliable nature set the stage for vendors of proprietary multitasking operating systems.

That was the first big mistake: If early commercial adopters of Unix had focused more on reliability and ease of use than on heaping features helter-skelter into the environment, proprietary competitors like DEC's VMS and IBM's OS/2 would have had no reason to exist. The openness that generated such excitement in the early days fermented into separatism. Each vendor created its own flavor of Unix, incompatible with all the others. Details were getting overlooked, and things seemed to get out of control.

How out of control? In 1989, DMR Group, a Montreal-based computer software consulting and services company that has done studies for UniForum and X/Open on the Unix and open-systems markets, found about 25 brands as the result of a survey of about 6000 sites. That number was whittled down to six top Unix versions. According to Andrew Toller, a principal at DMR, the top six were SunOS; SCO Xenix and SCO V/386 (combined tally); HP-UX; Ultrix; AT&T System V release 4.0; and IBM's AIX, which was just beginning to make an appearance.

# Space - Savers

## Popular Space-Saver Keyboard \$98.00

First successful alternative to conventional keyboard saves 60% desk space with a foot print of 27.3 x 15.2 cm. Has full travel tactically responsive keys with standard left-right spacing for easy touch typing. 100 keys, compatible with IBM XT/AT PS/2. Many language versions available.

## Stand-Alone LCD Monitor \$995.00

This 10" black on white monitor is easy-to-read, yet compact. Resolution is 640x480 with sharp, flicker-free image. Sharp's high refresh rate, triple supertwist nematic technology with back lighting provides a super bright, low radiation screen with a wide viewing angle. The adjustable monitor base is only 29x14 cm. It lets you mount the LCD monitor on vertical surfaces or fold for transport. Comes with 1.5 m cable and VGA adaptor card. No external power required. IBM AT compatible.

## Diskless LANStation \$1995.00

Combines Space-Saver Keyboard, LCD Monitor and 20 Mhz 386sx CPU w/2 Meg RAM (4 Meg optional) in a single very small footprint (27.4 X 26.0cm). Network ready with 10 Base2, 10 BaseT NE-2000 compatible network adapter built-in. Unit does not fold for portability.

## IS UNIX DEAD?

Unix never made serious inroads on the desktop. Developers who were once excited about the prospect of a stable multitasking PC operating system quickly discovered the volume of problems to be worked around. Unlike DOS and Windows, which seem to run on every PC, PC Unix was fussy: You had to have the right processor, bus, drive controller, tape drive, and display card. Software developers also found that they had to create a separate version of their applications for each flavor of PC Unix. While one version of a program can run on every SPARC-based system in the world, the same was never true for PC Unix.

Having so many different PC Unices is hurting the Unix market. The solution, oddly enough, is to fill the market with a new batch of incompatible PC Unices from the likes of Univel, Next, and SunSoft. There's some hope that, with the new high-profile players, some de facto standards can be struck. They'll be largely proprietary standards, but the success of Apple and Microsoft proves that those are the standards that stick.

Public standards can't easily be enforced. When every Unix provider can alter the source code to suit its individual needs, how do you keep providers from creating incompatible versions? By making binary licenses easier and less expensive to obtain, the keepers of Unix ensure that a broad set of functions known to be stable, including graphics and networking, will be part of most copies of the operating system. USL's deal with Novell, for example, gives USL a distributor it can keep a close eye on. There will, no doubt, be those who feel compelled to tinker with this stable code, but USL hopes they'll be so overwhelmed by competitors doing fully compatible releases that they'll get back in line.

USL spokesperson Ry Schwark says maintaining compatibility is not the only reason to leave the source code alone. "One of the reasons we have driven development down to the binary level is to off-load as much development responsibility as possible from the OEMs," he notes. Those OEMs will have to pass on the cost of customizing Unix to their customers—a painful choice in a market of shrinking margins.

Of the PC Unix players, SCO and Next are in the minority. Most of the others are lining up behind USL's SVR4.2 (see screen b). Unlike its predecessor release 3.2, SVR4.2 makes networking and graphics more or less standard elements of the distribution. Some vendors will probably choose to unbundle portions of it, but graphical applications built for SunSoft's PC Unix should recompile for Univel's version without changes.

It's not important that these vendors will ship different sets of standard applications. What matters is that developers will have a predictable standard software base on which to rest their code. There will be no more rewriting applications to make them run on variants of PC-based SVR4.2, if it lives up to its promise.

Next doesn't mind striking out on its own. It's bringing NextStep, based on Carnegie Mellon University's Mach kernel, to Intel-based systems in an attempt to capitalize more on the fervor over Windows than on any renewed interest in Unix. Obviously, it can't deliver binary application compatibility with its own Motorola-based workstations, but if Next can reduce porting of applications to a simple recompile, it has a chance.

Pencom (Austin, TX) has ported its X server Co-Xist from NextStep 2.1 to NextStep 486 2.1, a version that Next never released as a product. "We probably had more problems than some developers," says Chris Chauvin, product manager and principal developer of Co-Xist. He adds that the difficulties had more to do with the fact that Co-Xist has a dependence on the CPU. Pencom succeeded in doing the port by rewriting specific chunks of code that were optimized for the 68020 microprocessor. The rewritten code was optimized for the 486 within a week; the actual code rewrite took only a couple of days, Chauvin adds.

"Other people were having one- and two-day turnarounds" in

## IS UNIX DEAD?

### UNIX VS. WINDOWS NT

#### Technical issues that are a toss-up between Unix and Windows NT

- Advanced hierarchical file system with long descriptive names
- 32-bit linear memory model
- Preemptive multitasking
- Memory-mapped files
- Shared libraries
- Integral peer networking
- Distributed global naming (assuming LAN Manager NT)

#### Areas in which NT looks better than Unix

- Threaded SMP (symmetric multiprocessing). Some flavors of Unix (e.g., NextStep) are threaded but lack SMP, while others (e.g., SVR4) are SMP-capable but not threaded. Solaris 2.0 claims threaded SMP.
- Layered device-driver architecture. NT will provide generic disk, display, network, and printer drivers that will allow driver writers to specialize relatively easily to create specific device drivers. Unix drivers are more monolithic and, hence, more difficult to create and maintain.
- Interapplication communication. NT provides well-defined services (e.g., OLE, or Object Linking and Embedding); Unix does not.
- A well-integrated scalable-font subsystem. While SVR4.2 will offer Adobe Type Manager and NextStep has Display PostScript, the dominant Unix GUI, X Window System, still relies heavily on bit-mapped fonts.
- DOS/16-bit Windows support (unproven, but likely to equal or exceed that of OS/2 2.0 and far exceed that of any Unix).
- Source code-compatible applications, with a hugely successful Windows 3.x installed base.

#### Areas in which Unix looks better than NT

- Multiuser capabilities.
- Distributable GUI (X)—graphical applications are intrinsically client/server.
- Well-standardized basic network services (TCP/IP, sockets, RPC [remote procedure calls]) that work reliably across wildly different hardware platforms and operating-system versions. NT offers a lot of options (named pipes, mail slots, NetBIOS, sockets, RPC, and even, potentially, DDE/OLE, if and when they are made network-aware), but the danger is that there may be no clear path for developers to write distributed NT applications.
- Well-standardized wide-area E-mail.
- Availability for more platforms than are likely, at least in the short term, for NT.

porting Next applications over to the 486 platform, says Chauvin. This lends support to Next's claim of simple recompilation. Pencom will need to port the application again under NextStep 3.0 when Next makes it available in late summer. "Nobody's port will be considered complete until then," Chauvin notes.

Solaris 2.0, a derivative of SVR4, is going to be the acid test for Sun spin-off SunSoft. It remains to be seen whether the software arm of a hardware vendor is truly willing to create a level playing field. Sun is trying to set itself up with a virtual monopoly on SPARC operating systems and, through SunSoft and Solaris 2.0, is planning to extend its reach into the realm of high-end PCs.

The dicey part of this deal is that Sun's hardware side will still be developing its own software. Along with countless SPARC and Intel vendors, it will be licensing its own operating system

# "I've never liked flowcharting, but ABC Flowcharter has changed my mind."

Kevin Reichard  
COMPUTE Magazine, 9/91

## Fast, easy ABC Flowcharter is America's #1 Windows flowcharting solution!

Take a complex process, and make it simple. That's the whole idea behind ABC Flowcharter® from Micrografx.

ABC Flowcharter is the choice of everyone from programmers to consultants, accountants to engineers. It helps you easily break the

most complex procedures into logical steps. Making you more productive, more consistent, more accurate in everything you do.

"A Windows-based package that's both powerful and easy to use."

*InfoWorld*  
April 20, 1990

"Turns making flowcharts into child's play."

*DBMS Magazine*  
August 1991

With ABC Flowcharter, you'll be able to quickly update your charts as things change. Something you can't do with manually drawn flowcharts. And unlike other Windows flowcharting packages, ABC Flowcharter lets you link subcharts to your main chart to depict deeper levels of detail.

You can choose from thousands

of shapes and symbols – sizing, placing, and linking them easily with your mouse. Then add text as needed. A Windows interface makes it all incredibly simple.

**Act now and get Windows OrgChart® software FREE!**

Mail in your ABC Flowcharter registration card plus proof of purchase before October 15th and we'll send you a copy of the #1-rated Windows organization charting software free (a \$149.95 value). You pay only our regular \$10 shipping and handling charge.

If you're using flowcharts now, ABC Flowcharter will make it a pleasure. And if you're not, ABC Flowcharter is a great reason to start. *Call today for more information!*

*NextStep (top), SVR4.2 (center), and Windows NT (bottom) all have unique visual traits. NextStep uses heavy shading, floating menus, and animated icons to achieve its glossy twenty-first-century look. SVR4.2's early allegiance was to Open Look, a capable but not popular X interface layer. USL's commercial release will include OSF/Motif as well. Windows NT offers a bridge to Windows users by providing no surprises: It looks, feels, and acts like Windows.*

from its own subsidiary, SunSoft. But Sun will have a unique advantage in the added-value department. As new technologies are born, managers at Sun get to choose whether to keep the jewels locked in Sun's safe or share them with the world through SunSoft. In any case, Sun freely confesses its intention of using proprietary enhancements to keep Sun-brand SPARC systems leading the market.

Through all this, SCO is claiming the high ground for its decision to pretty much stay put. Open Desktop 2.0, SCO's flagship Unix bundle, offers little more than previous versions and is still based on SVR3.2. SCO's approach seems to depend on SVR4's failing to catch on. "The conventional wisdom says that Sun, Univel, and so on are going to eat [SCO's] lunch," says Maureen O'Gara, editor of the *Unigram-X* newsletter.

Nina Lytton, president of consulting group Open Systems Advisors (Boston), thinks that developers will be attracted to Open Desktop 2.0 because it is proven and stable. "That strategy sounds like a yawn, but [SCO's] is the low-worry approach for Unix," Lytton says. She also notes that Open Desktop 2.0 will run applications written for SVR4.

## The NT Factor

Windows NT is the wild card in Unix's future. Microsoft has a talent for whipping up public support for its products while they're still on the drawing board. The U.S. Patent and Trademark Office, under Giammo's guidance, is pre-sold, but he expects to wait a year or two after NT is available before adopting it, to ensure that it lives up to its promise. He's not interested in Windows: "From what I've seen," he says, "Windows is a kludge. It's even worse than Unix." He blames the "DOS baggage" Windows carries.

Microsoft claims NT will run DOS, Windows, new 32-bit applications, OS/2 applications, and X applications within an NT window (see screen c). Dwayne Walker, Microsoft's director of Windows NT and networking products, says, "If you had to summarize NT, you'd say it is powerful, scalable, easy to use, and compatible. And it offers multitasking and multiprocessing."

In addition, Microsoft says that NT will have built-in networking, including TCP/IP, and C2-level security. NT is portable from 386 and 486 PCs to RISC environments, supporting the Mips R4000 as well as DEC's Alpha RISC chips. Microsoft claims an advantage for developers, too: The 32-bit Intel-based applications they develop for NT will run native under Microsoft's Win32S extension for 16-bit Windows. With all that, Windows NT is clearly targeted at Unix, becoming what Walker calls "a high-end operating system for desktops and servers just as Unix is a high-end operating system for desktops and servers" (see "Unix vs. Windows NT" on page 140).

Microsoft clout alone could make NT a success. Next's Tevastian concedes that Microsoft's market presence is a big advantage, and according to O'Gara, at least one other Unix provider is worried: "Even the street fighters over at Sun are concerned when they look at what's happening with Windows. They see the way the market works: The users are a bunch of sheep, and Billy [Gates, Microsoft CEO] is the shepherd," says O'Gara.

For Giammo and others, Windows NT sounds like a dream come true, solving all compatibility headaches in one swoop. But with the end-user version at least three months away from shipping, NT is still a question mark. O'Gara calls NT "the unhardened operating system. You can't tell me that this thing is going to be ready to run mission-critical applications anytime soon." And the strength of Windows 3.1 on the desktop might not help Microsoft in promoting NT on workstations.

Open Systems Advisors' Lytton says Unix users are not impressed by the quality of Windows 3.1. "People thought that Windows would be the path of least resistance, but now that

WORM  
(DD-S5101)

CD-ROM Minichanger  
(DRM-600)

Multifunction  
(DE-S7001)

# WE DIDN'T HAVE TO PUT OUR OPTICAL PRODUCTS ON PEDESTALS. JERRY POURNELLE DID.

“ I am pleased to report that I'm sold. The Pioneer optical drive... is as solid as a rock... Thus, I'm discontinuing testing. Now I'll just use the drive... I now rely on the Pioneer erasable optical disks for backup, for primary storage of really big files, and for archive copies of software... you really need something so easy to use that you'll routinely use it for backup... the Pioneer DE-S7001 will do the job very well indeed. Recommended. *Byte* (9/91)

The Pioneer six-pack CD-ROM Minichanger is great. We've had it in operation for the best part of the year now, on a number of different systems... It has always performed flawlessly... it changes drives a lot faster than you'd expect it to... It's really fast... Accesses that used to take many seconds are now nearly instantaneous. Accesses that took over a minute now take a few seconds. I always did like the Minichanger... Now it's even better... Incidentally, the Pioneer Minichanger will work just fine with a Mac. *Byte* (10/91)

The Pioneer DE-S7001 dual-purpose external optical disk drive I've written about before. Log your wordprocessor to that, save early and often, and you'll have it all... In a word, WORM drives look like

the ultimate in backup storage. *Byte* (12/91)

Suppose you erase a file? Overwrite one you wanted to keep? And suppose your house burned down? You don't have any off-site backup at all... I could remedy that by installing the DE-S7001 on the network server and archiving on that... *Byte* (11/91)

I have the DRM-600 running not only with QEMM386.SYS, but inside DESQview windows, which has the amusing result that I can actually have several CD-ROM windows open at once... It's surprising how fast you can switch back and forth among them... The Pioneer DRM-600... it's very convenient to have a bunch of CD-ROMs available without swapping. *Byte* (1/91)

It's quite intuitive [the Pioneer CD-ROM Minichanger]: no instructions are required... Recommended. *Byte* (1/91)

This technology is coming of age. *Byte* (1/91)

## DESKTOP MARKET SHARE IN 1996

**Figure 2:** Although Dataquest expects Unix to have 47 percent of the workstation market by 1996, it will not fare as well in the desktop arena. There, Unix is a distant third at 7 percent, with Windows NT and MS-DOS holding a combined 77 percent market share.

they've had a chance to really assess 3.1, the vision isn't as rosy as it was," she says.

Dataquest's Kirzner sees a bright future for NT: "We believe Windows NT will be the winner, because you can't stop the power of Microsoft, but Unix will do well," she says. Today, Unix has about 86 percent of the workstation market. By 1996, that figure will drop to 47 percent, due largely to NT. Dataquest projects that NT will claim 37 percent of the desktop market by 1996; DOS will retain 40 percent, and Unix will be a distant third with 7 percent (see figure 2).

### Promises, Promises, Promises

While NextStep will be one of the contenders for the high-end multitasking desktop, it appears that the fiercest salvo fired at NT will come from an unlikely alliance: Univel. USL, looking to get serious about marketing and distribution, and Novell, hoping to shed some of its proprietary image in the newly competitive climate, have joined forces to offer a new shrink-wrapped Unix operating system that may be available as early as this fall.

Sold as SVR4.2 by USL and as UnixWare by Univel, it has a list of promises at least as long as NT's. What's surprising is that USL doesn't plan to stake out only the high end Microsoft has targeted for NT: SVR4.2's minimum configuration is a 16-MHz 386SX with 4 MB of memory. USL's literature talks about running the operating system comfortably on systems with 60-MB hard drives and even dares to suggest that SVR4.2 would run nicely on a notebook computer.

For standards, SVR4.2 hits a grand slam. The U.S. government and other large corporate customers will appreci-

ate the Posix, FIPS, X/Open, B1/B2 security, OSF AES (Application Environment Specification), and IBCS (Intel Binary Compatibility Specification) compliance. Users of the Intel port will be able to run SVR3.2 and earlier SVR4 applications without hassle. And non-U.S. users get their share of attention, thanks to multibyte characters, alternative date and time formats, message tables, and an internationalized version of the Curses text-interface library.

Difficulty with hard disk file systems has caused a lot of people to turn away from previous PC Unix implementations. SVR4.2 proposes to solve this by introducing a journaling file system. Journaling protects data by first writing it quickly to a reserved area on disk. Then, when the system has time, the journal is flushed and the real file updating is done. At that time, the various Unix file-system data structures on disk are updated as well. Once it has written the data and updated the structures, the operating system deletes that journal entry and moves to the next one.

In the past, data was transferred from the memory buffers directly to its final destination on disk. If you turned off the power or reset a running system, chances were there would be several files in various states of incompleteness, where either the data or the file-system structure would be out of sync.

Modern Unix file systems write disk information in a predictable order that lets a utility called *fsck* comb through the file system and make sense of it again. But with journaling, that, presumably, won't be necessary. To bring the system up to date, you just play back the entries remaining in the journal. Eliminating the need for frequent file-system cleaning also greatly reduces the time required to reboot a system.

Univel is slimming SVR4.2's size and price by unbundling, breaking with the "everything in one box" tradition. But SVR4.2 is hardly stripped down; both the client and server versions include X and graphical shell support, source-level compatibility with seven common Unix implementations, DOS and Windows support, and networking. USL's role in this is to break with its own tradition of leaving most of the porting job up to licensees. USL will develop targeted binary versions of SVR4.2 (Intel, SPARC, Mips, RISC System/6000, and HP PA RISC versions are promised) and license them to packagers ready-to-run.

Those packagers, with Univel among them, can focus on adding value rather than on doing the basic port. The Intel version will ship from USL with drivers for a variety of display, disk, and SCSI devices. One frequent gripe about X—its dependence on bit-mapped fonts—will be answered by Adobe Type Manager, which will be a standard part of SVR4.2. And SVR4.2's desktop manager will include productivity applications and point-and-click shells for common system administration tasks.

Novell's involvement will get SVR4.2 into the company's authorized dealers, who will provide the added value of NetWare integration. Novell's dealers are an important channel, since it's largely the same one Microsoft is targeting with both LAN Manager and Windows NT. Novell is using SVR4.2 to get its share of the "open systems" pie and keep Microsoft out of Novell's stronghold.

Dataquest's Kirzner believes SVR4.2 will

### What USL/Univel Promises with SVR4.2/UnixWare

- Compatibility with seven leading Unix implementations, including SunOS/Solaris, SVR3.2, BSD, and Xenix.
- Inclusion of the X Window System, with both OSF/Motif and Open Look interfaces, and development tools that allow users to switch applications' look-and-feel between them at run time. Adobe Type Manager will provide scalable fonts.
- Inclusion of TCP/IP networking in the base offering. UnixWare will offer NetWare capability as well, delivered by Portable NetWare.
- A minimum configuration of a 16-MHz 386SX with 4 MB of memory and a 60-MB hard drive.
- Graphical tools for common system administration functions, and a group of user productivity applications.

# GO FIGURE!

**D**esignCAD 2D. Like Leonardo da Vinci's concept of a rotary blade aircraft, it is ahead of its time, not only in technology, but also in cost and value.

DesignCAD 2D is only \$349, and it has more and better features than the other CAD programs that cost \$3,000!

And, if you're ready for a three dimensional CAD program, there is the state-of-the-art DesignCAD 3D . . . for only \$499!

So, how come theirs costs several thousand dollars and ours costs a couple hundred? Go figure. (Why do you think the Mona Lisa is smiling like that?)

## COMPUTER SECURITY PRODUCTS

COMPLETE LINE OF PROVEN AND EASY TO INSTALL  
COMPUTER SECURITY PRODUCTS FOR COMPUTERS.

### PREVENT COMPUTER THEFT!

#### Kablitz™ Security System

This system allows you to secure all your computer components: CPU, monitor, keyboard, printer. **Internal component security:** Kablitz fasteners secure the rear panel of CPU protecting internal boards and hard drives. Fasteners available for all applications. Prices \$34.95 to \$49.95 depending on system.

### DISK DRIVE LOCK™

#### IBM PS-2 DLK-270 Series

Now you can lock a diskette into your disk drive and force the computer to boot from the diskette. Disk Drive Lock models available for PS/2 - 30, 55SX, 50, 70 and 90. Protect your data from viruses or from being copied. Other drive locks to fit most non IBM PS/2 and Macintosh disk drives. List price \$24.95

Order your free catalog of these and many other security products. Purchase orders accepted. Quantity pricing available. Shipping not included. MC/VISA accepted. Dealer inquiries invited.

## IS UNIX DEAD?

allay the fears of some Unix vendors. "It's a pure, unadulterated version of B1-level secure Unix, but for the PC," she says. "You buy as much or as little as you need." Kirzner says SVR4.2 will be priced to compete against Windows and OS/2, ostensibly in the \$100-to-\$150 range. USL declines to give a price for SVR4.2, preferring to leave it up to its licensees.

Not everyone is convinced that SVR4.2 will be successful on Windows' and MS-DOS's turf. "It would be stupid to put Unix on people's desktops," says Andrew Toller, a principal with DMR Group, a Toronto market research and consulting firm. He notes that DMR consultants usually use Unix as a back-end system fronted by Windows on the desktop in all but the most technical environments, particularly in software development applications.

Open Systems Advisors' Lytton expects a rough beginning for SVR4.2. "[SVR4.2] is having the same honeymoon [as NT] right now with the press," she says. "But any major new release always has problems that need to be worked out." She cites MOOLIT (the Motif/Open Look Interface Toolkit) as an example, claiming that it won't support any application that uses supersets of Motif.

In spite of the doubts, Toller says that many DMR clients have begun asking about SVR4.2. "These are people that until a year ago didn't even know what Unix was," he says.

When SVR4.2 hits the streets, if it's everything that's promised, it will mark a new era in PC Unix. USL's doing the binary work will help ensure cross-platform application compatibility. USL is straddling the Open Look/Motif fence by offering both GUIs, and it's also committing to technologies like ANDF (Architecture-Neutral Distribution Format) and DCE (Distributed Computing Environment). DCE adds functionality to existing networks by allowing you to share applications as well as data. You can transparently allocate CPU power to networked applications, running pieces of a program on several machines at once.

The goal is to develop these and other new technologies at USL and then get them to packagers in a ready-to-run state, complete with documentation. That's a major shift for USL, and one that more closely parallels Microsoft's strategy than the arcane Unix channels of old.

### It's Just Starting

Unix isn't dead, but certainly the next few years will mark a period of intense change. Users and developers will be faced with important decisions. As the Unix market consolidates, the query "Which Unix?" may change to a less confusing question: "Unix or NT?"

To answer that question, Unix vendors, previously content to focus purely on technical issues, will have to spend more time solving ease-of-use concerns. And they will have to counter Microsoft's marketing might head-on.

Unix has a rich history. If the new pack of Unix vendors can keep from bickering among themselves, Microsoft will face a strong competitor of NT. ■

Editor's note: West Coast bureau chief Andy Reinhardt, news editor Patrick Waurzyniak, and senior technical editor at large Jon Udell also contributed to this story.

# The Greening of Computers

Both vendors and consumers are finding that environmentally sound computing pays

ANDY REINHARDT, ED PERRATORE, ANDY REDFERN, AND RICH MALLOY

**I**n the computer industry, you never know where idealism leaves off and opportunism kicks in. The trend toward more environmentally sensitive, or *green*, computing offers the rare opportunity to indulge both simultaneously: A new wave of more ecological products and processes now emerging from research labs is making it possible for vendors and users to save money and save the earth.

The pleasant surprise is that for vendors, environmentalism is turning out to be smart business. Companies not only earn brownie points for being good citizens, but many of their new design, manufacturing, packaging, and waste recovery techniques also save money compared with older methods. When you factor in the constant need for vendors to differentiate their products in an overcrowded market, reengineering products and processes to be more ecological becomes too attractive a prospect to ignore. And if that's not enough, tough new laws in places like Germany and Sweden are forcing companies—including multinationals—to rethink how they make and package computer products.

The environmental impact of the computer industry is twofold: The use of computers generates both solid and toxic waste and represents a large portion of energy consumption in developed countries. The consumer typically pays the expense of dealing with the waste via costs that the manufacturer passes on and fees and taxes associated with municipal landfills. Electricity consumption of computers is a major hidden cost that many businesses don't bother to analyze.

## Cleaning Up at the Factory

Compared to industries such as petrochemicals, metals, and paper, the computer industry once enjoyed a reputation for being relatively clean. The work of groups such as the Silicon Valley Toxics Coalition shattered this image by demonstrating that computer waste products (especially from

semiconductor manufacturing) were polluting the air and contaminating soil and groundwater. According to director Ted Smith, the group is "now much more focused on ways to prevent pollution than on cleaning up what's already there." Companies are revising their processes to eliminate expensive chemicals and disposal charges.

CFCs (chlorofluorocarbons), used as a solvent to wash residue off printed circuit boards, are a main target for elimination. Although CFCs have been implicated in ozone damage for years, companies were slow to switch to alternatives because of the investment they had in using CFCs, and because alternative methods were comparatively more expensive. But in the wake of the 1989 Helsinki Declaration, in which 81

countries committed to eliminate the use of CFCs by the year 2000, the cost of using CFCs, both politically and economically, has become too high to ignore.

In April 1991, Apple announced that it would use a new process for making boards and assemblies that does not require them to be cleaned. This change will let Apple eliminate all use of CFCs in its Fremont, California; Cork, Ireland; and Singapore plants by the end of this year. In June 1991, Compaq announced the adoption of a similar "no-clean" process, saying it would stop using all CFCs by 1995.

Other companies have dropped CFCs in favor of a remarkably simple cleaner: good old soap and water. At its manufacturing plant in San Jose, California, IBM now sprays its assemblies with soapy water, instead of bathing them in industrial solvents. Intel's systems plant in Oregon has made the same switch. According to Intel's spokesperson Howard High, the cost benefits are substantial: The company expects to save \$1 million to \$2 million per year on the cost to buy CFCs and an extra \$1 million to \$2 million per year it paid to dispose of the used chemicals. High says the costs of both raw materials and disposal are rising sharply, which will make the equation even more compelling in the future.

Ironically, while the substances used to replace CFCs may be benign for the ozone layer, some are dangerous in other ways. For example, U.K. chip manufacturer Inmos will be using IPA (isopropyl alcohol) as a replacement for CFCs. Unfortunately, IPA is highly flammable and would be extremely dangerous if used in the same quantities as CFCs. So, far from using a straight substitution, Inmos has had to find techniques for preventing accidental ignition of IPA and to develop a washing technique that reduces the quantity of fluid used. Fujitsu has developed an ultrasonic water cleaner. Using cold water, steam, and ultrasonic cleaning, Fujitsu says its device can remove 10 times as much dust as CFC washing did.

Another problem Intel and other chip makers confront is the disposal of defective parts. High says that Intel can reclaim precious metals from failed components if they're caught at the wafer stage. But once mounted in plastic or ceramic carriers, defective parts have to be tossed in landfills. High couldn't say how many parts Intel throws away each year but notes that the parts don't contain any hazardous compounds.

### Recycling Is In

Computers and peripherals themselves are rarely tossed into landfills, but consumables, such as paper, printer ribbons, disk media, toner cartridges, and batteries, typically are. Such consequent waste from computers makes up a minority of municipal garbage, but its proportion has grown every year since the advent of the personal computer. Finding ways to recycle these materials has become the latest trend in the industry, with companies such as Apple, Hewlett-Packard, and Lexmark International leading the way.

Because environmental regulations vary widely around the world, companies with global operations face a particular challenge. Some have decided to adopt the standards of the country with the strictest laws, since those are often a bellwether for the rest of the world (see the text box "Tough Laws Promote Change" on page 150). Doing so lets companies enjoy economies of scale, since a single model can be sold in any market.

Waste disposal is really two separate problems: volume and toxicity. The amount of garbage directly due to computers is nearly

impossible to determine, and awareness of the link is so recent that even the Solid Waste Association of America, an industry group that is part of the Society of Plastics Industry, can't quantify its magnitude. Some of the materials thrown into dumps (e.g., batteries and monitors) contain toxic chemicals that can leach out and poison the soil and groundwater.

### Printers and Monitors

In the last year, several companies have announced programs to recycle laser-printer toner cartridges. BIS Strategic Decisions says that 11.75 million toner cartridges were shipped in 1990, projecting that the number will climb to 19 million this year and nearly 28 million in 1995. This is a lot of nonbiodegradable garbage to add to the world's landfills.

Apple's program to recycle toner cartridges began in March 1991. Cartridges bought in the U.S. include a prepaid shipping label that lets you return them when they're spent. For every cartridge you return in the U.S., Apple will donate \$1 to one of two environmental organizations. Apple claims that 95 percent of the cartridge is recovered, and some of it is reused as is or recycled. Lexmark International, the IBM spin-off company that sells laser printers and typewriters, introduced a similar program last June. Ken Bissel, a Lexmark spokesperson, couldn't specify exactly how many cartridges were returned under the program but said that the number was relatively small but growing.

A booming business exists for remanufactured toner cartridges. At one time, "recharging" cartridges simply meant drilling a hole and putting new toner in. Now, says William E. Kelley, executive director of the International Cartridge Recyclers Association, cartridge remanufacturers "have learned that they have got to put out quality products." Cartridges are completely disassembled and rebuilt with new components as necessary. Some vendors replace the original drum with a lifelong unit, which can be reused several times. Remanufactured cartridges are less expensive. If a new cartridge cost \$100, says Kelley, a remanufactured unit with a lifelong drum would cost about \$75. And the vendor might give you a break on the price if you turn in that unit again because of the lifelong drum.

In Japan, Canon has its own recycling program. It is in the process of doubling the capacity of its reprocessing plant in China by the end of 1993. This facility currently recycles 150,000 cartridges per month. Canon expects to be able to reprocess 600,000 units by the end of 1994. The firm says it has been reusing almost 95 percent of the cartridges, which are collected in both Japan and the U.S.

With its new Ecosys printer, Kyocera has probably come up with the best way to deal with printer drums. One of Kyocera's key themes is to emphasize environmentally sound products and processes. To that end, the company has doubled its production capacity of polycrystalline solar cells, expanded the use of environment-friendly ceramics in industrial processes, and focused significant research efforts on thin-film technology. This thin-film technology is a key ingredient in Kyocera's new printer.

Kyocera used its thin-film expertise to create a photosensitive drum that is coated with a hard layer of amorphous silicon. To keep the drum surface clean, Kyocera supplies a ceramic-based toner, which is packaged in a biodegradable container (made from kelp). The result is that the drum will probably last the printer's lifetime, and all disposables are biodegradable. This

# 4,000,007 reasons to upgrade to System 7.

## 1. Rave reviews.

MacUser gave System 7 its Editors' Choice Award. Byte, its Award of Excellence. Software Publishers Association named it a Best New Business Software Product of the Year.

## 2. One-step installation.

The "Before You Install" disk confirms the compatibility of your software (including INITs). Then, simply click the mouse to install System 7. Any questions? 90 days' toll-free phone assistance included.

## 3. It's developed quite a following.

Developers have shipped hundreds of applications that take advantage of System 7 power. Microsoft, Claris, Lotus, Aldus, Adobe and many more.

## 4. Runs on your Macintosh today.

System 7 works on all Macintosh computers. To run multiple programs, four megabytes of memory are recommended. Two megabytes are required.

## 5. Powerful software utilities.

System 7 will let you run the latest software utilities from Apple, including Macintosh PC Exchange, QuickTime® and AppleLink® Remote Access.

## 6. More power out of the box.

Macworld says, "The new Finder... is worth the cost alone." System 7 improves the way you organize, view and work with your information. Built-in file sharing lets you share files over a network, simply and easily.

## 7. Keep your investment current.

The best way to keep up with the latest technology is to stay ahead with System 7. You'll need it to take full advantage of today's applications, hardware and software. And it will help you grow with the future as new technology innovations come along.

**Macintosh System 7.** If the first seven reasons didn't convince you to upgrade, just ask the four million Macintosh® users who have already discovered the power of System 7.™ Call us at **1-800-538-9696, ext. 185.** We'll give you the name of an Apple software reseller near you. And you'll discover the power of System 7. The power to be your best.®

# Tough Laws Promote Change

ANDY REDFERN

**T**he severity of waste disposal and energy conservation problems varies greatly around the world. Some countries, particularly those with high energy costs and relatively few means to discard trash, have taken legislative action to force companies to minimize these problems.

One key area affected is packaging. German law now places some responsibility for the disposal of excess packaging on the retailer. If, for example, you bought 100 floppy disks in 10 boxes of 10 disks each, it would be the responsibility of the retailer to dispose of the packaging that held the 10 boxes of disks together. With this onus on the retailer, retailers are pressuring manufacturers to use product packaging sparingly. For example, Japanese monitor maker Eizo has recently redesigned the four-layer packaging of its video cards so that only one integrated layer of packaging is left.

By the end of the year, this "polluter-pays" attitude is set to be further extended when a wide-ranging German state ordinance on electronic goods takes effect. The detail of the ordinance has still to be ratified, but it places the responsibility to recycle and reuse electronic goods on the manufacturer. So, if

you buy a personal computer, once it has reached the end of its working life, you will have the right to return it to the manufacturer via the retailer. The manufacturer will then be legally obliged to recycle or reuse the system.

If this measure is ratified, it will have a major impact on computer design around the world. As has already been seen in the area of monitor emissions, manufacturers design systems to meet the highest legal standard required around the world. For example, Sweden has the toughest rules on monitor emissions, and many monitors not even sold in Sweden already meet the Swedish safety standards.

To meet this proposed ordinance, companies must first work out whether reusing or recycling of their equipment is the most economical. Renovating computer equipment has little appeal for many manufacturers. Product life cycles are so short that by the time companies return their equipment, there is little opportunity to resell it. Some product reuse projects are under way; for example, collecting and refurbishing personal computer equipment and consumables to be sent to charities in developing countries. But the most serious efforts are in the area of recycling.

Manufacturing giant NEC has been investigating the recycling of electronic equipment since 1969. Because of the use of expensive metals (e.g., gold) in high-performance systems, NEC has been reclaiming the precious metals from defunct systems for resale. NEC now has a partly owned subsidiary called Kowa Enterprises based in Kawasaki City, Japan, that recycles some 3000 tons of machinery every year. Through a network of 52 branch offices across Japan, Kowa collects 90 percent of its hardware for recycling from other NEC subsidiaries. Kowa is also responsible for the safe management and disposal of industrial waste and hazardous substances from the old NEC machines.

In the early 1970s, IBM established a similar program in the U.K., and in 1991, this program recycled or reused 80 percent of IBM's total obsolete-parts inventory, according to reports published by IBM. IBM's goal is to raise this to 95 percent of all components used on printed circuit boards and in monitors. IBM has also voluntarily extended this recycling program by providing a disposal service for customers who have equipment that has reached its life expectancy.

is in marked contrast to most laser printers.

The catch is that there is no catch. An amazing feature about the Ecosys printer is that its eco-friendly nature is achieved without any disagreeable side effects. The printer is no larger than similar 10-page-per-minute laser printers; in fact, its LED technology allows it to be considerably smaller than most of its competitors. And its price tag of \$2395 and claimed cost of operation (less than 1 cent per page) are so low that even people who don't give a hoot about the environment should seriously consider this printer. The Eco in Ecosys could well stand for economy, as well as ecology.

Old or broken monitors can be disassembled for scrap, except for the CRT, which has to be disposed of in an expensive hazardous waste dump because of the lead in the glass. Monitors can also be reconditioned for less cost than buying new ones. Video Display (Tucker, GA) specializes in repairing CRTs in computer displays. According to company chairperson Ron Ordway, the most common point of failure in displays is not the tube itself but the electron gun or the electronics that drive it. Video Display can fix these components and preserve the rest of the tube and housing. The result is a refurbished monochrome CRT for about 60 percent

of the cost of a new one or a color tube for about 50 percent, Ordway says. Unfortunately, Video Display sells its reconditioned monitors only to service organizations and repair shops; they are not available to the general consumer.

## Salvaging Systems

According to Ethan Seidman, a researcher for *Garbage* (an environmentally oriented magazine based in Gloucester, MA), when a computer enters the waste-processing stream, it is usually stripped of all salvageable or recyclable parts, which can include metal or plastic casings, electronic components, wiring, and even nuts and bolts. Virtually nothing is left when the crows are done picking.

Some channels have emerged for disposing of intact but unwanted equipment. The East-West Development Foundation (Cambridge, MA) accepts donations of used systems for export to Russia and eastern Europe. Some companies sell their used equipment to brokers, who recondition it for export to the Third World. And the Solid Waste Association of America's information hotline (see the text box "Guide to Green Computing Groups, Products, and Services" on page 158) advises callers to donate old

# We'll show you how to play the media better than Bush, Clinton and Perot put together.

## Easy to get rolling.

You don't need extra hardware to start working with QuickTime. Simply drag the QuickTime system extension into your System Folder. Now applications designed to support QuickTime can work with digital video sequences, animation movies, sound files and compressed images.

## View and edit QuickTime movies.

Play, pause, fast-forward, rewind and advance frame by frame with the MoviePlayer application. Copy video and animation clips, paste them together, create your own movies.

## Compress PICT images.

Shrink them to a fraction of their original file size and save valuable space and transmission time with the Picture Compressor application. (Compressed files can be used automatically in any existing application that supports PICT files.)

## Convert existing data into movies.

Convert other file formats (AIFF, PICS, PICT, Scrapbook, DOS image formats) to QuickTime movies with the Movie Converter application. Control frames per second, compression scheme and color depth.

## One-button movie recording.

Digitize video and sound easily with the Movie Recorder application. View what you've recorded, save it or toss it out and try again. (Requires a video-capture card and sound digitizer.)

## The Starter Kit.

Includes the system extension and Scrapbook, MoviePlayer, Movie Recorder, Movie Converter and Picture Compressor applications. Plus QuickClips, a CD-ROM disk with samples of movies and still color images and an electronic catalog of products that support QuickTime.

**QuickTime Starter Kit.** How well you communicate has never been more important. That's why Apple created QuickTime.™ The ability to paste digital video, animation and sound into your presentations as easily as pasting graphics into text. So if you'd like the name of an Apple software reseller near you, call us at **1-800-538-9696, ext. 175.** They'll tell you more about the QuickTime Starter Kit and show you how to communicate your ideas more powerfully than ever.

QuickTime requires a Macintosh computer with a 68020, 68030 or 68040 processor. At least 4 megabytes of RAM. An Apple SuperDrive or compatible floppy disk drive. A hard disk drive. System 6 (version 6.07 or later) or System 7 (version 7.0 or later). You'll also need an Apple CD-ROM drive or compatible CD-ROM drive for accessing the contents of the CD-ROM. ©1992 Apple Computer, Inc. All rights reserved. Apple, the Apple logo and Macintosh are registered trademarks of Apple Computer, Inc. QuickClips, QuickTime, SuperTime and System 7 are trademarks of Apple Computer, Inc. Tellus is a registered trademark of Macintosh computers.

equipment to charities willing to accept it or to contact the manufacturer to see if it wants to reclaim the system for service parts.

The problem of dealing with obsolete equipment has led to changes in system design. Examples are the new expandable PCs from Compaq, AST, Acer, and others: Originally created to address an economical problem—the rapid obsolescence of technology and desire by customers to expand their systems—these PCs are also more environmentally sensitive because they delay the disposal of otherwise functional equipment. Similarly, many vendors are now redesigning their systems for ease of service, which also makes them easier and less expensive for salvagers to disassemble.

Some of the plastic computer cases are impregnated with leaded and cadmium pigments, but so far the evidence of leaching is inconclusive. A report in *Appliance Manufacturer*, May 1992, says that Europe, but not the U.S., has established a timetable for eliminating cadmium from some resins, including those often used in computer casings. HP has already decided to switch to resins that contain no heavy metals.

The disposal of plastics, while much in the public eye, may become less of a problem as new techniques emerge for recycling plastic. This year, a study presented by researchers from Dow Plastics in Midland, Michigan, showed that the plastic (i.e., polycarbonate/acrylonitrile butadiene styrene) most often used in computer casings could be ground up and remolded with little or no degradation in key attributes, such as weight, thermal properties, and flame resistance; however, the color darkened slightly with each successive recycling.

These findings were achieved in a controlled environment using homogeneous plastic samples. The results were not as successful when different grades of plastic, or even similar plastics from different suppliers, were intermixed, suggesting that recycling will only be feasible when plastics are carefully sorted. To help promote that end, the Partnership for Plastics Progress, a group of 26 major resin producers, has recently started a committee called the Computers and Business Equipment Group. The group's charter is to focus on postconsumer issues, especially the disposal and recycling of plastics used in data-processing equipment.

### The Paper Chase

Far from creating the paperless office, the microcomputer industry has contributed to even greater paper use. The American Paper Institute, an industry association, reports that shipments of uncoated, free-sheet paper grew from 6.5 million tons in 1976—the year the Apple II was introduced—to 11.5 million tons in 1990, the latest year for which figures are available. Ron Lamb, a spokesperson for the Council on Plastics and Packaging in the Environment, notes that the rise is due mostly to the advent of high-speed photocopiers, personal copiers, and laser printers.

Some of the surge in consumption is on the production side. For example, the Microsoft Windows 3.0 package, including documentation, consumed more than 2 pounds of virgin paper, which means that the 10 million units sold have alone used at least 21 million pounds of new paper. Microsoft, IBM, Sun, Apple, and other companies are aware of this problem and are increasingly trying to ship documentation on CD-ROM. Doing so not only saves trees but also substantially reduces postage costs and improves ease of use for customers.

A study conducted by Franklin Associates for the U.S. Conference of Mayors' National Office Paper Recycling Project

found that in 1990, nearly 11 million tons of waste paper were generated in U.S. offices, of which the lion's share, some 8.1 million tons, is high-grade printing and typing paper. Another 1.2 tons is cardboard. These amounts are expected to climb to 9.2 million and 1.5 million tons, respectively, by 1995.

Only 15 percent of office paper waste was recovered for recycling in 1990, the study found. But with aggressive, coordinated efforts by business and government, the rate of recycling could be nearly tripled, for a total of about 3.4 million tons, according to the study. In addition to supplying the growing demand for recycled paper, this would reduce total office waste to 5.8 million tons, or about 70 percent of current levels.

The value of used paper depends not only on the stock but also on how it was used. In general, mixed paper has the least value and white ledger paper the most. But interestingly, plain paper that has been through an impact printer is four to 10 times more valuable than laser-printed paper waste, says Brian Day of the National Office Paper Recycling Project. This is because paper recyclers can't remove laser ink as easily, but new processes to de-ink the 60 percent of office paper now laser printed are on the horizon.

### Battery Blight

The most notorious toxic waste from computers comes from their lowly batteries,

which contain heavy metals, such as lead, cadmium, and mercury. Most desktop PCs today use a battery to back up system-setup memory, and nearly all battery-powered portables and notebooks use rechargeable nickel-cadmium batteries for system power.

Researchers from the University of Arizona Garbage Project, who have excavated 11 landfills in the U.S. and Canada to learn what they reveal about waste-disposal patterns, say batteries represent only two-tenths of a percent of the garbage by volume but alone constitute nearly 20 percent of the hazardous waste generated by U.S. households and offices. According to Marge Franklin of Franklin Associates, the main source of toxic cadmium is rechargeable batteries used in electronic devices.

Sometimes a nickel-cadmium battery is not really worn out but simply unable to hold a charge due to poor maintenance. Nickel-cadmium batteries exhibit what is known as the *memory effect*, where premature recharging can reduce battery life. According to Andrew Czernek of The Complete Portable (Prospect Heights, IL), nickel-cadmium batteries are good for 300 to 500 recharges before you must throw them out. For \$39, the company will test your battery and restore it to full capacity through a series of deep discharges over a five-day period. If the battery is not recoverable, there is no fee. The Complete Portable disposes of bad batteries through recyclers. Some companies send Czernek hundreds of batteries at a time, saving the companies a considerable amount over the cost of new batteries.

In October 1991, Apple announced a battery recovery program for its PowerBook notebooks. Noting that rechargeable batteries typically expire after two years, Apple said it would accept used batteries at any of its worldwide service providers and pay the full cost of their recycling or proper disposal.

The long-term solution for system makers is to use newer battery types that don't contain cadmium, such as nickel metal hydride or zinc-air. Both of these emerging technologies offer an additional benefit: They have higher power-to-weight ratios than nickel cadmium does, which means you get longer operating life per pound of battery. Nickel-hydride batteries typically allow

**C**ompanies are increasingly trying to ship documentation on CD-ROM.

# Don't Shoot It, Troubleshoot It.

**LANDMARK... the widest selection of PC diagnostic software, firmware, and hardware in the world!**

## PC WON'T BOOT? KICKSTART IT!

Don't replace your motherboard, use **KickStart 2™**. When serious hardware problems occur, nothing gets you up and running as fast. KickStart 2 *measures power within 2.5% on all four voltages, shows Power-On Self-Test (POST) failure codes, and features on-board ROM-based diagnostics* allowing you to determine and remedy the problem quickly, easily, and inexpensively!

Built-in serial and parallel I/O *allows for testing remote via modem*, or simply logging results to a remote terminal, printer, or laptop. You can configure your own test routines and store them in KickStart 2's battery backed-up CMOS RAM for quick future use. On-board switches, LEDs, and digital displays allow complete control over testing in systems lacking video or disk.

KickStart 2 is the ultimate *SECURITY CARD*, too. With two levels of password protection and pre-O/S activation, you can confidently prevent unauthorized use of your PC.

Includes serial and parallel loopback plugs and the Landmark **JumpStart™** AT ROM BIOS for testing ATs that don't issue POST codes. KickStart 2 works independent of your operating system. You can use it on DOS or UNIX systems. **CALL for current pricing.**

## THE 5 MINUTE SOLUTION TO FLOPPY DRIVE FAILURE

With **AlignIt™** you can clean, diagnose, and align your floppy drives in minutes without a scope. Patented technology requires only a screwdriver to perform ANSI-accurate alignments (.3 mils).

AlignIt is ideal for corporate users with multiple PCs. The **GOLD STANDARD** feature allows you to align all your PCs to the same in-house standard, guaranteeing that all your floppies are perfectly interchangeable between PCs! Available in 3.5" or 5.25" for both high and low densities. **CALL for current pricing.**

*"The number of tests KickStart 2 can perform is mind-boggling... IF THE KICKSTART 2 CAN'T FIND THE PROBLEM, IT PROBABLY EXISTS IN YOUR HEAD, not in the hardware."*

*Rich Santalessa, Computer Shopper*

*"KickStart 2 system diagnostics board helps users check out virtually every aspect of a PC's hardware system... THE BOARD IS A WORTHY INVESTMENT for computer maintenance."*

*David Claiborne, PC Week*

## PROFESSIONAL LEVEL PC TROUBLESHOOTING

Landmark **Service Diagnostics™** is ideal for professionals requiring the most exhaustive diagnostic test capabilities.

Service Diagnostics is not just a single product, but a complete LINE of products. It's comprised of software, hardware, and firmware so you can choose the best "tool" for the job.

When your PC won't boot, you'll need **ROM POST** firmware, a plug-in chip that virtually "jumpstarts" the system to determine what's wrong. And, when your printer isn't working, you won't know whether it's the LPT port, cable, or printer without hardware, like our loopback plugs (which together with our software completely test the COM ports).

To provide you a complete troubleshooting resource, Service Diagnostics is offered in single modules or in "kits." Components include; CPU-specific software (PC, XT, AT, 386/486, PS/2), ROM POSTS (PC, XT, AT) and floppy alignment disks (3.5" and 5.25").

All the Service Diagnostics software modules are available in self-booting versions for use with non-DOS operating systems like UNIX.

Service Diagnostics is powerful and flexible. Hundreds of tests can be performed on your motherboard, memory, video, COM ports, floppy and hard drives, printer, and more. **CALL for a customized quote on the kit that's right for you!**

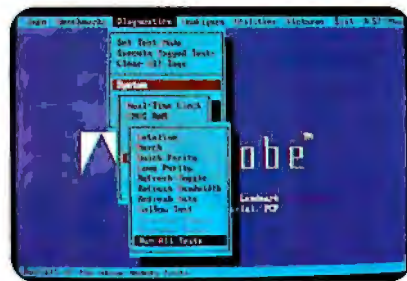

## PC DIAGNOSTICS MADE EASY

You don't need to be technical to use **PC Probe™**. With clear, intuitive, pull-down menus and 206 pages of on-line help, troubleshooting your PC is truly MADE EASY!

And, you don't have to be handy with a screwdriver to make PC Probe pay for itself. Just by providing a diagnostic report to your service and repair shop, you'll save money and receive quicker service.

PC Probe runs over 150 tests including; motherboard and CPU, memory, video card and display, keyboard, COM ports, floppy drive and controller, hard drive and controller, and more. Includes **VirusCure**, Landmark **Speed Test**, **AT SetUp** & loopback plugs. **CALL for current pricing!**

## SLASH HARD DISK SET-UP TIME

If you install, upgrade, or maintain hard drives, then you need **DiskBase™**. It'll save you boat-loads of time and money by putting the exact hard disk information you need at your fingertips... whenever you need it.

DiskBase reveals 12 technical specs on over 2500 hard disk drive models and 8 technical specs on over 220 controllers. Once you've located the correct hard disk model, you can instantly bring up a listing of all compatible controllers. **CALL for current pricing!**

Circle 169 on Inquiry Card (RESELLERS: 170).

notebooks to run about 25 percent longer between charges than would a nickel-cadmium battery of the same weight.

Makers of desktop computers are also addressing the battery disposal problem, while at the same time making their systems more secure and flexible. Both HP and Amkly Systems have eliminated battery-backed-up CMOS RAM for storing system setup information in favor of flash memory. With flash memory, there is no danger that the setup will be lost if the battery dies, and in both companies' PCs, the system BIOS is also stored in flash memory so that you can update it.

### Save Power, Save Money

At its office in Munich, Germany, Intel has a guard, who, after hours, twice makes his way into every office and turns off unused PCs. Systems that must remain on (e.g., file servers or computers used for remote log-in) sport a prominent sticker—available from supervisors alone—that tell the guard to keep his distance.

Sound excessive? Expensive? When it comes to paying for power, Intel is like any other company that faces rising utility bills owing to the proliferation of computers and related equipment. Intel has found that the cost savings in power that this practice achieves have more than paid the guard's salary.

Studies on the energy required to run your business have been available for years. Items broken down have typically included things like manufacturing, air conditioning, and lighting. But until recently, studies have relegated the rising costs of computer equipment, as well as the extra cooling of office spaces using it, into the category of "Miscellaneous" or "Other." Steve Blanc, R&D program manager for Pacific Gas and Electric (San Francisco, CA),

said, "This is the biggest unregulated load in any building. This load, particularly PCs, has increased on an order of magnitude."

According to nameplate-rating estimates by BR Associates of the power used by electronic office equipment in the Pacific Northwest, PCs alone accounted for 12 percent of the total. This figure does not take into account the increased expansion capabilities per PC since the 1986 study was done. Hard drives are bigger, CRTs use more power, and many networks have downsized to raise the percentage of power you can attribute to PC use. It can no longer be ignored. One San Francisco-based company, for instance, saved nothing after paying big for sophisticated control mechanisms designed to lower the company's energy costs a fat 20 percent. The culprit: the simultaneous rise of the number of PCs purchased and unaccounted for along the way.

### Typical Per-Office Drain

Jeff Harris, a staff scientist for Lawrence Berkeley Labs (Berkeley, CA) explained a typical power scenario using the example of his own temporary work area at the U.S. Department of Energy. His PS/2 with a VGA monitor and expansion cards consumes 150 watts, and his laser printer uses about 250 W on average. He estimated power consumption at nearly 1½ W per square foot of office space. Lighting, the known factor in interpreting utility bills, has traditionally required the same wattage.

An added cost of running computer equipment, the cooling of work areas ranging from one-person offices to big data centers, must also be addressed. Citibank tackled this issue head-on in a Wall Street building it uses primarily for nighttime order entry and cash management. In this facility, the company optimized its

HVAC (heating, ventilation, and air conditioning) system, since turning off the mainframe and the many busy workstations wasn't an option. The result: 10 percent fewer kilowatt-hours. A figure like this translates into thousands of dollars annually.

Frequently, however, companies must cut back on energy devoted to cooling simply because of the number of PCs running—they literally don't have enough power coming into the building to run all the computers and the air conditioning at the same time. As a result, these companies chill offices overnight when the PCs are off and let them warm up gradually throughout the workday.

## Energy Efficiency in the Desktop

It has taken portable technology to show us how much savings in energy can eventually be achieved in desktops (see the figure). The need for portable computers to conserve energy has driven the development of LCDs, low-power storage devices, and 3.3-volt components. "I would be surprised if anyone is designing 5-V systems by the end of 1994," said Jim Reinhardt, manager of marketing and applications for Motorola's 68000 processor line. (Part of his reasoning is that the new 0.5-micron technology can only operate at voltages lower than 5 V.) A 3.3-V design not only reduces power requirements, but it also cuts down on the heat a system produces. This eliminates the need for a cooling fan and helps relieve the strain on air-conditioning systems.

Another portable feature that is migrating to the desktop is power management. The computer center at Lawrence Berkeley Labs notified other departments that for \$50 per year, it would back up all data on their Macs' hard disks every night provided the users left the machines running. But when Harris calculated

how much power a department of Macs expended overnight, he found it exceeded the price they were paying for the backups. "The answer wasn't that we shouldn't back up our data," Harris explained. "What these machines needed was a sleep mode—to sleep until they did the backup, then to go back to sleep."

The Environmental Protection Agency's Global Change division has already signed agreements with several computer makers to affix an "Energy Star" logo to identify desktop systems incorporating a sleep-mode capability. Sleep mode in some form should be a part of any design for low-power desktop systems. And so should a phase-out of CRTs in favor of some variety of flat-panel displays. But beyond that, said Reinhardt, there are no standards on what would constitute a low-power system.

How much power can portable technology save on the desktop? Assume that you have a desktop PC (with a 386 processor, a color VGA, a 3½-inch floppy drive, and a 40-MB hard drive) that gets 3100 hours of use a year. Of the 3100 hours, 600 are active and 2500 are standby—the PC is on but not being used. This PC takes up 150 W, or 465 kWh a year. If you can incorporate portable-PC-like sleep-mode capability into a standard desktop machine (same configuration in high-power parts), you can bring the power consumption down to 153 kWh for a 67 percent savings per PC on your electric bill. In contrast, a similarly equipped laptop with an active-matrix color screen would use a mere 31 kWh per year.

## Monitoring Monitors

Screen savers may do wonders for the phosphors in your monitor, but they do nothing for your electric bill. "The only point of keeping on a monitor is for someone to look at it," said Harris.

*The practice of leaving a personal computer running around the clock may have some marginal benefit for the system components, but it wreaks havoc on your electric bill. In large installations, energy costs could easily run thousands of dollars a year. Smart use of personal computers and the implementation of low-power components promise to dramatically lower energy requirements. (Data courtesy of EPA Energy Star Computers)*

Some monitor vendors, mainly in response to government pressure in Europe and Asia, have introduced energy-saving monitors. Eizo, the Japanese monitor manufacturer known in the U.S. as Nanao, is leading the way. Its first energy-saving monitor, the F340i, is designed to power itself down when the PC doesn't transmit a signal. So, if you turn the system box off and forget to turn off the monitor, the monitor automatically switches off once it senses that the PC isn't sending a signal.

The F340i was launched last fall. Eizo is already working on a more sophisticated second-generation monitor that can recognize when a screen saver is active, so it can power itself down, too. Since Eizo develops video cards as well as monitors, it would not be difficult to develop a card/monitor pair that, through the use of a software driver, exhibited this property. But Eizo is looking for a more general solution. By using a custom Windows screen driver, Eizo claims it will be able to generate a unique output signal from any video card that the power-saving monitor will recognize. Then when the screen saver kicks in, the signal will be sent, and the monitor will power down, saving the screen and power.

## Printing Smarter and Cheaper

The so-called paperless office, even on a relative scale, is another potential energy cost-cutter. "We need to ask, 'Do we really need all the faxing and printing we do?'" said Lawrence Berkeley Labs' Harris. E-mail, the strategic use of LANs for messaging and announcements, can greatly eliminate some of the power draw of these devices. Les Norford, an assistant professor of building technology at MIT's department of architecture, notes a common practice that is also an energy saver: sharing printers (particularly lasers), desk-top scanners, and other peripherals.

If you're shopping for a printer, consider that ink-jet printers, while slower than lasers, use much less power—according to a 1990 study

by Competitek (a research arm of the Rocky Mountain Institute), 80 percent less in standby energy and 97 percent to 99 percent less in printing energy. What about nonimpact printers already in service? You can dig into the manual for information on setting a quiet or power management mode, which uses less power on standby but takes an extra instant to come up to speed. "Printer companies," said Harris, "told me this feature is always disabled when the unit is sold." If it weren't, they explained, the printer would score poorly on computer magazine tests of the time spent printing a single page.

## The Industry Responds

Fortunately, the computer industry has begun to hear what utilities, major users of energy, and researchers are telling them. A major task force comprising the Department of Energy, the EPA, the Electric Power Research Institute, and several utilities met June 17–18 for the first time with representatives of all the big computer makers. "This is the first significant effort to bring together this group with the computer industry," said MIT's Norford. Vendor members include Zenith Data Systems, NCR, Apple, Smith Corona, IBM, HP, Compaq, and DEC. Each of these companies has said it will introduce energy-efficient models within a year.

The coalition's initial goals are to agree on and publicize a list of equipment features that are desirable from an energy standpoint and to come up with a test procedure for equipment purchases that would calculate the lifetime cost of running computers and related equipment. The American Society of Testing and Materials has long had a test for photocopiers' various modes of power usage, and this may serve as a model. Once test procedures become standardized and computer vendors reveal test data in product labeling, it should be far easier to make volume purchases with some confidence of forecasted increases in your company's utility expense.

During periods of peak usage, it is not unusual for a utility to call its biggest users and

ask them to see if they can shut down any unused equipment to avoid possible brownouts. HVAC systems at these companies are usually already automated. Lighting fixtures, an easy target for energy savings, have often been retrofitted throughout a company's facilities. What's left? The equipment that people use to keep their businesses alive: computers, which until recently were lumped under the "Other" category. "We need to break out of that 'Other' category," said Harris.

## Ethics or Edge?

Is "environmental sensitivity" merely this year's marketing catchphrase? Or do the programs outlined above represent a real shift in the computer industry toward protecting the earth? The answer is somewhere in the middle.

Many of the companies whose programs now lead the way in green computing have long had public commitments to environmentalism. Other companies are merely jumping on the bandwagon because it is advantageous from a financial or marketing standpoint. But whatever the motives, the small changes in expectations and practices that these companies are now instigating could eventually add up to big economic savings. ■

# The Outlook for Pen Computing

Pen-based computing struggles with its problems but looks to a bright future

NICHOLAS BARAN

**J**immy Cliff's hit from the 1970s, "Many Rivers to Cross," could well be the theme song of pen-based computing. Despite early systems such as the GridPad, the pen-based industry first received major attention in January 1991: Go Corp. announced its PenPoint operating system, and Microsoft acknowledged Windows for Pen Computing. Although it's received a great deal of hype over the past year and a half, pen-based computing must overcome major technical and market challenges before it lives up to the expectations of potential users.

Both PenPoint and Windows for Pen Computing began shipping in April. The first pen-based systems that support these interfaces are too heavy, too expensive, and too hard to read. Also, they run at best for 3 hours on batteries. (See "Rough Gems: First Pen Systems Show Promise, Lack Refinement," April BYTE.) On the software side, most applications are still in the beta stage, and handwriting recognition is only marginally acceptable.

Nevertheless, pen-based computing represents the most exciting and promising area of computing to come along since the desktop personal computer. Desktop computers have reached a degree of maturity in which most new development represents refinements to the existing technology. Pen-based computers, on the other hand, represent an arena ripe for major technical breakthroughs.

## The High Road and the Low Road

The young pen-based computing market can be divided into two categories: the high end and the low end. On the low end, DOS-based systems using the 8086 or NEC V20 architecture prevail. The most popular of these systems is the GridPad from Grid Systems (Fremont, CA), which was one of the first companies to enter the pen-based computer market. Grid offers an interface

layer called PenWrite and a set of development tools called PenRight for developing forms-based applications running on DOS. Fujitsu Personal Systems (Santa Clara, CA), formerly Poqet Computer, has introduced a V20-based system, called the PoqetPad, which supports Grid's PenRight development environment.

The driving concept behind machines like the GridPad and the PoqetPad is to provide a no-frills system for data entry and retrieval using custom forms—no GUI, no multitasking, but enough power to run a basic forms-based application with limited handwriting recognition. These systems are well designed for that purpose. Grid's recently announced PalmPad straps to your wrist and weighs less than 3 pounds. It has a

detachable battery pack that you wear on your belt.

This type of system may be all that's required for many pen-based applications, particularly in vertical markets. For example, Detroit Edison recently purchased over 300 GridPads for use in filling out work orders and time cards in the field.

To make things more interesting, GeoWorks (Berkeley, CA) has announced a version of its PC/GEOS graphical operating environment for pen-based systems, called Pen/GEOS. Pen/GEOS is targeted toward 8086- and V20-based systems and provides a GUI. Jeff Hawkins, a former Grid vice president, founded Palm Systems (Menlo Park, CA) to develop handwriting-recognition software and other applications for Pen/GEOS. Pen/GEOS should start appearing on systems like the PoqetPad by early next year.

Tandy (Fort Worth, TX) and Casio Computer (Tokyo, Japan) recently announced that they are jointly developing a family of pen-based "personal information processors." GeoWorks and Palm Computing are providing the operating system and handwriting-recognition software, respectively. Tandy would give no introduction date as of this writing, however.

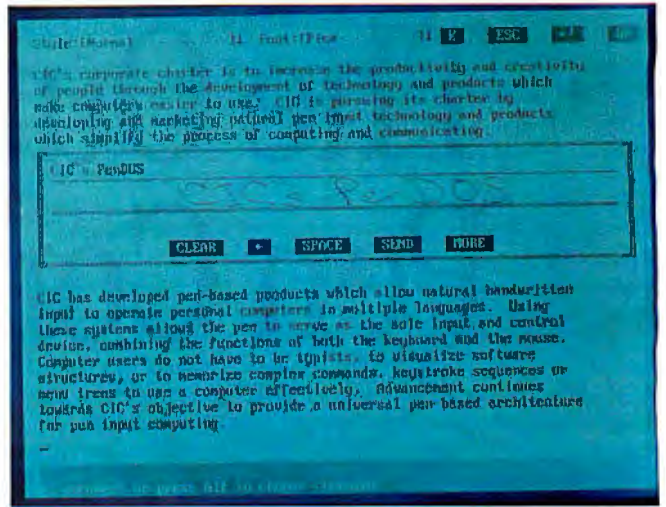

Hawkins, who developed the handwriting-recognition engine used on the GridPad, says that Pen/GEOS will be "a key part of the palmtop market." He's impressed with the truly object-oriented environment of Pen/GEOS and its ability to support multitasking. Hawkins says he can run several applications simultaneously on an 8088 with 512 KB.

In the near term, systems like the GridPad will be very attractive to users who need to get a basic job done. You can expect to see hand-held devices sporting the Pen/GEOS interface next year, according to Hawkins. Chips & Technologies, a Santa Clara chip vendor, joined GeoWorks at the introduction of Pen/GEOS, promoting its single-chip PC architecture as an ideal match for Pen/GEOS. Chips & Technologies plans to sell this strategy to OEMs.

The question remains, however, if the 8086 architecture can hold its own against more powerful processors, such as the processor based on the ARM (Advanced RISC machine), which will appear in Apple's Newton and other hand-held devices (see "The PC Gets More Personal," July BYTE). Considering the processors used, the GridPad and PoqetPad systems are not inexpensive: They cost \$2000 to \$3000, depending on the configuration. Smaller, more powerful devices will soon be on the market for about half the cost.

Nevertheless, Grid's president, Bruce Walter, is confident in the success of Grid's DOS strategy. In a recent speech, Walter stated that Grid will support PenPoint and Windows for Pen Computing, but said, "PenWrite has proven to be exactly what the forms-application-based vertical markets want."

Doug Gauthier, information management supervisor for the Human Services Department in Phoenix, Arizona, used PenWrite to develop an application that lets

**Screen 1:** PenDOS is shown in conjunction with a Microsoft Word document. You can use the pen interface provided by PenDOS to edit the document, using handwritten text for insertion or cutting and pasting. PenDOS commands appear in the upper right corner of the screen.

caseworkers record client information. When his project began, Grid was really the only choice. Gauthier was able to do all development on existing 286-based PCs. He has had such good success with PenWrite that he would not consider switching, unless compelling applications were available on other platforms (e.g., Lotus 1-2-3). Gauthier's application consists of 40 on-line forms up to 16 or 17 pages long. The 200-KB executable file "fully utilizes" the GridPad's capabilities, Gauthier said.

Fitting somewhere between the low end and the high end is the PenDOS operating environment from Communication Intelligence Corp. (Redwood Shores, CA). It is on the low end in the sense that it runs as a layer on top of DOS. PenDOS is on the high end because it requires a 386 processor (primarily because of CIC's handwriting-recognition engine, which is bundled with PenDOS). According to CIC's marketing engineer Bruce Leong, the main goal of PenDOS is to enable DOS applications to work with a pen-based interface and to take advantage of CIC's handwriting-recognition technology.

PenDOS lets you use a pen and handwriting to execute DOS commands and to run DOS applications. It provides a set of pen gestures for performing operations such as inserting and deleting text and cutting and pasting. These gestures will work with any DOS application that supports a mouse without modification. You simply point with the pen at the upper right corner of the screen to activate the PenDOS interface (see screen 1). CIC provides a software development kit for developers who are using PenDOS. PenDOS is likely to gain some support in the marketplace. It offers a straightforward solution for developing forms-based applications with handwriting recognition on top of DOS.

### Windows for Pen Computing and PenPoint

The high end is dominated by Windows for Pen Computing and PenPoint. Both operating environments require 386 systems or higher, a minimum of 4 MB of RAM (Go recommends 8 MB), and at least 20 MB of mass storage, although 40 MB is more realistic. A recent demonstration of PenPoint using an IBM ThinkPad with 20 MB of storage was barely adequate. The system constantly swapped applications from disk. Both systems offer full-featured GUIs with multiple fonts and handwriting

## BYTE ACTION SUMMARY

Inadequate handwriting recognition, battery life, and display technology keep pen-based computing mired in vertical niches. However, a great deal of research and software development are encouraging signs. Pen-based technology will begin to enter the mainstream next year and could become a major part of the computer market by 1994.

recognition. However, Windows for Pen Computing and PenPoint are very different environments, built from completely different foundations and concepts.

Windows for Pen Computing is simply an extension of the desktop, mouse-based version of Windows. Although it is an extension of a desktop interface, it handles pen input remarkably well (see "Windows Meets the Pen," June BYTE). For Windows users, Windows for Pen Computing offers a familiar interface with the pen replacing the mouse. It offers the added functions of handwriting and drawing with the pen.

In support of Windows for Pen Computing, Microsoft is promoting its Visual Basic programming toolkit as a platform for developing pen-based applications. I've been impressed with some of the initial demonstrations and prototypes of forms-based pen applications developed with Visual Basic. For example, Microsoft has developed a prototype of a traffic accident and citation report form application for police work using Visual Basic (see screen 2). The form lets the officer fill in the details of the accident or traffic violation (e.g., license numbers, speed, or a sketch of the accident scene).

There is little question that Windows for Pen Computing will play a major role in the pen-based market. The sheer numbers of Windows users and applications developers virtually guarantee its success.

PenPoint, on the other hand, faces the formidable challenge of establishing itself as a new operating system and as the one of choice for pen-based computing users. From a technical standpoint, PenPoint has significant advantages over Windows for Pen Computing. I spent a week using both environments on an NCR 3125. As Go claims, PenPoint is a far more intuitive interface for pen computing than is Windows for Pen Computing. With PenPoint, the computer behaves much like a paper notebook (see screen 3). It has tabs on the side. It has page numbers. Each file appears as a document or page in the notebook and is automatically updated and stored.

PenPoint is a multitasking environment, so you can switch from page to page or document to document without thinking about closing files or waiting for applications to load. This lets you interact with the computer in a manner similar to working with a notebook; by tapping on the appropriate tab, the notebook "turns" to the correct page. You can concentrate on the work at hand rather than on details such as saving files.

**Screen 3:** A screen from the Note Taker application running under PenPoint. The right edge of the screen shows the notebook-like tabs. PenPoint looks and behaves much like a paper notebook.

Another feature that differentiates PenPoint from Windows for Pen Computing, and may be one of its most important advantages, is its automatic networking capability. PenPoint has a built-in version of the TOPS peer-to-peer network called Pen-TOPS from Sitka (Alameda, CA). Simply by tapping on the Connections icon and specifying that you want to establish a network connection, you can automatically connect to another node, by a wireless connection or by standard AppleTalk cabling. You can automatically detach from the network, and you can "defer" output for later connection to a network.

These features will be of major importance in the pen-based computing environment. For example, deferred output and automatic network connection will be an important feature for mobile workers who return to the home office at the end of the day to download data and to upload data for the next day's work.

But in spite of its technical elegance, PenPoint has a great deal to prove. Although PenPoint may be technically superior, Windows for Pen Computing works surprisingly well and will meet the needs of many pen users. Although it's easier to learn than Windows for Pen Computing, PenPoint still has idiosyncrasies and obscure functions that are not readily obvious. For example, I couldn't figure out how to change the names of the tabs on the side of the notebook page.

Another problem is the lack of PenPoint development tools, other than the Watcom C compiler. Windows for Pen Computing has a big advantage, with tools like Visual Basic and many others that are familiar to the software development community.

continued

But PenPoint development tools are a key priority for Go and will appear in the next year, according to Go's cofounder Robert Carr. In addition, Norm Francis, founder of PenMagic and developer of Numero for PenPoint, pointed out that all operating systems suffer from a lack of development tools in the early going. He added that for a new operating system, PenPoint is remarkably stable and robust.

In the final analysis, PenPoint is an impressive technical accomplishment that is just in its infancy. In the years ahead, PenPoint will appear on other processor architectures and will undergo many refinements and improvements. Although Go will not comment on its plans for porting PenPoint, it points out that PenPoint is written in C and designed to be portable. Reliable sources indicate that PenPoint will appear on AT&T's CRISP (C-machine Reduced Instruction Set Processor). PenPoint is likely to have a bright future.

### Handwriting Recognition Must Be 100 Percent

Perhaps the biggest limitation that is common to both Windows for Pen Computing and PenPoint (and to environments such as PenDOS) is the current state of handwriting recognition. Both environments come with handwriting-recognition engines. And it is supposedly possible to substitute other vendors' engines. I've tried Microsoft's, Go's, CIC's, and Momenta's engines, and none of them offer 100 percent accuracy, even after you've trained these systems to better recognize your handwriting.

While it may seem like a harsh requirement, handwriting recognition must be *100 percent accurate* to be successful. It is simply not acceptable to worry about whether the machine recognized your last name correctly or got an S and a 5 mixed up. Nor is it acceptable to go back and overwrite an incorrect character, often several times before it gets it right. Users won't put up with it, especially when these systems cost \$5000 or more.

The current technology is really aimed at filling in "small things, like names and addresses," according to Hawkins. He added that anybody who expects a computer to recognize a person's notes will be disappointed. Writing tends to get sloppy when people start dealing with sentences, and at that point the recognition engines start having problems. But Hawkins believes that handwriting recognition is not the real issue. He says that people will buy pen-based systems "because of the valuable things you can do with the pen interface."

Perhaps the key to more acceptable handwriting recognition is the development of cursive handwriting-recognition engines. Several companies are working on cursive recognition, including Paragraph International (a Russian firm that has offices in Moscow and Boulder, Colorado), Microsoft, CIC, Nestor (Providence, RI), and AT&T. While Paragraph has demonstrated its cursive recognition system, this technology still has a long way to go before it appears commercially. Both Apple and Microsoft have announced that they are licensing Paragraph's technology. Much of the research involves neural networks and DSPs (digital signal processors), which would require different hardware designs than those currently used on pen systems.

The process of cursive handwriting recognition requires that several complex algorithms be solved simultaneously. This includes so-called "feature extraction" and "segmentation" of various components of the cursive script, application of context-sensitivity to determine heuristically what characters most likely apply to the script, and then coordinating these processes to arrive at the recognized character. Neural networks provide the software intelligence, and DSPs provide the coordination and speed for responsive recognition. AT&T, Intel, and Motorola have been working on neural-network architectures intended for solving complex problems such as cursive handwriting recognition.

### Third-Party Software

Most third-party pen-based applications are still under development. Any standard Windows application runs on Windows for Pen Computing but does not offer features designed for pen-based input (e.g., handwriting data-entry fields and check boxes).

There are promising products for both PenPoint and Windows for Pen Computing for forms entry, address book and Day-Timer scheduling, financial and spreadsheet modeling, drawing and note taking, and document reference and retrieval systems. For example, Slate (Scottsdale, AZ) is working on a product called PenBook, with versions for both environments. This product is designed for searching and browsing through large documents (e.g., parts or instruction manuals, dictionaries, or encyclopedias).

In the vertical-software arena, there is tremendous interest from the medical community. For example, Pi Systems is targeting its Infolio pen-based system toward the medical profession. Other vertical markets include insurance and real estate appraisal, delivery systems, building and railroad inspection, and more.

Pen-based computing presents a new arena for software developers and offers the opportunity for innovation that has virtually disappeared from the desktop arena. It's a chance for small companies to score a hit. We can expect to see some powerful and innovative applications in the next two years.

### Hardware Is the Key

While the software has some rough edges, the real technical hurdles in pen-based computing are in the hardware. Current machines suffer from two related and serious limitations: limited battery life and inadequate readability. Display readability can be improved by backlighting, but backlighting consumes a lot of power. While hard drives and memory-storage devices are also substantial power consumers, displays represent the most power-hungry components, requiring from 3 to 5 watts.

Reflective displays, such as that on the NCR 3125, don't require backlighting. However, they simply don't provide enough contrast to be readable, except with excellent ambient lighting. Some newer LCDs boast a 12-to-1 contrast ratio, but backlit displays provide a minimum of 15 to 1.

Both reflective and backlit displays suffer from extremely limited viewing angles. Pen-based systems that I've seen require head-on viewing. Two people sitting side by side have difficulty with both seeing what's displayed on the screen. LCDs on laptops have improved dramatically in the last few years. But pen-based systems face the added complexity of layering a digitizing tablet together with the LCD and providing a ruggedized surface, both of which reduce the contrast of the display.

Scriptel, which manufactures digitizing tablets for pen-based systems, minimizes the problem by binding the digitizer layer directly on the protective glass. Scriptel's technology allows for 88 percent transparency; the digitizer's indium tin oxide coating blocks 3 percent of the light from passing through, while the glass itself blocks 9 percent.

According to David Mentley of Stanford Resources, a San Jose, California, display-technology consulting firm, the next round of LCDs will have better film compensators for improving the viewing angle and will feature more efficient and higher-intensity backlights. However, Mentley foresees no major breakthroughs in backlighting technology: "Lighting has been beaten to death," he says.

If LCDs are stuck with backlighting, the major improvement will have to occur in battery technology. Some promising developments are on the horizon. Zinc-air batteries were shown in a prototype pen-based system at a recent conference. They ran for up to 10 hours. However, no vendor has publicly committed to using zinc-air batteries, which are expected to cost up to four times

## THE OUTLOOK FOR PEN COMPUTING

as much as nickel-cadmium batteries (see "Zinc-Air Batteries: Long May You Run," May BYTE, page 28).

Another component on current pen-based systems that contributes to higher power consumption, size, and weight is the hard drive. The 1.8-inch hard drives consume between 1 and 1.5 W of power during read/write operations. Hewlett-Packard's 1.3-inch Kittyhawk hard drive requires between 1.5 and 1.7 W. Flash-memory devices such as SunDisk's (Santa Clara, CA) SDI series have many advantages over hard drives, except that they cost about 10 times as much. Flash-memory devices are much more durable (500 gs of operating shock versus about 100 gs for the Kittyhawk), weigh less, and fit in a narrower space.

Flash-memory devices, however, cost about five times more per megabyte than the 1.8-inch hard drives and require at least 5 volts to operate. Small computing devices are moving toward 3.3-V designs to minimize power requirements.

Because of its convenience and durability, flash-memory storage will eventually be the choice for mass storage for pen-based systems. Prices must come down first. Intel has announced that it will offer a 20-MB flash card for about \$600 in quantity pricing. This represents a drop of about \$20 in cost per megabyte for flash memory.

Intel recently announced a 3.3-V version of its 386SL processor. This chip has what Intel calls a FlexibleVoltage feature, which allows system designers to build computers without reengineering their existing power management strategies. This low-power CPU, along with others from companies such as AMD, represent one more step toward reasonable battery life on pen-based systems.

### The Crystal Ball

What people want in a pen-based system, says Hawkins, "is a very powerful device that weighs under a pound and costs under \$500." Clearly, pen-based computing technology has a long way to go to meet that goal. Consider the evolution of the PC from 1982 to 1992—how much machines improved, and the relentless downward progression of the price/performance curve. A similar pattern of evolution is foreseeable with pen-based computing technology. By next year, you will see improved displays and batteries and considerably less expensive flash-memory devices. This trend will be more dramatic by 1994.

In 1993, you will also see more hand-held pen systems (e.g., Apple's Newton). Coupled with these new devices, you will see new processor architectures emerge in the pen market. Newton will use the ARM processor. AT&T's CRISP is expected to appear in pen-based systems from a company called Eo Computer (largely staffed by former Go engineers). PenPoint is likely to appear on the CRISP platform as the main operating system.

In conjunction with these developments, you can expect major advances in wireless networking. The FCC is expected to provide a dedicated frequency band for spread-spectrum wireless networks within the next two years, thus opening up the possibility for true wireless networking using pen-based systems (see "Wireless Networking," April BYTE).

Overall, the future looks bright for pen-based computing. But, as with the early days of the PC, users and customers will have to be patient. In the initial phases, only "early adopters" like large corporate accounts with specific problems to solve will buy pen-based systems. By 1994, you can expect pen-based systems to be affordable enough and to work well enough that the market will open up and start to take on the dimensions of the PC market. ■

# THE COMPAQ DESKPRO/i. SO A LIMITED PRICE LEADS

The company most qualified to advance the state of the desktop computer announces four systems that represent a breakthrough in R&D. At prices that won't ruin your P&L. Reflecting the level of thinking and quality that you've come to expect from Compaq.

At Compaq, there's a fundamental belief held by all of us that when you set extraordinary goals, extraordinary people will meet them.

Recently, for example, you made it clear to us that you wanted new PCs, with everything from advanced graphics to audio capability to affordable prices. Our response: the COMPAQ DESKPRO/i Family of PCs. Four new systems loaded with features to

enhance productivity.

The built-in COMPAQ QVision 1024 Graphics

times faster than most popular video graphic subsystems. So quickly, as a matter of fact, you may find your computer waiting for you. Instead of the other way around.

Its unique processor upgrade path ensures

Controller, for example, allows you to scroll, re-size windows and pull down menus up to ten

that your PC won't be swept into obsolescence.

Simple chip upgradability and a 64-KB cache

# PHOTONICS: REVOLUTION OR EVOLUTION?

Processing with light is poised to live up to its potential  
to help you compute faster and better

JACK WEBER

**R**evolutions never happen overnight—unless you're not expecting them. The wind of change that's now blowing through the silicon corridors and magnetic hallways of computing is bringing with it a profound shift in the ways people will process, store, and transmit data. Optical technologies are infiltrating what was once the exclusive preserve of electronics, introducing not just new devices or different data structures but a fundamental change in the physical fabric of information.

No one is suggesting that electronics will disappear or that its own evolution and growth are about to end. But optical and optoelectronic technologies will certainly rewrite the ground rules of the computing game.

Already we've seen the inexorable growth of optical storage. CD-ROM and WORM drives are commonplace and are being joined by new technologies, such as magneto-optical and phase-change drives. And optical techniques based on lasers and LEDs have virtually reshaped the printer market.

More significant than these new technologies is the rise of networking and remote access. Data communications through the telephone network could never have developed without the high bandwidth and low error rate provided by optical fibers. Optical LANs and WANs (wide-area networks) are bringing fiber to users' desks, and, for the first time, optical connections are starting to appear in individual computers.

The one area that hasn't yet succumbed to the revolution is the very heart of computing: the processing logic that manipulates data, and the memory that holds it ready for use. But even these are poised for change. OEICs, or optoelectronic ICs (see the glossary "Unbending Lightwave Terminology" on page 171), which combine both technologies, are starting to find their way into commercial machines while, in laboratories around the world, experimental all-optical processors and memories offer a glimpse of the future (see photo 1).

A research team headed by scientists at Conductus, Inc. (Sunnyvale, CA), is attempting to integrate optical technologies into a prototype computer designed to eventually bring supercomputing performance to desktop machines. This de-

velopment will combine photonics with cooled semiconductor and advanced superconductor technologies to achieve performance said to be orders of magnitude greater than that of personal computers and workstations being used today.

The team that will develop the machine is composed of scientists from TRW Space Technology Group (Redondo Beach, CA), the University of California-Berkeley, NIST (National Institute of Standards and Technology) (Boulder, CO), Hewlett-Packard Research Division (Palo Alto, CA), and Stanford University (Palo Alto, CA).

It would be easy to perceive optical technology as a threat to silicon's status quo or as a panacea for all its problems. It is neither. The attraction is that it addresses precisely those problems that are emerging as limits in the electronic domain—problems like pin congestion on ICs, the tangle of tracks on printed circuit boards, signal skew, cross talk, pulse degradation, and electron tunneling. The list goes on and on, but all these problems—and their solutions—arise from a few fundamental properties of electricity and light.

## Let There Be Light

Electronics is a technology that manipulates the flow of electrons. Photonics, a technology that is its optical equivalent,

## Resource Guide: OPTICAL PRODUCT SAMPLER

195

**Photo 1:** Polymer memory cubes such as these prototypes developed by UCI's Peter Rentzepis are capable of storing information in three dimensions. Data can be written and read in thousandths of a second by two laser beams. (Photo courtesy of University of California-Irvine)

manipulates photons. The differences are simple but profound: Electrons have mass and an electric charge; photons have no mass and no charge—they are simply packets, or quanta, of electromagnetic energy.

As a result, electrons interact with each other through capacitive and inductive effects; photons do not interact at all. In addition, mobile electrons require energy proportional to the distance they travel—it's the cost of carrying an electric field around. Photons have no such baggage; they can travel across the universe with no more energy than they set out with.

The consequences for computing are

that electrons are more easily controlled but slower and less efficient than photons. Their interactions produce cross talk between adjacent signal paths. Photons, on the other hand, can travel freely through open space, crossing other light beams with no effect. Because they have no mass, they can reach the maximum speed allowed by nature: the speed of light.

One of the most important measures of potential computing power is the energy required to transmit a bit of information. In this respect, light is efficient, but it requires more complex technology that is less developed than that of the electronic domain.

Those are the trade-offs, but electrons and photons also have something in common: They are both quantum phenomena. This means that if you look at them one way, they'll behave like particles, but if you look at them another way, they'll appear as waves. In electronics, this wave-particle duality can be ignored most of the time. Photonics, however, demands that engineers grasp and deal with quantum mechanics, because understanding and using the physics are central to many of the devices and systems of optical computing. The challenge is to fabricate the technology.

As in electronics, the devices required for optical processing must be capable of generating and detecting bits of information, transmitting them from one point to another, performing logical operations, and storing and retrieving data. The first and obvious requirement is a light generator, usually a laser or an LED. In these devices, as electrons pass through a semiconductor junction, they acquire sufficient energy to jump to an excited energy level. This is an unstable state for electrons, so they quickly jettison their extra energy in the form of photons and return to their stable ground state. In an LED, this process happens randomly. In a laser, the electrons fall back in step, and the light they produce is coherent (i.e., in a state in which all the photons have the same phase).

Solid-state lasers are relatively efficient and capable of switching at tens of gigahertz, which makes them a mainstay of high-bandwidth communications and processing. Until recently, the problems were their large physical size and their restricted range of wavelengths. Not anymore.

In 1989, Bellcore researchers produced the first microlasers, some of which measured only 1 micron across. Although the power of each laser is low, millions of lasers can be packed tightly together. Most important, they emit light perpendicular to the chip surface, a factor that will be essential for transmitting data directly from an IC.

The other problem diminished in 1991, when researchers from 3M Corporate Research Center (St. Paul, MN) broke the wavelength record and developed solid-state zinc selenide lasers emitting blue and blue-green light at wavelengths as short as 490 nanometers. Being able to produce these shorter wavelengths is important because they can be focused more tightly, allowing higher densities in optical storage and better resolution in laser printers.

Recently, scientists from the Defence Research Agency (Malvern, U.K.) made an exciting discovery: photoluminescence and electroluminescence in acid-etched silicon. Normally, only semiconductors like GaAs (gallium arsenide) can emit visible wavelengths, but they're not widely used in computers. So, this discovery of silicon light may be a crucial factor in bringing optoelectronics into the mainstream.

Generally, solid-state generators and photodiode detectors are well-established technologies, but optical processing will require more novel devices. What's needed is the ability to control light with light, just as transistors use one current to control another. But electrons interact with each other; photons don't. Thus, special materials, called *nonlinear optical materials*, are needed to mediate this action.

### New Materials and Devices

Ordinary glass is linear because its optical properties are independent of the light level. Photochromic glass (e.g., that used in eyeglasses that darken in bright sunlight) is nonlinear, however: Light alters the glass's optical properties. A great many substances exhibit various nonlinear effects (e.g., as the light intensity changes, they alter their color, refractive index, opacity, or polarization), and new types of these materials are being developed all the time. Scientists have high hopes that people will eventually be able to use some newly developed devices and materials, such as lithium niobate and S-SEEDs (symmetric self-electro-optic effect devices), as processing elements for optical computers (see the figure).

One of the most important nonlinear effects is photorefractive. In a photorefractive substance, light intensity alters the speed at which light travels through the material. Differences in the speed at which light travels are what cause refraction. It is possible that these materials may one day be used to steer light beams or to work as optical switches (see photo 2).

Some photorefractive materials change their refractive index rapidly in response to variations in light level. Others will hold the refractive changes for some time after

## BYTE ACTION SUMMARY

Optical technologies already have had a profound effect on digital communications, data storage, and printing. One day, the computers you use will contain optical memories, optical interconnections, and even optoelectronic processors.

If you're looking  
for a notebook  
computer that's  
easy to use,  
there are basically  
only two ways  
you can go.

# The hard way.

## New programs, \$506 each.

Unless you buy programs specifically designed for Windows 3.1, you'll have to use conventional character-based programs and their awkward commands.

Extra memory, \$210\*. Most notebook computers in use today simply aren't fast enough to make Windows 3.1 practical. And many that are fast enough may require extra memory, which can add hundreds of dollars to their price tags.

Clip-on trackball, \$172. If you're going to try to use Windows 3.1 on many portable computers, you may have to plug this in and clip it onto the side of your computer. (Be careful not to catch the cord in your airplane tray.)

## Fax/data modem, \$142.

The ability to communicate on the road is what makes a notebook PC really valuable. So you'll have to pack one of these. Once you get back to the office, be prepared to shell out another \$138 to update the files on your desktop PC, and over \$500 just to access network file servers and printers.

Added weight. Many notebook computers may claim to weigh less than 7 pounds, but by the time you add all the components you need to make Windows 3.1 work well, you're likely to find yourself with an additional 4 or 5 pounds to lug around.

Your time, name your price. Fiddling around with MS-DOS or Windows 3.1 on the road can cost you plenty of time. How much is yours worth?

Ordinary notebook, \$2,497. The typical notebook computer of today was designed to run DOS only, not Windows 3.1. It doesn't have enough memory, speed or screen brightness, and its screen isn't fast enough for high-quality graphical computing.

Comfort is something most notebook computer ads never talk about. Because, truth is, they're not very comfortable to use. Which may explain why they don't win awards for being well designed. (PowerBook, of course, has won more design awards than all other notebook computers combined.)

The coach seat factor. If you want to run Windows 3.1 on most portable computers, you'll find that you need a front-mounted keyboard and a side-mounted trackball or mouse. What you won't find is enough room on an airplane tray to hold it all.

Instruction manual, 2 pounds. There's nothing like forgetting a DOS command when you're 2,000 miles from home, so you may want to carry a manual with you. And since Windows 3.1 is based on DOS, you'll definitely want instructions handy.

The Apple® Macintosh® PowerBook® is the only personal computer to make the Products of the Year lists of *Business Week*, *Fortune*® and *InfoWorld*. And the only notebook computer to be named one of the Best Designed Products of the Year by *Time*®. Because it's the only computer designed as

# The easy way.

**Consistent applications.** Every PowerBook runs thousands of Macintosh programs (including Lotus 1-2-3 and WordPerfect) that all work in the same consistent, intuitive way. You learn one, you know the basics of all of them.

**Built-in networking.** Plug your PowerBook into an AppleTalk network, and conveniently access all network resources—printers, file servers, e-mail, even other networks from Novell, IBM and Digital.

**Built-in fax/data modem.** With this option, you can send your work directly to a fax machine or access e-mail from almost any telephone anywhere you happen to be. Just plug the phone cord into the back of the PowerBook.

**Built-in peripheral support.** Like every Macintosh, PowerBook lets you add up to six external hard drives, CD-ROM drives, scanners or other peripherals simply by plugging them in.

**Palm rests.** Working on the road isn't like working at your desk. So Apple designers provided a place to rest your hands, making it much easier and more comfortable to work in tight quarters—such as a middle seat on an airplane.

**Blistering speed.** Because Macintosh computers are optimized for graphical computing, PowerBook can significantly outperform comparably priced notebook computers running Windows.\* Both the PowerBook 170 and the new PowerBook 145 deliver an impressive combination of speed and power at an affordable price.

**Built-in Balloon Help.** Point at what you want to know about, and your Macintosh will tell you what it's for. So you can leave your manual in a desk drawer at home.

**AppleTalk Remote Access.** This remarkable software comes with every Macintosh PowerBook. It not only allows you to access all the files on a modem-equipped Macintosh at your office or at home, it also gives you complete access to your network—printers, files, file servers, e-mail—from anywhere there's a phone.

**Built-in file sharing.** On most notebook computers, sharing information with a desktop computer is virtually impossible. But every PowerBook has powerful file sharing built in. So you can easily connect your PowerBook to a desktop Mac or another PowerBook and copy files from one computer to the other.

**Integrated trackball.** Everything about Macintosh computers is designed to make it easy for you to work. In the case of PowerBook, the pointing device is integrated into the computer. There's nothing to hook up or clip on. Open it up and you're ready to go. (It's comfortable whether you're left- or right-handed, too.)

**It's compatible.** Like every Macintosh, PowerBook is compatible with the personal computers you use at the office. It can read from and write to floppy disks from MS-DOS or OS/2 PCs, or even run DOS software using programs such as SoftPC.

a totally integrated system. Combining hardware, software and industrial design to make working on the road as comfortable as working at your desk. It's more intelligent. It's more convenient. It's power anyone can use, anywhere you happen to be. The power to be your best.\*

### How to connect to a network file server.

#### The hard way:

1. Purchase an external network adapter.
2. Install the network adapter.
3. Connect the network cable.
4. Plug in AC power supply if needed.
5. Install network software and configure parameters.
6. Start Windows.
7. Run Windows Setup to load network software.
8. Restart.
9. Start Windows.
10. Start File Manager.
11. Select the desired file server.

#### The easy way:

1. Connect the network cable.
2. Open Chooser.
3. Select AppleTalk "Active" button.
4. Select desired file server.

### How to retrieve a deleted file.

#### The hard way:

1. Purchase a utility program.
2. Install it on your computer.
3. Restart the computer.
4. Start Windows.
5. Start the utility program.
6. Start the unerase feature.
7. Find the directory where your file existed.
8. Click on that directory.
9. Select the deleted file.
10. Choose unerase command.

#### The easy way:

1. Double-click on the trash can.
2. Drag the deleted file out of the trash can.

### How to rename a directory.

#### The hard way:

1. Double-click on the Main group in Program Manager.
2. Start File Manager.
3. Highlight the directory you want to rename.
4. Select "Rename" from the file menu.
5. Type in a new name for the directory (must be 8 characters or less).
6. Go to Program Manager if needed.
7. For each application in the renamed directory, select "Properties" from the file menu.
8. For each application in that directory, change the command line to reflect the new path to the application program.

#### The easy way:

1. Highlight the directory (folder) you want to rename.
2. Type a new name (up to 31 characters).

### How to add an external hard disk drive.

#### The hard way:

1. Purchase a parallel-to-SCSI adapter.
2. Connect it to the parallel port.
3. Plug the drive into the adapter.
4. Insert the adapter's installation disk in drive A:.
5. Select drive A:.
6. Type "INSTALL".
7. Select appropriate options for your drive.
8. Select appropriate drive for software installation.
9. Restart.
10. Run installation test program.

#### The easy way:

1. Plug the drive into the SCSI port.
2. Start up the PowerBook.

### How to play a sound.

#### The hard way:

1. Purchase a sound upgrade kit.
2. Attach sound upgrade hardware.
3. Install sound upgrade's software drivers.
4. Start the sound recorder program.
5. Select Open from the file menu.
6. Select the sound file you want to play.
7. Choose OK.
8. Click on the Play button.

#### The easy way:

1. Double-click on the sound's icon.

### How to add a pointing device.

#### The hard way:

1. Purchase a pointing device (such as a mouse or trackball).
2. Open notebook's back panel.
3. Attach appropriate port adapter to pointing device (if other than 9-pin).
4. Connect pointing device to proper port.
5. Choose appropriate clamp arms.
6. Attach pointing device to clamp arms and adjust tilt angle.
7. Start the computer.
8. Install driver software.
9. Restart.

#### The easy way:

1. The trackball is built in.

# Macintosh. The more you do, the easier it gets.

# Unbending Lightwave Terminology

**diffraction** The bending of light at the edge of an opaque object. Usually, diffraction is a problem because it introduces unwanted distortion, but it has useful applications—for instance, in a grating.

**electro-optics** Not to be confused with optoelectronics, electro-optics is a technology in which electrons are steered and focused as if they were light (e.g., in a CRT or electron microscope).

**generator (or source) and detector (or receiver)** There are several methods of generating and detecting optical output signals in real time and converting them to electrical signals that can be stored or otherwise manipulated. LEDs and lasers are among the devices used as generators. Photodiodes, photoconductors, and photomultipliers are some of the tools used to detect the optical output signal.

**grating** A pattern of microscopically fine lines that can be used to focus or redirect a beam of light. Gratings need less space than lenses and are easier to build into small photonic devices.

**hologram** A 3-D optical image formed by storing 3-D information about an image or a pattern of light. Where two beams of laser light cross, they produce an interference pattern of microscopic light and dark fringes. If this pattern is recorded, the result is a holo-

gram that contains full information about the two beams that formed it.

**laser** A device that generates light in which all the photons are exactly in step and produce a coherent beam. Laser light has one wavelength and is more easily controlled than other kinds of light. A laser is one way to create and read holograms.

**MBE (molecular-beam epitaxy)** A semiconductor fabrication process used to build up devices by adding one molecular layer at a time. MBE allows different materials and types of doping to be sandwiched precisely in layers. It is an expensive and slow process, but it's essential for manufacturing various photonic devices (e.g., S-SEEDs).

**nonlinear material** A substance whose optical properties vary with the intensity of the light. In fact, most optical substances are very weakly nonlinear, but a lot of research has gone into finding materials with stronger nonlinearities.

**OEIC (optoelectronic IC)** A hybrid IC that uses both electronic and photonic technologies. One significant challenge is fabricating chips that combine silicon with optically active materials, such as GaAs (gallium arsenide).

**photorefractive material** A material whose refractive index (i.e., the mea-

sure of the speed of light in the material) varies with the light intensity. Photorefractive materials are widely used in photonic processing and memory.

**reflection** The ability of a surface to rebound light. A smooth surface (e.g., a mirror) may produce a specular reflection. A rough surface (e.g., a sheet of paper) produces a diffuse reflection.

**refraction** The bending of light as it passes from one medium to another. It is the phenomenon that enables a lens to focus light and that makes a stick appear to bend where it dips into water.

**solitons** Stable pulses that can travel indefinitely or pass through each other without losing their shape. In a soliton, the tendency for different wavelengths to travel at different speeds is canceled by the fact that different intensities also have different speeds.

**S-SEED (symmetric self-electro-optic effect device)** A nonlinear device consisting of hundreds of alternating GaAs and GaAlAs (gallium aluminum arsenide) layers sandwiched in a photodiode. Positive feedback in the device allows it to act as an optical switch.

**waveguide** A device that constrains or guides the propagation of electromagnetic waves along a path defined by the physical construction of the waveguide.

being exposed to a pattern of light, allowing the materials to operate as an optical memory (see "Parallel Optical Memories" on page 179). In fact, one of the most potent of all photonic techniques is the use of photorefractive crystals to store data as a hologram.

Nonlinear effects are usually not strong, but they can be amplified with a little help from the electronic world. The S-SEED links optical I/O with an electronic effect to initiate a hard nonlinearity. The S-SEED behaves as an optical transistor, performing a NOR function by allowing one light beam to switch another. S-SEEDs are difficult to make and expensive. But they

provide excellent performance, with switching rates better than 1 GHz. Because they can be fabricated into arrays, S-SEEDs are also well suited to parallel processing.

Discussing his team's latest optical CPU, the O-CLIP (Optical Cellular Logic Image Processor), Desmond Smith, a professor at Heriot-Watt University (Edinburgh, U.K.), says, "Compared to electronic logic, we get gains in cycle times of a few hundred to several thousands. It's one of the best arguments that optical computers have a good future." The O-CLIP uses a 16 × 8 array of S-SEEDs, and holograms are used to configure the interconnections. Using improved lasers, Smith

expects to boost performance by a factor of 1000 in the next few months.

AT&T Bell Laboratories (Holmdell, NJ) also has several photonic processors. Some centers (notably the California Institute of Technology) are making good progress with optical neural networks (see "Is What You See What You Get?" on page 189).

## Fabrication Challenges

Whatever the design, fabrication is a big issue. The materials involved in developing optical techniques and components are often difficult to process, and many optoelectronic devices require time-consuming molecular beam epitaxy. The need to

## S-SEED STRUCTURE

An S-SEED is a p-i-n photodiode built around multiple layers of GaAs and GaAlAs (gallium aluminum arsenide). These layers act as quantum wells, trapping electrons and holes close by. The resulting energies determine the optical transmission of the device.

ensure precise alignments makes optical systems fragile and often bulky.

What the industry would like best is to manufacture photonic devices using the same fabrication techniques used to manufacture silicon electronic devices—hence the tremendous interest in electroluminescent silicon and the ability to combine GaAs with silicon on the same substrate. According to Nan Marie Jokerst, assistant professor of electrical engineering at the Georgia Institute of Technology, “The use of conventional techniques may bring to optoelectronic devices the same economy of scale that has helped lower the cost of conventional silicon circuits.”

### Making the Connections

One of the major obstacles to creating a working marriage between photonics and electronics is the problem of how to integrate two dissimilar technologies. If low-cost silicon-based OEICs do appear, it will be electronics, not photonics, that will benefit first. Optical interconnections will solve the connection-congestion problems in electronic computers long before optical processing becomes a commercial reality (see the text box “Interconnecting the Pieces” on page 192).

Four possible levels of optical interconnection exist inside a computer: rack-to-rack (in larger computers), optical backplanes (linking groups of circuit boards), interchip links on a single board, and intrachip connections within a single IC. Each level presents both benefits and problems, among them cost, physical size, cross talk, energy efficiency, and speed.

Choosing the most appropriate technology is a matter of trade-offs. If you want to send data from New York to London, photons are the obvious choice. If you want to

send data 2 inches across a circuit board, the choice is not so clear-cut.

Electrons are less trouble because they require simpler technology. On the other hand, when space is tight, only photonics can cut through the electronic gridlock. The final decision has to be based on a balance between cost and complexity.

At present, implementing the larger-scale interconnections is easier to justify, and it's this level of implementation that has progressed the most. One of the pioneering examples of optical interconnections on the rack-to-rack scale is the 5-ESS pulse-code-modulation system developed and used by AT&T for switching long-distance and local calls. The 5-ESS contains up to 190 switching modules, each linked to central communication and administration modules by 32-Mbps optical fibers.

Honeywell (South Bloomington, MN) has demonstrated photonic backplane interconnections on the massively parallel Connection Machine produced by Thinking Machines (Cambridge, MA). Honeywell is starting to produce optical backplanes for use in conventional computer architectures (see photo 3). In a recently announced collaboration with Intel, Honeywell will develop gigabit photonic interconnections to join several Touchstone Delta supercomputer modules into a single mesh. The firm anticipates that this development will provide at least a 16-to-1 reduction in connection complexity.

The technologies now available for use in optical backplanes include free-space beams, optical fibers, and polymeric waveguides, which can be integrated into circuit boards and multichip modules (see the text box “Smart Pixels and Free-Space Interconnection” on page 174). Polymeric waveguides using channels of high-refractive-index polymer in a low-index substrate have demonstrated good performance and complex routing in conventional motherboard-daughterboard layouts.

Other researchers are investigating the practicality of different kinds of board configurations that would replace the traditional backplane. They are experimenting with optical signals that broadcast through space to several boards simultaneously. In the long run, it seems likely that board and cabinet layouts will have to adapt to photonics, just as they adapted in the evolution from vacuum tubes to transistors.

If you look at the smaller scale of intrachip links, photons begin to look less attractive than electrons. Whereas a photon's energy is independent of distance traveled, the energy required to move an electron decreases as the distances become smaller. Thus, the cost/performance ratio of electrons at the intrachip level is much

**Photo 2:** Testing a new polymer that has photorefractive properties. These characteristics may lead to the development of applications such as optical memories or optical data storage many times denser than what is available today. (Photo courtesy of the IBM Research Division, Almaden Research Center, San Jose, CA)

better. When you get down to IC dimensions, light begins to look like a more expensive alternative.

Will the computer industry ever implement intrachip photonics? Possibly, but not necessarily. New 3-D layered packaging technologies may use integrated optical generators and detectors to communicate between layers of the IC while retaining electronic links within each plane. Researchers at Hiroshima University in Japan have been developing one such design called the 3D-OCC (3-D optically coupled common memory). In this memory, data written electrically into any one layer propagates optically into all the others. All the layers then contain identical data, a condition that allows multiple processors to simultaneously access the same memory space for parallel computation.

Other intrachip applications may use optical waveguides fabricated in silicon to overcome cross talk or to distribute clock signals. It seems unlikely, however, that photonic transfer can ever play a large role inside 2-D devices.

### Optical Transmission Developments

Outside the computer, there is no uncertainty: Communications via optical fiber is unrivaled, and new networking strategies

# Smart Pixels and Free-Space Interconnection

H. SCOTT HINTON

**Photo A:** A 16- by 32-bit-wide multistate-interconnection-network prototype developed by AT&T Bell Laboratories (Naperville, IL). This switching fabric is based on free-space digital optical interconnections and S-SEED devices. (Photo courtesy of AT&T Bell Laboratories)

**A**s the performance of electronic technology continues to improve, it faces the same challenge confronted by humans: the ability to communicate effectively. The increased complexity of future processors and other ICs will require that they move more information on and off the chip. This need for increased I/O capability will lead to more pin-outs per chip. Not only will there have to be more physical channels, but the timing and synchronization of the information-bearing signals will demand tighter control.

Furthermore, as bit rates increase, so will the size and power requirements of the output drivers. These increased needs will require that more real estate per chip be devoted to I/O, a situation that in turn implies more on-chip dissipated power. Finally, as new computing architectures head away from the standard bus structures and evolve toward parallelism, they will need more

highly synchronized I/O connections per chip.

## Photonics to the Rescue

One potential solution to these problems is to use photonic I/O to interconnect electronic ICs. Photonic I/O offers the hope of lower communications energy per bit, which leads to less on-chip power dissipation per pin-out and less required real estate per pin-out. In addition, this will make skew rates significantly lower than with standard electrical interconnections, thus leading to improved synchronized systems.

One approach to meeting these interconnection needs is through the use of 2D-OEIC (2-D optoelectronic ICs) and free-space optical interconnections (see photo A). A 2D-OEIC is an IC that is composed of FETs (field effect transistors—standard electronic gates) with photonic I/O. The term *free space re-*

sults from the fact that the light passing from one place to another is not confined in a physical waveguide, such as a fiber.

A 2D-OEIC input is typically composed of p-i-n detectors, followed by electronic amplification. The input signals are processed electronically, with the output information transmitted to the connecting 2D-OEICs by either modulators or active sources (e.g., lasers or LEDs).

One kind of optoelectronic IC is called a *smart pixel array*. It's a special type of 2D-OEIC that consists of a 2-D array of electronic circuits with photonic I/O (i.e., smart pixels). To interconnect these smart pixels, you need a technology that can collect the spots of light (a 2-D image), leave the smart pixels, and direct the light to the appropriate input detectors of the next smart pixel.

Classical optics (e.g., lenses, beam splitters, mirrors, and holograms) is an ideal match for this interconnection need. It's one approach that can move images of light from one smart pixel array to another. A second approach is to use microlenses instead of the big and bulky classical lenses to direct the light between devices.

With the advent of frame-to-frame optical-fiber links, photonics has begun the migration into high-performance electronic systems. The next step could be shelf-to-shelf and board-to-board interconnection with both fiber and/or free-space photonic backplanes. Finally, free-space interconnection of multichip modules and 2D-OEICs could provide the connectivity necessary for future parallel systems.

*H. Scott Hinton is head of the photonic switching department at AT&T Bell Laboratories. His research interests include photonic switching and optical computing systems. You can reach him on BIX c/o "editors."*

**Photo 3:** Optical backplane hardware assembled in a VME card cage. Its function is to implement 32 fanouts distributed over four double-sided daughterboards inserted in the four card slots on the left side of the card cage. The prototype device was produced by Charles T. Sullivan, Bruce L. Booth, and Anis Husain. (Photo courtesy of Honeywell Systems and Research Center, Bloomington, MN)

are proliferating—too much so, perhaps, with the winners still to be decided and compatibility keeping a low profile. The important point is that optical solutions are available for every level of networking.

One current example at the LAN scale is the FDDI (Fiber Distributed Data Interface), which provides a dual-ring topology that can reconfigure itself to survive fiber damage or faulty nodes. FDDI operates at 100 Mbps with a token-passing protocol. Some companies (e.g., 3Com of Santa Clara, CA) offer FDDI adapters as personal computer cards.

Another recent and important development is SONET (Synchronous Optical Network), a networking protocol that operates in the optoelectronic world and offers data transfer rates of up to 2.4 Gbps for metropolitan-area networks and WANs. The benefits of SONET include rapid recovery from failure and the ability to combine and separate signals at many different bit rates (see the text box "SONET: A Standard for Today" on page 186).

The first public SONET circuit was installed this year in a 5.5-mile loop around downtown Cincinnati, Ohio. Eventually, SONET may form the basis of B-ISDN (broadband ISDN) technology, which would combine voice, data, and video into one public optical network.

The thrust behind fiber research comes not from the computing environment but from the telephone world. But computer users will benefit a great deal from this work. The past year has seen significant

advances in three key technologies: optical amplifiers, soliton transmission, and WDM (wavelength division multiplexing). Taken together, they could drive data transmission speeds toward the terabit range.

Optical amplifiers use erbium-doped glass and a pump laser to boost pulses as they travel through the fiber, without any need to convert and amplify them electronically. Researchers at BT Laboratories (Ipswich, U.K.) recently demonstrated an optically amplified network capable of distributing 39.8 Gbps of data simultaneously to 43.8 million terminals. And not long ago, AT&T demonstrated the use of optical-fiber amplifiers (i.e., spliced-in segments of erbium-doped optical fiber) to transmit lightwave signals error- and attenuation-free at a rate of 5 Gbps over distances of up to 5580 miles.

Solitons (i.e., pulses that maintain their shape as they travel) make optical amplifiers more efficient. They used to be a lab curiosity but are now on the verge of becoming a practical technology. Recently, AT&T Bell Laboratories' researchers have reached error-free soliton data transmission speeds of 10 Gbps over 6820 miles.

Since solitons of different wavelengths don't interact, they make possible the third emerging technology, WDM, in which separate wavelengths are used to multiplex many channels through a conventional fiber.

Without optical amplifiers, WDM would need separate boosters and lasers for each wavelength, but optical amplifiers work

# Holographic Applications

*Advances in holographic technology have given birth to a wide range of applications, and there are some waiting in the wings. The following is a sampling of current and near-future holographic applications.*

- Computer memories
- DBMS
- Storage
- Image preprocessing and processing
- Analysis and pattern recognition
- High-resolution and 3-D displays (Toyota already has holographic heads-up displays in some of its cars.)
- Image and data encryption and compression
- Submicrometer lithography
- Computer-generated images with holographic dimensionality for application in the areas of CAD, medical imaging, and scientific visualization
- Fiber-optic wavelength division multiplexing and demultiplexing
- Precursors of systems that compute with light
- Spatial imaging (e.g., holovideo and photographic holography)
- Laser printers and scanners
- Lookup tables
- Drives
- Interferometry (e.g., nondestructive stress testing and analysis of building materials and machine parts)
- Medicine
- Infrared and x-ray imaging
- Teaching image libraries
- Optical contouring
- Optical clones of mirrors, lenses, and prisms
- Kinegrams (e.g., security images on credit cards and software)
- Packaging

over a range of wavelengths, completing the three-way synergy of erbium, solitons, and WDM.

The results of all this research are two to five years in the future, but work is well under way. Mohammed N. Islam, a research scientist at AT&T Bell Laboratories, is developing a soliton LAN that uses optical gates to read packet headers and route data without any electronic intervention (see "Light Switches" on page 183). IBM's Rainbow Project intends to use WDM to create a 1000-node optical network capable of data transfer rates of 1 Gbps per node.

## Optical Storage

It's exciting to think about the coming of gigabit data channels and TFLOPS processors, but you won't get to enjoy their use without having the storage technology to match. Whether you plan to tackle the "grand challenge" problems of scientific modeling, make meaningful multimedia, or just sift through a mountain of on-line information, you'll soon need to access terabits of raw material.

For the foreseeable future, you can ex-

pect to continue with the rich mix of incompatible and semicompatible CD formats, together with WORM, magneto-optical, and phase-change drives. Static, nonrotating alternatives, such as Drexler Technology's Lasercard, are now being tested in the U.K. and the U.S. for archiving large files (e.g., medical records).

In addition, the use of short-wavelength lasers could raise storage densities by a factor of four. With this technology, you could store about 2.5 GB on a standard 4¼-inch CD, but improvements will have to be made in head design to significantly improve access times.

Optical drives and cards are not the only way to go, though. To see the essence of optical storage, you must step into the third dimension. Imagine, for example, a plastic block, the size of a sugar cube, packed solidly with a terabit of information; think of a crystal containing in its lattice the holographic image of a whole library.

Peter Rentzepis, a professor of chemistry at the University of California-Irvine, has been working on a photochromic material, spirobenzospiran, that changes from

clear to blue when simultaneously exposed to two different wavelengths of laser light. By scanning the beams, Rentzepis can record bits as microscopic blue dots in the material. To read them back, he uses two ultraviolet beams. Where the beams cross at a blue dot, the dot fluoresces, allowing a photodetector to read any location. Rentzepis anticipates that his system could achieve potential read/write speeds of around 1 Gbps.

At IBM and in Japanese and German universities, other work is taking laser recording technology into the realm of individual atoms. For now, all these techniques are still in the research environment, but they give us a glimpse of the future of data storage.

## Holo-Computing

Consider two apparently unrelated facts. First, the trend in all areas of high-end computing is toward greater parallelism. Second, because of its quantum nature, a photon has no path or position until it is detected. How do these facts connect? One way is in the domain of holography. Using the properties of holography and creating holograms with computers provide lots of computer-oriented applications (see the text box "Holographic Applications" at left).

In a hologram, two beams of laser light set up an interference pattern that is recorded in a photosensitive material. It's then possible to shine one beam through the hologram in such a way that it will recreate the image information and direction that was originally contained in the other beam.

Because light is a quantum phenomenon, no part of a holographic image is localized anywhere—all the parts of the hologram affect every photon in the beam. This technique is a good example of *unparalleled parallelism*.

The true beauty of holography is its versatility. Applications of the technology are many and varied. At Caltech, Demetri Psaltis has been building optical neural networks from holograms recorded in nonlinear crystals (see "Parallel Optical Memories" on page 179). At Heriot-Watt University, Desmond Smith uses holograms to direct light beams in and out of the logic arrays in his optical cellular processors. And at the Georgia Institute of Technology's Research Institute, Carl Verber, a professor of electrical engineering, is building POHMs (page-oriented holographic memories) that can store multiple patterns of data or programs and apply them in parallel to a CMOS array of processors.

Holographic techniques will be central to photonic computing, but a great deal

## PHOTONICS: REVOLUTION OR EVOLUTION?

**Photo 4:** Carl Verber of the Georgia Institute of Technology is building POHMs that can store multiple patterns of data or programs and apply them in parallel to a CMOS array of processors. Here you see Mark Jones, a student assistant, adjusting laser beams in a holographic switching experiment. (Photo courtesy of Georgia Institute of Technology)

more research is required to fulfill this technology's promise. Says Verber, "The problem that's foremost in my mind is the materials problem."

In the lithium niobate crystals that Verber is using, reading the hologram erases the data. New photorefractive polymers may fix that problem, but these materials have other limitations. Scientists are confident that you will eventually be able to write and modify stable holograms as easily as any other form of memory. Then you'll see the arrival of true photonic computing (see photo 4).

### Using Light

Making predictions about new technology is just asking to be proved wrong, but I can make some educated guesses about a few trends. Photonics is perhaps the only technology I know of that is capable of breaking through some of the barriers that plague electronics. In addition, this technology comes with a proven track record in the communications industry. Mohammed Islam sums it up by saying, "You're changing the application rather than the technology."

The range of possibilities that optical technologies provide is tremendous. Photonics has the power to provide us with virtual machines composed of a network of supercomputers scattered worldwide. Photonics also has the capability of squeezing an entire world of information into a handful of hologram.

There will, however, be some trade-offs. One of the many questions that will have to

be faced in the future is whether software can be developed that can cope with the coming of the photonic environment. Other challenges will have to be solved, too.

Optical techniques and devices are already being integrated into our computing environment. Because of the possible commercial and technical applications they bring with them, they have the potential to greatly improve the way people process and store data. The growth of parallel and distributed computing will fuel the development of these optical technologies and be driven forward by them.

People may never compute with all-optical computers; pure optical computing may not be the way to go. Electronics offer a lot of advantages for I/O and—at least in the short term—for processing. The important need now is for the commercialization of technologies that will marry electronics and photonics so that each can fulfill its potential and allow us to use the best of both those worlds.

The photonic revolution won't be without its difficulties or its failures. In a few years' time, however, people may be wondering how they ever managed before the lights came on. ■

**In The Beginning, There Was One 3.5" Drive.**

**SONY**

Some of Sony's innovations from 1981 to 1992: 3.5" floppy drive, CD-ROM drive, multi-frequency monitor, 12" write-once optical drive, 5.25"

**Sony Invented The 3.5" Floppy Disk  
Drive. Co-Developed CD-ROM.  
Brought Trinitron® Tube Technology  
To Computer Monitors. Developed  
The Multi-Frequency Monitor. Origin-  
ated Rewritable Optical. Invented  
DDS. And Pioneered Multimedia.**

And you thought all we did was make great TVs.

In fact, Sony has been one of the leading producers of computer peripherals for more than 10 years, inventing or introducing many of the storage and display technologies being used today. Sony innovations are spread across a wide range of feature-rich products, including DDS, optical disk, multimedia, and high-performance monitors.

1968: The Trinitron one-gun, three-beam picture tube.

1981: The first 3.5" floppy disk drive.

1982: The first audio compact disc.

1983: Co-developed CD-ROM technology.

1984: The first multi-frequency monitor.

1986: The first 3Gb 12" write-once optical disk drive.

1987: The first DAT drive.

1988: The first 5.25" rewritable optical drive.

1989: The first DDS tape drive.

1990: The first writable CD.

1991: The video/computer integration protocol (VISCA™).

1991: The first 3.5" rewritable optical drive.

1992: The first portable CD-ROM XA player.

An early Trinitron CRT

rewritable optical drive, DDS tape drive, writable CD drive, VISCA multimedia products, 3.5" rewritable optical drive, CD-ROM XA player.

Do you remember buying your first album on cassette tape? How convenient it was compared to vinyl records? Or the first time you heard a familiar song on CD? Remember the clarity and brilliance of the music? In both cases you were experiencing the results of Sony R&D.

Applying the results of R&D efforts from various disciplines has helped Sony become one of the world's leading suppliers of peripherals. Our magnetic tape research led to the invention of the 3.5" floppy disk drive, which helped make portable and laptop computers practical. Our audio tape research led to the development of DDS, a major advance in both high-capacity storage and miniaturization. Inventing the audio compact disc led directly to the development of CD-ROM, WORM and rewritable optical storage technology, helping propel the development of multimedia.

Sony product innovations spring from R&D in basic materials and new technologies. Our semiconductor research has led to new SRAM designs. Basic optical research led to the laser diodes that made CD and CD-ROM possible. And research in materials composition for magnetic and optical media led to improvements in the drives themselves.

But innovation itself isn't enough. Extraordinary effort also goes into making Sony peripherals extremely reliable.

**Inventing The First 3.5" Floppy Disk Drive Wasn't An Accident. It Was The Result Of A Monumental Effort That Took Advantage Of More Than 40 Years Of Pioneering R&D In Fields As Diverse As Audio Tape And Semiconductors.**

**Sony Trinitron Monitors Captivated Users From The Moment They Were Introduced In 1984. Vertically Flat Screens Produce Sharp Images From Corner To Corner. Black Screens Display Bright, Rich Color. And Sony Multiscan® Monitor Technology Means Compatibility With All The Current Major Graphics Standards.**

It's not often you can choose computer products that use Emmy Award winning technology.\* Sony monitors do. Trinitron technology, with its innovative and advanced one-gun, three-beam design.

Sony Trinitron monitors also have a unique Aperture Grille with long, unbroken vertical slits between the electron gun and the screen to help focus the beams. The Grille lets more electrons through, delivering maximum color to the screen for a bright, rich image.

Trinitron monitors have another advantage: a vertically flat screen that produces straight lines and minimal distortion corner to corner. It also helps alleviate eye fatigue by dramatically reducing ambient light reflection.

Sony Trinitron monitors come in the most popular sizes: 14," 17," and 20," for applications ranging from basic spreadsheet and text, to CAD/CAM, desktop publishing, and multimedia presentations.

\*1973 Emmy Award for picture quality.

TRINITRON  
Super fine pitch

**Sony Is One Of The World's Leading Suppliers Of  
Storage Products. That's Not Just An Advertising  
Claim: In Both Performance And Marketshare, Sony  
Now Holds Commanding Positions In Rewritable  
Optical, WORM, CD-ROM, DDS, And Floppy Disk Drives.**

It's no surprise that Sony has been a leading supplier of mass storage components to the world's major computer manufacturers for the past 10 years. As demands for storage capacity increase, they look for the products that offer the highest capacity, best data integrity, most flexibility, and greatest reliability. The same reasons you should look to Sony for your storage needs.

The range of Sony storage devices is impressive: floppy disk drives, rewritable and write-once optical, CD-ROM, DDS. No matter if you need megabytes, gigabytes, or terabytes of storage, the chances are good there's a Sony device to satisfy that need.

Another example of Sony's leading position in the computer industry is the quality of our cooperative relationships. Besides being an active member on many of the standards committees, Sony has co-developed products and technologies with many major hardware and software companies.

**Decades Of Experience Developing  
The Industry's Leading Storage, Dis-  
play, And Video Products All Come  
Together On The Desktop And Make  
Sony The Natural Choice For Multi-  
media Applications.**

Lights! Action! Computer!

The world is quickly moving toward combining image, motion and sound on the desktop. Sony is already there. With a complete suite of display, storage, video, and playback products, plus VISCA, the platform-independent video/computer protocol developed by Sony and supported by other major computer and software companies.

Start with Trinitron computer and video monitors. They're sharp, bright, colorful, and very reliable.

Add the Vdeck™ video drive, the first Hi8® VCR designed specifically for computer use. Add a Vbox™ video/computer interface for computer control of consumer and professional video equipment. An 8mm camcorder to create your own video images. Laserdisc players for access to a world of image and sound. And external speakers to enhance audio quality.

You can also add CD-ROM players for an even wider selection of programs. And rewritable optical and DDS drives for storing digital audio and digital video.

The story of Sony computer products that began with that 3.5" floppy disk drive doesn't end there. For more information, call 1-800-352-SONY (352-7669).

# PARALLEL OPTICAL MEMORIES

All components necessary for building parallel-access optical memories are available

DEMETRI PSALTIS

Everyone has become familiar with optical memories and storage through their commercial applications for audio and video recordings. The same basic technology has also been applied to computer memories, with conventional systems available from many different manufacturers.

The primary advantage of optical memories is that optical disks are easily removable, which makes them attractive for applications ranging from workstations to electronic photography. In addition, it costs relatively little to produce a large number of permanent copies of an optical disk. Other properties of optical disks are roughly comparable to those of magnetic recording media.

For example, the current storage density for optical and magnetic media is approximately 1 bit per square micron. The capabilities of optical disks, however, can be dramatically augmented through parallel access. The idea is simple: The disk is illuminated with a broad optical beam instead of a tightly focused spot.

As a result, many stored bits are addressed in parallel. The bits are transferred to the computer by imaging the illuminated portion of the disk onto a 2-D detector array. The electronically detected signal can then be mapped to the RAM space of a computer through an optical RAM. Thus, it's possible to optically load information at each memory cell (see figure 1).

## Doing It in Parallel

The degree of parallelism that you can achieve with this method can exceed 100,000 channels. The speed at which the data can be transferred depends on the available optical power. For example, with

**Figure 1:** A conventional optical memory disk is illuminated with an unfocused beam to address thousands of stored bits in parallel. The illuminated portion of the memory is imaged onto a detector array, and the detected signal becomes part of the computer's RAM space.

100 milliwatts of optical power and a parallel readout of 100,000 bits, the readout speed is less than 1 microsecond, resulting in an effective data transfer rate of  $10^{11}$  bps between the optical memory and RAM. The access time to any block of data is the same as that of a serial readout disk (approximately 50 milliseconds).

At Caltech, my colleagues and I recently demonstrated such a system using a prototype disk recorder made by Sony's Corporate Research Laboratories (Tokyo, Japan). This system is similar to any commercial optical disk system except for two important features.

First, the recording format is such that information recorded on different tracks can be spatially aligned. Second, the error-correcting coding is bypassed. These two features make it possible to draw ar-

bitrary 2-D images on the disk. Data is recorded on the disk as 2-D blocks, with each block readout in parallel.

The recording of the 2-D patterns can be either a direct recording or a computer-generated hologram of the bit pattern that you intend to store. The advantage of the hologram is that the readout system doesn't require any lenses, simplifying the design and speeding up the access time. More important, holographic recording makes it possible to minimize the accuracy with which the disk has to be aligned with the detector array that senses the output.

Holograms are stored in a thick medium by recording the interference of an image and a plane wave reference beam. The image is retrieved by reilluminating the hologram with a reference beam similar to the one used to record the hologram. In a thick medium, the image is reconstructed only if the angle at which the reference beam illuminates the hologram is the same as when the hologram was recorded. This *angular selectivity* allows the storage of multiple images in the same volume and the retrieval of any of the images by illuminating the hologram at the proper angle.

All the components necessary for the construction of parallel-access optical memories are well developed and available. Therefore, if there is a market for the capability they offer, it's possible to manufacture such systems now.

Image processing, databases, and neural networks are some of the potential applications for parallel optical memories. In such applications, you need the capability to rapidly (and sequentially) search large data sets. Using an efficient search process, it's possible to take advantage of a parallel optical memory's fast data transfer rate without its being constrained by the slow random-access time.

## Associative Memories

In applications such as neural networks, it's often convenient to use an associative memory. You can use a parallel-access optical disk as an associative memory by recording a pattern that you wish to search for on an SLM (spatial light modulator). The SLM imprints the search pattern on the light beam that illuminates the disk.

The intensity of the light reflected from each location on the disk is the product of the intensity of the incident light and the disk reflectance at that point. The light that is reflected from the illuminated area is collected on a single light detector, and the detected signal is normalized to account for variations in the average intensity of different patterns. This normalized signal is at its maximum when the illuminating pattern from the SLM matches the illuminated pattern from the disk.

The system searches the associative memory by rotating the disk, sequentially

**O**ptical disks have advantages over magnetic storage for certain applications.

illuminating different patterns on its surface and detecting the total reflected signal. With a simple maximum-detection operation, you can locate (and thus identify) the pattern that gives the best match. The output of the system is a label for the identity of this pattern.

Several such systems have been demonstrated recently. In one, a handwritten-digit-recognition experiment, examples of the numbers 1 through 9 were recorded on the disk, and new patterns were classified by locating the best match between the input

## BYTE ACTION SUMMARY

Optical memories, for use in easily removable optical disks, are attractive for applications ranging from workstations to electronic photography.

Circle 164 on Inquiry Card.

and the stored examples (up to 10,000 on one disk). Because the search completes in one disk revolution, the optical memory provides fast access to a large database.

## Optical vs. Semiconductor Memories

Due to their removability and parallel access, optical disks have advantages over magnetic storage for certain applications in the near term. However, you must also consider semiconductor memories when you contemplate the long-term prospects.

Japanese manufacturers have already demonstrated experimental RAM chips that can store approximately 64 Mb, or one-tenth of the data that one disk can store. It's clear that unless the storage density of optical disks is substantially improved, semiconductor memories will become preferable except for applications where nonvolatile storage is essential. The semiconductor lasers in development with shorter (i.e., blue) wavelengths will increase storage densities, because the minimum area required for storing a pixel is equal to a wavelength squared.

## 3-D Optical Disks

An optical 3-D disk is similar to a conventional optical disk except that the storage medium is thick. Because of this difference, it is possible to record multiple images at each location and access any one of the images. The system mechanically rotates the disk and moves the parallel readout head so that the illuminating beam reaches the appropriate position. The system then sets the angle of illumination to select one of the images stored at that location (see figure 2).

My colleagues and I recently stored 3 minutes of a movie on a 3-D disk using lithium niobate as the recording medium, filling only a tiny portion of the available memory space. With a 5-centimeter disk radius, each hologram occupying 10 square millimeters, and 1000 frames superimposed at each location, the storage capacity of the disk approached  $10^{12}$  pixels—enough for more than 10 hours of video. Using such an optical 3-D disk, we could play back a 10-hour movie in approximately 10 seconds. Even though no one would want to watch movies at this speed, the capabilities of optical technology may prove critical for applications such as image recognition.

## 3-D Optical Memories and the Future

Two decades ago, researchers extensively explored 3-D holographic memories, but there wasn't enough progress or significant practical applications to make their development worthwhile. Now, because

**Figure 2:** In a 3-D disk, data is stored as holograms of 2-D bit patterns. Multiple holograms are stored at each location on the disk. The area of each location is approximately 10 square mm. You can retrieve each hologram by illuminating it at the appropriate angle specified by the acoustooptic deflector. Different locations on the disk are accessed by mechanically rotating the disk and translating the readout head. You can store up to  $10^{12}$  bits on a disk 1 cm thick with a 5-cm radius.

of advances in volume holography, there is a strong resurgence of interest in holographic 3-D memories. Contributing to this comeback are advances in optoelectronic devices, the development of new holographic recording materials, and the increased need for memories with large storage capacity.

In a recent demonstration, more than 500 images—each consisting of roughly a million pixels ( $10^6$  bits per cubic centimeter)—were stored in a crystal with a volume less than a cubic centimeter. The large storage density, combined with the high data transfer rate and fast random access (approximately 10  $\mu$ s when using an acoustooptic deflector to set the angle of the reference beam), make holographic 3-D memories exciting candidates for optical memories.

## Remembering Optically

Optical memories have already proved their value in such commercial applications as audio and video recordings, but the technology's ultimate role in the computing environment has yet to be determined. Optical disks' removability offers a flexibility useful in a wide range of applications. And parallel-access optical

memory's fast data transfer rates make it a potential candidate for use with image processing, neural networks, and databases. The speed and high storage density of 3-D holographic memories is a force that bears watching. In fact, there are strong indications that 3-D holographic memories could reach practical applications in three to five years.

Where research will take optical memories remains to be seen. For now, the watchword is wait and see. ■

# LIGHT SWITCHES

Optical switches let you take full advantage of the amazing communications bandwidth provided by fiber optics

MOHAMMED N. ISLAM

**W**orking with computer technology, you are always running into limitations that can adversely affect your applications. Not so long ago, if you didn't optimize the memory usage of your applications (even at the expense of the readability of the program code), you could easily overwhelm the capacity of your system. Now, with an abundance of memory and linear address spaces, memory requirements are less of a problem.

In communications and computer networks, however, there are still many applications that either must be optimized or can't be attempted because of bandwidth limitations. One major step toward the goal of limitless bandwidth has been the advent of optical fibers. For example, in the low-loss telecommunications wavelength range (between 1.3 and 1.6 microns) in fibers, there is approximately 40 THz of bandwidth. This bandwidth-rich environment invites innovative use of the resource. Fibers have become the transmission medium of choice for long-distance as well as short-haul telecommunications (see the text box "SONET: A Standard for Today" on page 186).

Although optical communications technology is replacing the copper wires and much of the intervening electronics in telecommunications networks, you can't get anything near 40 THz of bandwidth for your applications because electronic switches still perform the routing and logic decisions in the network. Electronic switching may be blindingly fast in human terms, but it's tortoise-like when compared to pure optical technologies.

To achieve transmission speeds approaching a terabit per second, you need

COFFELT

**IEEE-488**

You can control any IEEE-488 (HP-IB, GP-IB, 488.2) device with our cards, cables and software for the PC/AT/386, EISA, Micro Channel and Macintosh II. Micro Channel is a trademark of IBM

all-optical *light-pipe* networks, where data remains in optical format throughout the network and converts to electronics only at the source and the destinations. By making bandwidth an inexpensive and virtually limitless commodity, you can tailor your system to optimize its functionality without regard to bandwidth.

### The Case for Optical Switching

All-optical switching means that one light beam controls, or *modulates*, the passage of another light beam by interacting with it in a nonlinear medium. Light-light ma-

nipulations can be fast if nonresonant virtual optical interactions are used: The interaction is through deformation of electron clouds or wave functions rather than through the generation of electron-hole pairs, which must then recombine before the switch is reused.

There are several compelling reasons for turning toward all-optical switching for serial terabit-rate processing. First, you can achieve switching speeds exceeding 50 Gbps, which is beyond the capability of electronic systems. Second, by processing optically, you can remove the bottlenecks that arise from converting signals between optics and electronics, which is particularly important if the information enters and exits in optical format.

Third, electronic gates or devices that absorb light tend to generate heat, which is a major problem at high bit rates. On the other hand, if nonresonant interactions are exploited, then, in principle, heat dissipation is not a limiting factor.

Finally, and perhaps most important, all-optical gates let you distribute intelligence throughout the network. For example, because the data and routing information can be in the same optical format, the destination can be encoded with the data. This lets you assemble *self-routing packets*, which can steer themselves through the network to their destinations.

At AT&T Bell Laboratories, my col-

## LIGHT SWITCHES

leagues and I have invented all-optical logic gates based on solitons that can operate at speeds of 200 Gbps. Solitons are light pulses that travel distortion-free for long distances in optical fibers. Also, we have demonstrated the components and designed the architecture for an ultrafast optical-fiber-ring LAN that is designed to have a peak data transfer rate of 100 Gbps, making it more than 1000 times faster than today's electronic systems. Although it's in the early stages of research, the optical LAN demonstrates the viability of this technology.

### Solitons and Switches

Solitons are self-trapped pulses that arise from the balance between group-velocity dispersion and nonlinearity in an optical fiber. Group-velocity dispersion means that different frequencies of light travel at different speeds, and nonlinearity means that the index of refraction, or optical density, of the glass fiber changes with the intensity of light. Because of these two counteracting effects, the soliton is a stable pulse with a restoring force that makes it behave in many ways like a single particle or fundamental data unit. This is a crucial property for switching applications.

Fibers are an attractive medium in which to make all-optical gates because they have an almost instantaneous response and low-loss and excellent guiding properties—they minimize the natural property of light to diffract and lose intensity over distance. By using long lengths of relatively inexpensive fiber, you can achieve low switching energies for the logic operations.

Soliton-dragging logic gates satisfy all the requirements for devices in a digital optical processor: cascability (i.e., the ability of one gate to drive a similar gate), fan-out, and the ability to create gates that perform the complete range of Boolean operations. They also have switching energies approaching a picojoule, which is not out of line with high-speed electronic gates. In soliton dragging, the speed, or *propagation time*, of the control pulse depends on whether it propagates alone or if it's accompanied by one or both of the signals. Physically, when the two pulses are coincident, they "chirp" each other, or change each other's center frequency, which leads to a change in velocity because of the group-velocity dispersion in the fiber.

A schematic of a NOR gate is shown in figure 1. The gate is made up of two lengths of fiber (typically the first measures about 75 meters and the second about 350 meters) coupled through a beam splitter and ending in a polarizer. The control, or power-supply pulses, propagate

## BYTE ACTION SUMMARY

Much of the bandwidth of optical fiber is not used because electronic switches can't keep up with the speed of optical transmission. Soliton switching lets you eliminate electronic switching in a network. You can thus create *light pipes* that fully exploit optical technology.

## LIGHT SWITCHES

along one axis, and the signal pulses are launched into the orthogonal axis.

The system assumes that you are using a clocked digital system, and the logic is based on time-shift keying (i.e., the control pulse arriving within the clock window corresponds to a Boolean one, and any other result is a Boolean zero). For example, in a typical time-shift keyed output from a soliton-dragging NOR gate, the gate is regenerative (i.e., it shows optical-level restoration); at each operation, the signal pulses are replaced by a fresh control and the signals are removed from the system by an output polarizer.

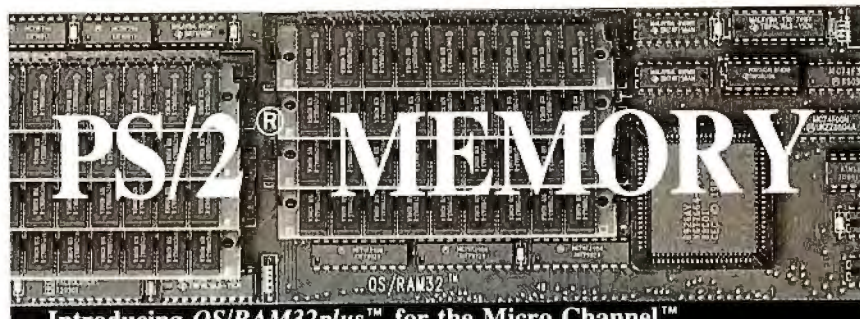

At the boundary of the all-optical system, we used another type of logic gate, a *soliton-trapping gate*, which doesn't exhibit gain or cascading but is sensitive to the timing of the input pulses and provides an energy contrast at the output. Consequently, the trapping gates convert the time-shift-keyed signal to an amplitude-shift-keyed output, which can be detected and converted to electronic format.

### Soliton-Ring Network

To explore the opportunities and challenges of using all-optical devices in system applications, my colleagues have designed the architecture for a soliton-ring network that spans several tens or hundreds of kilometers and that interconnects several hundred users. This is a self-routing packet network in which the packet size equals a typical computer word (i.e., 32 bits), so the network can be used to interconnect computers.

A simple analogy for the nodes, or information-switching points on the network, is a post office with a conveyor belt to move packages. The speed of the conveyor belt and the number of packages that are moved are limited by the speed at which a postal worker can read the addresses and sort the packages. If the worker is a speed reader, the package flow rate can be greatly enhanced. In this network design, four logic gates in the code-matching logic module are used to read the address and decide whether the packet has arrived at the proper destination. Thus, the ultrafast soliton gates serve as a speed-reading postal worker.

The design concentrates on the network access nodes, where data enters or exits the network. The code-matching logic module operates at the bit rate and uses the ultrafast logic gates to select and decode the packet address. The exchange/bypass network operates at the packet rate (i.e., 1.25 GHz) and routes incoming or new packets, and the network can be implemented using electro-optic devices. When the packet reaches its destination, it's bit-rate down-

# PS/2<sup>®</sup> MEMORY

**Introducing OS/RAM32plus™ for the Micro Channel™**

- ✓ Provides from 2 to 128 Mbytes of fast memory.
- ✓ Works in 16 or 32 bit mode to meet your needs.
- ✓ Provides extended and expanded memory.
- ✓ Fast software and hardware for LIM 4.0 included.
- ✓ Automatic configuration for DOS, OS/2 and UNIX.
- ✓ Easy to install. Risk free guarantee. Two year warranty.
- ✓ Add a disk cache and RAM disk using OS/RAM32plus to get maximum performance from your computer.

**Figure 1:** Soliton-dragging NOR gates can operate at speeds of 200 Gbps, and the logical operation is based on time shifts of a control, or power supply pulse. A NOR gate consists of two fibers connected through a PBS (polarizing beam splitter) and ending in a polarizer (a). In the output of a NOR gate (b), the dotted lines correspond to the clock window, and the signal pulses drag the control out of this window in accordance with Boolean logic.

# SONET: A Standard for Today

MARK A. CLARKSON

**T**he world is shrinking, and it's bound tighter and tighter in loops and nets of copper wire and glass fiber. Everything is connected to everything else—telephones to TR-LANs to cable TV, Tokyo to Wichita Falls.

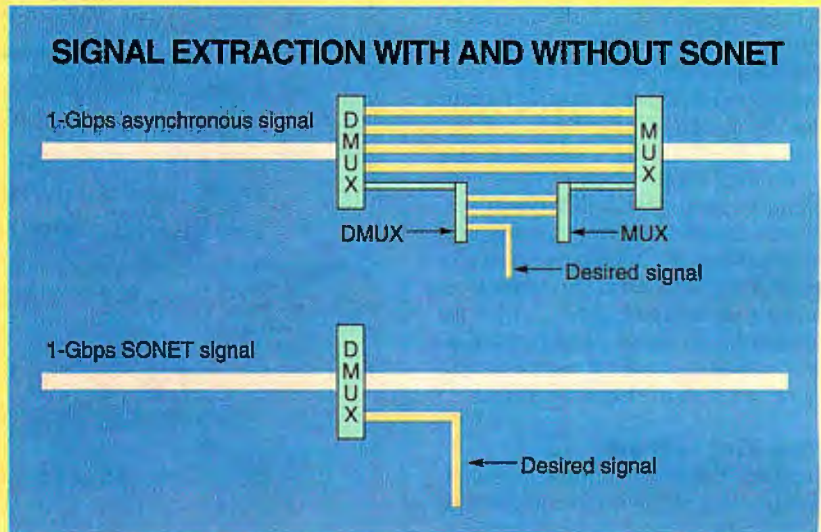

As the information in this global network increases in volume and velocity, the links are increasingly being fashioned of optical fiber. New data services, such as broadband ISDN, require high bit rates, and optical fiber is technically superior to cable at the broadband speeds (about 150 MBps or higher).

SONET (Synchronous Optical Network) is a standard that establishes an optical communications hierarchy, ensuring that optical-fiber networks in every country "speak the same language." First proposed by Bellcore in 1984, the standard is currently under development by ANSI as SONET and by Europe's CCITT as SDH (Synchronous Digital Hierarchy). Thus, SONET and SDH are effectively the same standard.

By defining standardized interfaces, SONET lets you put one company's transmission and switching equipment on one end of the fiber and another company's equipment on the other. Each company can use whatever technologies suit it. Dozens of companies (e.g., Bellcore, AT&T, IBM, and Nippon Telephone & Telegraph) are actively involved in SONET R&D.

SONET is service-independent, with no regard for the contents of the information it carries. Digital electrical signals can be transformed into digital optical signals and put directly on SONET without changing their information content. In existing systems, the contents of an electrical signal have to be modified for broadcast over the fiber network.

SONET provides for high-capacity data links a few miles long. It carries existing services (e.g., voice, video, and ISDN) and has sufficient capacity to handle future demands.

**Figure A:** To extract a particular channel from an asynchronously multiplexed signal, the entire signal must be demultiplexed (DMUX) and then remultiplexed (MUX). A single channel can be extracted from a SONET signal with one demultiplexing.

## Virtual Containers

The SONET signal consists of two parts: payload and overhead. Payload is the data being transported over the network (e.g., voice, video, or text). The overhead portion of the signal carries information needed to maintain the integrity of the link, including data parity, frame and channel information, network maintenance information, and user-defined functions.

The payload portion of a SONET signal is carried in VCs (virtual containers). Like real containers, VCs come in an assortment of capacities. For example, a VC-12 carries 2 Mbps. VCs of different sizes are combined to form SONET signals.

VCs can easily be individually added, subtracted, and rearranged as they travel the network. Network providers will be able to dynamically shift bandwidth around the network, providing bandwidth on demand to end users. Also, high-bandwidth links to a customer will be easier to provide and manage.

In addition, VCs provide an advantage over asynchronously multiplexed data. Any change in the allocation of bandwidth within an asynchronously multiplexed signal requires that the entire payload be manipulated. In contrast to that, an individual channel in the form of a VC can easily be stripped from a SONET signal. The remainder of the payload passes by ignored. (See figure A.)

Such convenient signal switching also provides a basis for self-healing networks. In the event of a disruption (e.g., a cut cable or faulty equipment), traffic can quickly be rerouted over alternative links.

But is SONET fast? Its speeds range from 51.84 Mbps (one copy of the *Encyclopaedia Britannica* every 15 seconds) to 2.488 Gbps (three encyclopedias per second). The basic SONET signal is called STS-1.

STS-1 signals can be concatenated, their bytes interleaved, to create higher-speed signals. For example, three 51.84-Mbps STS-1s can be concatenated to

produce one 155.52-Mbps STS-3C. This rate is adequate to transport sophisticated services, such as broadband ISDN.

### So What About FDDI?

In contrast to SONET, FDDI (Fiber Distributed Data Interface) is designed to implement LANs over relatively short pieces of fiber. FDDI has an internal clock—it can't be synchronized with the telecommunications networks. SONET could be used to connect FDDI rings, but not vice versa.

In theory, FDDI runs at 100 Mbps. In fact, however, the speed of an FDDI ring drops rapidly as terminals are added, and it's never faster than the slowest node.

Users are seeking broadband services to handle the next generation of computer applications. These applications might involve transporting huge databases around or supplying continuous streams of high-quality audio and video to the desktop.

### Europe and Beyond

Optical networks are gaining ground fast in Europe, where tougher noise-emission standards make them preferable to electronic wire-based networks. As Europe's SDH evolves, SONET changes to conform with it. Both standards present a moving target to developers. Most, if not all, implementations are incomplete in one way or another. SONET and SDH have yet to be seen in their final form. Meanwhile, across the Pacific, Japan is moving, perhaps faster than anyone else, to adopt and implement SONET.

Some developers doubt that SONET, which was designed to carry gigabit signals over long distances, will be a factor in linking personal computers to each other and to their peripherals. Others aren't so sure. They think you can always use just a little more speed.

*Mark A. Clarkson is a freelance science writer living in Wichita, Kansas. You can reach him on BIX c/o "editors."*

converted, or demultiplexed, to speeds accessible by electronic shift registers. An optical feedback loop is used to synchronize the local clock to the ring data, and optical amplifiers are used to compensate for the insertion and splitter losses.

### Future Applications

In general, ultrafast gates enhance the capabilities of networks whenever it is the bandwidth of the switch that limits system performance. Although the latency (i.e., delay between I/O) of the fiber gates described here is long, the devices can be used in pipelined feed-forward applications. Telecommunications applications tend to be relatively insensitive to latency, and examples of such applications that require serial terabit-rate switches include high-performance front/back ends of long-haul systems, LANs, and metropolitan-area networks.

You can also use ultrafast gates for high-speed encoding and decoding of signals to guarantee secure transmission. In addition, if the latency of all-optical gates can be reduced by using more nonlinear materials, you could find applications in distributed computing systems. Computer networks may benefit by using high-speed gates for clock synchronization and communication between memory and processors, workstations and processors, or multiple-processor machines.

All-optical devices and systems are still in the infancy of their development, and several technological areas require major breakthroughs before the field can thrive. The crucial device issue remains the lowering of the switching energy and the exploration of novel nonlinear materials to make compact devices with reduced latency and increased thermal stability. Perhaps the main missing component for all-optical systems is a compact laser source with average power approaching a watt that can act as the power supply.

Although commonly overlooked as an "engineering detail," accurate time-synchronization circuits are needed for bit periods approaching a picosecond. Finally, in a broader context, researchers and designers must craft architectures that use the switch bandwidth to enhance the capabilities of the system, enabling this ultrafast technology to make an impact. The day when network bandwidth ceases to be a limitation in your applications is in sight. ■

©1991 VARBUSINESS Software Report Card reprinted with permission.

Rated on everything from performance and reliability to service and support, PROGRESS trounces all of its competitors in the 1991 Datapro user surveys and the 1991 VARBUSINESS Software Report Card.

Topping the Datapro surveys for the fourth year in a row, users give PROGRESS a rating of 9.3 for overall satisfaction. The highest mark ever awarded. Against all comers, PROGRESS is unsurpassed in all 15 categories (okay, we tie once). With a 9.0 or higher in eight categories.

**PROGRESS**  
SOFTWARE

Also, PROGRESS becomes the first product ever to capture all 18 categories of the VARBUSINESS Report Card. Racking up 9's in five categories, where no one else even gets an 8. Anywhere. So, if you're considering a 4GL/RDBMS for building and implementing high performance applications that are fully portable across major platforms, isn't it time you rated PROGRESS? For more complete information, or for our fully functional Test Drive, simply call 800-4 PROGRESS.

PROGRESS applications are fully portable across the broadest spectrum of hardware platforms, operating systems, network protocols and user interfaces. So many, in fact, that we had to list them here in small type: AIX,<sup>™</sup> C/OS, HP/UX,<sup>™</sup> NOVELL NLM, OS/1,<sup>®</sup> OS/2,<sup>®</sup> OS/400,<sup>™</sup> UNIX,<sup>®</sup> ULTRIX,<sup>™</sup> VMS,<sup>™</sup> XENIX,<sup>®</sup> MICROSOFT<sup>®</sup> WINDOWS,<sup>™</sup> X WINDOWS,<sup>™</sup> DECnet,<sup>™</sup> LAN MANAGER,<sup>™</sup> NetBIOS,<sup>™</sup> NOVELL<sup>®</sup> SPX/IPX, TCP/IP and SNA APPC LU 6.2. Also, PROGRESS lets you process information in other databases, including AS/400, C-ISAM,<sup>™</sup> CT-ISAM,<sup>™</sup> ORACLE, Rdb, and RMS. BYTADV05

# IS WHAT YOU SEE WHAT YOU GET?

Since images are optical, why not process them optically?

DAVID CASASANT

**I**mprovements in performance and resolution have benefited traditional image-processing applications such as robotics, product inspection, reconnaissance, earth resources, and missile guidance. But despite advances in storage and processing speed, it is increasingly difficult to implement many operations in real time without a very large and expensive multiprocessor.

Recent optical pattern-recognition hardware and algorithm advances may offer a solution. Why not process an input optical image directly without converting it to digital data? Photons instead of electrons can perform the processing. (See the text box "Interconnecting the Pieces" on page 192.)

## What Is Optical Information Processing?

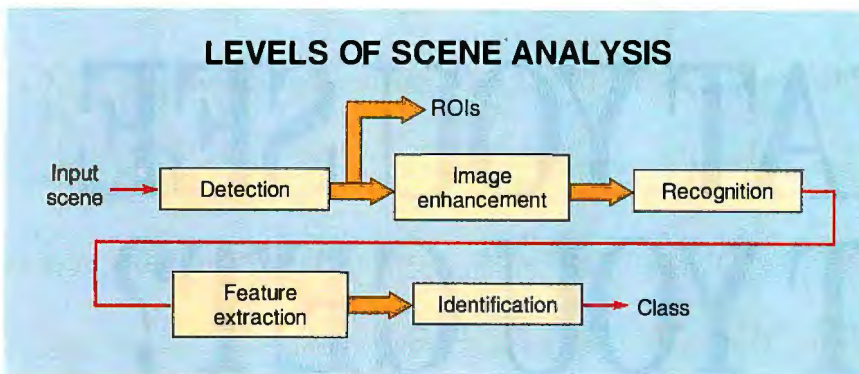

Optical information processing is the use of optical hardware to process data such as images and memory contents, data between processors, and digital—as well as analog—information. Within this broad optical processing category, there are at least five separate elements: computing, interconnections, signal processing, pattern-recognition systems, and neural networks.

*Optical computing* refers to the use of optical-processing techniques and devices to perform logic and numeric operations to produce general-purpose optical computers or special-purpose optical coprocessors. *Optical interconnections* are unique since the paths of photons can cross without any interaction or cross talk. You will be able to optically interconnect electronic components to reduce computer clock skew, size, and volume and to improve speed, fan-out, and fan-in.

*continued*

**Figure 1:** The first two operations let you locate and enhance a candidate ROI (region of interest) in a scene. Then, typically, you calculate features that describe the contents of each ROI and input them to a classifier that determines the identity of the object in each ROI.

Optical signal processors will be used for high-speed RF signal-processing functions in radar and electronic warfare. Optical pattern-recognition systems already perform image-processing and image-recognition functions to locate and identify objects in a scene that has clutter, multiple objects, and object distortions. This process is referred to as *scene analysis*.

For example, if you want to perform image processing for robotics or product-inspection applications, you need to locate the objects of interest in the field of view and then identify them and their orientation. This technique is called *pattern recognition*. (In product-inspection applications, the location of the object is generally known.) The operations required are feature extraction, determination as to whether or not an item (i.e., a product) is good or defective, and discovery of the nature of any defect. Finally, *optical neural networks* are coming into being for use

in applications such as control, optimization, and classification.

### What Do You Need?

One application for which optical processors are being used today is scene analysis. Processors for this purpose can use optical-image-processing, pattern-recognition, and neural-network techniques. If you want to combine these approaches, you can try using a hierarchical/inference approach (see figure 1), with each level of the system having a different purpose and function. A plan such as this is OK if the use of optical processing can address each level using the same multifunctional optical architecture. Figure 2 shows how an optical correlator system achieves each of the separate operations in figure 1.

The optical correlator system in figure 2 can achieve a wide variety of improved processing functions using different filters at  $P_2$ . *Correlation* is a process that locates objects  $h$  in a scene  $f$ . The operation involves placing  $h$  over each region of  $f$  and measuring the similarity of  $h$  and each local portion of the image. The output correlation pattern has peaks at those locations in  $f$  that most closely resemble  $h$  in a scene. Thus, you can locate multiple objects in a scene with this operation. In figure 2, the correlation is performed by multiplying the Fourier transforms of  $f$  and  $h$ , thus avoiding the need to manually move  $h$  over  $f$ .

With detection filters and structuring element filters, you can achieve all morphological or low-level computer-vision functions on a scene at  $P_1$ . These functions perform clutter reduction as well as enhancement and detection of ROIs (regions of interest). Once you have selected an ROI, you input it to  $P_1$  and then extract features from it.

When different CGH (computer-gener-

ated-hologram) filters are placed at  $P_2$ , different features' spaces are produced at  $P_3$ . The locations and values of  $P_3$  outputs denotes the amount of a given feature that is present. Many successful product-inspection applications use these optical feature-extractor systems.

These same features are then input to a classifier that performs the identification. (Classification is the final process that denotes the identity of each object that's in a scene—and often, too, its orientation and scale.) In this case, I'll use a neural-network classifier whose analog input neurons are these features.

These input neurons are massively interconnected to a second layer of neurons where a nonlinear weighted sum of the input neuron values is produced. Free-space optics (i.e., optical techniques using space instead of fiber as the medium) is an especially attractive way to provide the interconnection weights. (Recall that two photons can cross without any cross talk or interference; electrons and wire connections create all sorts of cross talk and interference problems.) It is also worth noting that a correlator is a most powerful shift-invariant neural network. (*Shift*, or translation, *invariance* refers to a system's ability to classify an image wherever the image appears in the visual field.) In this type of neural network, the  $P_2$  filter is the set of weights that are simultaneously applied to all local  $P_1$  regions (by multiplying the local  $P_1$  neurons and summing each local product into a correlation peak output at  $P_3$ ).

The advantage of neural networks over conventional classifiers is that they can simultaneously calculate multiple discriminant functions and combine them into the

## BYTE ACTION SUMMARY

It has become more difficult to implement many operations in real time without a very large and expensive multiprocessor even though progress has been made in storage and processing speed. Advances in optical-information-processing hardware and techniques may offer solutions to this challenge.

**Figure 2:** You can use this optical system to compute a wide variety of features. The input image is placed at  $P_1$ , a filter is placed at  $P_2$ , and the correlation of the input and filter function appears at  $P_3$ . By using various  $P_2$  filters, you will find that this architecture can achieve all major low-, medium-, and high-level computer-vision operations and all functions needed in figure 1.

# COMPUTING KNOW HOW

## with computer books from Abacus

### DR DOS 6.0 Complete

The user's guide to running DR's new DR DOS 6.0 operating system. From introduction, to the basics, to using and understanding DR DOS 6.0, you'll learn to optimize your DR DOS system to your needs.

Item #B144. ISBN 1-55755-144-8. Suggested retail price \$34.95 with 3.5" companion diskette.

### DOS 5.0 Complete Special Edition

Learn the 'ins and outs' of DOS 5.0.

- Using the new SHELL, DOSKEY, EDIT, and QBasic
- Complete comprehensive DOS command reference section
- Includes **Tempest** - the graphic shell for DOS 5.0

Item #B151. ISBN 1-55755-151-0. \$39.95 with **Tempest** and utilities disk.

### PC Intern

The encyclopedia of DOS programming know how for the professional programmer. Includes parallel working examples in ML, C, Pascal and BASIC.

- DOS and BIOS internal structures and functions
- Programming video cards, sound and TSRs

Item #B145. ISBN 1-55755-145-6. \$59.95 with over 2mb of source code on one diskette.

### Turbo Pascal for Windows

Introduction to the standard elements of Turbo Pascal.

- Development of the WinCrt, WinCrt and WinDOS units
- Comprehensive coverage of the Object Oriented Programming (OOP) features

Item #B141. ISBN 1-55755-141-3. Suggested retail price \$39.95 with 3.5" companion diskette.

### Windows 3.1 Complete

Learn to optimize & customize Windows 3.1.

- Improve your productivity with the built-in Windows applications
- Includes dozens of useful tips and techniques
- Includes two valuable Windows utilities: Backup & Snapshot

Item #B153. ISBN 1-55755-153-7. \$34.95 with Windows utilities disk.

### Windows 3.1 Intern

Introduces the reader to the overall concept of Windows programming and events using dozens of easy-to-follow examples. It's a solid guide for beginning to intermediate Windows programmers who need to know more, faster.

Item #B159. ISBN 1-55755-159-6. Suggested retail price \$39.95 with 3.5" companion diskette.

### The 486 Book

Explains the features that make this processor so advantageous - the memory capabilities, the math coprocessor, the specialized software that maximizes the CPU's performance and more.

Item #B155. ISBN 1-55755-155-3. Suggested retail price \$34.95 with 3.5" companion diskette.

### OS/2 COMPLETE

From installation, to overview, to the basics of the Presentation Manager, you'll learn how to take full advantage of this new operating environment.

Item #B157. ISBN 1-55755-157-X. Suggested retail price \$24.95.

### Stepping Up To OS/2 V2

The upgrader's guide to learning OS/2 in a hurry. ISBN 1-55755-160-X. Item #B160. Suggested retail \$16.95.

Available at B. Dalton Booksellers, CompUSA, Crown Books, Software etc., Waldensoftware, Computer City, and other retailers nationwide. In the UK call Computer Bookshops 021-706-1188. In Australia call Pacronics 02-748-4700.

# Interconnecting the Pieces

SING H. LEE

**O**ptical interconnections is the term often used to describe optical communication channels linking functional units in a digital computing system. At times, it also is used to refer to the use of optics to link a number of computers for distributed processing.

Performing interconnections optically offers several important advantages over performing them electrically. Among these benefits are higher speed and larger bandwidth, freedom from electromagnetic interference or crosstalk, and less drive power when the interconnection distance is longer than the break-even line length. (*Break-even line length* refers to the interconnection distance over which a level amount of energy has to be supplied at the input to achieve interconnection.)

Other advantages of using optical interconnections include fan-out without impedance discontinuities that cause unwanted reflections, freedom from planar and quasi-planar constraints, and the ability to implement parallel pin-out. All result in higher interconnection density. For the end user, these benefits result in higher-performance computing systems that are more compact and consume less power.

The field of optical interconnections is still in its infancy, although some successful examples of optical interconnections have begun to surface. One such example is the connection of com-

**Figure A:** MIT Lincoln Laboratory research: (a) experimental module of 1-Gbps digital data links and (b) application of the high-speed data link to connect RISC-based multiprocessors on a number of boards into a ring network.

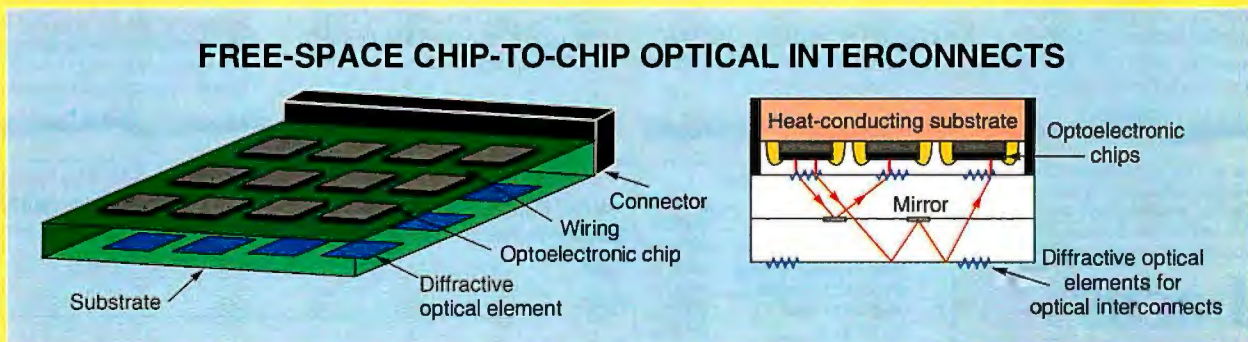

puters via optical fiber with the implementation of the FDDI (Fiber Distributed Data Interface) standard. Operating in this mode provides a tenfold improvement over Ethernet speeds.

## Waveguides

Many current activities in the field are devoted to researching the applications of optical waveguides and diffractive optics. (See the glossary "Unbending Lightwave Terminology" on page 171.) These techniques solve some of the board-to-board and chip-to-chip inter-

connection problems encountered in high-performance computers as well as in multiprocessor parallel computing systems.

Generally, optical waveguides can provide higher interconnection densities than fibers, because fibers typically have larger dimensions—the bulk of which are associated with the cladding of fibers. Also, waveguides can be bent with smaller radii than fibers, and they can be more easily fabricated using standard microfabrication procedures. Researchers at Honeywell are working

**Figure B:** Optically transparent substrates are the medium used for free-space transmission in (a) AT&T's packaged module and (b) UCSD's packaged module.

on the design of a high-density optical backplane that uses polyimide waveguides to connect many processing elements on different boards.

Researchers at the University of Arizona are working on another type of optical backplane. Polyimide waveguides are not used in this design. Instead, university scientists are employing holographic or diffractive optical elements (e.g., diffraction gratings) and the phenomenon of total internal reflection (i.e., total reflection of the optical beams between the side walls of the dielectric substrate) to guide the interconnecting beams from board to board. Since these beams are not restricted to propagating only on the surface of the substrates, it may be possible to achieve interconnection densities that are even higher than those achieved when waveguides are used.

## Free-Space Techniques

Researchers at MIT's Lincoln Laboratory also are experimenting with free-space board-to-board interconnection modules (see figure A). Free-space optical interconnections allow for freedom from planar or quasi-planar constraints. (See the text box "Smart Pixels and Free-Space Interconnection" on page 174.) AT&T also is experimenting with free-space optical interconnection techniques. In much of its massively parallel optical interconnection work, scientists at AT&T are using off-the-shelf optics, custom optics, lenslet arrays, optical bistable SEED arrays, and micro-laser arrays.

Applying free-space optical interconnections to chip-to-chip interconnections offers parallel pin-outs that would lead to even higher interconnection densities and large fan-out without impedance discontinuities. This would result in improved signal-to-noise ratios. Figure B shows the approaches that AT&T and UCSD (University of California at San Diego) are trying, to replace layers of electrical interconnections by free-space optical interconnections.

One important challenge facing free-space interconnection technology is packaging. Researchers at AT&T and

UCSD are working on this challenge, especially in the area of packaging electronic systems that use diffractive optical elements to perform chip-to-chip interconnections and a transparent substrate for the free-space medium.

## Global Interconnection Efforts

The development of optical interconnection technology is, of course, not limited to activities in the U.S. In fact, there are very strong efforts both in Japan and in Europe. For example, optical interconnections is an important part of MITI's recently launched Real World Computing program—a 10-year program with participation from many strong industrial and academic institutions, including Fujitsu, NEC, Mitsubishi Electric, Oki Electric, Hitachi, the University of Tokyo, and the University of Osaka.

At NTT, a Cosine-2 project is devoted to building a multiprocessor system using automatically rearrangeable free-space multichannel optical switches. In Europe, the focus of the Esprit II Olive program is on optical interconnections for VLSI and electronic systems. Five industrial and five academic institutions are participating in this 60-workforce-year effort.

Because of all the concurrent activities and efforts taking place around the world aimed at developing optical interconnection technology, it isn't easy to predict how much optics future computing systems will use. However, it appears safe to say that there will be more optical devices and techniques put into computers.

Present-day computers are designed to minimize interconnections. Given a technology that could support thousands of interconnections operating at a gigabit per second each, it will be interesting to see if the architecture of future computers will remain the same or change dramatically.

*Sing H. Lee is a professor of electrical and computer engineering at the University of California—San Diego. You can contact him on BIX c/o "editors" and on the Internet at shlee@ucsd.edu.*

higher-order surfaces needed to discriminate many classes of objects. Optical systems are not able to easily support all the operations required in advanced neural-network learning algorithms. Thus, for learning, you use digital-hardware neural networks to calculate the required weights.

After learning has finished, you download these weights to an optical neural network. When a neural network is used as a classifier, it is a one-pass feed-forward system with no iterations, and optics provides the multiplications, additions, parallel free-space interconnections, and nonlinear functions required. Many other uses exist for neural networks (e.g., control and retinal modeling) besides their use as classifiers.

## But Can I Buy It or Build It?

Perhaps five years ago, you briefly considered optical processing. You probably dismissed the idea, however, because of those huge optical benches or 2-foot-long lasers necessary to carry out the process. Also at that time, optical processors could perform only a limited number of image-processing functions. You had to use a different optical system every time you want-

**S**oon you will  
be able to  
more easily create  
your optical  
image-processing  
system.

ed to carry out another function. Besides, you couldn't go out and buy a unit or order one as a peripheral for your vision system. Well, things have changed.

DARPA (Defense Advanced Research Projects Agency) has now established a consortium of optoelectronic suppliers and users. Although it's not the Japanese MITI, it is bringing together sources and users. DARPA has also launched a program called TOPS (Transition of Optical Processors into Systems). TOPS's mission is to develop modular optical image- and signal-processing hardware for the major data-processing functions. With the implementation of this consortium and

## A MESSAGE TO OUR SUBSCRIBERS

**F**ROM TIME TO TIME WE make the BYTE subscriber list available to other companies who wish to send our subscribers material about their products. ## IS WHAT YOU SEE WHAT YOU GET?

*The Solid Block MCSS Optical Correlator, developed by OCA Applied Optics (Garden Grove, CA), is contained inside a 4-inch-diameter cylinder. It looks at a scene through a lens with a 200mm focal length and outputs a live black-and-white video image. The components are (a) the input optics and CCD (charge-coupled device) camera electronics: A 200mm lens forms a white-light input image onto the spatial-light modulator, and the camera records the correlator's output; (b) the spatial-light modulator: A liquid crystal light valve converts the input imagery's intensities into modulated polarizations that are imprinted onto the internal laser beam. These polarizations are converted back to equivalent intensities, but now they are in laser light; (c) the main housing; (d) the FT (Fourier transform) lens, which performs a 2-D FT of the input scene and images it onto the matched spatial filter; (e) the solid-block-prism assembly, which folds the correlator's optical path into a small rugged package and guarantees the optical alignment of the fold mirrors; (f) the matched spatial filter and cell, which kinematically register the photographic FT in the optical path at the FT plane: The filter diffracts all the laser energy from the object it "recognizes" into a focused spot on a CCD chip, and all other energy is scattered into a low-level background signal; (g) the rear cover; and (h) the diode laser, which is the source of coherent light for the correlator, required for FT analysis. The laser beam is confined within the correlator.*

program, soon you will be able to more easily create your own optical image-processing system.

Many recent developments in optical-processing hardware have now made it practical to build optical systems. Teledyne Brown Engineering (Huntsville, AL) has produced an optical correlator that uses modular optical elements and a solid-optics construction (i.e., no air gaps) to reduce vibration and other external effects.

Litton Data Systems (Van Nuys, CA) is currently fabricating a system called the Hockey Puck Optical Correlator. In this system (which is the size of a hockey puck), the manufacturer has mounted the optical components (all of which operate in reflection mode) around the perimeter of the device.

Through a subcontract to Optical Corp. of America (OCA) Applied Optics (Garden Grove, CA [formerly Perkin Elmer]), the Jet Propulsion Laboratory in Pasadena, California, assembled an optical correlator

that is 100 millimeters in diameter and 50 mm thick (see the photo). It is to be used by MICOM (the U.S. Army Missile Command in Huntsville, Alabama). The Japanese have fabricated an optoelectronic neural-network chip, one of the first of its kind.

These are merely a few of the present optical image-processing algorithms and hardware. When the proper sequence of correlation filters is used in the hierarchical inference system of figure 1, they provide a general-purpose, programmable, optical scene-analysis processor that achieves low- to high-level computer-vision functions. ■

*David Casasent is George Westinghouse professor and director of the Center for Excellence in Optical Data Processing at Carnegie Mellon University in Pittsburgh, Pennsylvania. You can contact him on BIX c/o "editors" or on the Internet at marlene@gauss.ece.cmu.edu.*

When you need business information, why not get the total story, instantly! Word for word. The McGraw-Hill Publications Online database gives you just that. Unedited, full-text retrieval (except graphics) of articles exactly as they are published in McGraw-Hill magazines and newsletters.

Now you can get information on companies, people and products on any topic — pertaining to one particular industry, or search the entire McGraw-Hill library (over 35 leading publications online) for diverse editorial perspectives. Only McGraw-Hill, the world's foremost business information publisher, can deliver it all so completely — immediately! McGraw-Hill unabridged.

Access an entire universe of business information. Go online with our line. McGraw-Hill Publications OnLine. For more information, including our latest list of publications, contact Andrea Broadbent at (609) 426-5523. Or fax this coupon to (609) 426-7352.

# PROFILES IN DOCUMENT MANAGING

**Businesses generate billions of pages and terabytes of data a year; a good DMS can help you keep track of all that information**

**RAYMOND GA CÔTÉ  
AND BEN SMITH**

June BYTE). These programs are good at indexing documents and then searching them for specific words or phrases. But DMSes (document management systems) go far beyond that. They file everything—text and images coming straight from a computer or scanned in from paper—in an electronic library, storing it all in a form that can be quickly searched for, retrieved, shared by hundreds of people, and kept in a tiny space. Most DMSes also provide a means for passing documents around, either across a network or from fax to fax. Although they will not reduce the amount of information pouring into your office, DMSes, such as the ones we review here, can help you get a handle on the problem.

In broad terms, DMS products fall into two categories: those designed primarily to handle text (i.e., feeding it into an indexed archive) and those designed primarily to handle images (i.e., turning a page of print into a digital picture and then storing it in an indexed archive); some programs can handle both text and images. For this review, we chose products representative of each approach. SoftSolutions for DOS and PC DOCS (Document Organization & Control System) are indexing and retrieval engines extended with functions to manage the gathering, tracking, storing, and searching of documents. Imara and Keyfile are image-based systems. They handle documents that come in from a scanner or fax, store them as pictures, and provide the means for sharing the library of imaged documents. (See the table

**E**very day, businesses spend countless hours generating and filing forms, reports, contracts, letters, records, marketing material, and engineering diagrams. They also spend hours looking for those documents—or looking not just for one but for a number of related documents. Finding everything in the corporate filing cabinet that has to do with Subject A is not easy with traditional paper-based filing methods, even in the best libraries.

One approach to organizing tons of text is with so-called text management programs (see “Searching for Common Threads,”

## BYTE ACTION SUMMARY

### ■ WHAT DOCUMENT MANAGEMENT SYSTEMS DO

They let you store, search, and manipulate documents electronically to maintain a library of text and images in a compact space.

### ■ LIKES

The ability to conduct fast searches through volumes of data and quickly retrieve documents; reduction in paper clutter.

### ■ DISLIKES

Initial installation and learning curve can be daunting.

### ■ RECOMMENDATIONS

Keyfile 1.0a is a good image management system with an excellent iconic interface. PC DOCS 4.1 doesn't have the extensive search capabilities that SoftSolutions for DOS 3.0 has, but it's still a good, easy-to-use desktop system for managing megabytes of text documents.

for summary information about the four DMSes profiled in this review.) While there are many other DMSes on the market offering a wide range of capabilities (see the text box "Tools for Lassoing the Paper Cyclone" on page 206), the four products we reviewed represent accessible, PC-based systems that won't tax your bank account. The elements of document management are the following:

- document content profiling
- indexed search and retrieval
- document work flow
- access and version control
- administration
- LAN/WAN (wide-area network) support

We examined these main areas as we evaluated the products. They are the basic aspects to consider when you're looking to buy a DMS. Setup and operation are also important. If a DMS isn't easy to learn and use, it will seem more like a hindrance than a helpful tool. Performance is also important, but it will depend greatly on how many documents you have, what type of documents they are, what sort of network you're running on, what your server is, what sort of load it endures, and so on. (See the text box "Evaluating Document Management Needs" on page 200 for more on this subject.)

In our tests, the different systems all

# Evaluating Document Management Needs

**D**ocument management systems are necessarily complex, but they should be simple to use and manage. To evaluate what you need in the way of document management (or to determine if you even need it), ask yourself the following questions:

- ✓ How many different document formats do I need to manage?
- ✓ How many documents of each format do I anticipate?
- ✓ What are the storage requirements for each format?

- ✓ Do I need full-text searching or will document profile information be enough?
- ✓ How many people will use the system?
- ✓ How much control of work flow do I need?
- ✓ What kinds of access and version control methods will best satisfy my needs?
- ✓ Do I expect to manage distributed sets of documents and need support for a WAN (wide-area network)?

turned up documents quickly, but a more rigorous test for a DMS is an enterprise that handles thousands of pages a day, with dozens of people tapping into the network to hunt for and retrieve documents. In the following sections, we'll discuss the main areas you should investigate when evaluating a DMS.

## Profiles

A profile is the information that describes a document. It includes the type of document (e.g., a WordPerfect file, a scanned image in TIFF, a Lotus .WK1 file, and so on) that was entered into the system, who created it and where, where it is stored in the DMS, and other bits and pieces. The profile screen is often the point of entry for using the system.

The work of profiling documents can be time-consuming if done by hand, and the process should be automated as much as possible. A good document management environment will already have information about who created what document, when, and with what application. Some DMSes gather this information by monitoring the system and capturing a document as soon as you store it. (For example, when a PC DOCS user finishes writing a document and closes the file, the DMS automatically grabs the text and adds it to the document library.) The ability to

define your own profiles is the mark of a good DMS.

## Search and Retrieval

In most DMS installations, finding documents is the most important function. The objective is to locate a specific document as quickly as possible with as little specific information as possible.

A good retrieval system produces a hit list of documents found that contain the word or concept you are searching for. Some DMSes index just keywords and profiles, which means that you can search only keywords and profiles. Others index every word in every document in the system. Retrieval also involves logging a record of document access and launching a viewer for a particular file type.

## Work Flow

A real DMS can process documents, shepherding them through stages of editing and review. Different kinds of documents may have to take different paths. For example, a contract may start with a draft that must first be approved by an attorney, then reviewed by concerned parties and the client, and finally returned for revision. The contract goes through this loop several times until it is ready for printing. As the contract and any supporting documents move through their various steps and stops, the

DMS has to track their location and contents. A complete DMS can associate a predefined path with a document and track and control what is happening to it.

## Version and Access Control

One common danger in working with shared documents is that an early version can be mistaken as the most recent. Another concern is that when different people modify a document, their changes may not get reconciled. A third issue is security—keeping certain documents hidden or unsearchable.

A good DMS provides tools for version control. The simplest systems maintain full copies of all the versions; others keep just the original and a file of any changes made to it; and others maintain a copy of the most recent version and a list of changes that lets you reconstruct any previous version from the most recent one.

Security features let the system administrator control who can see documents and who can change them. Any competent DMS lets you hide documents, and some even hide keywords. The DMS blocks a file from being changed if someone else has already checked it out of the library. Other people may be able to view it, but they can't alter it.

## Servers and Networks

Since DMSes are implicitly composed of servers and clients, they naturally run on networks. The simplest systems support only one network, but the more general DMSes can handle distributed collections of documents, where several different kinds of networks may be involved.

Networks and multiuser systems have built-in tools that can help the DMS maintain the security and integrity of data, so it's a good idea to buy a DMS that can take advantage of your network's underlying operating system. The administrator also needs a good interface for accessing the underlying network resources and controls through the DMS's administration tools.

## Administration

DMS administration involves more than installing the software and backing up the files. It also means managing access and security, maintaining indexes, enforcing procedures, and interfacing the DMS to other programs for document processing and viewing.

A DMS should also generate reports on system usage and status. The administrative tools should be at least as easy to use as those of the DMS; DMS administrators are not necessarily more technically advanced than the other users.

**DOES YOUR DATABASE GIVE YOU  
SALES REPORTS, INVENTORY AVAILS,  
PRICE LISTS, CATALOGS,  
DIRECTORIES, FINANCIAL REPORTS,  
RATE GUIDES, TABLES, AND SCHEDULES?  
CUSTOMIZED? ON DEMAND?**

**NOT WITHOUT THIS.**

Because this is Ventura DataBase Publisher.®

Without it, your database printouts are just a pile of green-bar. Or waiting for a programmer.

With it, you can extract the information you need. Convert it. Format it. And publish it with Ventura Publisher,® PageMaker, or Interleaf—all with push-button simplicity...all without programming.

Ventura DataBase Publisher gives you the flexibility to publish database documents when you want. With only

the information you want. Any way you want.

If you need to transform data into information, you need Ventura DataBase Publisher.

Don't go without. Make database publishing simple, automatic, and push-button quick. See your local Ventura dealer, or call **(800) 822-8221.**

Ventura DataBase Publisher. When it comes to database publishing, it doesn't get any easier than this.

## PROFILE OF FOUR DOCUMENT MANAGERS

*PC DOCS and SoftSolutions are aimed primarily at managing text files. Keyfile and Imara are primarily for handling documents as images.*

	PC DOCS 4.1	SoftSolutions for DOS 3.0	Imara 2.1	Keyfile 1.0a
<b>Price</b>	\$295 per workstation	\$495 per server, \$295 per workstation	\$2995 per two users (includes server software)	\$995; LAN: Windows, \$1995 for 5 users; OS/2, \$4995, unlimited users
<b>Platform</b>	DOS	DOS, Windows, Unix	OS/2, Windows	OS/2, Windows
<b>Key features</b>	Document control, full-text searching, version tracking, activity log, NetWare integration, WordPerfect interface, WAN support	Document control, full-text searching, SpeedSearch, activity log, mass importing of documents, version tracking, WAN support	Converts documents to images, E-mail, fax in/out, OCR option, query by form or keyword, iconic interface	Handles images and text, work flow, fax in/out, files-and-folders metaphor, iconic interface

**Screen 1: PC DOCS** presents a menu-driven interface. From this point, you can access the program's main functions, such as searching profiles, making new documents, and searching for documents.

and then return to the viewer. This seriously slows down the process of visually selecting documents from the hit list.

Depending on how the administrator sets things up, PC DOCS will let you look at an image file either by launching the application used to generate the image or by using a third-party package to view it. In the case of an image file that contains prose—a Harvard Graphics presentation, for example—you can have PC DOCS add the text to the index.

With PC DOCS, you can interface to just about any DOS application. PC DOCS merely launches the application with the parameters that the supervisor has specified in the application installation and maintenance table.

PC DOCS relies heavily on NetWare and its Btrieve engine for maintaining security, but it also goes further and provides profile-level security and hidden profiles. This DMS controls which users and groups can launch which application programs.

The program's version-control system lets you retrieve any version of a document. You can also start a branch version from any version. For example, if your most recent version is 4, you can still retrieve version 3 and use it to create new versions: 3a, 3b, and so on. This sort of version control is especially useful when you're working with legal documents, where there may be different versions for different jurisdictions.

PC DOCS also lets you check a document out of the system. This essentially locks the document so that no one else can revise it until you return it.

For a DMS, PC DOCS's resource requirements are modest. To run PC DOCS, you need a server running NetWare 286 version 2.15 or 2.2 or NetWare 386 version 3.11. You also need about 1.5 MB of

## PC DOCS 4.1

**P**C DOCS is a text-oriented client/server-based DMS that has DOS clients and a NetWare/Btrieve server. Like SoftSolutions for DOS, it uses character-based menus and forms for document management operations. The program is tightly coupled with NetWare (using Btrieve as its database manager) and WordPerfect, intercepting WordPerfect keystrokes and letting you invoke PC DOCS from within the word processor.

Menus seldom exceed nine items. They can, however, extend three or four levels deep. From PC DOCS's main menu (see screen 1), you can search document profiles, view hit lists, see recently edited documents, look up documents, create new documents, profile new documents, start applications, check in documents, select search libraries, and run utilities as well as reports.

The default operation is a profile search. It is through the profile-search form that you can access the full-text search. The

search functions let you create combined profile and full-text searches. Boolean operations are not limited to the full-text search but can be applied in any of the profile fields as well.

With the Search Libraries function, you can look in more than one collection of documents. You can even have the separate libraries on separate servers, as well as under separate directories.

PC DOCS returns from a search with a *hit list*—the list of documents that match the criteria you have specified. As you scroll through the hit list, the top half of your screen pages through a brief summary of the profile of the document associated with the current hit-list item. Retrieving a document means that you are using an external application for viewing or modifying it.

PC DOCS's built-in file viewer is geared to looking at WordPerfect documents, but it can also handle many other word processing files. Looking at documents in the file viewer, however, requires that you select a document from the list

"The importance of the program cannot be overlooked ... it so fundamentally alters the mechanics of mathematics."

New York Times

"Mathematica is a startlingly good tool."

Nature

"Mathematica has the potential to change the world of science at least as much as word processing has changed the world of writing."

InfoWorld

# Mathematica®

## A System for Doing Mathematics by Computer

**Function:** Numerical, symbolic, graphical computation, interactive programming. Integrated technical computing environment.

**Numerical Computation:** Arbitrary-precision arithmetic, complex numbers, special functions (hypergeometric, elliptic, etc.), combinatorial and integer functions. Matrix operations, root finding, function fitting, Fourier transforms, numerical integration, numerical solution of differential equations, function minimization, linear programming.

```
In[1]:=
3^70
Out[1]=
2503155504993241601315571986085849

In[2]:=
Hypergeometric2F1[7, 5, 4.1, 3-I]
Out[2]=
-0.00403761 - 0.00295663 I
```

### Numerical Computation

**Symbolic Computation:** Equation solving, symbolic integration, differentiation, power series, limits. Algebraic operations, polynomial expansion, factorization, simplification. Operations on matrices, tensors, lists, strings.

**Graphics and Sound:** 2D, 3D plots of functions, data, geometrical objects. Contour, density plots. 3D rendering with intersecting surfaces, lighting models, symbolic descriptions. Combining and labeling graphics. Color PostScript output, publication quality graphics, animation (most versions). Sampled sound generation from functions and lists.

```
In[1]:=
Integrate[x/(a + Exp[x]), x]
Out[1]=

$$\frac{x^2}{2a} - \frac{x \operatorname{Log}[1 + \frac{e^x}{a}]}{a} - \frac{\operatorname{PolyLog}[2, -(\frac{e^x}{a})]}{a}$$

```

### Symbolic Computation

**Programming:** High-level, interactive, symbolic system. Full procedural language, functional programming constructs. General transformation rule paradigm based on pattern matching.

Graphics and Visualization

**External Interface:** Input from external files, programs. Expressions, strings, words, records, numbers (in *Mathematica* or Fortran format), with arbitrary word and record delimiters. Output in TeX, C, Fortran, PostScript. System functions, file manipulation. External function calls, general interprocess communication, and data exchange via *MathLink*™.

**Notebook Front End (Macintosh, NeXT, Microsoft Windows):** Based on word processor analogy. Notebook interactive documents mixing text, graphics, animations, *Mathematica* input, output. On NeXT and Macintosh, front ends can be used with kernels on other computers, and support sound.

**Documentation:** *Mathematica: A System for Doing Mathematics by Computer*, Second Edition, by Stephen Wolfram (Addison-Wesley, 1991) available at bookstores. Additional documentation supplied with specific versions. *The Mathematica Journal* published quarterly by Miller Freeman. Many other *Mathematica* books also now available.

**Versions Available:** Macintosh • MS-DOS • Microsoft Windows • CONVEX • DG AViiON • Digital Equipment Corporation VAX/VMS, RISC ULTRIX • HP 9000 • HP Apollo • IBM RISC Systems/6000 • MIPS • NeXT • Silicon Graphics • Sony • Sun 3 and SPARCstations • Educational, volume, reseller, and other discounts available • Now shipping Version 2.

```
log[1] = 0
log[E] = 1

storage space per 1000 documents and 1 MB of RAM for each 100 MB of server disk space. For a workstation, you must have at least a 286 with 640 KB of memory, plus 1 MB of extended or expanded memory; you'd most likely want a 386 with 2 MB of memory and a hard drive.

PC DOCS doesn't pretend to be a feature-rich DMS along the lines of those designed for mainframes or big Unix systems (e.g., BRS Software Products' BRS/Search). It is not intended for operations where there needs to be sophisticated control of work flow. Rather, it succeeds ad-

mirably as an easy-to-use desktop DMS that lets you index, store, and search reams of documents. It relies on NetWare and plugs into WordPerfect, so if you are already using those two products, PC DOCS will be a natural fit. What it does, it does well and in a predictable way.

## SoftSolutions for DOS 3.0

A database engine is at the core of all these DMSes. In the case of SoftSolutions for DOS, the database engine is designed for text search and retrieval, making this DMS well suited for managing purely textual documents. Some other systems are built on standard database engines (e.g., PC DOCS uses Btrieve) that may not be as good at handling pure text.

SoftSolutions for DOS focuses on indexing and search technology. It has a rich syntax for wild-card and Boolean searches. With one command, the program looks across profile fields and examines the text of every document in the database to find a particular word. In contrast, using PC DOCS, you would have to specify the search fields separately. SoftSolutions' indexing and SpeedSearch tools are exceptional.

SoftSolutions for DOS is menu- and form-driven (see screen 2). Most of the fields in the forms have associated tables that you can query. For example, the Document Type field in the profile search form has an associated table. If you don't know which document types are available to you, the F1 key lets you scroll through the table and pick a type. When there is no associated table, there is a help screen.

This system is customizable. Not only can you limit different users to the docu-

ment types they can access, but you can also create different menus and query screens for different users. For example, a customer may be able only to view the documents relating to a project and not be able to modify anything; a document librarian may be able to access everything and even check documents in and out but not be able to change anything; and a document editor may be given privileges to add, delete, and modify documents in only a few document types. The administrator defines what users can do and what their menus show.

The administrator can also add new document types on the fly. SoftSolutions for DOS can launch any application or batch file based on the information in the document profile. You can define any kind of document profile as well as different user profiles, each with its own menus and available resources.

As you locate documents, you can select (i.e., mark) the ones you want to send to an application. As with some other DMSes, you can launch the appropriate application programs for editing and viewing the documents that you have indexed with this system. "Mark and launch" is the system's facility for taking a document out of the SoftSolutions archives and bringing it into another application.

SoftSolutions for DOS can operate in a heterogeneous network with Unix and DOS/NetWare servers. It even works in a WAN, dialing up remote machines and

checking out documents on remote sites. This means that the document base can be completely distributed across several networks. This is a capability to consider if your business has scattered offices that need to share information.

Activity accounting is a strong feature of SoftSolutions for DOS. It not only reports on the current document status, archival state, and so on, but it also keeps track of every time the article is edited, copied, or even previewed; which user initiated the activity; and when it occurred. There is also a built-in work log and accounting system that includes a report writer. Each document type and operation can have an associated fee. This greatly facilitates accounting in law firms.

As you would expect from the fact that its underlying database is designed for full-text indexing and searching, SoftSolutions for DOS excels at finding documents. The program addresses most major issues in document management but has a few shortcomings. For example, although you can pick and choose the layout of the query and report screens, you cannot remap the keyboard, which WordPerfect strongly influences.

While you can define user privileges, you cannot define a work flow for a document type. You can maintain separate versions of a document but only as separate, full-size files. If you want to compare versions, you can use a third-party program, such as Jurisoft's CompareRite. You would mark the files you want to compare and then launch the document-comparison application. You can mark up to nine files at a time.

You can configure the menus, but even the default menus lack clear organization. They are very complex and require too many key presses to do simple operations, such as viewing the next document in a list.

The document viewer is not intelligent enough to recognize when a document is not a piece of text; it simply views all files as if they were textual documents. As with PC DOCS, if you want to look at an image file, you have to resort to using a third-party viewer.

SoftSolutions has an add-on module, the Image Manager, that lets you link a

# WHY HARDLOCK IS THE PREFERRED *network* PROTECTION SYSTEM

## Developers Say...

"Hardlock is Networking! Now everyone on the Network can access my application without having the Hardlock on their PC. NET Hardlock's interface allows me to easily limit the number of simultaneous users without having to build this up myself. Since NET Hardlock contains an algorithmic response ASIC, I'm assured of the highest level of copy protection effectiveness. Glenco's software interface choices couldn't have been easier to use!"

## Accountants Say...

"NET Hardlock is a welcome addition to the Hardlock family of revenue protection products. Now limiting and expanding the simultaneous user portion of the license agreement is the easy part! Our costs are lowered and the end user benefits - it's a perfect solution!"

## End Users Say...

"NET Hardlock is the easiest protection system I've ever used! Once the NET Hardlock is plugged in, I don't even know it's there. Now the application can find the NET Hardlock regardless of which PC I'm using. We can easily add more users to the license without shipping Hardlocks back and forth. Just knowing the software developer is paid for their efforts makes me feel confident that the next upgrade is coming and my investment is secure!"

**Other products in the Hardlock Family:**  
Hardlock & Hardlock with Memory (Single User)  
Hardlock DES (Data Security)  
Hardlock SE (Workstations)

Supporting DOS, Windows, OS/2, Xenix

Shown actual size.

The *only* product that combines a memory option with programmable, algorithmic response — all in one compact unit.

# Tools for Lassoing the Paper Cyclone

D. BARKER

There's a scene in the film *Brazil*, set in a dim, information-crazed future, where the Robert De Niro character is literally engulfed in a swirling cyclone of paper. If you've had days at work when you thought this was about to happen to you, you probably need a document management system.

There are now dozens of products that can help you manage images and text. They all provide tools for receiving electronic data, filing it, and then finding it pronto. The brief descriptions that follow will point you toward the product that's right for your situation.

## BASISplus

Document management for the Fortune 500, BASISplus (from Information Dimensions) can be simplistically described as a comprehensive set of tools for searching and retrieving compound documents in a relational database. Documents can consist of mixed objects—text, graphics, alphanumeric characters, sound, and video—and can come from almost any application or device. Documents can be huge: up to 8000 sections, each holding 128 million characters. The system is noted for its advanced search-and-retrieval functions, including concept, proximity, and “sounds like” searches.

BASISplus is not the sort of thing you throw together over the weekend (the manuals stack 3 feet high). The system runs on IBM mainframes, DEC VAXes, and Unix machines, such as Sun Microsystems' Sparcstations, the HP 9000, the Bull HN series, and Unisys 6000. Front ends for searching and viewing are available for ASCII and EBCDIC terminals and for PCs running Windows. Prices range from \$2500 to \$179,000. According to a Datapro report, even users who criticize parts of BASISplus remain impressed by what it can do.

## BRS/Search

A system from BRS Software Products, a company specializing in on-line research databases, BRS/Search excels at the fast finding of needles in haystacks. It is used by businesses that generate tons of text, including newspaper publishers, law firms, and government agencies. No matter how big the database, BRS/Search can retrieve documents in 5 to 10 seconds, according to the company.

The software does full positional indexing whenever a document is loaded into the system (i.e., it indexes each word in terms of its location within a sentence). You can search for words, phrases, or concepts. BRS/Search can handle just about any type of document, from common word processor files to compound documents. Security functions let the administrator hide not only documents but specific words as well.

Although BRS/Search lacks imaging functions, you can link it to an image management system. An API lets you integrate BRS/Search's retrieval engine with other applications. BRS/Search runs under major operating systems, from MVS and VM to VMS and most variants of Unix, as well as DOS and NetWare. The company recently announced a Windows front end for searching and viewing documents. Prices start at \$2500.

## Desktop Document Manager

A combination of Windows-based software and a controller card, Desktop Document Manager (from Alacritty Systems) is designed to process documents that come in via scanner or fax. There are applications for scanning documents into files, receiving and sending faxes, and compressing and decompressing images.

The software is iconic. For example, you drag files to a file-to-fax icon or click on a scan-to-file icon. The hard-

ware component is a card that holds a Texas Instruments 34010 (50-MHz) graphics processor, which Alacritty Systems says speeds up printing time and raises print resolution to 600 by 300 dots per inch. Alacritty estimates that as many as 500 document images can be compressed into 10 MB of hard disk space, making this system a good solution if storage resources aren't plentiful. The price is \$1995.

## Document Administrator

Interpreter's Document Administrator falls into the same basic category as PC DOCS and SoftSolutions. This DOS-based program indexes and archives text, tracks revisions, prevents simultaneous editing, and lets you search for document profiles or particular words, or use wild cards and Boolean operators. Profile cards, which provide information on every document entered into the system, are extensive (providing up to 38 fields) and very flexible; the administrator can set them up to fit any situation (i.e., design it so that some fields have to be filled in). You can work within your regular applications and then send only the files you want to the document manager.

Document Administrator currently lacks the handsome interface of more graphical products, but its menus are straightforward. It works with NetWare, Vines, Etherlink, and other DOS-based LANs. It costs \$2495 for up to 10 users.

## FilePower

You can tailor Optika's modular imaging system, based on Windows, to fit your situation, whether it is one user or 500. Software modules include ImageFiler—for scanning, indexing, storing, and retrieving image documents; DataFiler—for doing those same things to text rather than images; ImageFinder—a network package for retrieving and printing documents; software for

managing various optical disks; Fax-Server—for sending and receiving faxes; TransAct—for pulling data from mainframes, minicomputers, and other PCs; communications software that allows remote access; and ImageEngine Development Kit—for customizing the system, integrating it with other applications, and linking it to external databases.

The system works with major LANs. Prices run from \$7500 to \$100,000. Kenwood USA, a big audio company, is using a FilePower system to process and store warranty claims and invoices, replacing microfiche with optical disks.

### ImageFast

A Windows-based imaging system with work-flow and text-indexing modules, ImageFast (from Benson Computer Research) uses the folders-in-file-cabinets metaphor. As with Keyfile, you can drag a file onto an icon to initiate actions such as sending a fax. Although it is image-oriented, the program has features for handling text, including an OCR (optical character recognition) module that can extract text from an image and save it as an ASCII file or flow it into specified fields of a form (extracted text can be automatically indexed). Users can set up data and query forms. An API allows developers to plug in their own modules or integrate the system with other applications.

For businesses that use lots of forms or faxes that need to be stored and quickly retrieved, ImageFast could be an excellent solution. A five-user LAN (NetBIOS) version starts at \$9500; OCR, text, and work-flow modules are \$650, \$500, and \$750, respectively.

### Imagic

An image management system that runs under Windows, Imagic receives scanned and faxed pages and files them in an ISAM (indexed sequential-access method) database. The Westbrook Technologies' system is designed for people who work with images, whether they are drawings or forms, rather than for people who handle lots of text; however, the software can store and index any user-selected text on a page.

The program accepts TIFF and PCX files but converts them to its own proprietary format. Westbrook emphasizes

that its approach allows you to use hardware you've probably already got installed. For workgroups, Westbrook's ImagicLAN lets multiple users simultaneously access images on a server. It works with popular PC LANs. Imagic is \$895; the LAN version is \$1895 per server, with unlimited users.

### KIPP

The KIPP (Kofax Image Processing Platform) family of PC products turns paper into digital documents and stores them in a library. There's software and hardware to control the scanning and storing of documents, software for printing or faxing documents, and software for retrieving images across a network. For faster retrieval, decompression, and display, Kofax offers hardware engines (AT or Micro Channel boards).

KIPP also includes a display controller geared toward handling images, a document display system, and software for quick printing under Windows (if you must have paper). The KIPP Developer's Toolkit, available for DOS, Windows, OS/2, and Unix, lets you create applications that tie into Kofax software and hardware. KIPP is supported by a number of image management systems, including Keyfile, Imara, Imagic, and FilePower. Prices for the scanning/printing board start at \$2400; display boards start at \$1000.

### MARS

Micro Dynamics' MARS (Multiuser Archival and Retrieval System) is a rarity: a heavy-duty document-imaging solution that's based on the Macintosh. Built on a client/server model, MARS converts scanned pages into image files and then stores them on optical devices.

The company also has a text search-and-retrieval program called FreeForm, which will hunt for words on every Mac on the network; Micro Dynamics claims that FreeForm will find every occurrence of a word within 500,000 pages of text in 5 seconds. An API called MARS Shuttle offers tools for customizing the system and integrating it with other applications. MARS sites include paper-laden companies such as Motorola, McDonnell Douglas Missile Systems, and the legal department of Ernst & Young. The single-

user setup, which includes a Mac Quadra, a printer, a scanner, and the software, is \$30,000. The network version starts at \$70,000.

### NCR DMS

This is very serious document management. NCR describes its DMS as "a general-purpose imaging system" geared toward businesses with a high volume of paper transactions (e.g., claims, applications, records, and orders). It provides data-entry, storage, search-and-retrieval, work-flow automation, and relational database functions. NCR recently added a module that recognizes handwritten numbers. DMS can use AT&T's Interspan frame-relay technology to allow access to images across a WAN; thus, NCR's office in Munich can view files on the server in the New York headquarters.

DMS runs on NCR's System 3000 multiprocessor computers. Prices start at about \$800,000 for a setup that includes a server, 20 workstations, scanners, optical storage devices, and laser printers.

### Team Document Library

Aimed at departments that need to share a collection of compound documents, DEC's Team Document Library can be accessed by users of Windows-based PCs and Macs across a DEC Pathworks LAN. The system is based on Information Dimensions' BASISplus, powerful search-and-retrieval software built on a relational database. The system offers check-in/check-out control and a good set of search tools. Documents can come in from almost any source. Users can work with their regular word processor and other applications.

The system runs on a MicroVAX 3100; client machines need to be at least 386s or Mac IIs. Prices for the Windows version start at \$59,950 for 20 users. Prices for the Mac version were not set at press time. The latest piece in DEC's Document Factory offerings, Team Document Library reflects the company's strides in integrating heterogeneous systems over a network.

---

*D. Barker is a BYTE Lab editor specializing in software applications. You can reach him on BIX as "dbarker."*

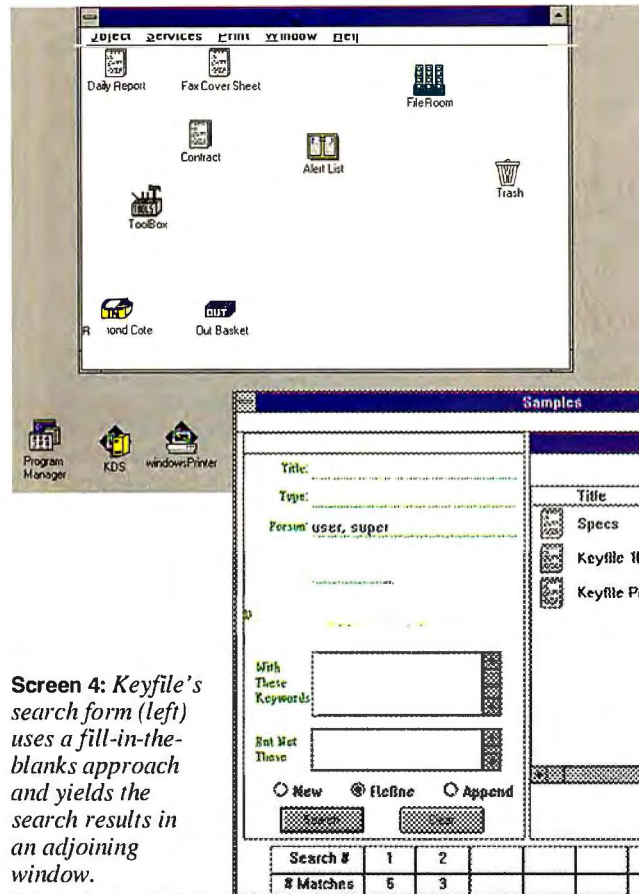

graphic to a text file. If you call up a document associated with an image, the program lets you know the image file is out there and tells you where it is.

Overall, the performance of SoftSolu-

tions for DOS is good, and it's flexible enough to fit many businesses, but the user interface is far from intuitive. A Windows version is about to be released, but basically it just replaces the character-based

menus and forms with Windows-style versions. SoftSolutions for DOS's underlying engine is excellent; what the program needs is an intuitive interface more like that of Keyfile.

**Screen 3:** *The main Keyfile window presents you with a drag-and-drop environment.*

**Screen 4:** *Keyfile's search form (left) uses a fill-in-the-blanks approach and yields the search results in an adjoining window.*

## Keyfile 1.0a

**A** client/server application based on Windows, Keyfile can handle images and text. The program recognizes three page types: ASCII, TIFF, and "container pages." Container pages consist of data generated with another application (Word for Windows, for example). The data is kept on the Keyfile document server; when a user wants to view or edit that data, it's passed back to the application used to create it. The program lets you mail, store, and archive any type of file. The system architecture permits file viewers to be added, and the company says that it is working on new viewers for the most popular program formats.

At its simplest, the Keyfile environment consists of a single document server connected to multiple network clients. Although you can run a client and a server on the same computer, the server software is

usually placed on a dedicated machine. In our test setup, we ran Keyfile on a pair of Dell 486D/25 machines using NetBIOS to communicate over NetWare. Our NetWare server was a Compaq Systempro. The program requires a Windows-capable PC with at least 3 MB of RAM; the server has to be a Windows or OS/2 machine with at least 4 MB of RAM.

You provide system services, such as printing, scanning, and OCR (optical character recognition), by adding specialized servers. The servers can reside on the central server machine, or you can install them on individual computers. The company recommends that you place compute-intensive services, such as the Calera OCR engine, on dedicated computers to ensure the most rapid throughput. However, if cost is an overriding consideration, you can place as many servers as you need on a single computer; you just have to be prepared to accept slower performance.

The main Keyfile window (see screen 3) presents you with a drag-and-drop environment. For example, dragging a document icon from the upper left corner of the screen onto the Out Basket icon automatically brings up the outgoing mail form. (A container page cannot be printed or faxed by dropping the document icon on the print or fax icon.) Likewise, dragging a document onto the File Room icon files the document away for future reference. The Application tool lets you place icons in your work area that you can then click on to launch DOS and Windows programs (or you can drag a document onto an icon to launch an application).

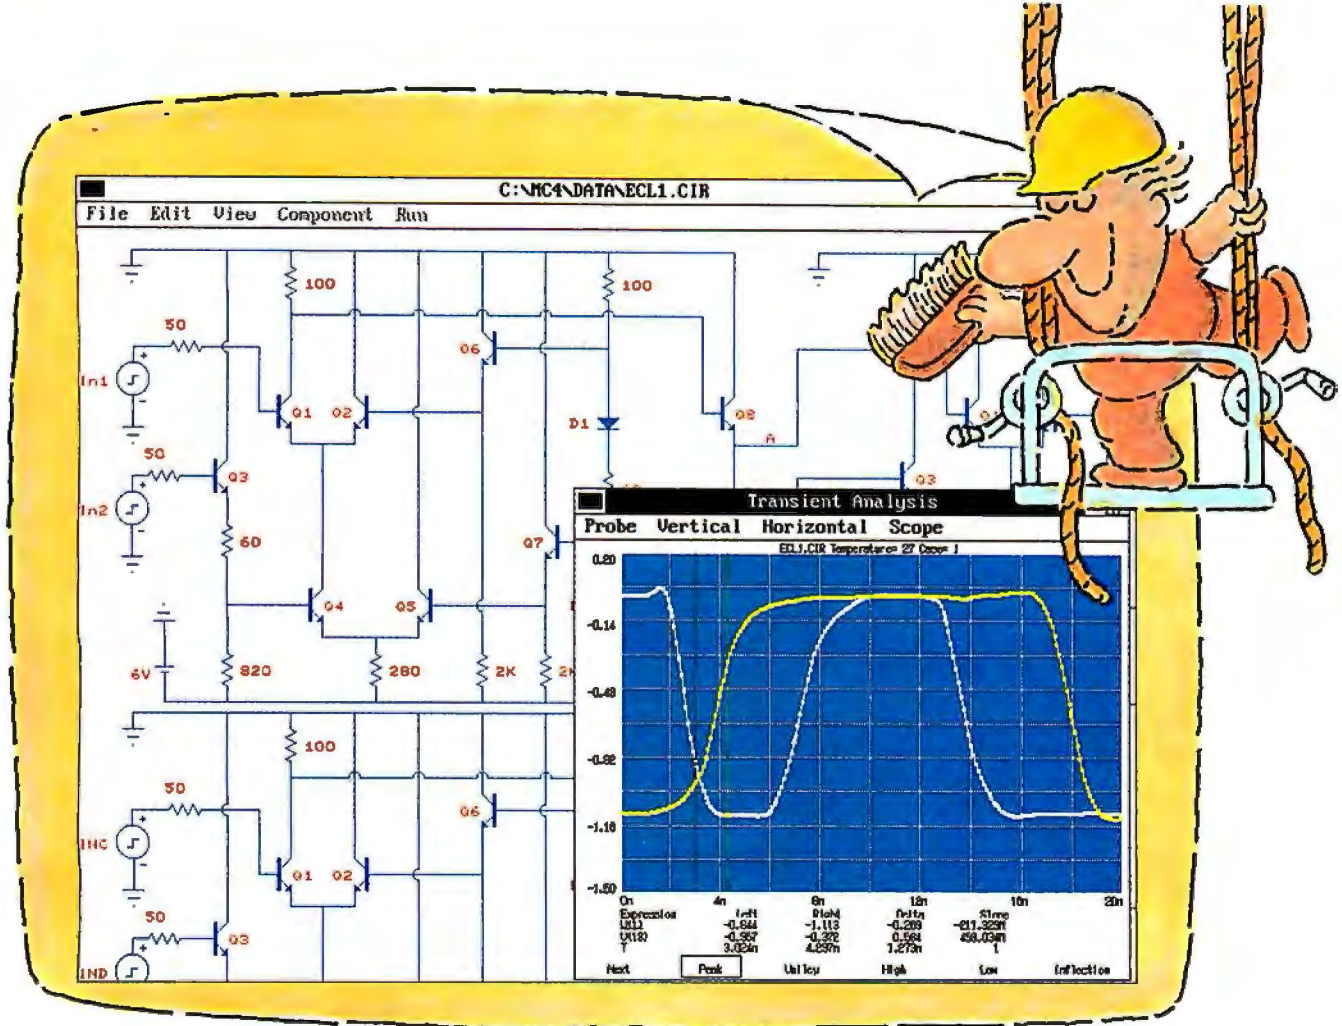

Original documents can come from many sources. They can be imported from existing files, scanned through an integrated scanner server, or received via a fax server.

Once a document is added to Keyfile, you can annotate it with text, graphics, and dictation (using a card like Creative Labs' Sound Blaster). Each annotation, which appears as an icon, is tagged with the name of the user who created it. Annotations can be hidden and viewed on a user-by-user basis. OCR data extracted from the image also appears as an annotated icon.

A Keyfile document has an associated profile that contains the title, creator, creation date, file type, and description. The profile also contains two sets of keywords. You enter one set of keywords when profiling the document. Keyfile extracts the other set from the text of the document (if it is ASCII text) or from the attached OCR data. Keyfile does not let the administrator predefine a set of words for the document type, description, and keyword list, so users can enter any information they choose in these fields. Unfortunately, this opens the way for the entry of misspelled or unique words.

Document retrieval is simple: Keyfile presents a simple search form, as shown in screen 4; you fill in the form with the appropriate information and press the search button. You can refine the results further through additional searches. You can also undo the result of your last search operation if you find that the results are too limited. A Browse option lets you scan through the document profiles sorted by title, type, creator, or date. Within the search window, you can see a list of any

# INTRODUCING MICRO-CAP IV.<sup>TM</sup> MORE SPICE. MORE SPEED. MORE CIRCUIT.

PC-based circuit analysis just became faster. More powerful. And a lot easier. Because MICRO-CAP IV is here. And it continues a 12-year tradition of setting CAE price/performance standards.

Put our 386/486 MICRO-CAP IV to work, and you'll quickly streamline circuit creation, simulation and edit-simulate cycles — on circuits as large as 10,000 nodes. In fact, even our 286 version delivers a quantum leap upward in speed. Because, for one thing, MICRO-CAP IV ends SPICE-file-related slowdowns; it reads, writes and analyzes SPICE text files and MC4 schematic files. It also features fully integrated schematic and text editors. Plus an interactive graphical interface — windows, pull-down menus, mouse support, on-line HELP and documentation — that boosts speed even higher.

Now sample MICRO-CAP IV power. It comes, for example,

AC Analysis

from SPICE 2G.6 models plus extensions. Comprehensive analog behavioral modeling capabilities. A massive model library. Instant feedback plotting from real-time waveform displays. Direct schematic waveform probing. Support for both Super and Extended VGA.

And the best is still less. At \$2495, MICRO-CAP outperforms comparable PC-based analog simulators — even those \$5000+ packages — with power to spare. Further, it's available for Macintosh as well as for IBM PCs. Write or call for a brochure and demo disk. And experience firsthand added SPICE and higher speed — on larger circuits.

**Spectrum**

1021 S. Wolfe Road  
Sunnyvale, CA 94086  
(408) 738-4387 FAX (408) 738-4702

keywords you've entered. After you select any of these keywords, Keyfile puts them into the search window and runs the search.

You can have any number of filing areas active in your Keyfile work area. You can select a single file cabinet or all file cabinets to search through. If you wanted to "find everything we've ever done with the Bilbo Baggins Travel Agency," you would go into the File Room menu and tell the program to search through all the cabinets.

The isolated computer is becoming a rarity in today's office. Most likely, your computer and your work need to be coordinated with many other people. Keyfile provides several basic communications options. Documents can be sent and received via fax, internal Keyfile mail, standard Windows E-mail servers, MHS Communication Server, and even printed and shipped via the U.S. Postal Service.

Of course, it is easy to lose track of documents as they move around and are shipped from person to person. The Job-

Maker tool can help keep track of the progress of documents by creating workflow Jobs. Each Job consists of a series of steps detailing who should be sent a specific document or set of documents. Jobs can automatically distribute documents to mailing lists and then wait for responses. If responses are not received within a defined period of days, you receive a notice that the step is not completed. In fact, Jobs can notify everyone involved in a project that the step was not completed.

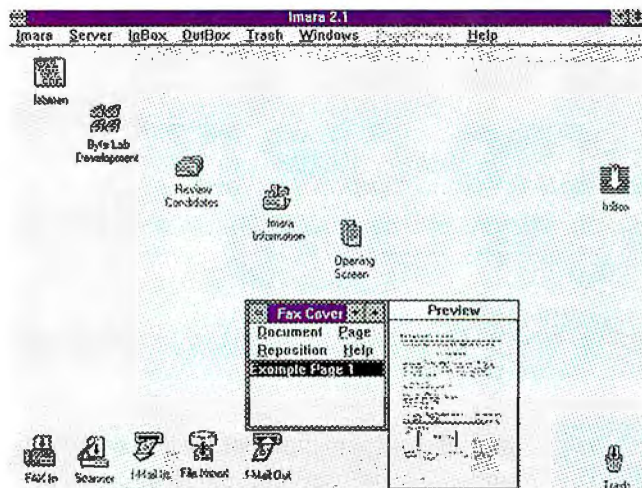

Keyfile is best at tracking and filing static documents, not documents that frequently change. Keyfile does not automatically maintain different versions of a file. If files change, you must keep different versions as distinct documents. Keyfile is, however, prepared to manage large amounts of data. It supports several popular jukeboxes, as well as single-sided WORM drives.

One important aspect of Keyfile is the Koala (Keyfile Open Access Layer) interface. Koala is a scripting language that

you can use locally from the Keyfile environment or externally through DDE. Although the ability to construct scripts is important, the ability to control and be controlled by other applications is central to Keyfile.

Keyfile is sold only through independent resellers, who typically use it to build customized file management systems. Although many customized environments are constructed totally within Keyfile, the ability to rapidly construct a Visual Basic front end to the Keyfile engine lets vendors quickly design and deliver customized vertical applications.

Keyfile is still a young product in need of maturity, but its user interface is simply the best of any document management package we've seen. We like its style of electronic office, with its use of folders, cabinets, and other intuitive elements. The program needs support for more document types and better searching tools to compete with strong search-and-file engines like SoftSolutions for DOS and PC DOCS.

**Screen 5:** *Imara's desktop depicts documents and activities as icons. The icons along the bottom of the screen represent methods for adding and transmitting documents to and from the system. In the foreground is a preview of a page to be used as a fax cover sheet.*

## Imara 2.1

Imara from Imara Research is a client/server application based on a SQL (Structured Query Language) database. The client versions we evaluated ran on OS/2 Presentation Manager and Windows 3.1. The Imara environment consists of a SQL Server that maintains document-tracking information. The actual documents are not stored in the Imara system but are kept on network drives accessible to users through remote log-in. Index information is stored in the SQL database. In our test setup, we placed the Imara SQL Server and document-storage directories on an AcerFrame 3000MP; the Windows 3.1 client was on a Dell 486D/25. The

Windows and OS/2 PM interfaces are similar.

To use Imara, you need an OS/2-compatible network, a SQL database server (Microsoft SQL Server, IBM Database Manager, or Oracle Server), and Windows workstations (386s or 486s) with at least 6 MB of RAM (8 MB on the server). You also need a scanner and probably some optical storage.

Screen 5 shows a typical Imara desktop. The icons along the bottom of the screen represent the various methods through which documents can be added to and transmitted from the system: fax, optical scanner, Imara E-mail, printer, and file import and export. The trash can holds documents for discarding that haven't yet

been wiped from the system. (You can hide all these icons from view when you're not using them.) The desktop presents a drag-and-drop interface. You can move documents, in Mac style, by dragging them from folder to folder. You mail or discard documents by dragging them to the appropriate icon.

This drag-and-drop ability, while useful, is problematic. Contrary to what you expect with this sort of interface, you cannot drag and drop documents that are displayed as icons on the desktop. In our opinion, this is a serious bug. Since you see a nice interface with icons and the documentation states that you can drop documents on icons to mail or print them, you simply assume that this process is possible from the desktop. You can drag a document to the fax icon, but once a document is left on the desktop as an icon, you can't. The first time we encountered this problem, we spent half an hour trying to determine what we had broken. It took a call to Imara's technical-support group to learn that we hadn't broken anything.

Imara arranges documents into a rather rigid hierarchical structure. At the highest level are servers. Each server may contain multiple sets. Sets contain categories, which in turn hold folders. Documents are stored in folders. This hierarchy cannot be circumvented. You must place documents in folders; you cannot store them directly in a category. This means that you must dig down through four layers before finding documents. Although you can prevent

the intermediate levels from displaying on your desktop, switching from one folder to another requires a lot of activity. Imara does provide a shortcut. Selecting Document Finder from the menu lets you search through all the folders.

The documents that Imara handles best are faxes and scanned pages. Although it can manage and view TIFF images, Imara defaults to storing image documents in CCITT Group 3 or 4 fax compressed formats. The default scanner driver for the HP ScanJet or ScanJet Plus produces CCITT formats. Imara also lets you store and view ASCII files and faxes. (The company says version 2.2, not ready in time for this review, will let you fax text documents.) Currently, the program supports only the GammaLink GammaFax fax board. Release 2.1 allows you to launch applications that let you view and manipulate document types that Imara cannot directly view.

Importing previously created documents is time-consuming. You start by selecting the New Document option in the File Import tool. Then you open the document, create a new page (either text or image), select the file you want to import into this page, and close the page. You then add access and profile information to the file through two more dialog boxes. If you want to import large numbers of documents, you have to use Imara's script-like language, called IXL.

Because Imara is based on a rather serious, industrial-strength database, you would expect its searching capabilities to be pretty sophisticated. Surprisingly, they are rather mundane. Searches, called *queries* in Imara, are performed at two levels: query by keyword and query by form.

A query by keyword compiles a list of documents matching keywords, action dates, and document priorities. You enter all these profile values manually when you create a document. A Quick Keyword feature lets you select keyword phrases from a pick list. This helps to ensure that you enter keywords consistently. The scope of the keyword search is determined by the level at which you start the query. Starting a query from a folder searches only the files in that folder. Starting a query from a set searches all documents in all folders in all categories contained in that set.

Associated with each Imara folder is a form, which the user or the administrator defines, that describes the type of document located in the folder. A query by form searches all the information associated with each folder in a category and returns a list of folders that match the search criteria.

Imara's solution to document archiving

is to let users move files to optical storage devices and take them off-line. You can move categories, folders, and documents to archive sets.

Work-flow and workgroup options are also lacking. Although Imara contains integrated fax and mail services, it cannot track documents sent to groups, determine if tasks are completed, or alert you when task completions are overdue.

Imara has many little quirks to trip the unwary user. Some of them (e.g., the in-

ability to drag icons and drop them on destinations, which even surprised some Imara personnel) are major problems. Others are minor annoyances. For example, the Windows menus do not stay activated when you click on them with the mouse; instead, they act like Macintosh menu bars and disappear when you release the mouse button. This feels wrong even if you are a frequent Mac user, because you are expecting normal Windows behavior.

The program's dependence on SQL

## New Low Cost Multimedia Product Family

Add multimedia to your PC

Run under MS Windows 3.0,  
HP NewWave, or MS DOS

Powerful new silicon offers  
unbeatable functionality at super,  
low prices

### Super VideoWindows – \$895

Display full motion video in a window on VGA monitor. Scale, crop, freeze. Image capture, save and restore. Sound control. Accepts VGA input for graphics/text overlay. Required software sold separately.

### Super VGA Daughter – \$395

Industry standard VGA (Headland's Video 7) attaches to Super VideoWindows for compact 1-slot solution of graphics/text overlay. IMB buffer.

### Super TV Tuner – \$395

Computer selectable antenna or 122 channel cable TV input. Combine with Super VideoWindows to watch TV on PC.

### Super Still-Frame Compression – \$995

JPEG compression up to 75:1 of color or grayscale images. Takes only seconds. All TGA file formats—TARGA 16, 24, and 32.

VISA, M/C, and AMEX accepted.

Server means that response times are slow. We ran Imara on some fairly powerful systems and still spent a lot of time waiting for responses to button pushes and menu selections. Imara's worst problem is that the interface looks as if it should be intuitive. You start work on problems with certain expectations but often receive surprises. Imara is a good concept that needs some polishing.

## Final Sort

All the products we reviewed here have impressive features. They also have weaknesses. If we could put together our dream DMS, it would combine the excellent interface of Keyfile with the sophisticated indexing and searching technology of SoftSolutions for DOS. Unfortunately, it is not yet possible to purchase that product in one box.

If you want a DMS primarily for handling image files—either drawings creat-

ed with a PC or pieces of paper turned into digital images—Keyfile is a good solution. Its interface is creative and consistent, and it takes advantage of a graphical environment; it's convenient to be able to drag a document onto an icon and have the system fax that file for you. Also, the work-flow system is impressive and intuitive.

If you want a DMS primarily for handling vast amounts of text files, PC DOCS is a good solution. It doesn't have the extensive searching tools of SoftSolutions for DOS, which is more flexible and far-reaching, but its interface is more consistent, and it's generally easier to set up and use. PC DOCS is tied to Btrieve as a database, but in smaller work settings, that shouldn't be a limitation. Bigger companies, with greater database demands and the need to search across a WAN, might eventually be stifled by PC DOCS. They should have a look at SoftSolutions for

DOS but also check out one of the Unix-based systems, such as Information Dimensions' BASISplus, BRS Software Products' BRS/Search, or DEC's new Team Document Library.

DMS software is such a complex subject that no review can guide you unerringly to the system that's right for you. We have simply tried to give you some criteria to go on when evaluating a DMS and considering a possible purchase. ■

# When storms hit the Gulf, Texaco keeps the gas pumping...

## ... thanks to QNX®

Severe storms used to put a real damper on offshore operations, especially when personnel had to be evacuated from production platforms. And without operators, the platforms just sat idle until the skies cleared.

The bottom line is that shutting down production can cost \$1.5 million per day.

But that was before STORMAC (System for Texaco Offshore Remote Monitoring And Control).

With this SCADA system, operators can now monitor and control offshore devices in real time from the safety of a land-based control center.

Texaco now maintains offshore gas production 24 hours a day, whatever the weather.

The QNX Operating System plays a key role in the STORMAC success story.

Since QNX delivers *real* realtime performance, PC SCADA packages like BJ Software's RealFlex™ can compete with costly high-end hardware systems.

From its unique modular architecture to its transparent fault-tolerant network, QNX gives system designers a host of high-performance advantages. And as a POSIX-compliant OS, QNX follows *the* standard in system portability.

SCADA. Robotics. OLTP. POS. With an installed base of nearly 200,000 systems worldwide, QNX is the OS of choice for mission-critical applications.

To find out how QNX can help you develop responsive realtime solutions, call 1-800-363-9001 (ext. 101).

With RealFlex™, the QNX-based SCADA package by BJ Software Systems (a division of Baker CAC), operators can monitor and control remote well head devices throughout the Gulf of Mexico.

Introducing AST's New Power Premium® Family. With Microsoft® Windows™ performance 4½ times faster than Dell®, 3½ times faster than Compaq®, and 2 times faster than IBM® and NEC® AST's new Power Premium computers have put this familiar Windows icon on the endangered species list.

Windows Performance Benchmark	
AST Power Premium 4/33	6.678
3.257	NEC PowerMate® 486/33i (Local Bus)
2.865	IBM PS/2® Model 95 XP 486 8595-0KD (XGA)
1.830	Compaq Deskpro® 486/33M
1.438	Dell PowerLine® 433DE

Based on Graphics WINMARK™ results of testing performed on 33 MHz 486DX systems in 640x480 resolution with 256 colors using PC Magazine Labs Windows Benchmark software version 2.50.

From the creators of the world's first fully upgradable systems, comes a new generation of state-of-the-art desktop computers featuring:

**Premium VGA Graphics.** Unequalled speed is just the beginning.

Our innovative subsystem supports enhanced video resolution modes of up to 1280 x 1024 and can display over 32,000 colors simultaneously.

**Cupid-32™ Upgradability.** AST's award-winning Cupid-32 technology is still the industry's best, most complete upgrade solution.

**Extended Industry Standard Architecture (EISA).** Take full advantage of today's EISA I/O cards while protecting your investment in existing ISA hardware.

**AST FlashBIOS.** Our simplified, software-based upgrade makes updating your Power Premium's BIOS quick and easy without chip replacement.

**High-Performance Processors With Cache.** Built into each Power Premium is a powerful Intel486™ or Intel386™ processor and an ample supply of fast-access cache memory.

To receive your FREE video, "AST's Power Premium: Innovation Reinvented," call 1-800-876-4AST.

# Obsolete Icon.

# Workhorse Computers

**The BYTE Lab puts 18 low-cost 386SX systems to the test**

**RICK GREHAN AND  
STAN WSZOLA**

**O**ver the past year, the 386SX has earned recognition as the workhorse of microprocessors, usurping the title formerly held by the now virtually abandoned 286. There are plenty of reasons for the increased popularity of the 386SX. It can run any software that a 386DX or 486DX can handle, albeit a little more slowly. All existing hardware that is compatible with the 386DX works with the 386SX. And, of course, 386SX systems generally cost a few

hundred dollars less than comparably equipped DX machines.

In fact, attractively priced 386SX machines are everywhere, which makes it hard to know which way to turn when scouting out systems. To make your job easier, we've done a little of the legwork, reviewing an assortment of models from companies who advertise machines costing less than \$2000. Many of the makers are mail-order companies, but a number of manufacturers who typically sell through resellers or dealers also are represented. Our list, while by no means exhaustive, is extensive and is a representative sample of the field.

In all, we looked at 18 386SX computers: the AcerPower 386SX, the Acma 386SX/25, the Addtech Research SlimPro 386SX-25, AMAX Engineering's 386SX-25, Ariel Design's 386SX-25 Cache, Cardinal Technologies' PC10, Club American's Eagle 325SX, CompuAdd's 325SC, Dell Computer's System 325SX, Duracom Computer's Desksaver 386/25SX, Gateway 2000's 25MHz 386SX, JCC Systems' 386SX-25, NEC's PowerMate SX/25i, PC Brands' 386/SX-25, PolyWell Computers' Poly 386-25SX, Tandy's 2500 SX/25 HD, Tangent Computer's 325s, and the Wyse Technology Decision 386SX/25C.

In an attempt to provide a level playing field, we requested that each manufacturer supply a system with a 386SX running at 25 MHz, 4 MB of RAM, a 387SX math coprocessor chip, 80-MB hard disk drive, VGA adapter, VGA monitor, and a mouse. All of the review units met these specifications; some far exceeded them. As we opened up the machines, poured over spec sheets, and ran our battery of benchmarks, differences in both price and performance became apparent (see the features table, "25-MHz 386SX Desktop Computers," on page 226).

### The Inside Story

At the heart of every 386SX machine lies an 386SX processor; chances are that processor will carry the Intel or American Micro Devices label. As the features table reveals, Intel maintains the edge when it comes to the number of CPU chips sold.

## BYTE ACTION SUMMARY

### ■ WHAT 386SX SYSTEMS ARE

A 386SX processor retains all the capabilities of the original 386DX but employs a narrower 16-bit data path. The lower cost of SX chips makes it possible to provide low-end systems that still run 386-specific applications.

### ■ LIKES

For many mainstream applications, an SX system will do the job for less money.

### ■ DISLIKES

Systems based on a full-scale 386DX offer noticeably better performance and, in many cases, the price of SX systems is only \$200 to \$300 lower.

### ■ RECOMMENDATIONS

We recommend the PolyWell Poly 386-25SX and the Wyse Decision 386SX/25C. But you should seriously consider a 386DX if its price is right.

AMD has, however, become a strong contender, building its share to about 10 percent of the CPU market, in part by repeatedly bringing out faster-rated 386SX and 386DX chips ahead of Intel.

AMD took on Intel in mid-1991, introducing a 16-MHz 386SX chip to compete against Intel's 12-MHz processor. Intel countered by marketing 16- and 20-MHz 386SX chips, at which point AMD brought out its Am386SX/25 microprocessor. When Intel rolled out a 25-MHz 386SX chip, AMD upped the ante with

its Am386SX/33. At the same time, AMD has priced its chips aggressively, forcing Intel to lower its prices and undoubtedly prompting the company's high-profile "Intel Inside" marketing campaign.

But in terms of performance, functionality, and reliability, neither company appears to have an edge: We noticed no difference between the AMD and Intel chips. The only way to tell which chip is inside a computer is by taking off its cover.

When it comes to math coprocessors, however, brand name may make some difference. Fully 10 out of the 18 test computers used the Cyrix FasMath 83S87 coprocessor rather than Intel's 387SX coprocessor. Our performance tests did not indicate any glaring advantage to using the Cyrix instead of an Intel (or AMD) math chip. In fact, most systems equipped with a Cyrix chip turned in LINPACK and low-level floating-point results on a par with systems running Intel chips. We should point out, however, that both of the systems that ranked highest in the scientific/CAD benchmarks—where a math coprocessor is most likely to provide the best performance boost—had Cyrix coprocessors. Interestingly, the extra kick won't cost you extra. A recent scan through several mail-order ads revealed that you can get Cyrix chips for about \$20 less than Intel chips of equivalent speed.

## A Carry-Along Alternative

**T**he Addtech SlimPro 386SX-25 is significantly different from the other 386SX computers in this product report. While the rest of the machines are strictly desktop computers, the SlimPro is a transportable computer in the tradition of the Ergo Brick and the Flytech Carry1: a system for users who want to take their computers with them but can expect to find a full-size keyboard and monitor at their destination (see accompanying photo).

The monitor-less SlimPro measures 11.5 by 10.75 by 2.25 inches and weighs 8.1 pounds, making it small enough to fit into a standard briefcase. Our review model packed a 25-MHz 386SX CPU, a compact 81-key keyboard, and list price of \$425; with a 16-MHz 386SX processor, the SlimPro costs \$325. Standard features include 1 MB of RAM (expandable to 16 MB), a 1.44-MB floppy drive, a VGA card with 1 MB of video RAM and an IDE controller for connecting an internal 3 1/2-inch hard drive. As tested, with 4 MB of RAM and an 85-MB Western Digital hard disk, the system lists for \$1106.

The SlimPro is configured to use a standard VGA monitor and any keyboard that has a standard DIN connector. The unit has two 16-bit, three-quarter length expansion slots. A VGA adapter occupies one of the system's expansion slots, leaving only one empty slot. This setup doesn't offer you much room for expansion, but you can upgrade the video card in the future, thus extending the working life of the computer.

Although built to travel, the SlimPro will fit right in on your desk. Its beige case and small size—just large enough

*The Addtech SlimPro, a transportable computer similar to the Ergo Brick and the Flytech Carry1, lets you carry your computer from site to site and be able to plug in a full-size keyboard and monitor.*

to slip under a monitor—make it attractive enough for any office.

The SlimPro handled our benchmarks reasonably well, placing in the middle of the pack in almost all tests. It did not exhibit any outstanding characteristics, good or bad.

Like many low-cost computers, the system comes with a minimum of documentation. The user's manual is a slender 41-page booklet, and its instructions for setting up the unit using AMI's setup utilities is terse almost to the point of uselessness. Many of the setup options, for instance, are not explained at all.

The SlimPro is made for the person who needs a reasonably fast computer that can be transported easily. Its diminutive footprint and quiet operation make it very attractive.

### The Compatibility Question

Backing up these computers' CPU and math chips are a host of other chips. In the bad old days, you had to worry about the "PC compatibility" of such chips. When clones of the original IBM PC first began to appear, BYTE reviewers routinely tested a system for compatibility to ensure, for instance, that a clone system's motherboard and BIOS would function just like the original PC's. Today it's a given that if a computer can run the BYTE low-level and application benchmark programs, it is compatible.

Our review systems used a wide variety of motherboard chip sets: OPTI, Chips & Technologies, Micronics, VLSI, Texas Instruments, Western Digital, and AMD. The systems also employed a variety of BIOSes from Phoenix, NEC, AMI, and other companies. We encountered no compatibility problems.

One big difference did strike us, however: the quality of the documentation explaining how to set up the various CMOS and chip-set features. The well-known brands, such as Dell, Gateway, and NEC included extensive documentation that made it easy to set up the systems for our benchmark tests. The instructions for other brands, such as the Addtech, covered only the bare essentials of system setup. (See the text box "A Carry-Along Alternative" for a closer look at this machine.)

Our recommendation? If you are inexperienced in system setup, stick with the well-known brands or have your dealer set up and explain the system to you.

### Don't Forget the Memory

The other chips of paramount concern are memory chips. Now that so many users are running Windows, it is foolish to offer base configurations with less than 4 MB of RAM. Yet many manufacturers still market systems that come with only 1 or 2 MB of memory—apparently so that they can advertise artificially low system prices.

If you plan to run Windows on a 386SX, give your system the 4 MB of RAM it needs to run comfortably. Adding more memory will give it the necessary breathing room to work with high-end applications and should improve the performance of any system. With all these systems, boosting memory ought to prove relatively simple. All accept standard SIMMs in 1-, 2-, or 4-MB increments. Most can handle as much as 16 MB of RAM on their system boards, and the JCC Systems motherboard accepts as much as 32 MB.

### Driving a Hard Disk

For storing information more permanently, the hands-down choice in a hard drive interface is the IDE standard. The IDE design offers simplified controller design, and much of the electronics resides on the drives themselves. The IDE interface also pairs good performance with low-priced drives. Widely available, IDE drives showed up in all 18 of the review units, and in many of the units the IDE controller was integrated onto the motherboard and attached to the drive with a single ribbon cable.

The former standard hard drive capacity of at least 40 MB is woefully inadequate when confronted with software packages that demand 5 to 10 MB for just a minimum installation. Those requirements don't even take into account the files you might generate in day-to-day work. The minimum configuration today should be 80 MB; 100 MB is a better lower limit

for users who work with graphics images or multimedia. Although we requested systems with an 80-MB capacity, many of the manufacturers provided drives in the 100- to 125-MB range.

Access times ranged from 16 to 18 milliseconds; the drive's original manufacturers were more diverse: Maxtor, TEAC, Western Digital, Quantum, Seagate, and Conner showed up in the test systems. But hard drive makes and models are subject to change. Many computer manufacturers frequently switch drive models and brands if they can get a better price or if a drive they have been using no longer is available. Consequently, the drive specified in the features table may have changed by the time you order a system.

### Looking at Video

As with drive functions, many computer makers now are integrating video functions into the motherboard. This improves

## Is It a Mac?

When we pulled the Cardinal out of its box, we thought for an instant that we were uncrating a new Mac clone that had been improperly substituted for the 386SX we requested. We haven't seen a PC clone with an integrated monitor for quite some time.

In truth, someone walking rapidly past this machine might mistake the Cardinal for a Mac SE. The Cardinal is about an inch bigger all around, but a Mac-like paper-white display and a 3½-inch floppy located in the same place as on Mac Classics and SEs (see accompanying photo). Although monochrome, the display can handle 64 shades of gray and is VGA compatible. (An included utility program lets you set the display to emulate any number of other monitor types: PC monochrome and Hercules monochrome, for example.) If you don't like black-and-white screens, the standard VGA connector around back will happily accept your favorite color VGA monitor.

Loosen two thumbscrews in the back and the monitor section slides off. Though the monitor remains connected to the motherboard by an umbilical of wires, the cables have enough slack that you can lay the monitor on its back behind the main chassis and do whatever work needs doing on the motherboard. Inside are a frightfully sparse

*The Cardinal PC10, with its integrated monitor and compact design, looks more like a Mac than a PC. Unfortunately, its performance and price are not as attractive as its appearance.*

motherboard and two horizontal 16-bit short slots that can hold boards as large as 4.2 by 8.8 inches. It amazed us that just a brace of VLSI chips—along with the CPU, of course—could provide two serial ports, parallel port, PS/2 mouse port, floppy and hard disk interfaces, and the VGA interface.

Expanding the Cardinal should prove easy; the math coprocessor socket (our Cardinal came with an Intel 387SX) and SIMM connectors are accessible. The

system has room for only one 3½-inch floppy drive and one 3½-inch IDE hard drive, however. The system we tested contained an 80-MB hard drive; if your storage needs are more modest, a 40-MB version is available.

Our unit's operating system was Digital Research's DR DOS 6.0. Although we can't do a full review of DR DOS 6.0, we will say that all benchmarks ran without fail. We did have to modify some of the entries in our standard CONFIG.SYS file, but we made those changes easily with the help of the unit's documentation.

Unfortunately, the Cardinal's interesting look doesn't carry the day when performance is involved. On all our benchmarks, the Cardinal's scores were moderate to disappointing. Similarly, its price isn't cause for celebration; at \$1299 it is neither a leader nor a follower. In addition, a 12-inch monochrome monitor is simply inappropriate for dealing with color graphics of even moderate resolution; this is especially true if you're running lots of Windows applications.

If a stylish and space-saving design is what you're after, then perhaps the Cardinal deserves scrutiny. Otherwise, it's likely your computing needs would be better served by other systems.

# DELL INTRODUCES A CONCEPT SO IT BREAKS EVERY LAW IN

We've added services to help you get the most out of your computer.

If something can go wrong, it will. That's a law so fundamental, it's practically built into every brand of computers on earth. Fortunately, you've told us how to make it better. In millions of conversations with our customers, we discovered it's not just a great computer you want; it's how to get the most out of it.

So we made substantial additions to our entire line of acclaimed computers to help you get more out of them now, and in the future. We added services, specialists, and in the three areas where you most want assurances — compatibility, quick answers and fast service — we're adding something unheard of in computers: guarantees. And it's all available at Dell's new lower prices.

It should make everybody happy. Except maybe our competitors. And Murphy.

## INTRODUCING GUARANTEED COMPATIBILITY:

Dell® systems are designed and extensively tested to run all standard operating systems, application software, peripherals and network operating systems developed for ISA and EISA architecture systems. If you encounter a compatibility problem with your Dell Performance Series system anytime within three years after the original purchase,

we guarantee that Dell's engineers and technicians will work with you to identify the cause of the problem and recommend a solution. If the problem (other than software support for device drivers) can be solved by updating your system, we will provide you the change at no charge. Or, in the rare event we can't do that, you may return the system for a refund. You understand, of course, that we can't extend the guarantee to software or devices that were never intended to run on comparable ISA or EISA systems of the same vintage.<sup>1</sup>

We guarantee we'll work with you to ensure compatibility with future products.

<sup>1</sup>Refund value is based on the sum of years digits depreciation of the original purchase price over a three-year period, calculated monthly. Refund offer is valid for registered owners of Dell Performance Series systems purchased after July 1, 1992. Guarantee not applicable outside the U.S. and subject to change without notice. <sup>2</sup>This guarantee applies to registered owners of Dell Performance Series systems purchased after July 1, 1992, but only one award per system per day. Please understand that the guarantee does not apply to support calls missed for reasons clearly outside of our control, such as power outages and interruptions to telephone service, or outside the U.S. Subject to change without notice. <sup>3</sup>This guarantee applies to registered owners of Dell Performance Series systems purchased after July 1, 1992. Please understand that the guarantee does not apply to service calls missed for reasons clearly outside of our control, such as interruptions to telephone service and the closure of airports required for parts delivery, or outside the U.S. Subject to change without notice.

# REVOLUTIONARY, THE BOOK.

**INTRODUCING GUARANTEED RESPONSE:** When you call Dells technical support center with a problem during operating hours (6AM-12 Midnight CT daily)\*, you will talk to a technical specialist within 5 minutes. If you do not wish to hold for a technician, your call will be promptly returned by a technical specialist within one hour. In the rare event you don't reach a technician or a technician

## INTRODUCING GUARANTEED NEXT-BUSINESS-DAY SERVICE:

If there's a hardware failure with your Dell system while under a service contract purchased from Dell and you notify us before 5:00 PM CT, a technician, if needed, will arrive by the end of the next business day.<sup>A</sup> In the rare event the technician doesn't arrive, your situation will receive top priority, plus you will receive an additional month of service at no cost.<sup>3</sup> (By the way, the first year's service is included in the Dell system price.)

A technician will come by the end of the next business day.

And now, the final guarantee: a 30-day, no-questions-asked, money-back guarantee with each Dell computer.

doesn't call back within one hour, let us know and you will receive your choice of a check for \$25 or a credit of \$25 toward your next purchase.<sup>2</sup>

Now, the price of your system includes this toll-free phone support mentioned in the above guarantee for as long as you own your computer. We'll solve most reported problems over the phone, usually in 10 minutes or less.

We also have a toll-free Getting Started Helpline, 24 hour-a-day system information via our TechFax<sup>SM</sup> line and our own Dell Forum on CompuServe's Information Service.

We solve most problems over the phone within 10 minutes.

Our philosophy of putting your problems before our rules is why two-thirds of the FORTUNE 500<sup>®</sup> buy Dell systems. It's a philosophy that's made us an \$890 million company. And it's a philosophy we'll continue. We guarantee it.

video response time because data no longer must pass through the slower system bus. Unless the built-in adapter can be disabled, however, this approach forces you to accept the video adapter installed on the motherboard. That's a problem if you anticipate some day using higher screen resolutions than your original adapter allows. In that case, filling up an expansion slot with a video adapter doesn't seem like such a bad idea.

Whether you have integrated video or a separate adapter card, the type of chips used and the amount of VRAM (video RAM) provided are important. Among the test systems, Orchid and Diamond chip sets figured prominently. Only two systems, the NEC and Wyse, used the Tseng ET4000AX video chip set, which—like the Orchid and Diamond chip sets—performs well in video tests. We encountered no compatibility problems running DOS and Windows benchmark tests; however, some of the systems skimped on VRAM, supplying 256 or 512 KB, instead of a full 1 MB. You need 1 MB to display 256 simultaneous colors at 1024- by 768-pixel Super VGA resolution.

*The PC Brand CPU module makes upgrading microprocessors a snap. Inside the cartridge are the microprocessor, coprocessor, cache, and a few support chips. The 9- by 11-inch system board holds the BIOS and main memory, the IDE controller, floppy disk controller, SVGA display adapter, and one parallel and two serial ports.*

All the systems, with the exception of Addtech's SlimPro, came with their own noninterlaced monitors. Resolutions ranged from 640 by 480 pixels to

1280 by 1024 pixels, and vertical refresh rates ranged from 60 to 72 Hz (indicating the screens were redrawn completely 60 to 72 times per second). The best-looking monitor was the NEC PowerMate's optional NEC 4FG display. The most unusual video setup we encountered was the monitor integrated into the system box of Cardinal Technologies' PC10 (see the text box "Is It a Mac?" on page 217).

## The I/O Equation

Of course, like all computers these 386SX systems need connections to the outside world. Most of the computers come standard with two serial and one parallel port. The only exception, the NEC PowerMate, has a single serial port; a second serial port is optional.

The situation with mice proved a little more varied. We included a mouse in our base configuration because our tests involve extensive Windows benchmarking, but a few of the manufacturers' base models do not include one. The most prominent brand of mouse was Microsoft's. Only four of the systems

## UNIX Developers!

See Us At UNIXexpo (NY), Booth #1067

# The only dongle smart enough for any open systems application.

## Introducing MicroSentinelUX

It's simply the ultimate tool for providing developers more revenue generating options — and ensuring that you get paid for software that's used.

In fact, it is the most effective hardware key for open systems and UNIX applications. And it works on any hardware platform.

## A Hardware Key With Brains

The real magic of MicroSentinel is its onboard intelligent microprocessor. This makes the key smart enough to provide the ultimate in cross-platform flexibility and marketing value. Each key features an algorithm

and 32 bytes of non-volatile read/write memory. This allows the developer to customize the key for specific applications.

## Cross-Platform Flexibility

MicroSentinelUX is flexible enough to be used as a portable host-ID on Sun, DEC, Silicon Graphics, Apollo, HP, even PCs and more. The key attaches to any RS-232 port and the software is instructed to look for it. Its operation is transparent to the user. Developers use it to control distribution, meter usage, count concurrent users, and much more. And, it's easy and quick to integrate into your application.

## Try One Today.

Be smart. Order a low-cost evaluation package today from the UNIX specialists at world leader Rainbow Technologies.

**SENTINEL**  
Securing the future of software

Call for more information:  
**1-800-843-0413**

## Look what MicroSentinelUX can do for you.

- Make demos and leases more secure
- Controls distribution
- Provides alternative to host-ID security
- Allows portability
- Manages site licenses
- Protects unauthorized use or duplication
- Update/upgrade software remotely

Circle 63 on Inquiry Card.

provide mouse ports; all the others use a serial mouse, which takes up a serial port that you might someday need for another device.

NEC is alone in providing an interesting I/O feature on its PowerMate SX/25i. To keep up with changes in computer technology, NEC equips the PowerMate with an upgradable BIOS that is stored in a "flash ROM" chip. When you need to add new hardware or a peripheral not accommodated by your current BIOS, you can

obtain a BIOS update disk from a dealer or through NEC's BBS. The *NEC User's Guide* gives complete instructions on saving the old BIOS and copying the new BIOS into the flash ROM chips.

### CPU in a Box

Another innovation that shows up in two of these machines is a CPU upgrade path. Substituting a more powerful CPU usually means buying a new motherboard and installing it in the old case—clearly not a

job for an inexperienced user. The PC Brand 386/SX-25's CPU module makes this process as easy as sliding in a floppy disk. The microprocessor module is a 6-by 7 1/4-inch metal-encased cartridge just 5/8 of an inch thick. Inside the cartridge are a microprocessor, coprocessor, cache (8 to 32 KB), and a few support chips, a design identical to that used for some of Tandon's desktop computers. The 9-by 11-inch system board holds the BIOS and main memory and the I/O circuitry, including the IDE controller, floppy disk controller, Super VGA display adapter, and one parallel and two serial ports (see the photo on page 220).

PC Brand offers a complete series of microprocessor modules, including a 386SLC-50 for \$299; a 386/40 (with a 387 math coprocessor) for \$499; a 486/SX-25 for \$499; a 486/33 for \$799 and a 486/50 for \$1099.

As with many upgrades to existing hardware, this setup has a downside. Although you can increase the performance of the PC Brand, you get a smaller performance boost than you would if you purchased another computer designed around a faster processor. The upgraded motherboard still is configured to support the 386SX CPU, which has 16-bit data lines rather than the 32-bit lines provided by a 386DX or 486 chip.

### Ace in the Hole

The AcerPower 386SX has a different sort of CPU upgrade option. When we first unpacked the machine, we naively set it up, verified that we had the proper portions of the BIOS shadowed, loaded the benchmarks, and began running them. The results knocked us back like the wake of a passing speed boat, leading us to conjecture that Acer had perfected the 100-MHz 386SX or that something unusual was afoot. The latter proved true. The AcerPower 386SX is equipped with an "overdrive" CPU socket, a special socket on the motherboard that accepts Intel's clock-doubling CPU. Indeed, when we ran The Norton Utilities, they reported that the machine contained a 50-MHz 486 CPU.

The AcerPower's CPU upgrade socket is special, indeed. If you have an AcerPower with a 386SX currently installed, you simply take the top off the case and plug in the 486 chip. That's it; the system automatically detects the new chip and the proper BIOS kicks in at boot-up. This is possibly the most painless upgrade we've seen. And Acer had "painlessly" upgraded the machine before shipping it to us. Painfully, we downgraded the machine to its 386SX level but not without noting that the

### Professional Software and Hardware-Assisted Debuggers for 80386 & 80486 Systems

If you need a debugger but have no room left in the lower 640K of your 386™ or 486™ system, Periscope now has a new SOFTWARE-ONLY solution for you—Periscope/EM.

- Periscope/EM takes advantage of the extended memory you already have, rather than using any memory in the lower 640K.
- No runaway program can corrupt Periscope/EM because it's write-protected.
- You don't have to use a slot since there's no board to install.
- You can add an optional break-out switch to recover from crashes.
- Periscope/EM costs only \$295, half the cost of Periscope Model I, with most of the same functionality.

Periscope/EM requires 386MAX® or BlueMAX™, version 5.11 or later; a 386 or 486 system with about 300K of extended memory; 32K of memory between 640K and one megabyte; DOS 3.0 or later.

# New Debugging Tools

*"I needed a means to debug interrupt handlers where I could really see what was going on. The hardware trace buffer is great. I was able to debug code in 3 days that I have been trying to debug for months!"*

...writes Peg Seistrich with Prime Computer, on why she chose Periscope Model IV.

If you need more than your current software-based debugger gives you, Periscope Model IV, with these advanced NEW features, may be just what you're looking for:

- Supports 386 and 486 systems running up to 33MHz with its ICE-like capabilities.
- Real-time hardware trace buffer holds up to 16K CPU events.
- Enhanced analysis and display of trace buffer makes you more productive.
- Periscope/EM functionality, built-in at no extra cost, saves you money.

## IIT ADVANCED MATH CoPROCESSORS

MAKE YOUR  
PC FLY WITH  
NEW LOW  
FARES UNDER  
\$100.

Great news for 386, 386SX and 286 PC owners! We've just lowered our prices on all IIT Advanced Math CoProcessors. *Now, for under \$100, you can increase the speed and performance of most key business applications—* Spreadsheet, Graphics, CAD, Desktop Publishing, Database and other business productivity tools—by up to five times.

Get today's best value in a performance upgrade for your PC. Ask your dealer for an IIT Advanced Math CoProcessor.

### IIT ADVANTAGES ADD UP FAST!

- Guaranteed 100% compatibility with all 386, 386SX, and 286 systems and software
- Speeds up over 2,000 applications by up to five times
- Up to three times faster than Intel
- Lifetime warranty
- Installs instantly and easily
- Toll-free support line

For more information or the IIT dealer nearest you, call 1-800-832-0770 or 408-727-1885.

AcerPower with its 486 upgrade in place turned in results that were between two and seven times those of the other machines we tested.

The CPU upgrade lets you triple or quadruple the performance of the Acer when running CPU-intensive applications. This performance increase lists for a nominal \$175.

### A Controller of Note

Another noteworthy feature also turned up in the AcerPower: a hefty UltraStor controller, the kind of device you'd expect to find in a beefy network server. Capable of handling up to two IDE hard drives and three floppy disk drives (3½- or 5¼-inch models) and carrying up to 8 MB worth of disk cache, the Ultra 15C comes with utility software that leads you through a slew of configuration options. For example, if you turn on the controller's deferred writing capabilities, you also can set a cache threshold that triggers a physical write. Writing occurs when the cache is filled to this threshold. Though we tested the AcerPower with only DOS and Windows applications, UltraStor claims compatibility with SCO Unix, NetWare, and OS/2. This surprise package will even support controller duplexing and drive mirroring.

The Ultra 15C supplied with our AcerPower included a 2-MB cache. We disabled its deferred writing (which, if on, would certainly have significantly improved the AcerPower's file I/O and database results) and set its cache threshold to 84 percent. As our analysis of benchmark results shows, even with these restrictions the Ultra 15C provided the AcerPower with disk I/O figures anyone would be proud of.

### The BYTE Benchmarks

But disk I/O is just one of the benchmarks in the standard BYTE test suites we used to compare the performance of this group of 386SX machines. As usual, we ran each system through low- and medium-level tests that let us focus on the particulars of hardware performance and used application tests to provide a good snapshot of how these machines would behave when running real software (see the figure on page 232).

The applications tests cover two classes of software: DOS- and Windows-based packages. Since we were looking at 386SX machines and it was unlikely that anyone would choose to use a 386SX as a Unix workstation, we did not run BYTE's Unix test suite.

# Your upgrade

## Introducing Intel OverDrive™ Processors.

With built-in upgradability we promised you room for the future. Room for more power.

Well, the future has arrived. Presenting a revolutionary new

category of single-chip upgrades: Intel OverDrive Processors. The easiest, most cost-effective way to add even more power to your system—for Intel486™ SX PCs

i486™SX-20 System Performance: Microsoft Word for Windows\*

now, and soon for all 486 systems and beyond.

Just pop in a new OverDrive Processor and you'll improve overall i486 SX system

# just checked in.

performance by up to 70 percent. Added performance that will benefit over 50,000 compatible software applications.

And that goes for today's demanding Windows software, too.

**WE MAKE  
COMPUTERS  
WORK  
HARDER.**

Find out more. Ask for ext. 98  
**1-800-538-3373**

In fact, by adding an Intel OverDrive Processor, your 486 PC will even run multiple Windows applications faster.

To check in to the OverDrive Processor, see your local computer dealer now.

Or for a detailed brochure, call 1-800-538-3373, ext. 98. And hurry. The vacancies are filling fast.

**intel®**

Circle 66 on Inquiry Card.

Though our benchmarks are not specifically designed to measure compatibility, we often discover problems while simply loading and executing such a variety of applications—especially Windows programs. Happily, none of the systems we tested exhibited major problems.

Running so many systems through so many benchmarks creates a mind-numbing buzz of numbers. We distilled those numbers by grouping tests into five categories—word processing, spreadsheets, database, development, and scientific/CAD—and computing indexes for each category. The resulting collection of five indexes helped us to narrow our search for the top machines.

After examining the data, we were struck by how tightly the results were

clustered. This was true for both our DOS and Windows tests. Indeed, if you consider performance alone, you find neither outstanding winners nor outstanding losers on the tests.

Of course, occasional anomalies cropped up, but their significance became obvious when we explored the benchmark results on a single large spreadsheet. For example, the AcerPower turned in unusually good figures for low-level I/O and Windows database tests. The Acer's fine showing can be traced to its Ultra 15C caching drive controller from UltraStor.

Ultimately, we managed to select two performance winners: the Wyse Decision 386SX/25C and the PolyWell Poly 386-25SX. Keep in mind, however, that

our benchmark results reveal a close race. For example, the NEC PowerMate SX/25i showed up twice in the winner's circle—once for word processing and again for database performance. Also, our performance indexes reflect overall results; the anomalies mentioned earlier—outstanding performance on one or two tests—were smoothed out during the indexing process.

## Buying Decisions

As we evaluated these systems, a question hung in the air: How wise an investment is a 386SX system really? None of these systems is *bad*, but all the advantages we can find seem so *marginal*. What are the advantages? Price...maybe. Space? Let's consider these issues.

*continued*

## 386SXES FACE-OFF

### LOW-LEVEL DOS

### DOS APPLICATIONS

### WINDOWS APPLICATIONS

When it comes to performance, 386SX systems are closely grouped. Our two picks, the PolyWell Poly 386-25SX and the Wyse Decision 386SX/25C, placed well across the board. The NEC PowerMate SX/25i also performed well.

# LAUNCH YOUR HARD DRIVE!

*Promise  
Introduces  
the First  
Truly  
Affordable  
Caching Disk  
Controllers.*

## Prices Start at \$169.00

Order an IDE Caching Controller today and watch your system operate at light speed!

## Featuring

- .3ms Average Disk Access Speed.
- "Plug and Play" Operation.
- Easy to Follow Documentation.
  - Two Year Warranty.
- Guaranteed to Run with All Operating Systems & Applications Software.

*Our new ultra-low cost disk accelerators will finally end the data bottleneck that takes up so much of your valuable time and at a fraction of the cost of similar cache controllers. They install in minutes and require no special tools or expertise. Satisfaction guaranteed!*

“If you're tired of watching your hard drive slowly give up its data, Promise Technology may be able to put the spring back into your data handling... There are other caching IDE controllers available, but they don't share the flexibility and simplicity of the DC-2032. These two attributes will make it a sterling addition to your computer.”

*Bill O'Brien, PC Sources.*

“★★★★ An enormous improvement in performance was immediately obvious compared to the un-cached controller . . . Overall, this controller increased performance by a factor of around 8 times when using large database applications. At a more general level, the whole machine seemed faster and more responsive . . . At the new lower price, this is an extremely good value and extra features make this controller (DC-2031) a particularly attractive option. *Dave Pearman, PC+ (U.K.) March '92*”

**Circle 70 on Inquiry Card.**

With new 80x86 processors sprouting in Intel's fertile soil so frequently these days, it's difficult to tell what par is anymore, but 33-MHz 386DX machines are easily obtained at prices not far beyond what you'd pay for any of these 386SX machines. And it's obvious that a 33-MHz 386DX is going to run through tasks more quickly than a 25-MHz 386SX (our benchmarks indicate performance improvements of 200 percent to 500 percent when running a DX system).

Granted, you're not buying just a processor—you're buying a complete system, and that includes disk controllers and monitors and maybe tape drives and so on. A good caching disk controller loaded up with lots of memory can go a long way to making up for a sluggish processor.

You can even get Windows accelerator cards to put zing in graphics operations.

But with price differences of only \$200 to \$300 in favor of the 386SX, the only economic reasons for going the SX route are if you're really strapped for funds and you don't have the time to shop around. A good shopper can easily make up a \$300 difference. All those accelerator cards and caching controllers would be just as happy—*happier*, in fact—in a DX system.

Economics aside, someone might argue that the 386SX allows for space-conscious designs, and makes possible machines such as the Cardinal and the Addtech. But it's hard to imagine a space that could accommodate any kind of monitor worth spending time with but that can't fit a reasonably sized desktop computer. We've seen 486 systems as

small as or smaller than many of the 386SX systems we tested in this product report.

If, knowing the breed's limitations, you still decide to buy a 386SX system, we recommend you seek out the PolyWell Poly 386-25SX or the Wyse Decision 386SX/25C system. But your rationale must be a good one—strong enough to warrant choosing the less capable 386SX over a 386DX. Frankly, we'd be hard put to think of a single such reason. ■

*Rick Grehan is technical director of the BYTE Lab. He has a B.S. in physics and applied mathematics and an M.S. in mathematics/computer science. Stan Wszola is a BYTE Lab testing editor. You can reach them on BIX as "rick\_g" and "stan," respectively.*

# Compudyne™. Latest Technology. Highest

To Bruno & Heather goes the prize for the lowest wedding ever: in an ice cave, 15 ft. below ground, in Antarctica, at 15° below zero.

Compudyne is probably the fastest growing PC company in the history of the industry.

We are to notebooks what Griselda of Skyland was to Pomeranians; the lightest, at 1 lb., 12 oz.

Compudyne is the PC manufacturing and direct marketing arm of CompUSA™ — The Computer SuperStore (NASDAQ symbol; CUSA)—inventors of big volume, deep discounting PC retailing, and the largest chain of computer super stores in the country. Compudyne manufactures top quality, fully supported computers as available from only the largest PC manufacturers at prices typically found only

## The First of a New Generation:

- Only 5.5lbs. with battery
- Slim, trim 11"x 8.5"x 1.6" (yes, only 1.6" thick!)
- Full 10", 64 grayscale brilliant VGA screen
- Internal 3 1/2" 1.44 MB floppy drive
- Built-in trackball saves carrying a mouse
- Microsoft® Windows 3.1 installed ready to run
- Polaris PackRat 4.0™ Personal Information Manager™
- External SVGA monitor and keyboard support
- Toshiba-compatible external expansion bus
- User-installable FAX modem and other options
- Full keyboard—dedicated 'page up/down', 'home' and 'end' keys
- Built-in serial (2) and parallel (1) ports
- FCC Class B certification

## SYSTEM

# Eight Notebooks Keep a Tight Grip on Power

JIM CARLS

**N**otebook computers run on batteries. Well, mostly. But the slightest chance that built-in batteries will not outlast a cross-country trip or carry you through an important presentation means you need to travel armed with an AC power cord and extra batteries. The Holy Grail of notebook users is a portable machine that will last a whole trip entirely on its own resources—one that lets you leave the accessories at home.

New processors and advances in power management have moved us closer to this ultimate goal. In this article, I'll review eight notebooks based on Intel's 386SL and AMD's 386SXL processors. These machines take advantage of the sophisticated power management features offered by these processors, along with other recent advances in portable technology, to extend battery life. BYTE's latest battery-life test suite (see the text box "A New Thumper" on page 250) will be the main proving ground. But I'll also evaluate the portability and the "feel" of Compaq's LTE Lite/25, Dell's NL25, Epson's NB-SL/25, Insight's 386SXL-25, NCR's 3170, NEC's UltraLite SL/20, Sharp's PC-6781, and Zenith Data Systems' Z-Note 325L.

### Enabling Technology

Processors designed with power management in mind lead the list of new technologies driving improvements in battery life. Intel's 386SL provides System Management Mode, a software environment ideal for power management functions. The device also combines processor, cache controller, and bus controller into a single chip; a few other peripherals are included in Intel's companion 82369SL device. This high level of integration gives the system better control over its subsystems and reduces overall power requirements.

AMD offers its own 386-compatible, power management-aware processor called the 386SXL. This processor provides an interrupt line that manufacturers can incorporate into power-managed designs.

NiMH (nickel-metal-hydride) battery technology can increase notebook life by providing batteries with increased capacity per cubic inch. NiMH batteries provide 20 percent to 30 percent better capacity than more common nickel-cadmium batteries and are less subject to charge memory effects. They are more expensive (about twice as costly as nickel-cadmium batteries), but they give the manufacturer the option of shrinking the machine and maintaining duration of use.

### Standard Features

The feature list for these computers shows a great deal of standardization in notebook design (see the table). While this trend may be driven by user wish lists, it also reflects these machines' greater level of integration. Each system includes a 60- to 86-MB hard drive, a backlit LCD, and a 1.44-MB internal floppy drive (the NCR 3170's floppy drive is external). All come with at least 2 MB of RAM; for this review BYTE requested a minimum of 4 MB. All accept an optional modem or fax modem card, except the NCR 3170, which already has one.

Each machine includes a power management system that allows you to regulate how and when the machine uses power, with at least one factory-set configuration. At a minimum, you can control processor speed, backlighting, and hard drive activity through time-outs. Each machine also has at least one standby or idle mode, in which the power manager stops the clock on the processor and shuts down all sub-

systems except memory. Each machine can resume operations if a signal comes in through the serial or modem port. All these machines have a configuration program to customize power management, but only four (the NL25, the NB-SL/25, the UltraLite SL/20, and the Z-Note 325L) offer access to system configuration from within an application.

In the following sections, I'll evaluate each machine for battery life and perfor-

*Machines range in size from the bulky NEC UltraLite SL/20, which stands over 2 inches high, to the amazingly compact Sharp PC-6781, which crams a full system into less than 150 cubic inches.*

mance. You can find the benchmark graphs to back up these evaluations in the figure on page 249. I've also included subjective impressions on keyboard design and display usability, which often determine how pleasant (or uncomfortable) a notebook is to carry and use.

#### Compaq LTE Lite/25

The \$2799 LTE Lite/25, boosted by strong video scores, ran close to the top in the

BYTE application performance tests. It also performed very well on batteries, running second only to the Z-Note.

The LTE offers three preset levels of power management and one custom level. You cannot customize individual component controls from within a program, but you can step through the four predefined levels with a hot key. In addition to the zero-activity standby mode, the LTE offers an intermediate system-idle mode and

## BYTE ACTION SUMMARY

### ■ WHAT POWER-SAVING NOTEBOOKS ARE

Notebooks designed around Intel's 386SL and AMD's 386SXL to minimize power requirements and extend battery life.

### ■ LIKES

Long notebook life; integrated networking and communications; small and lightweight designs.

### ■ DISLIKES

Many poor keyboard layouts; some expensive price tags.

### ■ RECOMMENDATIONS

ZDS's Z-Note 325L is outstanding in most categories; Compaq's LTE Lite/25 and NCR's 3170 are more compact alternatives; and Dell's NL25 is comfortable and reasonably priced.

a hibernation mode, in which the system saves a RAM image to disk and shuts off. You can activate a small pop-up battery gauge from the keyboard that remains visible as you work.

The LTE's keyboard is a good trade-off between compactness and usability. All the most common keys are accessible without shifting, although the Home, End, PageUp, and PageDown keys are inconveniently located in the top row.

The screen on this machine is one of the best in the group, giving a very good range of contrast. The darkest "grays" look blue, which I found slightly distracting, but there was no arguing with the readability of the screen. It's a very solid piece of equipment.

#### Dell NL25

As one might expect from Dell, the \$2178 NL25 is a very good value for its price. It's a well-balanced machine, with many good features and no bad ones. Its battery life was shorter than some, but still respectable; its performance marks were usually just behind the best in the group and occasionally surpassed them. Dell provides a pop-up configuration screen for power management, making it easy to adjust settings while you work.

The NL25 takes first place in keyboard quality. Not only does it have a very good touch, but all the keys are in the most

# EIGHT NOTEBOOKS KEEP A TIGHT GRIP ON POWER

Price, size, and weight of these notebooks cover a broad range. Insight's and Dell's systems are the least expensive, selling for less than half the price of the full-featured NCR 3170. Sharp's PC-6781 is the smallest machine.

(● = yes; ○ = no.)

	Compaq LTE Lite/25	Dell NL25	Epson NB-SL/25	Insight 386SXL-25	NCR 3170	NEC UltraLite SL/20	Sharp PC-6781	ZDS Z-Note 325L

<sup>1</sup> Unless otherwise noted, as-tested price includes 4 MB of RAM, no modem, and features as listed in this table; base configurations vary.

<sup>2</sup> NCR 3170 configuration includes fax modem.

<sup>3</sup> NB-SL/25 configuration included 6 MB of RAM.

<sup>4</sup> All units include a VGA-compatible LCD and an external VGA port. STN = supertwist nematic; TSTN = triple-supertwist nematic.

<sup>5</sup> In addition to the ports listed, each unit includes one parallel and one serial port.

M = mouse; K = keyboard; N = numeric keypad; E = expansion unit; D = external floppy drive; P = extra parallel port; B = external battery. Entries separated by a slash indicate a multipurpose port.

usable arrangement possible on a compact keyboard. The Insert, Delete, and all cursor-movement keys are placed individually around the lower right corner where they are easy to access. The function keys at the top of the keyboard are not quite full-size, but they're still big enough to use effectively.

Although the screen is not quite as bright as the best of the others, it has good cursor visibility. The NL25 is well designed, and I can recommend it for those who plan to write and edit a lot of text.

## Epson NB-SL/25

For its \$3298 list price, the NB-SL/25 gives you several good features, balanced by some unfortunate ones. For travelers, Epson provides a renewable "road service" guarantee, which will quickly replace all or part of a downed system at no charge. In computing speed, the NB-SL/25 held its own against the other top performers.

The NB-SL/25 comes with two batteries, between which the unit will switch automatically. You can change the battery

not being used while the system is running. Despite the dual batteries, lifetime was below average.

This unit has a well-thought-out keyboard that minimizes the finger-twisting sometimes needed to access cursor-control keys on other units, but the murky screen lagged behind those of the rest of this group.

## Insight 386SXL-25

Insight's machine lists at \$1899 (including an 86-MB hard drive and a mouse), making it a very good deal despite performance that didn't quite keep pace. This is the only machine in the group that uses AMD's 386SXL chip; the 386SXL-25 held up very well on BYTE's battery-life tests. A command-line utility controls power management, offering fairly basic control over management settings.

The keyboard has a slightly soft feel to it that some might not enjoy, but it reduced fatigue when I was typing flat-out. The 386SXL-25 has a good screen—almost as good as the Z-Note's.

## NCR 3170

The 3170 (which until recently was called the Safari SSL/25) is the second-smallest and most expensive machine in the test group. The \$5748 notebook is also the only machine with a built-in fax modem and an outboard drive, and one of only two with a PCMCIA slot. The LCD screen is extremely readable, and the 3170's designers have paid special attention to mouse pointer visibility. The keyboard is good, albeit a bit stiff, and it suffers from the location of the Home, End, PageUp, and PageDown keys at the top.

The 3170 offers a configuration screen that includes power management settings. Besides the standard set of time-outs, you can disable power for unused ports or slots, and you can lock the CPU speed for processing-intensive software. At just over 3 hours on BYTE's tests, battery life was reasonable, but the 3170 trailed most of the other systems.

For basic cursor and mouse control, the 3170 offers the FingerPoint Mouse, which consists of what might be called a "joy-

## EIGHT NOTEBOOKS KEEP A TIGHT GRIP ON POWER

### BYTE NOTEBOOK BENCHMARKS

All results are indexed, and higher numbers indicate better performance. For each index in the DOS and Windows tests, a Toshiba T2200SX running DOS 5.0 and Windows 3.0 = 1.

The BYTE low-level benchmark suite identifies relative performance at the hardware level, breaking down performance by system component. The results of these tests can help you identify the relative performance of a given subsystem and determine where performance bottlenecks may lie. For a complete description of these tests, see "BYTE's New Benchmarks: New Looks, New Numbers," August 1990 BYTE. The BYTE low-level benchmarks, version 2.2, are available in the byte.bmarks conference on BIX, or you can contact BYTE directly.

BYTE's application performance suite measures the performance you can expect to see running a given application category under a given operating environment. We test under two environments: DOS 5.0 and Windows 3.0. We test three application categories for each environment, running test scripts using the following programs: Word Processing: WordPerfect 5.1 and Lotus Ami Pro 2.0; Spreadsheet: Lotus 1-2-3 release 2.3 and Microsoft Excel 3.0a; and Database: Software Publishing Superbase 4 version 1.3 and Borland dBase IV. The data files and test scripts are available from BYTE.

*Battery-life tests illustrate the Z-Note 325L's and the LTE Lite/25's edge in power conservation; the two machines ran longest through BYTE's "typical use" suite. Although easily portable, the Sharp PC-6781 turned in a poor running time. The LTE and the Z-Note, along with the NCR 3170, are also the fastest notebooks in this class.*

button" flanked by two other buttons used as left and right mouse buttons. With its dual speeds, the FingerPoint Mouse is a fairly effective pointing device, but NCR wisely notes that it is not meant to replace a real mouse or trackball.

The real value of the 3170 lies in its plug-and-play approach. It comes out of the carton loaded with Windows, AT&T Mail Access Plus, and BitFax 2.0, which works with the included cellular-ready 2400-/9600-bps fax modem. I typed a very quick message into Windows Write and was immediately able to fax it to a friend

just by plugging in the phone line and selecting the fax as the current printer.

#### NEC UltraLite SL/20

This machine is one of the two 20-MHz machines included in this group. At \$3268, it falls in the middle of the price range. The UltraLite proved an excellent battery performer—third in this group.

The UltraLite's CPU goes into an idle mode as soon as system activity stops. You configure power management features through a pop-up utility.

The UltraLite has a crisp screen framed

# A New Thumper

HOWARD EGLOWSTEIN

**L**ast December, the BYTE Lab introduced Thumper 2, our automated notebook battery tester (see "Testing Battery Life," December 1991 BYTE, page 252). The photo in the December issue was of the prototype—the real one was still on the drawing board. The new Thumper 2 makes testing a large group of notebooks much easier. It uses the same arm mechanism as the prototype, but it has 16 arms instead of three, and eight optical sensor heads instead of one. Depending on how many actuator arms a notebook needs, we can now test up to eight notebooks at a time.

Our battery-life tests approximate real-life notebook use by alternately using (i.e., typing on the keyboard) and not using (i.e., allowing power-saving features to kick in) each machine under test. We use Thumper 2 to press keys during the usage periods, to monitor

LCD screens to check for signs of life, and to press reset key combinations when we need to wake the machine from standby mode.

All the testing takes place without requiring action on the part of the machine under test, except for short bursts of serial-port communication. Thus, all the battery-saving features, including screen dimming, hard drive shutdown, and CPU standby, have a chance to contribute to extended life. Thumper 2

allows us to run a group of DOS, Mac, or Unix notebooks simultaneously, using a PC or a Mac host.

Some manufacturers insist on placing the power/standby switches in inaccessible places. That's no problem for Thumper 2—the arm can reach just about any spot on the computer case. Removable tips allow for swapping the standard "fingers" for smaller, palm-top-compatible versions.

Thumper 2's controller is updated as well. This criterion has a 6809 microprocessor, an LCD display, nine serial ports, and 32 front-panel connectors. The controller now handles all the low-level timing and interface responsibilities previously assigned to the host.

*Howard Eglostein is a testing editor for the BYTE Lab and the designer of the Thumper 2 battery-life tester. You can reach him on BIX as "heglowstein."*

by a jet-black case. Although not quite as good as the screen of the Z-Note or LTE, it was quite readable in artificial light. In direct sunlight, it presented almost-black characters against a light-green background and was one of the more readable.

## Sharp PC-6781

The PC-6781 packs an amazing number of features, including a built-in trackball and a PCMCIA slot, into a tiny, 4.9-pound rubberized case. At \$2898, it easily matches the features of the other machines in its price range. However, it lags in both battery life and performance.

Although you can pop up the configuration screen while using another program, the machine resets when you exit. Like the LTE, this machine offers a "suspend-to-disk" shutdown mode.

The PC-6781's keyboard is adequate, although it is so flat that in some lighting conditions it looked painted onto the ma-

chine. It suffers from key-travel limitations. The trackball is, well, cute. It is a variable-response device, which moves the pointer farther the faster you turn the ball. This sounds like a good idea, but in practice it usually means you must spend several moments hunting down the pointer. The trackball is located on the right side, above the keyboard, with the buttons on the left, requiring two-handed use.

## ZDS Z-Note 325L

Housed in a clean-looking white case, this computer leaps over most of the others in this group with its excellent display, performance, and ease of use. The \$4299 Z-Note 325L comes with a built-in NE2000-compatible network adapter and several standard network shells; all you have to do is buy the appropriate cable adapter from ZDS. One great innovation is the optional Port Replicator, which lets you permanently attach your home or office cables

to an adapter that snaps onto the rear of the Z-Note.

The Z-Note uses NiMH batteries. It proved untouchable on BYTE's battery-life tests, besting the second-place LTE by over a half hour. A pop-up configuration utility includes a screen of standard power management settings for both AC and battery operation.

The keys are full size, although a bit flat, with all the standard cursor-movement keys easily accessible at the right side of the keyboard. Unfortunately, the full-size keys make the Z-Note wider than most notebooks; this is the only unit that wouldn't fit vertically in my briefcase.

The screen is simply the best in this group, if not the best among all laptops I've seen. It was bright, with extremely good contrast, and Windows displays were flawless. Where most machines have simple normal or reverse controls on the LCD, ZDS provides a multistep adjustment that

# Step On It!

At 5'4" and 280 pounds, Northgate's Ed Lachle is no lightweight. But our new SL25 Notebook is so rugged and durable, it can even stand up to a punishing demonstration like this.

*Sleek, contemporary styling. Customers say it's the "sexiest" notebook they've ever seen!*

*Unique tilt display lets you work comfortably in tight spaces!*

## Northgate SL25 Stands Up To The Toughest Competition!

- Intel® 386SL/25 processor
- Uses Microsoft® Power Management to its full capability
- 4MB RAM (expands to 8MB)
- 64K cache with 25ns SRAM
- 80MB 19ms hard drive (120MB optional); 3.5" floppy drive
- 10" non-glare Triple SuperTwist VGA display supports 32 shades of gray
- 9600/2400 fax modem with WinFAX
- MS-DOS® 5.0 and Microsoft Windows™ 3.1 installed
- Microsoft PS/2 style mouse
- Lightweight – just 6 lbs. 9 oz.

progressively changes the mapping between screen grays and image colors.

### Top Notes

All these machines are fast and light, and they'll stay in action for long periods.

If you have the cash, the ZDS Z-Note 325L and the Compaq LTE Lite/25 stand out as excellent all-around machines. If you have even more cash, try to work a deal on the NCR 3170. And finally, if you want a reasonably priced, comfortable ma-

chine that lacks only some bells and whistles, give the Dell NL25 a try. ■

*Jim Carls is a computer consultant and freelance writer from Memphis, Tennessee. You can reach him on BIX c/o "editors."*

### GOLD

WinSleuth Gold is the first tutorial/analysis/diagnostic program specifically written to operate under Windows 3.0/3.1. A newly enhanced graphical user interface makes WinSleuth Gold the easiest WinSleuth to use, EVER.

Novice and advanced users will appreciate WinSleuth Gold's access to low-level information and functions. WinSleuth Gold can actually test and evaluate memory chips, serial and parallel ports, the video adapter and other vital system components. New users will find the on-line help facility valuable as a learning aid. WinSleuth Gold helps make complex aspects of computing such as IRQs, hard disk drives and video easier to understand.

TuneUp is now more comprehensive in its analysis and not only can make performance-enhancing suggestions, but with a set of NEW 'smart editors', can make changes to system settings automatically that improve Windows operation! Installation Assistant is a partner in the frustrating task of installing new hardware. With Report Generator send hardcopy to the printer, or an ASCII file for import into your database manager.

PC Computing, July, 1992 - BEST VALUE - "WinSleuth...is a godsend to Windows users intent on fine-tuning their systems." "WinSleuth...is exceptionally easy to use." - Preston Gralla

BYTE Magazine, March, 1992 - First Impressions. "WinSleuth...is one of the few programs that I consider absolutely and positively necessary on my PC. One...should be on yours, too." - Stan Dziatkowski

## We've Added Extra Power To An Already Great Ride. New STATGRAPHICS *Plus* Takes You Farther.

YOU DON'T HAVE TO BE  
AN EXPERT TO HANDLE  
NEW STATGRAPHICS *Plus*  
FOR THE 386/486.

If you've been wheeling around statistics for any time at all, you probably already know about STATGRAPHICS®, the statistical graphics system that anyone can use to quickly analyze data and see the results. The package that offers over 250 different statistical procedures, including regression analysis, ANOVA, quality control, experimental design, multivariate methods, forecasting, and much more. The product that Software Digest rated #1 for ease of use and learning. Now, we've done the only thing left to improve it: we've added all the horsepower you could want.

THE POWER AND SPEED FOR  
THE FAST TRACK.

If you've got a 386- or 486-based PC, grab your racing helmet. Because anything STATGRAPHICS can do, STATGRAPHICS *Plus* can do up to 5 times faster. And since it utilizes all of the RAM in your computer, it can handle the largest problems, including those that other stat packages

choke on. And everything in this powerful new product works just like in STATGRAPHICS, right down to its easy-to-use menus and ability to import data from Lotus®, dBASE®, ASCII, or DIF files.

THINK OF IT AS A BETTER  
WAY TO SEE THE BIG  
PICTURE, FASTER.

Call today for more information and a free demo disk. And let STATGRAPHICS *Plus* keep you from spinning your wheels waiting for solutions.

## STATGRAPHICS

In Maryland, (301) 984-5123.

# Look what's at the heart

Take a closer look at some of the best notebook computers and it's easy to see why the prognosis is so good—they each have an Intel SL microprocessor.

The Intel SL gives each of these unique notebooks a leg up, because it was designed specifically for the stop-and-go world of mobile computing.

For example, the Intel SL has an instant on/off feature

that eliminates long boot-up and shut-down sequences. If

## Stop-and-Go Battery Life\*

Average 386 SX  
4.8 hours

Intel SL  
8.3 hours

you're interrupted, the Intel SL holds your place and puts your entire system into suspended animation, using virtually no

# of all the best notebooks.

power and significantly extending precious battery life.

The Intel SL is a more highly-integrated microprocessor, which means lighter, more feature-rich notebooks that come in speeds up to 25 MHz. No wonder major manufacturers are prescribing the Intel386™ SL microprocessor as a cure for traveling hassles.

Call 1-800-228-4549 to receive more information and a complete list of Intel SL-based notebooks.

Then watch for notebooks with the Intel SL. Because nothing else is worth looking into.

## The features you want in a High Speed-14.4Kbps Modem/Fax. At nearly half the Price!

ZyXEL's U-1496E offers all the standard features available in a 14.4Kbps- V.32bis+V.42bis modem/fax with DTE speeds up to 57.6Kbps. But you'll also find features you'd expect in only the "top-of-the-line" modems. So why pay more for the features you want, when you can get the best value from ZyXEL for less?

### Caller ID/Distinctive Ring

Displays the caller's phone number, time and date stamp directly on your screen, and responds to the distinctive rings for incoming fax or modem calls.

### Enhanced FAX

14.4Kbps G3 fax with automatic detection of fax or modem calls. Automatically receives, stores and/or prints faxes with our FREE ZFAX software.

### Automatic Fast Rate Renegotiation

Online automatic speed fall-back/fall-forward allows the highest throughput achievable during poor line conditions.

### Multi-Level Security

Security password protection and automatic call-back features are designed so only authorized callers can access your system.

### Nonvolatile Memory Storage

Store up to 4 user configuration profiles in NVRAM, plus up to 10 user phone numbers and their associated passwords.

### Software/System Compatible

Supports V.25bis autodial and enhanced AT Command Set, ensuring compatibility with popular communications/fax software. Available with MAC™, Windows™ and DOS fax software packages.

### Guarantees

We offer a Full 5 year Parts and Labor Warranty, a 30 day money back guarantee and full BBS technical support line.

Once you've weighed the options, you'll agree: ZyXel's U-1496E offers the best value for less than any other modem/fax in its class. So, don't hesitate. **Call Today.**

## SYSTEM

# 486 Notebooks Double as Desktops

BARRY NANCE

**W**ith enough horsepower and sufficient connectivity options, a notebook computer doesn't have to be a second PC that you use just for traveling. A powerful notebook can be a desktop computer as well as a traveling companion, saving the expense of two machines and keeping your projects easily accessible.

I have some strict requirements that a notebook has to fulfill before it can double as my desktop machine. This month, I look at four 486-based notebooks that go a long way toward delivering on the notebook/desktop promise: Compudynes's 4DX/33, Ergo's NoteBrick 486, Gateway 2000's Nomad 420SXL, and Toshiba's T4400SX. I evaluated the machines at odd times and places, indoors and out, in the office and on the road. By the time I finished the review, I had bought one of these notebook PCs (I'll tell you which one, and why, at the end of this article).

All four computers can run OS/2 2.0, DOS, Windows 3.1, and SCO Open Desktop. I used a variety of applications as well: Microsoft's Word for Windows, Excel, and Visual Basic; Borland's Paradox for Windows, ObjectVision, and Borland C++; Watcom's C/386 9.0 compiler; Lotus's Ami Pro and 1-2-3 for OS/2; and Qualitas's 386Max. My son also loaded some games on the notebooks. All of this software ran without incident.

### Where to Look, What to Look For

These four notebooks have something to say about the sources of new portable technology. One was made in Texas, one in Japan, and the two fastest in Taiwan; only one (the Toshiba T4400SX) is manufactured and sold by the same company. Gateway's system is based on a Texas Instruments design, Ergo's NoteBrick 486 is built by Nantan, and the Compudynes 4DX/33 is manufactured by Twinhead.

The figure shows benchmark results for performance and battery life. [Editor's note: For a description of the *BYTE* battery-life tests, see the text box "A New Thumper" on page 250.] When you evaluate high-end notebooks, in contrast to 386SX and 386SL systems, I believe that battery life has to take a back seat to performance. At your desk, you'll use an AC charger. Traveling, you'll be ready for a break after 2 or 3 hours. If you buy an ad-

*Although slightly bulkier than typical 386SX or 386SL designs, 486 notebooks handle tasks that slower processors can't easily accomplish. Clockwise from left: Gateway 2000's Nomad 420SXL, Toshiba's T4400SX, Ergo's NoteBrick 486, and Compudynes's 4DX/33.*

ditional battery pack, you can slip it into the computer after your break and keep on running.

Each of these computers lasts at least 2 hours on one charged battery. Gateway says the Nomad will last 6 to 7 hours if all its power management features are enabled, but *BYTE*'s battery-life tests rate realistic running time at closer to 4½ hours. The T4400SX had the longest running time on a single battery (at 4 hours, 39 minutes), while the NoteBrick 486 (at 1 hour, 40 minutes) ran the shortest time. In any case, I highly recommend getting an extra battery for any of these computers.

In addition to their speed, compatibility, and sizable hard drives, these notebook computers share one other trait—durability. Notebook PCs are getting more and more rugged. Even the plastic covers over the serial and parallel ports were more difficult to dislodge than they would have been on notebooks made just a year ago. All four computers survived being carried under my arm, being tossed on the seat of my car, and being used by my 16-year-old son.

*continued*

## BYTE ACTION SUMMARY

- **WHAT 486 NOTEBOOKS DO**  
They put the computing power of a 486SX or a 486DX into a small, portable package.
- **LIKES**  
You can realistically expect to complete development projects or other compute-intensive tasks on the road.
- **DISLIKES**  
Keyboard layouts are clumsy, for the most part. The larger systems are also somewhat bulky.
- **RECOMMENDATIONS**  
For the quietest, slimmest notebook, get the Compudynes 4DX/33. The Ergo NoteBrick 486 has the best keyboard.

## FEATURES OF 486 NOTEBOOKS

*Gateway's Nomad 420SXL, based on a 486SX processor, is far and away the price leader. The CompuDyne 4DX/33 and Ergo NoteBrick 486 compete for the high end, but the CompuDyne system is considerably smaller and lighter.*

	CompuDyne 4DX/33	Ergo NoteBrick 486	Gateway 2000 Nomad 420SXL	Toshiba T4400SX

<sup>1</sup> Unless otherwise noted, price includes 4 MB of RAM, no modem, and features as listed in this table.

<sup>2</sup> All units include VGA-compatible LCD and external VGA port. STN = supertwist nematic;

TSTN = triple-supertwist nematic.

<sup>3</sup> Color LCD, gas plasma optional.

These notebook powerhouses aren't without their drawbacks, though. When you're on the road (and even in the office, unless you attach an external keyboard), you're faced with a small keyboard. The

keys don't have quite the travel of those on a full-size keyboard, and you'll have to get used to the different layout.

The features table details configurations. In the following sections, I'll give my ac-

count of what it's like to use these systems.

### CompuDyne 4DX/33

CompuDyne's 4DX/33 notebook is manufactured by Taiwan-based Twinhead. CompuDyne itself is the mail-order division of the CompUSA chain of computer stores. The 4DX/33 is the slimmest and quietest of the four notebooks in this review and quite inexpensive at \$2999. It's fast (33 MHz), the standard hard drive is 127 MB, and it comes with a built-in trackball.

The 4DX/33's keyboard doesn't have quite the feel of the T4400SX's or the NoteBrick 486's, but it's more than adequate. The PageUp, PageDown, Home, and End keys are dedicated, and the Control, Caps Lock, and tilde keys are in the same positions as they are on a full-size 101-key keyboard. The Insert and Delete keys are badly placed in the upper right corner of the keyboard.

The built-in trackball is especially handy when you're trying to work while sitting in the cramped coach section of a crowded airline flight. The Cirrus Logic LCD screen features 64 gray scales, quick response, and a clear, brilliant display. The brightness/contrast controls are recessed and stay where you put them.

In addition to DOS 5.0 and Windows 3.1, CompuDyne gives you a copy of PackRat, a PIM (personal information manager) from Polaris.

### Ergo NoteBrick 486

Nantan manufactures the NoteBrick 486 computer for Ergo Computing. The \$2995 NoteBrick 486 is larger, heavier, and noisier than the other notebooks. It is, frankly, a brute. But it is very reasonably priced, comes standard with a carrying case and numeric keypad, and has the nicest keyboard of all four notebooks. The NoteBrick 486 runs at 33 MHz, has a standard 170-MB hard drive, and ships with 4 MB of RAM. The unit Ergo sent for review was a top-end configuration with a full 16 MB of RAM that sells for \$3895.

Nantan has manufactured keyboards for years; the company's expertise shows in the NoteBrick 486's. There are dedicated PageUp, PageDown, Home, and End keys. The Insert and Delete keys are in their proper positions in the lower right corner. And the feel of the keyboard is superior, almost as good as that of a full-size true-blue IBM keyboard.

The NoteBrick 486's display is small (5.2 by 6.8 inches), but it's clear and easy to look at. Ergo gives you a Logitech mouse with the NoteBrick 486 and throws in a copy of AddStor. You can use the latter to turn a 170-MB drive into (roughly) a

# Up to Date. Down to Earth.

UNIX is changing the world of computers, the world of business – quite simply, changing the world. It's revolutionizing office automation. It's required for U.S. government computer contracts. It's the backbone of information strategies worldwide.

That's why you need **UNIXWORLD** – the magazine that keeps you up to date on the rapidly changing world of open systems computing. Each issue brings you the latest product trends and technical advances that can affect your business. The inside story on some of the biggest high-tech companies. Easy-to-understand programming tips and tutorials that can help your company use UNIX to its fullest. And unbiased hardware

and software reviews to help you invest wisely when you buy.

**UNIXWORLD's** in-depth features go beyond dry technical facts to show how the pieces fit together – to tell you what's important about the advances and strategies that are changing your world. And **UNIXWORLD** consistently offers the freshest, most down-to-earth writing that you'll find in any computer publication.

# "ALR PACKS POWER INTO NOTEBOOKS"

Info World June 22, 1992

If you think computing on the road means sacrificing the type of power you've become accustomed to, then you need to take a look at the new Ranger M486 from ALR. With a choice of high-powered i486 CPUs, the Ranger M486 is a match for any desktop PC. And, unlike other notebooks, the Ranger M486 is upgradeable. You can advance all the way up to 25-MHz i486DX™ computing by simply plugging in a new CPU module!

## Up To Five Hours Of Portable Computing!

With its advanced power management

circuitry, the Ranger M486 can keep going long after traditional notebooks have shut down. And its super

accurate "Gas Gauge" lets you know just how much power is left.

The Ranger M486 even has three internal ALR expansion slots. Need a FAX/Modem, SCSI adapter, or data compression module? Just plug them in!

**CALL NOW!**

For More Information and to order

of our color display notebook, you'll be able to create lively and eye catching presentations.

*We've taken the power and advanced 32-bit upgrade technology of our award winning desktop systems and condensed them into a lightweight portable PC. The Ranger M486 Series is the first notebook PC to offer a 32-bit modular upgrade path to full 25-MHz i486DX processing*

## AND THE

### Choice of Upgradeable Processing Power... 25-MHz i486SX or 25-MHz i486DX

#### ALR Ranger M486 STANDARD FEATURES

- 4-MB RAM; Up to 16-MB on the system board
- 8-KB integrated static cache
- VGA graphics featuring 640 x 480 resolution
- 9" diagonal paperwhite LCD screen
- Hard Drive Options: 60-MB <19ms, 80-MB <16ms or 120-MB <15ms IDE Hard Disk
- 82-key embedded keypad with 10 function keys, inverted "T" cursor, 3mm key travel
- Up to 5 hours possible life with ALR PowerPlus Battery. Recharges in ~ 2 hours with system on or off
- One serial port; one parallel port; one mouse port; external VGA port; external keyboard/keypad and 160 pin docking station port
- Optional SCSI or scanner interface, data compression(2:1)
- Optional internal FAX/Data Modem (9600/2400; V.2.2bis)
- ALR MS-DOS 5.0™
- 2.25"H x 11.75"W x 8.5"D, 7.2 lbs. (approximately).
- FCC Class B;
- Limited 12 Months; optional service and support program

## BYTE NOTEBOOK BENCHMARKS

■ Toshiba T2200SX 
 ■ Toshiba T4400SX 
 ■ Gateway Nomad 420SXL  
■ Ergo NoteBrick 486 
 ■ CompuDyne 4DX/33

All results are indexed, and higher numbers indicate better performance. For each index, a Toshiba T2200SX running DOS 5.0 and Windows 3.0 = 1.

The BYTE low-level benchmark suite identifies relative performance at the hardware level, breaking down performance by system component. The results of these tests can help you identify the relative performance of a given subsystem and determine where performance bottlenecks may lie. For a complete description of these tests, see "BYTE's New Benchmarks: New Looks, New Numbers," August 1990 BYTE. The BYTE low-level benchmarks, version 2.2, are available in the byte.bmarks conference on BIX, or you can contact BYTE directly.

BYTE's application performance suite measures the performance you can expect to see running a given application category under a given operating environment. We test under two environments: DOS 5.0 and Windows 3.0. We test three application categories for each environment, running test scripts using the following programs: Word Processing: WordPerfect 5.1 and Lotus Ami Pro 2.0; Spreadsheet: Lotus 1-2-3 release 2.3 and Microsoft Excel 3.0a; and Database: Software Publishing Superbase 4 version 1.3 and Borland dBase IV. The data files and test scripts are available from BYTE.

*The similarly configured CompuDyne 4DX/33 and Ergo NoteBrick 486 (both with a 33-MHz 486DX processor) competed for the top spot on our performance benchmarks, splitting the DOS and Windows application suites. However, the spreadsheet application test is floating-point-intensive, so the DX machines have a strong advantage; low-level CPU benchmarks provide a more accurate performance comparison.*

340-MB drive through file compression. Ergo also preinstalls DOS 5.0 and Windows 3.1.

### Gateway 2000 Nomad 420SXL

The Nomad marks Gateway 2000's entry into the notebook market. The computer is a TI design and looks exactly like a TI TravelMate 3000. Gateway offers a series of 486-based Nomad machines, ranging from the low-end 420SXL (\$2795) to the top-of-the-line 425DXL (a 25-MHz 486DX that costs \$3495). In its 420SXL

configuration, the Nomad is the least expensive of these notebooks; it's also one of the lightest and slimmest, and it's quiet. Not surprising, it's also a little slower than its more fully featured competitors, as you can see from the benchmark results.

While the price/performance trade-off is reasonable, the Nomad's keyboard is its weak point. The PageUp, PageDown, Home, and End keys are also the cursor keys. You hold down an Fn modifier key to choose between these sets. The Insert and Delete keys are in the upper right cor-

## BATTERY LIFE

*The Toshiba T4400SX and the Gateway 2000 Nomad 420SXL stood out in BYTE's battery-life tests.*

ner of the keyboard, not the lower right.

The Nomad's screen is the largest of the four (6 by 7.9 inches). The screen is easy to read and has a toggle switch for reverse video. The Nomad has a connector for an external VGA monitor and one for an external keypad. You can also use an external keyboard with an optional adapter.

Nomad's pointing device is a hand-held trackball. Only about 1½ inches square, the Nomad mouse lets you use your thumb to move the mouse cursor. One button on the pointer represents "click and hold," but I found the device unwieldy. Gateway loads DOS 5.0 and Windows 3.1 for you.

### Toshiba T4400SX

Toshiba is an old hand at making notebook computers. The T4400SX continues the tradition of good keyboard layout and feel and good display quality that made the T2200SX such a dazzling success. In the past year, however, Toshiba's competitors have created new machines that also have good keyboards and displays. The T4400SX is a solid machine, and it's the only notebook in this collection to offer a color screen as an option, but its high price (\$4349) makes it vulnerable to these new competitors.

The T4400SX is heavier and thicker than the Nomad and 4DX/33 but lighter and smaller than the NoteBrick 486. The PageUp, PageDown, Home, and End keys are dedicated. The Insert and Delete keys are in the right place. The Control, Caps Lock, and tilde keys are in unfamiliar locations, however.

The only major problem with the T4400SX is its power switch. Located on the left side of the case, the recessed switch requires a lot of effort to operate. The brightness and contrast controls are also poorly placed; they are in an exposed

# TAKE A COUPLE OF GIGABYTES OUT OF YOUR DATA STORAGE PROBLEM

If you're like most PC users, the way your computer devours available storage space resembles...well...a feeding frenzy. You never seem to have enough storage capacity, and when you're mobile, it seems impossible to back up your critical data on the road.

Fortunately, paddling to calmer waters and fail-safe data storage is easy with Parallel Peripherals. All you need is one of our sub-systems and a parallel port (no interface card required). You already have the parallel port, and we have the peripherals—in a format and capacity to satisfy the biggest storage appetite.

Ultra-portable, they simply plug-in to the

parallel port on your portable or desktop computer. And each is equipped with an additional printer port pass-through which maintains full printer capability.

Our portable and lightweight drives are true workhorses, providing the most reliable data storage and the most advanced drive features. And with a one-year factory warranty, you can take a bite out of your storage problem without getting bit.

So if your data storage is going down for the third time, let Parallel Peripherals throw you a line. Portable or desktop, we have the right drive in the right capacity. Call (800)222-7240 for more information.

CD-ROM Drive • Dual Floppy Drive • Battery-Powered Hard Drive • Tape Backup • Removable Hard Drive

position, easily bumped, and you'll probably have to readjust them each time you turn on the T4400SX.

The T4400SX offers a resume mode that can be activated through the power switch. When enabled, the resume mode puts you back exactly where you left off when you powered down. This is convenient, unless you use your notebook on a LAN. When you power up, the network software doesn't realize it has lost touch with the file server. And if an application

crashes, the power switch resumes back to the same crash. Pressing a special reset button on the back of the T4400SX, or disabling resume mode entirely, solves this problem.

The T4400SX has an expansion bus, one serial and one parallel port, an optional external keyboard connector, and an external VGA port. You can put an internal modem in the machine. Toshiba doesn't supply a mouse or Windows 3.1 with the computer.

## Noteworthy Notebook

When I decided to buy one of these notebooks, I picked the Compudyne 4DX/33. For me, the size of the hard drive, the processor speed, the clarity of the screen, and the built-in trackball were deciding factors. Of course, I'll have to put up with the keyboard when I travel, but at my desk I'll use an IBM PS/2 keyboard and VGA monitor.

The new notebook arrived yesterday. I don't expect I'll need to use my PS/2 Model 80 office machine ever again. ■

*Barry Nance, a programmer for the past 20 years and a BYTE contributing editor, is the author of Using OS/2 2 (Que, 1992), Network Programming in C (Que, 1990), and Introduction to Networking (Que, 1992). He is the editor for the IBM Exchange on BIX, where you can reach him as "barryn."*

# How much longer can you afford to wait?

## Create Overlaid Programs-Fast.

BLINKER™, the world's first and fastest dynamic overlay linker, reduces your link time to seconds and reduces program memory requirements. Now you can use one linker for all your software projects.

## One Linker, Many Languages.

BLINKER 2.0 links and automatically overlays DOS programs written in Microsoft® C, BASIC, Assembler, QuickBASIC™, Fortran, Pascal, Watcom™ C, Zortech® C++, Clipper®, FORCE® and in Borland® C, C++, Assembler, and more.

## Save Time and Memory.

BLINKER removes the need for overlay structures, simplifies program design and reduces memory requirements to save you time, effort and memory.

## Memory Swap Function.

BLINKER is the ONLY linker to offer an integrated memory swap function, so you can run other large programs from within your program, with negligible memory overhead.

**BLINKER™**  
High Performance Dynamic Overlay Linker

## Don't Settle for Less.

Other major features include full CodeView® support, use of EMS/XMS at program run time, and enhanced execution speed of overlaid code.

## Time is Money.

BLINKER offers all this in a fraction of the time it takes to link with your current overlay linker. You know time is money, and link time is no exception.

## Free Demo

To try our free demo on your own code

**Call: 804-355-4444**

**Circle 393 on Inquiry Card.**

*The only notebook with a tilt & swivel display. Great for sharing data or keeping it private. Easily adjusts for perfect viewing.*

*This fine Italian leather carrying case is an additional option. Loaded with pockets and features everyone will appreciate.*

*Digital brightness and contrast buttons make screen adjustment so easy.*

# ZEOS® Freestyle/SL. More features at a lower cost than any other notebook.

To try and compare the new ZEOS Freestyle/SL to any other notebook is next to impossible. Because nothing else has all its features. And even with all these great features, nobody can match the price. Features and price. It would seem the new ZEOS Freestyle/SL is the best of all worlds. It is.

## **DESIGNED BY USERS. JUST LIKE YOU!**

We asked our customers what it is they want in the perfect notebook. The first thing they told us is that most notebooks look like a cigar box with a lid. They told us they wanted not only good looks, but things like great power *and* great battery life. Lightweight too, like five pounds and change. And the keyboard should be effortless to use. The entire product had to be extremely durable. And that was just for starters.

## **SL POWER. SL BATTERY LIFE. 64K CACHE!**

We listened well.

Then we got down to work. For the chipset and CPU we selected the Intel 25MHz SL. We then built in a high-speed 64K SRAM cache as standard. We know this system might well replace a desktop for many users.

And power to your ZEOS Freestyle/SL system is provided by our advanced battery system. The fully enclosed lightweight battery packs easily snap in and out and can be "quick-charged" when the system is not being used or trickle-charged when in use. So what happens when the power is on?

## **GREAT VIDEO TOO.**

You get great video! Because for video control, we chose the amazing new Cirrus Logic VGA controller. It not only consumes less power, it also produces the fast crisp images you're looking for. And with a business machine like this you'll also appreciate our dual display capabilities. You can connect an external VGA color monitor for simultaneous co-display. And that's not all.

# Period.

## **A NOTEBOOK KEYBOARD YOU'RE GOING TO LOVE.**

We re-designed and re-sculpted every key from scratch. Even the key-switch mechanism was invented anew. And we added the mouse key for easy cursor control. It is the

absolute perfect notebook keyboard. What else?

Lots else! Like the best display system of any notebook available anywhere. We listened here too. The screen is big and easy to read. Plus, it's high contrast and it's fast. It's also very easy to adjust. People said contrast and brightness knobs were hard to use. So we replaced them with soft touch buttons that *electronically* adjust screen settings at your command. Then we really got creative.

## **THE ONLY NOTEBOOK WITH A TILT & SWIVEL DISPLAY.**

Can you imagine your desktop PC without a tilt and swivel display? Neither

could we. So why not incorporate that feature into a notebook. With the ZEOS Freestyle/SL notebook you can adjust the screen left and right as well as tilt it up and down. Now you can truly adjust your notebook screen to the perfect viewing angle.

## **IT FLOATS TOO.**

And then there is the "floating" screen. When you're facing your new ZEOS Freestyle/SL, the screen actually appears to "float" in the air in front of you. It's the only notebook that can really be used sitting on your lap!

## **EXTRA, EXTRA, EXTRAS. READ ALL ABOUT 'EM!**

We've made more options available than ever before. Like our modem with send/receive fax. And memory up to 20MB, hard drives to 180MB, even an optional Italian leather carrying case! Extra batteries and a charging stand are available too. Call 800-423-5891 for all the details.

# 2MB, 60MB Only \$1895!

*Built-in mouse key provides easy cursor control. Leave those bulky mice behind!*

*This sliding port door won't break off or come loose. Saves your fingers too.*

## **ZEOS. #1 RATED NOTEBOOKS, SERVICE & SUPPORT!**

*PC Magazine* recently surveyed notebook users for their Service and Reliability issue. Their findings? "Only ZEOS portable PCs achieved significantly higher-than-average ratings in all four categories." The categories were reliability, future purchase plans, repair service satisfaction and technical support. And remember, ZEOS technical support is 24 hours a day, 365 days a year, toll free. And we back your new ZEOS Freestyle with our 30-Day Absolute Satisfaction Money-Back Guarantee, One Year Limited Warranty and more.

## **ORDER YOUR AMAZING ZEOS FREESTYLE/SL NOW.**

Ordering your new ZEOS notebook is easy. Simply pick up the phone and give us a call. A friendly ZEOS Systems Consultant is ready to answer any questions you may have. You're going to love your new ZEOS notebook. Give us a call!

## APPLICATION

# A New Illustrator for Windows

CAL VORNBERGER

**A**lthough Adobe Systems' Illustrator 4.0 for Windows is a welcome improvement over the original version for Windows, there are enough missing or poorly implemented features to make this upgrade less than spectacular.

Still, several improvements make the program an important tool for graphic designers and technical illustrators. By bundling Illustrator 4.0 with TypeAlign, Adobe's type-manipulation program, the company addresses some of the missing type-manipulation features found in competitors' programs. Illustrator comes with Adobe Type Manager 2.02 and 40 Type 1 PostScript fonts. Also included are Adobe Separator, a color-separation program, and a version of Adobe Streamline, the bit-mapped graphics tracing program.

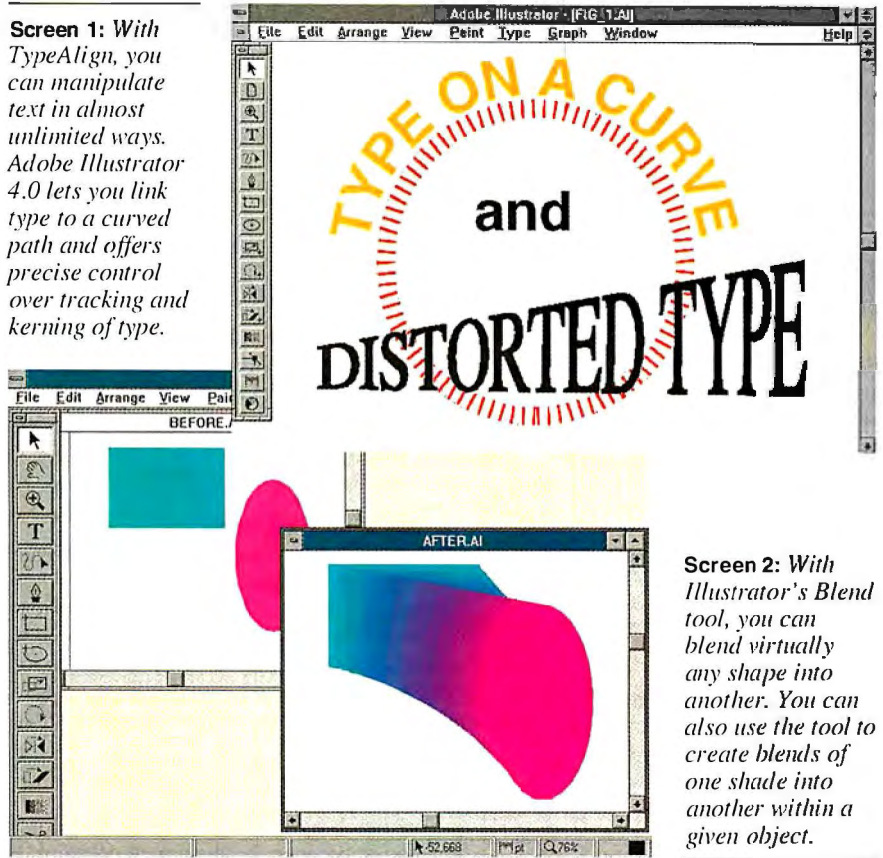

Some of Illustrator's new features include the ability to work on illustrations in preview mode, dynamic zooming, better font control, and improved color separation through the Adobe Separator program. Also much improved are the on-line help facility and screen-refresh rates. Another nice new touch to the interface is a floating tool palette that can be resized or made large for high-resolution monitors.

Adobe claims that the program has been optimized for 386 and 486 machines. The program requires a 386 or higher processor, 4 MB of RAM, a hard drive, and a VGA monitor. Experience recommends at least a 33-MHz 386 with 8 MB of memory. Illustrator will not run on an EGA monitor or any other monitor that does not have square pixels (i.e., 640 by 480, 1024 by 768, and so on). If you try to run the program on such a monitor, an error message will warn you of the discrepancy.

### Color Preview

One annoying problem with Illustrator in previous Windows and Macintosh versions was the need to toggle back and forth between artwork mode and preview mode. You would draw in artwork mode and view the finished work in color by making a menu selection that toggled the screen into preview mode. This was necessary because of the slowness in screen redrawing rates when the full-color screen had to be refreshed each time an element in the drawing changed. Illustrator 4.0 for Windows lets you manipulate work in pre-

**Screen 1:** With TypeAlign, you can manipulate text in almost unlimited ways. Adobe Illustrator 4.0 lets you link type to a curved path and offers precise control over tracking and kerning of type.

**Screen 2:** With Illustrator's Blend tool, you can blend virtually any shape into another. You can also use the tool to create blends of one shade into another within a given object.

view mode in full color, albeit with slower screen refresh, or continue, as before, to work in artwork mode (with a faster screen refresh) and toggle into preview mode to view the final product. The Mac version still suffers from this toggle boggle.

One conspicuous omission, available in rival Aldus FreeHand, is a multiple Undo function. With Illustrator, a single undo is all you get, while FreeHand has up to 99 undos, a valuable feature for the less-than-perfect graphic designer. But beware: Under certain conditions, the Undo function doesn't work at all. This is most noticeable when you go back and forth between preview and artwork modes. If you create a certain effect in artwork mode and then view it in preview and discover you don't like it, you're in for a surprise when you return to artwork mode to try to undo it—you can't. The Undo function is also disabled when you use certain menu items.

### Better Type

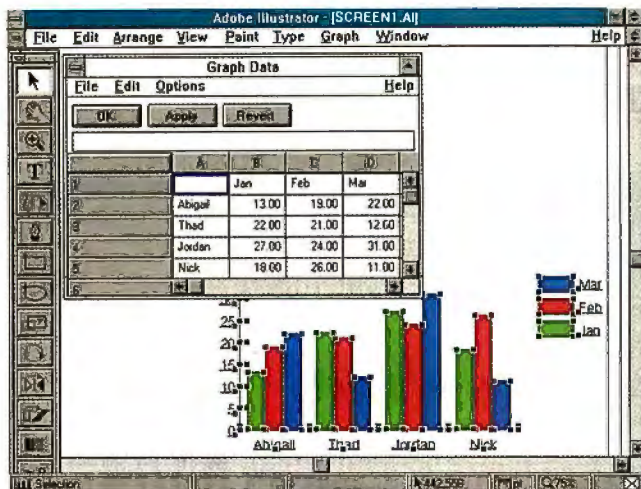

Illustrator 4.0 and TypeAlign offer much-improved type manipulation and control.

Although neither supports TrueType, and both work with only Adobe Type 1 PostScript fonts, the combination of the two programs gives you greater control over type manipulation. With TypeAlign, text can be stretched, pulled, and manipulated in ways limited only by your imagination. Illustrator itself lets you link type to a curved path (see screen 1) and offers precise control over tracking and kerning of type. Type can be stroked with one color and filled with another and can be converted to outlines and filled with an image or gradient. Unfortunately, images must be pasted into text one letter at a time, so the process can get tedious.

Illustrator lacks CorelDraw's ability to create instant 3-D type effects, but you can achieve the same results with a few added steps. If Adobe could see its way clear to support TrueType, Illustrator 4.0 could take advantage of all the TrueType fonts included with Windows 3.1.

The new release of Illustrator introduces dynamic panning and zooming. Although these are much-needed features, there is a

**Screen 3:** You can enter data manually into an Illustrator spreadsheet and automatically generate a chart or graph.

drawback. The screen goes blank during panning, making it difficult to judge how far the page has been moved. Zooming works much better. You select the magnify tool and draw a rectangle around the area you want to zoom in on. Zooming is almost instantaneous.

With Illustrator's Blend tool, you can

blend virtually any shape into another, as in the example of the square blended into a circle (see screen 2). You can also use the tool to create blends of one shade into another within a given object.

## Working with Color

Adobe has provided a program to create color separations from Illustrator files. Adobe Separator is a stand-alone application that lets you create custom color separations from your Illustrator files for four-color-process output. Illustrator also supports several color-matching systems, albeit in a cumbersome way. Instead of building color matching into the software, Adobe provides several files that have color-matching systems as custom colors. You must open the document containing the color-matching system of choice, make a copy of it, and create your illustration on the copy of that document.

Color-matching systems supported include Pantone, Toyo, Focoltone, and Trumatch. You have the option, as always, of creating your own custom ink colors. Illustrator also has the capacity, in conjunction with printed color swatches in the manual, to let you calibrate your monitor to match printed output. Although crude, the method seems fairly accurate.

Illustrator is Super VGA-compatible in its color picker, but something odd happens when you select custom colors. Since a computer is capable of displaying colors that are unprintable using the standard four-color-process method, color pickers geared for printed output are usually designed to display CMYK equivalents. In this way, users receive an on-screen approximation of what their printed output will look like. Since Adobe's color picker is RGB-based, it is possible to select custom colors that are unprintable. Adobe offers no explanation for this anomaly in the documentation for Illustrator.

Illustrator's simple, elegant interface continues to be its strong suit. All similar structured-drawing programs support Bézier curves, one of the basic constructs of the PostScript PDL (page-description language), but Illustrator's entire interface is based on the creation, linking, manipulation, and control of these curves. There are tools to draw and manipulate freehand curves and combine them with lines and shapes to create complex illustrations. While the Bézier model may prove daunting to the novice, once you've grasped the concept, you'll have a handle on the true power of the program.

## An Illustrator's Guide

There is an excellent tutorial that takes you through Bézier-curve fundamentals, and the accompanying examples on disk help beginners grasp Illustrator's unique approach to drawing and shape manipulation. A separate Beyond the Basics manual proceeds step-by-step through more complicated illustration techniques.

Unlike FreeHand, Illustrator lacks any type of layer management or control. In complicated illustrations, this lack of layer management can have serious consequences. Since the order in which layers exist on the page determines their characteristics and whether they obscure a layer underneath them, some kind of approach to layer management is very important in any structured-drawing program. Given Illustrator's lack of layer management, it is at times almost impossible to manipulate certain objects in large, complicated illustrations. Adobe suggests grouping similar objects together, but this is not a solution. Until the problem is addressed, a lack of layer management will remain a serious flaw in Illustrator 4.0.

Another serious problem I encountered with Illustrator 4.0 is its inability to import EPS (Encapsulated PostScript) files from other programs, notably PhotoStyler and CorelPhoto. The images seem to import error-free, but they are not viewable. Adobe's technical support acknowledges this problem and says a bug fix is in the works.

On the matter of technical support, Adobe seems strangled by its own success. It took two separate sessions of over 45 minutes each of auto-dialing Adobe technical support before I was put through. Then it took an additional 10 minutes before an actual technical representative came on the line. The representative was knowledgeable and courteous but admitted that the company can't handle the volume of calls it receives. Although the manuals and tutorials are well written, there are occasions when you'll need to get through to

## BYTE

### ■ WHAT ILLUSTRATOR 4.0 IS

A professional design tool for creating precise illustrations and single-page designs.

### ■ LIKES

Lets you view and edit color illustrations directly; has improved type manipulation and control.

### ■ DISLIKES

Lack of layer management.

### ■ RECOMMENDATIONS

Despite several omissions and a few bugs, Illustrator 4.0 is a powerful tool designed for ease of use.

### ■ PRICE

\$695

# While Our Competitors Are Diligently Trying To Emulate The SummaSketch II...

## We Proudly Announce SummaSketch II *Plus*

The world's best selling, most emulated, most acclaimed desktop tablet just got better. We've taken SummaSketch II, the industry standard, and added several new features to create a tablet that is, unquestionably, the world's best.

Unlike some competitors, we put everything in the box—4-button cursor and 2-button stylus (or 16-button cursor), interface cables and a utilities diskette with Windows® 3.0 and ADI® drivers. Plus we've added things like 2000 lines per inch resolution and 10 mil accuracy—standard. Plus the fastest, easiest set-up and configuration procedure. Plus an offer for a free AutoCAD® or CADKEY® Master Template (a \$245 value). Plus software compatibility

with over 400 programs, and hardware compatibility with PCs and Macintosh®. Best of all, it's still 100% pure SummaSketch—the editor's choice, winner of every major editorial accolade for graphics tablets. And the people's choice, with well over one-half million sold to demanding computer graphics professionals.

**Every  
decision**

**should be this easy.** In fact, the only tough decision is which Plus to choose: 12" x 12" or 18" x 12" Professional. For literature, or the name of your local dealer, call 1-800-729-7866. For technical information call 203-881-5400.

**Summagraphics®**

*Every decision should be this easy.™*

Circle 168 on Inquiry Card.

technical support. The present system is not satisfactory.

### Charts and Graphs

An additional feature of Illustrator 4.0, of interest to users of business graphics, is the built-in charting capability. You can import spreadsheets into Illustrator and automatically generate a wide variety of charts and graphs. You can also enter data manually into an Illustrator spreadsheet (see screen 3) and generate a chart or graph

that way. Legends are linked to their respective values and change automatically if values are changed. A wide range of different chart and graph types includes bar graphs, pie charts, and scatter graphs. Graphic designers should appreciate the ease with which they can create good-looking charts and graphs.

The program also allows you to import scanned artwork as templates. Templates can be any bit-mapped image in TIFF, PCX, or BMP format. These images can be

traced by hand with Illustrator's drawing tools, or they can be auto-traced with the program's built-in Auto Trace tool. The auto-trace function is not very accurate; the traced illustrations require quite a bit of cleaning up to create an accurate rendition of the image. For a limited time, Adobe is offering Streamline, its higher-quality tracing program, free to purchasers of Illustrator. Adobe should have included the capabilities of Streamline in Illustrator in the first place so it wouldn't have had to bundle it as a separate program.

Illustrator drawings cannot be copied, pasted, or viewed in the Windows Clipboard except as special Adobe PostScript objects. These can be passed from TypeAlign and Streamline into Illustrator, but not the other way around. Text blocks that are imported from TypeAlign to Illustrator via the Clipboard come in as outlines. Illustrator 4.0 can read and write Illustrator files from the Mac and from Adobe's Unix and Next versions of the program and can save in Illustrator 88 and Illustrator 1.1 file formats. Tests confirmed that file compatibility is 100 percent across the Mac and PC platforms.

### The Whole Bundle

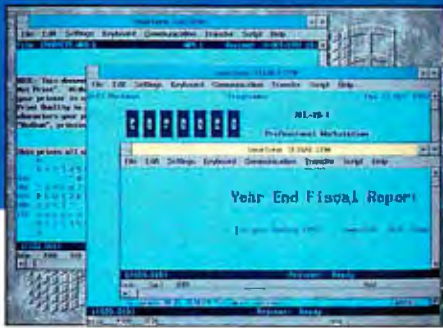

Adobe includes a fair number of borders, symbols, and patterns with the program. These images provide a shortcut from the tedious work of creating these shapes. Some of the borders and patterns are quite imaginative. Noticeably missing from the package is the cornucopia of clip art and fonts distributed with programs like CorelDraw and Professional Draw from Gold Disk, but this is probably not a drawback for most illustrators, as they prefer to create their own work from scratch. What the package lacks in clip art and fonts it makes up in a simple, elegant approach to structured drawing. In fact, Illustrator is much more a tool for creating professional illustrations than for putting together a simple poster or brochure.

Illustrator 4.0 is a welcome addition to the collection of Windows-based structured-drawing programs on the market. While it does not have the wealth of features, clip art, fonts, and ancillary programs offered by CorelDraw 3.0 and several other competitors, it is an excellent illustration tool designed for ease of use. Despite several omissions and a few bugs, the program is a powerful tool for the technical illustrator and professional graphic designer. ■

## APPLICATION

# A Power Boost for PowerPoint

SHELLEY CRYAN

With the release of version 3.0, PowerPoint proves you don't need well-honed design skills and a fondness for studying software manuals to create stunning slide presentations on your computer. With a host of new features, including a convenient toolbar, improved drawing and text-handling capabilities, and support for OLE (Object Linking and Embedding), PowerPoint 3.0 represents a sweeping upgrade. Microsoft makes up a lot of ground lost in the two years since PowerPoint's last major upgrade.

PowerPoint 3.0 requires Windows 3.1, and you'll need at minimum a 286 with 2 MB of memory. Microsoft recommends a 386 with 4 MB. Working without a color monitor is possible, because you can select colors by name, but this is akin to buying mail-order dress shoes—you'll be satisfied only if you know exactly what you want or if you're lucky. Make some room on your hard drive; PowerPoint fills 5 to 17 MB, depending on the options you install.

### The Right View

PowerPoint 3.0 helps even the occasional presenter to create professional-looking slides, overheads, or on-screen presentations. You supply the information; PowerPoint eases you through design and production.

PowerPoint offers you four "Views" in which to work. Outline View lets you type your ideas in outline form, which PowerPoint uses to generate slides. In Slide View, you can type directly on the on-screen slides themselves. Here, you customize the look of your slides by applying colors, formatting text, and adding charts, graphs, and drawings. In Slide Sorter View, you can change the order in which the slides appear by dragging slides around with the mouse. Speaker's Notes View lets you jot down things to remember to mention when giving the final presentation. Version 3.0 not only makes all this easier to do than in the previous version, but it offers you a wider variety of options as well.

The most visible change found in each of the Views is the new toolbar. It gives you quick access to frequently used commands, saving you the hassle of using pull-down menus.

*The new version of PowerPoint includes an improved toolbar. The toolbar offers convenient access to commonly used tools and single-click formatting for indentation, text styles, and text sizes.*

Buttons on the toolbar let you format text and toggle easily between magnification levels. An especially helpful set of buttons lets you manipulate relative text placement; for instance, you can move paragraphs around and adjust indent levels. These buttons are much easier to use than the sometimes confusing methods required in top competitor Aldus Persuasion. The toolbar is intelligently designed, although it lacks a text-alignment button.

### Master Plan

PowerPoint 3.0's most significant improvements are in its Slide View. As in the previous version, you create and format a single Slide Master, which dictates the format of every slide, but 3.0 offers much more flexibility. The Slide Master now includes both a Master Title and a Master Body that you format separately, and you can alter the Slide Master at any time.

This scheme of a single Slide Master helps to make for a surprisingly short learning curve. It's easy to remember that anything that's on the Slide Master—logos, artwork, and so on—will show up on every slide. However, it's only useful when most of your slides will be formatted the same way, since you'll have to manually set up the slides that vary from the master. This isn't difficult, but it's tedious if you've got more than a handful to adjust.

In contrast, Aldus Persuasion gives you several slide masters, and each one has two parts: a background and a foreground. This scheme offers greater flexibility, especially if several formats will be used more than once. However, it's more complicated, especially if you don't use Per-

suation frequently enough to remember how it works.

Other changes in PowerPoint's Slide View include an enhanced set of drawing, text-editing, and graphing tools. Can't draw a perfect shape on demand? Rather not dredge through a clip-art collection to find one? The new Shape Tool is a boon. It's really 24 tools in one: You can use it to create a myriad of stars, arrows, circles, cubes, triangles, and star bursts, and you can change the shape of existing objects with the click of a mouse.

Text editing is now done with a single tool, which is automatically activated when you highlight an object and start typing. The typographic formatting controls include the usual suspects, and using them is straightforward.

Like other programs in this category, PowerPoint does not include high-end text-handling features such as kerning and rotating. You can, however, create embossed text and can use any character of any size or color as a bullet.

The graph tool is not really a tool like the others. When selected, it launches a separate, embedded application called Microsoft Graph. This is the same full-featured graphing program featured in Microsoft Project, Word, and Works. It offers 84 different graphing styles, including all the standard 2-D and 3-D styles and then some. Graphing is probably the hardest aspect of PowerPoint to learn, but the payoff is in the amazing degree of control that you have over the look of your graph. Look no further than PowerPoint if you require sophisticated graphs in your presentation.

*continued*

### Text and Templates

If you've worked with previous versions of PowerPoint, you will be especially pleased with the way it now handles templates. A template serves as a collection of styles to be used throughout a presentation. These styles include background colors and patterns, fonts, text colors, sizes, and styles.

When you "apply" a template, your presentation takes on the style characteristics of that template. The beauty of PowerPoint's implementation is that now you can apply or replace a template anytime. Existing slides, as well as slides you create after you apply a template, will all take on the template's characteristics. This lets you instantaneously change the look of your presentation.

PowerPoint comes with 160 pre-designed modifiable templates, which are indispensable if you have neither the time

nor the inclination to make your own. It's particularly convenient that templates and presentations are the same type of file, so any presentation can also serve as a template.

Integral to any template is a color scheme. As another example of how PowerPoint caters to nondesigners, the program helps you to select colors that work well together. You can change the color scheme at any time, and PowerPoint will intelligently recolor objects—including graph elements—so that everything still matches. Over 5000 color schemes are available.

Like Persuasion, PowerPoint lets you import outlines in a variety of formats, so you can dump text into Outline View without rekeying or translating it. This gives these two programs a leg up on the other major competitors in the field.

PowerPoint, however, tops Persuasion and the other competitors with its new WYSIWYG Outline View. This lets you format text in either Slide or Outline View, and the different fonts, sizes, and text styles show up in Outline View. Additionally, small icons next to each slide title in Outline View indicate if there are any graphics on the corresponding slide. These visual cues make it significantly easier to edit quickly in Outline View.

Not surprisingly, PowerPoint takes advantage of Windows 3.1 technology. With full OLE capabilities, PowerPoint lets you embed pictures, graphs, and sound from other applications into your presentation. Simply double-clicking on the embedded object automatically loads the external application that created the object. This worked well with compliant applications, including the Sound Recorder and Paintbrush.

Font handling in PowerPoint is also much improved. Unlike with PowerPoint 2.0, you can use TrueType fonts instead of fonts created just for PowerPoint. Additionally, you can save the fonts with your presentation, which is helpful if you need to run your presentation on someone else's computer.

### Making the Pitch

In the event that you want to show your presentation on a computer that doesn't have PowerPoint loaded, you can now use the PowerPoint Viewer. A run-time version of PowerPoint's slide-show mode, Viewer can be distributed freely with presentations. With beefed-up slide-show transition effects, like a "flying bullets" feature that makes your bullet points slide into place when a new slide comes on-screen, the opportunity to look good is certainly compelling.

Like Persuasion, PowerPoint only got it half right, though. It should also include a Viewer to run PC presentations on a Macintosh, which would provide real distribution flexibility. Because Microsoft

## PowerPoint tops Persuasion and the other competitors with its WYSIWYG Outline View.

plans to release an upgrade to the Mac version of PowerPoint in the fall and claims cross-platform portability, a Macintosh Viewer for PC presentations should hardly be a stretch.

While many of its major features have been greatly improved, PowerPoint also shines in the details. A spelling checker, extensive on-screen help, and an automatic Smart Quotes option (to automatically turn straight quotation marks into curly quotes) all help to make the program easy to use. The Print dialog box, however, could be improved to let you print out all parts of a presentation with one command, instead of making you select notes, slides, handouts, and outlines individually.

PowerPoint 3.0 delivers a powerful tool for creating great-looking presentations quickly for people who have little design expertise. The broad flexibility to easily change templates, masters, and colors at any time will be welcomed by businesspeople who select designs by trial and error. Support for OLE is a real time-saver, as is the ability to import text and data in a variety of formats.

PowerPoint 3.0 lets you concentrate on your presentation's content rather than design and production. Is there a presentation in your future? At \$495 and with excellent documentation, PowerPoint is a good choice for your software library. ■

## SYSTEM

# IBM's New System Speaks for Itself

TOM YAGER

**A**lthough responsible for the PC era, IBM has rarely led the market that it created. Now, IBM is hoping to recapture some of the glory of the old days with innovation in a new market: multimedia PCs.

Big Blue's latest PS/2 is the first in a line of unique multimedia-capable systems. Dubbed the PS/2 Ultimedia Model M57 SLC, this new system brings a few surprises to the multimedia PC party. IBM's XGA display adapter, its fine-sounding integrated audio, the fast Micro Channel bus, and its helpful front panel raise the M57 SLC above similar systems. Without better software support, however, the M57 SLC will face stiff competition from the rest of the multimedia PC crowd.

### Looks Aren't Everything

Like all PS/2s, the M57 SLC is no beauty queen. But behind the Volvo-esque facade sits a solid machine. Its most notable feature (see the photo) is its multimedia front panel. Unlike systems built from MPC upgrade kits, the M57 SLC brings fully mixed audio directly to the front panel through a marvelously accessible quarter-inch headphone jack. A microphone jack and a volume control also share the panel. The CD-ROM drive has its own eighth-inch headphone jack and volume control.

The M57 SLC is designed around a 20-MHz 386SLC, IBM's own implementation of Intel's 386SX that includes an on-chip cache. Processing speed is fair, and a high-speed hard drive contributes to solid overall performance (see the figure). The compact motherboard also holds SCSI and floppy drive controllers and integrated VGA, serial-port, and parallel-port circuitry.

The system's Micro Channel bus rises vertically. Of the six total slots, four are free, one holds an XGA adapter, and the other contains an audio board. The standard sound board is IBM's M-Audio digital-audio capture-and-playback board. A ribbon cable connects this board to the system's front panel, making digital audio feel more like a designed-in feature than an accessory. The board's back panel has a set of eighth-inch connectors labeled only by single letters. This and the somewhat unclear symbols used on the front to signify power and microphone in-

*The PS/2 Ultimedia Model M57 SLC features handy front-facing microphone and headphone jacks and a volume control. An internal speaker lets you listen to multimedia presentations without headphones.*

put make the machine a little more confusing to use than it needs to be.

### It's in There

The system I reviewed was pretty well decked out. Standard features include the

3½-inch 2.88-MB floppy drive and the 600-MB SCSI CD-ROM drive. The standard configuration (\$5995 without monitor) includes 4 MB of RAM and a 160-MB SCSI hard drive, but the system that I reviewed was boosted to one with 16 MB of RAM

## BYTE ACTION SUMMARY

### ■ WHAT THE PS/2 ULTIMEDIA MODEL M57 SLC IS

A 386SLC-based PS/2 with integrated digital audio and CD-ROM.

### ■ LIKES

Easily accessible front-panel jacks and controls, dual independent digital-audio channels, and internal speaker.

### ■ DISLIKES

Much of the software is not quite solid; MIDI support is poor.

### ■ RECOMMENDATIONS

Once software is stabilized, this will be a high-quality multimedia system with several advantages over the rest of the crop.

### ■ PRICE

\$6945 (includes an 8515 monitor)

### ■ FOR MORE INFORMATION

IBM Corp.  
1133 Westchester Ave.  
White Plains, NY 10604  
(800) 426-9292

Circle 1233 on Inquiry Card.

All results are indexed, and higher numbers indicate better performance. For each index, a Compaq Deskpro 386/33L running Compaq DOS 5.0 and Windows 3.0 = 1. The overall index is the average index of the individual tests.

The BYTE low-level benchmark suite identifies relative performance at the hardware level, breaking down performance by system component. The results of these tests can help you identify the relative performance of a given subsystem and determine where performance bottlenecks may lie. For a complete description of these tests, see "BYTE's New Benchmarks: New Looks, New Numbers," August 1990 BYTE. The BYTE low-level benchmarks, version 2.2, are available in the byte.bmarks conference on BIX, or you can contact BYTE directly.

BYTE's application performance suite measures the performance you can expect to see running a given application category under a given operating environment. We test under two environments: DOS 5.0 and Windows 3.0. We run test scripts using the following programs: Word Processing: WordPerfect 5.1 and Lotus Ami Pro 2.0; Spreadsheet: Lotus 1-2-3 release 3.1+ and Microsoft Excel 3.0a; Database: Software Publishing Superbase 4 version 1.3 and Borland dBase IV; Development: Borland Turbo Pascal for Windows and Microsoft C 6.0; and Desktop Publishing: Aldus PageMaker 4.0. The data files and test scripts are available from BYTE.

*With its cached 386SLC processor and high-speed SCSI disk, the M57 SLC stacks up at about 60 percent the speed of a 33-MHz 386 system on most tests—slightly faster than the typical 20-MHz 386SX.*

(which adds another \$1240 if you buy SIMMs from IBM). An 8515 monitor costs an additional \$950. As an aside, I appreciated IBM's provision of an extra connector on its internal SCSI cable. There are other nice touches, too, like a plastic loop to help lift the SCSI terminating resistor out of its socket and a front-facing oblong speaker that's hooked to the audio board (so it can actually say something besides "beep").

The M-Audio capture-and-playback adapter represents a departure from the audio boards commonly seen in multimedia PCs these days. The difference is the DSP (digital signal processor). Even the MIDI instrument sounds are delivered by the DSP (rather poorly, I'm afraid). Per-

haps most valuable are the board's two independent audio tracks. This pair compensates somewhat for the not-so-hot DSP synthesizer by allowing digitized music to play underneath a separate voice track. This feature was frequently highlighted in IBM's demonstrations; the music ran without interruption while the demonstration software loaded and played multiple foreground voice files. The digitized-audio quality is adequate, and I was particularly pleased with the external speaker's delivery of very clear digitized voice. Music is not delivered as well, but when you listen through headphones, the sound is quite clean.

The system I reviewed included DOS 5.0, Windows 3.0, and OS/2 2.0 on CD-

ROM. I was pleased to find that IBM had included the Windows Multimedia Extensions, which were tweaked to provide support for M-Audio, XGA, and the CD-ROM drive. The multimedia drivers for OS/2 were still in beta testing at the time of this writing, and the full-fledged Multimedia Presentation Manager wasn't even hinted at. Still, a popular IBM authoring tool, AVC (Audio Visual Connection), ran fine under OS/2 and had support for most of the system's multimedia components. AVC does not support M-Audio's quasi-MIDI synthesizer, but I didn't miss it. Apparently, neither did IBM: The AVC demonstration entitled "MIDI Jukebox" plays digitized audio recorded from a real MIDI synthesizer.

Ironically, the best-supported environment for the M57 SLC at the time of my review was Microsoft Windows. It is a credit to IBM that it swallowed some pride and cooked up pretty solid support for its leading operating-system competitor. I loaded a handful of Windows multimedia applications, including Master Trax Pro, Macromind Action, and Brown-Wagh Curtain Call.

The updated Curtain Call, with its support for the Multimedia Extensions, refused to play any of the sample digital-audio files included in the package. I then found out that the standard Windows Media Player program wouldn't play them either but that the Sound Recorder application would. The same files loaded and played fine on an MPC-upgraded PC. Since both Curtain Call and the Windows MediaPlayer communicate with hardware via a high-level interface that the Sound Recorder bypasses, there are apparently some bugs in IBM's implementation.

## Listen Up

IBM's first entry into the multimedia PC market is impressive, but not exceptional. The M-Audio board's ability to handle two distinct tracks of digital audio is a huge help to even simple presentations, and the XGA adapter offers improved display performance.

IBM now needs to beef up its Windows Multimedia Extensions support and get Multimedia Presentation Manager out before Microsoft walks away with the entire PC multimedia market. Whatever moves IBM makes in software, the M57 SLC and the Ultimedia PS/2s that follow it should equip IBM to compete effectively in what is fast becoming a crowded market. ■

# Introducing Video Blaster. Now A Picture Is Worth Just \$495.

Here's everything you need for full-motion video, image capture, graphic overlays, even special effects. All the hardware, all the software, all in one box, all for just \$495.

It starts with Video Blaster™, an internal video card that lets you display and manip-

and special effects to create interactive presentations and multimedia training applications.

There's also a Windows-based Video Kit with JPEG compression that lets you capture images and use them to spice up your DTP, database and WP applications.

And with over two million colors and video control of hue, saturation, brightness, contrast and RGB, you'll have enough video capability to

ulate full-motion NTSC or PAL video on a standard PC monitor. And it lets you input and mix sound from multiple audio sources.

You also get MacroMind® Action!™ for Windows™ and Temptra™ for DOS. Both combine video with computer graphics

make even the MTV guys jealous.

So visit your local retailer or call us at 1-800-998-LABS. You'll get the picture on affordable multimedia video.

# OS/2 or NT + 50 MHz = Power!

If you are an OS/2 or Windows NT developer and you are porting an application that needs robust 32-bit support, your wait is over. Microway is currently shipping NDP Fortran-386/486 for OS/2 or NT, along with our C/C++ and Pascal. Our products work with the IBM and MS linkers and can directly access their respective APIs, taking full advantage of the 386/486 gigabyte address space. The biggest advantage of these new 32-bit operating systems over DOS is their

ability to pre-emptively multitask, which dramatically improves the speed of hard disk I/O and multitasking in general.

Microway has also engineered a complete line of 486 workstations which are ideal platforms for both developers and users who are into number crunching. Using removable hard disks, we can set up a system for you that can be used for DOS, NT, OS/2 and UNIX development! Scientists and

engineers will appreciate the fact that our top of the line 486 boxes use industrial strength power and cooling — that's one of the reasons why half of our Number Smasher-860s have gone out in a 50 MHz 486 B<sup>3</sup> workstation. Another important reason is the fact that the 860 can save you thousands of dollars per month in Cray or 3090 rentals. For more information, please call Microway's Technical Support Department at (508) 746-7341.

## 386, 486 and i860 Compilers

Our NDP family of compilers generate globally optimized, mainframe quality code that runs on the 386, i486, or i860 in protected mode under Windows NT, DESQview, UNIX, OS/2, or extended DOS. The compilers address 4 gigabytes of memory while supporting the 287, 387, Weitek, and Cyrix EMC coprocessors. Applications can mix code from all three compilers and assembly language. To simplify your ports, we offer ClearView, our full-featured, windowing symbolic debugger that works with DOS versions of NDP 386 and 486 compilers.

NDP Fortran™ is a full F77 with F66 and DOD extensions that is 99% VMS compatible. Also contains new F90 features & MS compatibility.

NDP C/C++™ runs in three modes: K&R with Sys V and MS C extensions; 100% ANSI C; and C++ Release 2.1 compatible.

NDP Pascal™ is a full ANSI/IEEE Pascal, with extensions from C and BSD 4.2 Pascal.

## NDP Language Pricing

NDP Fortran, C/C++, or Pascal — DOS products include NDP Tools and Extender. 486 DOS version includes Weitek support, royalty-free binder, and ClearView-386. All DOS compilers come with GREX, Microway's library of 160 MS C compatible lower level graphics and hardware interface routines.

OS/2™ or NT .....	\$595
386 DOS (includes Tools) .....	\$695
486 DOS (includes Tools, Royalty-free DOS Extender and ClearView) .....	\$995
386/486 UNIX V. 3 or V. 4 .....	\$1195
i860 Compilers .....	\$1995

(OS/2 is a trademark of IBM Corporation.)

ClearView-386™ — our windowing 32-bit symbolic debugger that runs with our 386 and 486 DOS products .....

NDP IMSL is a Microway port of IMSL mainframe library to the i860, 486 or 386. Math Library, Statistical Library, Special Functions .....

NDP Plot™ .....

NDP NAG™ Workstation library is a subset of the NAG mainframe libraries. Has 172 routines for differential equations and eigenvalue problems, matrix operations, fitting curves, statistics, and regression analysis .....

## Number Smasher-860™

Number Smasher-860 is the highest performance coprocessor card ever to run in an ISA or EISA bus or as part of a transputer system. Delivers up to 80 million floating point operations per second at 40 MHz and produces 11.8 double precision Linpack megaflops. The board comes standard with an EISA or ISA interface, 8 meg of high speed memory, and your choice of NDP Fortran, C/C++, or Pascal for the i860 running under MS-DOS, UNIX, OS/2, SunOS, or DESQview .....

## i860 Vectorizers and Libraries

NDP NAG/860 is a Microway port of the NAG workstation library to the i860 .....

NDP HALO-860 includes HALO Professional and an interface library which makes HALO directly callable by the i860 .....

860 Vectorizer includes PSR VAST-2 which converts a C or FORTRAN program into a new program which calls the Intel Vector library. Includes the Intel Vector Library and Microway's i860 Profiler .....

860 Vector Library — Written for Intel, includes over 400 vector primitives that take advantage of the i860's cache, dual instruction mode, and pipelined multiplier accumulator .....

IGL — a 3-D Graphics Pipeline that performs geometry and rendering using routines which use the i860's built-in graphics hardware .....

Kuck & Associates CLASSPACK — Hand-coded, pipelined libraries for the i860.

• Basic Math Library .....	\$500
• DSP — Over 100 routines including 1 and 2-D correlations and convolutions. Does 1024 Complex FFT in 1 msec. ....	\$750
• Dense Array solver package .....	\$750

## Special! SX Your AT!

FASTCache-SX/Plus™ — The "Windows Solution". Converts your 286 into a powerful 25 MHz 386SX. Combines Microway's award-winning FASTCache-SX accelerator with up to 16 meg of extended memory. Features an Intel 486-style 16K internal cache and 387SX coprocessor socket. Uses a 16-bit slot. Outperforms most SX systems! Installs in minutes in over 100 AT systems including AST, Compaq, Epson, HP, IBM, NCR, NEC, Sperry, Tandy, Zenith and more!

FASTCache-SX-20 .....	\$295
FASTCache-SX/Plus-25 .....	\$495

## 386/486 Custom Workstations

A Microway Black Tower is the ideal solution for a cost-effective desktop system, personal super-computer, file or computation server, or industrial PC. Microway workstations are used in corporations, government research labs and university engineering departments on applications ranging from CAD to financial analysis, software development to basic research. They come standard with two or more thermostatically controlled fans, 250 Watt motherboard power connectors, and American-manufactured industrial grade power supplies. Our 386 and 486 motherboards are carefully burned in and tested. Top speeds are 40 MHz for the 386 and 50 MHz for the 486. Choose from a full line of high quality options to customize your workstation. The base system includes a sleek, black tower case, a black tactile response keyboard, four megabytes of memory, a 250 Watt American power supply and one floppy drive. Each system is backed up by a one year warranty and the best technical support in the industry. Our 486B<sup>3</sup>T was a recent *Digital Review* Target Award nominee. Our B<sup>3</sup> frequently goes out with three to five i860 cards running NFS on UNIX. With a peak throughput of 400 megaflops, this is the most cost-effective way to boost the power of your Sun network. Microway systems have earned an international reputation for outstanding design, price/performance value and reliability.

## SOFTWARE

# Microsoft's Lucky Number

OTHAR HANSSON

**W**ith all the discussion over object-oriented this and that, the only real success story in OOP (object-oriented programming) seems to be C++. With Symantec/Zortech and Borland cleaning up in sales of their Windows-compatible C++ compilers, Microsoft knew its long-standing policy of "C and C alone" would have to go.

After several delays, Microsoft C/C++ 7.0 (or C7 for short) has arrived. Its price and features make it obvious that Microsoft intends to try to recapture the lead it had some years ago when Microsoft C was the only game in town.

### C++ Class Library

Arguably the most exciting feature of C7 is the C++ language itself, a topic somewhat beyond the scope of this review. C7 fully supports C++ native compilation, debugging, and profiling. In addition, in the MFC (Microsoft Foundation Classes) library, Microsoft has presented a surprisingly simple and straightforward example of how C++ can be used to simplify development of Windows and MS-DOS applications.

A simple example is provided in listing 1, a sample from Microsoft that consists of the very brief MFC-assisted "Hello, World" program. As you can see, the program relies on a lot of default behavior provided by MFC classes such as `CWinApp` and `CFrameWnd`. The program even uses the `main()` and `winMain()` functions provided by the library, relying simply on the constructor for `CHelloApp()` to initiate the application's interaction with the user.

Microsoft says that the MFC is merely the first in a family of Application Framework Extensions (hence the `afx_` prefix in all library symbols) that will track future Windows developments, including pen-based systems, multimedia, and Windows NT. The future of the library remains to be seen, but it certainly provides a good start. While this is Microsoft C/C++ 7.0 for Windows 3.1, it is important to stress that the library is version 1.00. The initial version of a C++ class library typically suffers from a few oversights, and I would expect changes in future versions of the MFC (luckily, the source is provided for do-or-die modifications).

### Keeping Up

One source of future changes is the uncertain state of the C++ ANSI standard, which is still under development. C7 implements the AT&T C++ 2.1 specification, but it deviates from some aspects of later versions. Microsoft claims (correctly) that the upcoming ANSI standard is the only standard worth arguing about, but practically speaking, most other compiler vendors track the AT&T implementations as a de facto standard, and thus the C7 deviations are likely to be a source of aggravation for users.

The first deviation is in the area of templates, which are used to provide a parameterized class facility. For example, with a parameterized list class, it would be easy to define lists of dates, lists of menu items, or lists of any other object type. While the ANSI standard committee argues over possible template specifications and requirements, compiler vendors are simply implementing their own interpretations. Microsoft has chosen a very simple preprocessor that instantiates the template code to use the specific object types.

A similar portability question can be raised over the Microsoft implementation of exceptions. An exception-handling facility can greatly simplify error recovery,

which is particularly important in building bulletproof user interfaces. Microsoft provides exception classes and a set of macros that implement a simple exception-handling mechanism, using the `Csetjmp` and `longjmp` routines. However, C7 exceptions are not compatible with the implementations chosen by other compiler vendors.

One "extension" that Microsoft did correctly, however, is its implementation of dispatching for Windows message handling. The natural C++ implementation of this is to use virtual functions for each type of message, allowing an object class to override the message handling provided by its parent class. The large number of Windows message types makes this impractical, resulting in large but ridiculously sparse virtual-function tables. Borland C++ works around this problem through a minor but still nonportable language extension. Microsoft found a solution within the language standards by using macros to construct dispatching tables during program initialization.

### C++ Documentation

A recent saying has it that while C++ makes it pretty difficult to shoot yourself in the foot (in contrast to C), when it does happen, it blows your whole leg off.

*continued*

## BYTE ACTION SUMMARY

- **WHAT MICROSOFT C/C++ 7.0 IS**  
A C and C++ compiler with tools for creating DOS and Windows applications.
- **LIKES**  
P-code and in-lining for size and speed optimization; Microsoft Foundation Classes library to simplify Windows programming; complete documentation.
- **DISLIKES**  
Still no Windows-hosted tools; deviation from most recent AT&T implementations.
- **RECOMMENDATIONS**  
This is a compiler well worth considering for projects of any size, but you should compare compilers before making a switch.
- **PRICE**  
\$499
- **FOR MORE INFORMATION**  
Microsoft Corp.  
1 Microsoft Way  
Redmond, WA 98052  
(206) 882-8080  
fax: (206) 883-8101  
**Circle 1232 on Inquiry Card.**

**Listing 1:** *This brief segment is the complete Windows version of the "Hello, World" program, simplified through use of the Microsoft Foundation Classes Windows class library.*

```
// helloapp.cpp : Minimal MFC Windows app.
//
// This is a part of the Microsoft Foundation Classes C++ library.
// Copyright (C) 1992 Microsoft Corp.
// All rights reserved.
//
#include <afxwin.h>

// Define a window class derived from CFrameWnd
class CHelloWindow : public CFrameWnd
{ public:
    CHelloWindow()
        { Create(NULL, "Hello World!",
          WS_OVERLAPPEDWINDOW, rectDefault); }
};

// Define an application class derived from CWinApp
class CHelloApp : public CWinApp
{
public:
    virtual BOOL InitInstance();
};

// Construct the CHelloApp's m_pMainWnd data member
BOOL CHelloApp::InitInstance()
{
    m_pMainWnd = new CHelloWindow();
    m_pMainWnd->ShowWindow(m_nCmdShow);
    m_pMainWnd->UpdateWindow();
    return TRUE;
}

CHelloApp HelloApp;
// HelloApp's constructor initializes and runs the app
```

Folklore also has it that the number of C++ programmers doubles every seven or eight months. C++ enthusiasts take such statistics as evidence of technological Darwinism. On the other hand, such statistics imply that one out of every two C++ programmers has very little experience with the language.

The weighty documentation (2 cubic feet worth) included in the C7 package does an admirable job of preventing serious injury from the powerful features of C++. Included is a C++ tutorial that is a little too short to present the entire language but, on the other hand, is not filled with the usual empty object-oriented propaganda. Despite its length, it presents a glimpse of the implementation where necessary (e.g., in describing virtual functions).

In addition, the tutorial on the MFC library takes care to introduce C++ idioms and style based on the style used in the library itself. If the MFC turns out to be the first large C++ library you work with, you'll be following a good example.

### Compiler Improvements

Independent of the C++ capability, C7 includes several extensions to the mature and stable Microsoft C compiler family. Improvements in code size and speed continue with C7's use of p-code (pseudo-code) and function in-lining. Microsoft's long-standing problem—long compile times—has been eased somewhat by the addition of a particularly flexible implementation of precompiled headers. In my tests, both Microsoft's product and Borland C++ 3.0 exhibited comparable compilation speed.

P-code is an old technique for reducing the size of executables. Rather than compile from a high-level language to object code, the compiler can optionally generate object code for a virtual machine, together with an interpreter to emulate the virtual machine. C7 packs code into a stack-based language that abstracts many of the details of 80x86 assembly language. P-code is selectable on a per-file basis or even within files using the #pragma compiler directives. For speed-critical sections

of an application, standard options can be used to optimize for speed. But for space-inefficient portions of the code, p-code can reduce code size up to 50 percent in some cases, extending traditional code-size optimizations.

Such p-code has apparently been used in the user-interface code of Microsoft Word, Excel, and Project products. For smaller applications, the size of the interpreter may outweigh the code-size reductions. P-code is compatible with the debugger, profiler, and other development tools, but as it is new technology in C7, I would not be surprised to hear of problems with its use.

Function in-lining selects small, frequently called functions and replaces calls to them with "in-line" code for the function, eliminating the overhead of passing arguments and manipulating the call stack. In-line functions are similar to the age-old use of #define macros. However, macros have problems with type safety and unexpected parameter-passing semantics. C7 extends the in-lining implementations of most ANSI C and C++ compilers by allowing the programmer either to specifically request that a function be in-lined or to ask the compiler to search for opportunities for in-lining optimization.

Many compilers will ignore the in-line keyword if the function is too complex. Some compilers will not in-line functions that have even a single conditional or looping statement. In this and many other areas, Microsoft has wisely given the programmer a lot of welcomed flexibility in code optimization.

Finally, C7 uses precompiled headers to reduce the overhead of repeatedly parsing header files during compilation. The overhead cost of large or deeply nested header files is a major problem with Windows programs and is particularly frustrating because many header files never change during the course of a development effort.

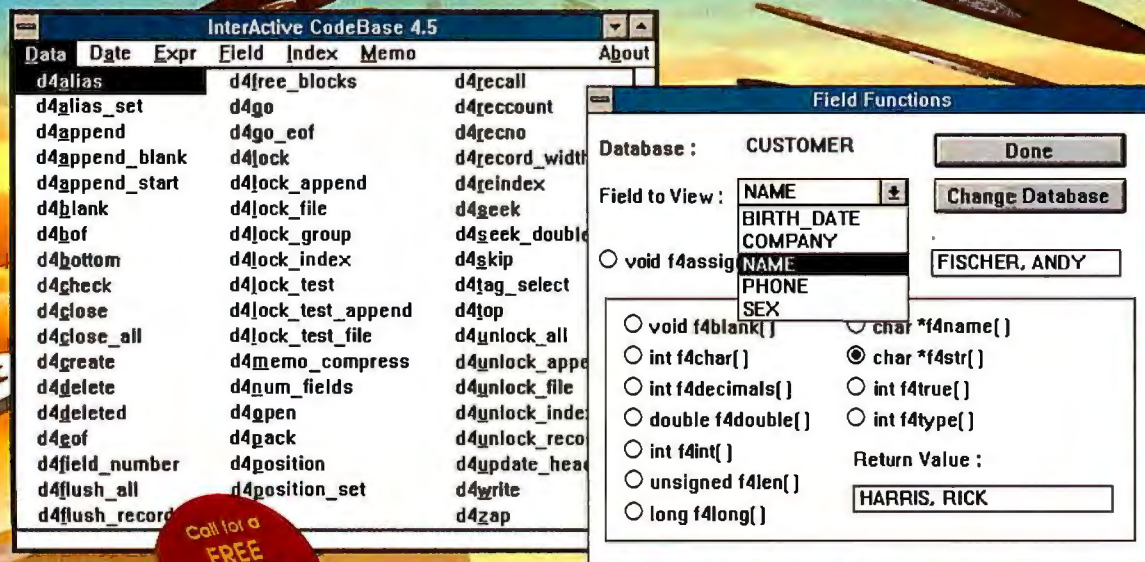

C7 allows the programmer to "snapshot" the state of the compilation at any point in a source file, typically after the stable header files have been parsed. This saved precompilation can then be used the next time that source file is compiled. In contrast to other compilers, C7 can precompile executable code as well as declarations.

### Environment Improvements

C7 introduces several improvements to both the CodeView debugger and the Programmer's Workbench. CodeView now supports remote debugging, overlapping windows, and faster loading of debugging information. The Programmer's Workbench has a new class browser and extended

# dBASE, FoxPro and Clipper in C, C++ and Basic

- Multi-user
- DOS, Unix, OS/2 Support
- C++ Interface Included
- Windows 3 Data Entry
- Clipper → C Translator Available

Complete DBMS for C, C++ and VB programmers - compatible with the data, index and memo files of dBASE III/IV, FoxPro 2 and Clipper. Try the super-fast, super-small FoxPro 2.0 CDX index files!

(Using Visual Basic? Try CodeBasic!)

## Images in your Computer

from Video or full page Scanners. Double your productivity in DeskTop Publishing, OCR and Multimedia applications.

### ColorSnap PC

Professional, REAL TIME, video image capture in color (24-bit, 16.7 million colors) and gray scale. Capture from any NTSC/PAL video source, camcorder, live TV, still video etc. VGA, SVGA supported, files saved in standard formats. Superb image quality, Windows support.

\$599.00

### Artiscan 24-bit true 600 or 800 dpi on both axes

Professional, desk-top, fast (SCSI interface included), 24-bit color scanner. True 600 dpi on both axis. Superb picture quality in color and gray scale. Includes Image Processing software. Optional X-Ray, Transparency Scanner (\$699.00). OCR software options available. Recognita (add \$159.00). 800x800 dpi version \$1545. Best magazine ratings.

\$1199.00

### PageReader 300

Full Page, 300 dpi Scanner complete with OCR WordScan software & line-art Imager software!! HP-ScanJet compatible driver hence compatible with any OCR package. Fast! Reads avg. page in <10 sec. Incredible introductory price \$399.00 complete!!! With Recognita, add \$159.00), with 9600 fax/modem send/rec, add \$99.00. Ideal in any office for text, autoCad drawings, presentations etc.

\$399.00

### Color 3000

Full Page, color (24-bit) scanner (16.7 million colors or 256 gray scale). Complete with Color Image Processing Software. Fully HP ScanJet emulation driver. Color 3000 .....\$599.00 WordScan .....99.00 Recognita .....159.00

\$599.00

# Video In.

**ComputerEyes/RT** - affordable 24-bit video frame grabber for IBM computers. Includes everything you need to capture high-resolution 8- or 24-bit color (or 8-bit gray scale) images from any standard composite or S-video source in real time.

Supports VGA and Super-VGA 256-color (or gray-scale), VGA HiColor, and true-color display boards. Saves image files in all common formats - TIFF, Targa TGA, PCX, GIF, ColoRIX, and more. Hundreds of applications!

Also includes new **CineMaker** animation software for capturing motion video clips. Windows and developers software packages also available.

Under \$600.

### TelevEyes

new VGA-to-TV Converter. External module easily moved from computer to computer - connects between computer's VGA output and VGA monitor.

Outputs standard composite video of whatever is on the VGA screen. Compatible with all TV monitors and VCRs. Works with text, graphics modes (320 and 640), and Windows. Excellent for use with large-screen monitors, video projectors, video networks, etc.

Under \$300.

## MICROSOFT'S LUCKY NUMBER

cross-referencing facilities. In addition, thanks to the Workbench, it has never been easier for novices to start a new project and get the make-file and compiler options correct.

Microsoft has by no means abandoned MS-DOS development and/or users. All the programming tools are MS-DOS applications. The majority of the MFC library is independent of Windows. This includes all the expected data structures—such as lists, arrays, strings, and “maps”—as well as well-designed support for persistent objects, debugging, tracing, and exception handling.

There are aspects of the development environment that could benefit greatly from a GUI, however. It is somewhat ironic that very few of the tools for developing Windows applications are actually Windows applications themselves. Cynics would say that Windows development must be much more difficult than compiler vendors claim or that the Windows environment is simply not as useful as Microsoft says. Many programmers still want lean and mean tools, not pull-down menus and what they perceive to be sluggish response. I for one eagerly await the advent of Windows class browsers, debuggers, and profilers.

### Big and Beefy

As someone who has been using Microsoft C since 1986, when the best that could be said about it was that there was nothing better available, I'm gratified to see C7 up the ante in the C and C++ development tools-feature war. Microsoft's C7 is the classic “power tool,” thanks in large measure to its 10,000 pages of documentation and the alphabet soup of options that it provides.

Although its thorough and readable documentation (particularly for C++) and its simple and well-designed class library make it an option for small projects, C7's appeal is clearly to the serious, large-scale development project. I would suggest a head-to-head comparison of different compilers on your application before switching. The applicability of the supplied classes and tools to your particular needs should be the most important factor, and the current price wars make such a comparison feasible. ■

*Othar Hansson is vice president of Heuristic Research, Inc., a software R&D firm in Berkeley, California. He received his Ph.D. in computer science from the University of California-Berkeley, and he has been a C++ user since 1986. # Delivering the Power: WATCOM C9.0/386

- ▶ **The Widest Range of 32-bit Intel x86 Platforms**  
32-bit DOS, 32-bit Windows, OS/2 2.0, AutoCAD ADS
- ▶ **The Industry's Leading Code Optimizer**  
Advanced global optimizer with new 486 optimizations
- ▶ **The Most Comprehensive Toolset**  
Debugger, profiler, protected-mode compiler and linker, 32-bit DOS extender with royalty-free run-time, licensed components from Microsoft SDK, and more
- ▶ **The Best Value in 32-Bit Tools: \$895\***

## Unleash 32-bit Power!

WATCOM C9.0/386 lets you exploit the two key 32-bit performance benefits. The 32-bit flat memory model simplifies memory management and lets applications address beyond the 640K limit. Powerful 32-bit instruction processing delivers a significant speed advantage: typically at least a 2x speedup.

### You Get:

- ▶ **100% ANSI and SAA compatible:** C9.0/386 passes all Plum Hall Validation Suite tests
- ▶ **Extensive Microsoft compatibility** simplifies porting of 16-bit code
- ▶ **Royalty-free run-time** for 32-bit DOS, Windows and OS/2 apps
- ▶ **Comprehensive toolset** includes debugger, linker, profiler and more
- ▶ **DOS extender support** for Rational, Phar Lap and Ergo
- ▶ **Run-time compatible with WATCOM FORTRAN 77/386**

**32-bit DOS** support includes the DOS/4GW 32-bit DOS extender by Rational Systems with royalty-free runtime license

- ▶ Virtual Memory support up to 32Mb

**32-bit Windows** support enables development and debugging of true 32-bit GUI applications and DLLs.

- ▶ Includes licensed Microsoft SDK components

**32-bit OS/2 2.0** support includes development for multiple target environments including OS/2 2.0, 32-bit DOS and 32-bit Windows

- ▶ Access to full OS/2 2.0 API including Presentation Manager
- ▶ Integrated with IBM Workframe/2 Environment

**AutoCAD ADS and ADI** Development: Everything you need to develop and debug ADS and ADI applications for AutoCAD Release 11

**Novell's Network C for NLm's SDK** includes C/386

## The Industry's Choice.

**Autodesk**, Robert Wenig, Manager, AutoCAD for Windows:

"At Autodesk, we're using WATCOM C/386 in the development of strategic new products since it gives us a competitive edge through early access to new technologies. We also highly recommend WATCOM C/386 to third party AutoCAD add-on (ADS and ADI) developers."

**Fox Software**, David Fulton, President: "FoxPro 2.0 itself is written in WATCOM C, and takes advantage of its many superior features. Optimizing for either speed or compactness is not uncommon, but to accomplish both was quite remarkable."

**GO**, Robert Carr, Vice President of Software: "After looking at the 32-bit Intel 80x86 tools available in the industry, WATCOM C was the best choice. Key factors in our decision were performance, functionality, reliability and technical support."

**IBM**, John Soyryng, Director of OS/2 Software Developer Programs: "IBM and WATCOM are working together closely to integrate these compilers with the OS/2 2.0 Programmer's Workbench."

**Lotus**, David Reed, Chief Scientist and Vice President, Pen-Based Applications: "In new product development we're working with WATCOM C because of superior code optimization, responsive support, and timely delivery of technologies important to us like p-code and support for GO Corp's. PenPoint."

**Novell**, Nancy Woodward, V.P. and G.M., Development Products: "We searched the industry for the best 386 C compiler technology to incorporate with our developer toolkits. Our choice was WATCOM."

## APPLICATION

# Animation Energizes Rio's World-Class Graphics

TOM YAGER

If the current excitement over multimedia has done anything, it's helped open the eyes of potential users to the value of using technology to present information. Sometimes overlooked amid all the hoopla is one of the simplest ways to attract attention: 2-D color graphics. AT&T Graphics Software Labs offers an impressive way to create 2-D presentation graphics. It's called Rio, and its latest incarnation, version 5.20, adds the allure of animation to what was already a world-class tool.

### Hanging a Tag

Rio uses 2-D shapes—polygons, ellipses, and text—to represent images of any complexity. You draw, color, and place these shapes as if you were working with shards of construction paper. When viewed together, they can become a convincing vision of anything, real or imagined.

Rio makes no distinction between drawing and preview modes. Everything you draw in Rio typically appears on the screen as it will appear in the finished image. Each element of a drawing—each shape or text phrase—maintains its own identity and carries with it a set of attributes that you can view or change at any time. Rio lets you declare default attributes for the major object types; all circles, for example, can start out yellow and with a shadow. Rio will apply solid colors, gradients, and image maps. Objects can be transparent to any degree and can cast shadows of variable depth, color, and transparency.

Rio includes a small (but expandable) assortment of proprietary scalable fonts. The entire drawing, called a *scene*, is stored on disk in a resolution- and device-independent format. A drawing can be rendered to the screen, to an external device such as a printer or a film recorder, or to a file for later processing. Rio optimizes its output according to the target device, applying antialiasing and dithering to produce smooth, high-quality images.

Finally, with the Animator option installed, you can set your Rio scenes in motion. Animations can be either recorded directly to videotape for the best-quality results or written to a file.

### Ticket to Rio

Installing Rio isn't difficult, but it does take some thought. The latest revision of

*Gradients, transparency, shadows, image mapping, antialiasing, and scalable kerned text, all shown here, are standard in Rio. Rio's unique interface speeds the creation of even complex scenes like this one.*

the package includes support for VGA (VESA [Video Electronics Standards Association] compatibility is needed for 256 colors and higher resolutions) and the full line of Truevision 16-, 24-, and 32-bit color display cards. The Truevision cards offer the highest-quality immediately viewable results, but a VGA and a secondary output device (e.g., a color printer or film recorder) are just as effective for hard-copy or slide presentations.

I chose to focus on Rio's strength when used with Truevision cards. I used the BYTE Multimedia Lab's PC system with an AT Vista, a 32-bit color card with 4 MB of memory. The destination for much of my work in the lab is video, so the AT Vista was aided by Truevision's VidI/O Box, a two-way RGB-to-recordable video converter. This not only paved the way to record my Rio still scenes and animations, but also allowed me to use Rio's image-capture capabilities (more on that later).

Rio runs under DOS but uses Phar Lap's DOS Extender to gain access to extended memory. GSL recommends at least 6 MB of RAM, and a 386 or 486 processor is required (a math coprocessor is strongly recommended for 386-based systems). Input-device support covers popular mice and graphics tablets. Rio will also converse with an amazing number of scanners, printers, film recorders, and VCR controllers, with all the device support internal to Rio.

The rest of the Multimedia Lab's test setup for Rio included a Panasonic AG-7750 Super-VHS video recorder, a Di-aquest DQ-422 VCR controller card, and a Videomedia V-LAN VCR controller. The AT Vista's output was connected to a

Panasonic 13-inch professional video monitor. These things are valuable for video and animation work; a VGA system is all that's needed for basic graphics work.

### The Smart Canvas

Rio's interface is a delight. It takes over the entire screen, putting up a pull-down menu bar that extends across the screen's top. You'll find, however, that the most common operations don't require you to go to the menus. Rio makes sublime use of quickly learned mouse/tablet shortcuts for the things you do most often.

If you're accustomed to working with a monochrome line-art representation and switching to a special preview mode to see colors and object stacking, Rio's real-time viewing may take some getting used to. I immediately took to it, and I found myself far more productive than with the two-step drawing tools I was used to. Performance is affected: Colored polygons take longer to appear on the screen than lines do. Rio performs reasonably well, though, and the benefit of seeing what I was drawing was worth the trade-off.

As a polygon drawing tool, Rio more than holds its own. There is no toolbox of shapes and actions. Instead, the pull-down menus use words to describe the object types and the actions available. To draw a square, you select Square from the Build menu and then drag out the square's dimensions with the mouse or pointer. To move, rotate, resize, flip, copy, or delete the square, you need only click with the mouse to select it and place the cursor inside the selection box that appears around it. As you move the cursor around the

perimeter of the selection box, the cursor changes shape to show the action that will take place if you click again.

The object-attribute dialog boxes are also quick to access. They pop up with a mouse-click for selected objects and offer control of color (including gradients), shadows, transparency, and image mapping. Selecting a color in the attribute dialog box brings up a palette. You can rotate through several default palettes or add your own entries at will. Rio supports RGB, HLS (hue, luminance, saturation), CMY (cyan, magenta, yellow), and HSV (hue, saturation, value) color models.

Gradient patterns are a special case. They can be rendered at any angle and can include up to eight color stops. Rio creates a smooth transition between the colors selected to produce the gradient.

Image mapping is one of Rio's most

powerful features. A scanned or captured image—or any graphics file in one of the many supported formats—can be used as an object's foreground color. You can interactively crop and shape the image to produce all kinds of effects. Rio scales and smooths the imported image to match the shape and cropping you select. Rio will import images directly from a scanner or Truevision video card. In the latter case, Rio handles all the image-capture functions internally. A particularly nice touch is Rio's field average function; this very effectively removes motion artifacts (i.e., jitter) from captured video frames.

Rio's background can also take on a flat color, a gradient, or an image map. If you are using a Truevision video card, you also have the option of making the background "live"—that is, the video coming into the Truevision card becomes your background. With this, you can use Rio to create video-overlay graphics and titles. A scene rendered with a live background can be reloaded and displayed on top of live video, using either Rio or GSL's Panorama presentation software.

### Getting a Look

While Rio shows you something very close to the finished output as you draw, it does cut a few corners for speed's sake. When you select the Render, Print to File, or Print to Device menu options, Rio renders the scene, delivering the best possible quality for the type of output device being used. With VGA, this is only as good as a 256-color palette can deliver. But with the Multimedia Lab's ATVista, Rio takes full advantage of the card's 16.7 million colors. Everything is antialiased to smooth diagonals and curves and improve the image's apparent resolution. Image maps are smoothed to hide the artifacts of scaling. Text is automatically kerned, and the completed drawing is either displayed on the screen, saved in a file, or sent to an external device, as you request. Rio will apply a number of image effects at your request, including emboss, contrast shift, negative, black and white, mosaic, posterize, and soften.

Rio's Print to File option lets you save an optimized render directly to disk in one of a number of popular graphics file formats. You can then import these files into other programs and for use as presentation slides (see the screen), backgrounds, or what-have-you.

Rio's Animator add-on attaches a powerful key-frame animation system to Rio's 2-D graphics facility. Each object's position, size, visibility, transparency, and color, as well as many other attributes, can be smoothly animated between key frames.

With Rio, animation is as simple as drawing objects as you'd like them to appear at the start of the animation, setting a key frame, and then changing the objects to reflect the way you want them to look at the end of the animation. Rio will create smooth transitions between those two key frames. You can set any number of key frames, and a key can be applied to an object, a group, or the entire scene. Rio includes a sophisticated time-line editor that lets you alter the speed, direction, and other elements of your objects' animation.

You can render finished animations to videotape, consecutive image files, or animation files. Once again, Rio's animation capability is fully self-contained. It includes the ability to automatically render and record individual frames to videotape using supported VCR control devices, allowing completely unattended operation. It will also save animations, one frame at a time, to consecutively numbered image files, for spooling to video, film, or some other medium.

Finally, Rio will create Autodesk Animator-compatible FLI (low-resolution) and FLC (high-resolution) files that contain a compressed copy of all the animated frames. You can then use a player (from Autodesk or numerous other third-party sources) to quickly play back the images in sequence to reproduce the animation on your computer's display.

### Return from the Islands

For the past two years, in the face of a steady parade of graphics packages, Rio has remained my hands-down favorite for 2-D graphics and animation, because I can quickly create professional-looking images. I might have written that off to familiarity, except that I was productive from the first day it arrived. Nothing I've tried since has got me through the learning curve so fast, provided so many built-in services (like video capture and animation), or produced such beautiful output on so many kinds of devices.

Rio has a quirk or two, to be sure, but they're minor. I put Rio through some positively grueling paces for this review, and I was always impressed with its performance, stability, and quality of output. Whether your medium is 35mm slides, color overhead transparencies, hard copy, or video, Rio makes it easy to create graphics that will impress your audience. ■

*Tom Yager is director of the BYTE Multimedia Lab and author of the forthcoming book The Multimedia Producer's Handbook (Academic Press). He can be reached on BIX as "tyager" or on the Internet at tyager@bytepb.byte.com.*

## BYTE ACTION SUMMARY

### ■ WHAT RIO ANIMATOR IS

A professional 2-D presentation graphics tool with key-frame animation.

### ■ LIKES

Quick access to common operations; complex gradients; image mapping; internal support for input and output devices; stunning results.

### ■ DISLIKES

Too high-priced; fixed viewpoint for animation (no movable "camera").

### ■ RECOMMENDATIONS

This is a fast, easy-to-learn presentation graphics system geared toward professional-quality output; I recommend it very highly as a step up from traditional PC presentation graphics programs.

### ■ PRICE

\$1795; Animator option, \$1495

### ■ FOR MORE INFORMATION

## APPLICATION

# Bringing the Outside into Windows

STEVE APIKI

**O**utside In for Windows is a document utility that aims to make it easier for those of us who live inside Windows to work with documents generated by those in the outside world. Outside In lets you view documents, complete with formatting (e.g., tabs and spacing), from DOS and Macintosh applications. Outside In blends viewing capability with cut-and-paste data transfer, printing, and file-finding and navigation tools to create a working environment that's ideal for handling multiple document types.

### Viewing Documents

File viewing is the central task of Outside In for Windows. Loading a document into the viewer requires only double-clicking on the filename in one of the navigation boxes or hitting the magnifying-glass button with the proper file highlighted (see the screen). Outside In displays the file complete with font styles, margins, and other formatting features.

Outside In handles a raft of file formats. There are too many to enumerate here, but Outside In covers just about every popular word processor designed for DOS, Windows, and the Mac, and most DOS spreadsheets and databases. I ran Outside In with documents from several versions of Lotus 1-2-3, Quattro and Quattro Pro, FoxPro, Microsoft Word (DOS, Mac, and Windows versions), WordPerfect, XyWrite, and Ami Pro. The viewer worked flawlessly most of the time, but I had some problems with two 1-2-3 documents (Outside In reported that the documents were empty when they weren't). Systems Compatibility was working on a fix as we went to press.

### Don't Just Watch

Outside In for Windows is more than a viewer; in fact, its most useful capability is its transferring of formatted data between DOS and Windows applications through simple cutting and pasting. To transfer data between, say, a Quattro spreadsheet and Ami Pro, you load the spreadsheet into the viewer, select the part you need, copy your selection to the Clipboard, and paste it into Ami Pro.

This mechanism makes it extremely easy to combine information from various formats. Outside In defaults to placing the

*Outside In's viewer lets you copy and paste between DOS document formats (in this case, a file from Lotus 1-2-3) and Windows applications. You can also search for files by document type and content and print formatted documents.*

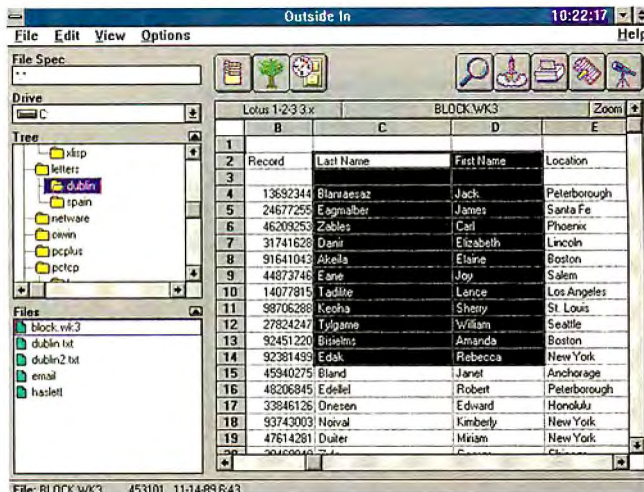

data on the Clipboard in every format that it supports (i.e., Text, Rich Text Format, and several Windows applications), but you can customize the copy operation to choose only formats you select.

Outside In's integration with these and other elements of Windows is very solid. It installs itself as a menu item in the Windows File Manager, allowing you to launch the utility directly from the File Manager menu. You can also drag and drop documents between the 3.1 File Manager and Outside In. Finally, Outside In will replace the file viewers in Norton Desktop.

Navigation and search tools make Outside In for Windows a full working environment. You can search for documents based on type, location, or even by contents. The navigation window is generally well designed, but it lacks a collapsible hierarchy; with a complex directory structure like the one on my disk, you can easily lose yourself in directories nested several levels deep.

Overall, Outside In for Windows is an outstanding tool if you need to work in a shop where many document formats are common. One of Windows' strongest selling points is that it provides a consistent mechanism for opening and printing documents and for transferring data between applications; Outside In extends this environment to include documents born outside of Windows. ■

*Steve Apiki is a BYTE technical editor with a B.S.E.E. from Rensselaer Polytechnic Institute. You can reach him on BIX as "apiki."*

## BYTE ACTION SUMMARY

### ■ WHAT OUTSIDE IN FOR WINDOWS DOES

It lets you view documents from DOS applications within Windows and lets you copy and paste between those documents and Windows applications.

### ■ LIKES

Easy cutting and pasting between DOS and Windows applications; wide variety of file formats.

### ■ DISLIKES

Errors with supported document types; directory tools are lacking.

### ■ RECOMMENDATIONS

If you work in Windows but need access to other documents, Outside In is outstanding.

### ■ PRICE

\$89

Buy with

# Confidence

In an effort to make your telephone purchasing a more successful and pleasurable activity, The Microcomputer Marketing Council of the Direct Marketing Association, Inc. offers this advice, "A knowledgeable buyer will be a successful buyer." These are specific facts you should know about the prospective seller before placing an order:

## Ask These Important Questions

- How long has the company been in business?
- Does the company offer technical assistance?
- Is there a service facility?
- Are manufacturer's warranties handled through the company?
- Does the seller have formal return and refund policies?
- Is there an additional charge for use of credit cards?
- Are credit card charges held until time of shipment?
- What are shipping costs for items ordered?

Reputable computer dealers will answer all these questions to your satisfaction. Don't settle for less when buying your computer hardware, software, peripherals and supplies.

## Purchasing Guidelines

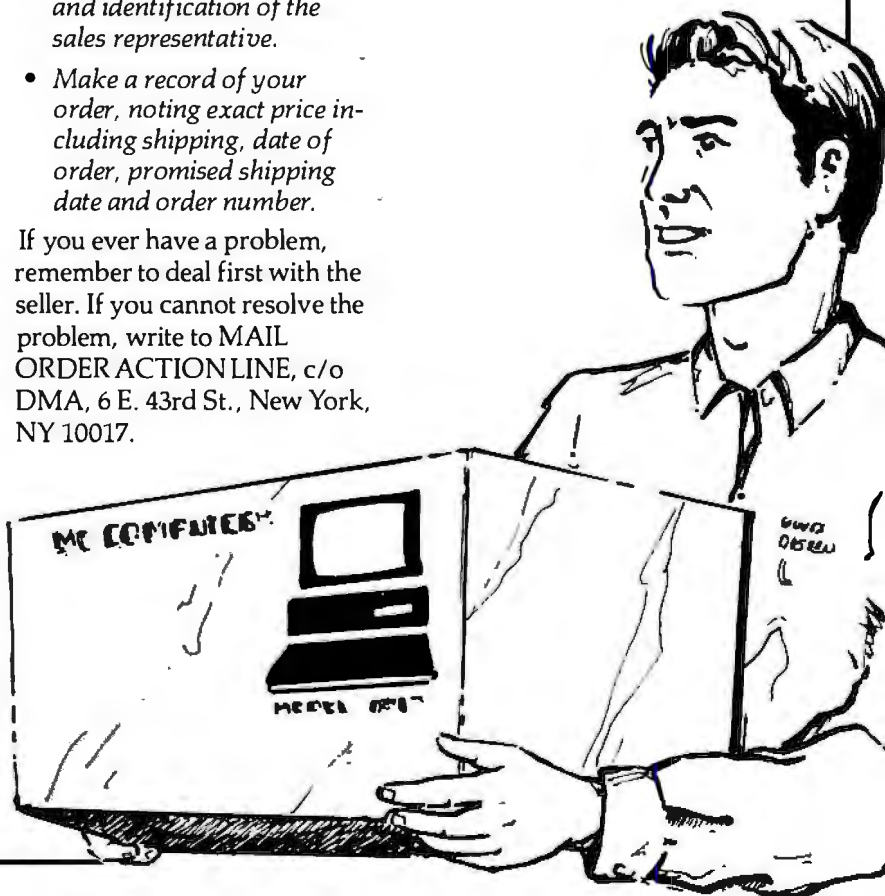

- State as completely and accurately as you can what merchandise you want including brand name, model number, catalog number.
- Establish that the item is in stock and confirm shipping date.
- Confirm that the price is as advertised.
- Obtain an order number and identification of the sales representative.
- Make a record of your order, noting exact price including shipping, date of order, promised shipping date and order number.

If you ever have a problem, remember to deal first with the seller. If you cannot resolve the problem, write to MAIL ORDER ACTION LINE, c/o DMA, 6 E. 43rd St., New York, NY 10017.

This message is brought to you by:

## SOFTWARE

# A/UX 3.0: The Mac's Odd Couple

TOM THOMPSON

What could be stranger than the Mac OS, renowned for its friendly user interface, working in tandem with Unix, whose user-hostile attitude is legendary? Nevertheless, that's exactly what Apple's implementation of Unix—known as A/UX—accomplishes.

A/UX allows the Mac OS and applications to operate on the traditional Mac Desktop beside Unix programs and tools running in console windows. A/UX 2.0 managed this Jekyll-and-Hyde duality decently (see "A Workstation in a Mac's Clothing," January 1991 BYTE). It combined features from both AT&T System V release 2 and BSD 4.2 Unix, and it used System 6.0's MultiFinder to run Mac applications. However, some Unix tools were missing or out of date, support of third-party peripherals was spotty, and not all Mac OS facilities were available. The latest release, A/UX 3.0, eliminates many of these shortcomings.

A/UX 3.0 uses System 7.0 for Mac application support. This is crucial for providing access to the high-powered Mac Quadras, which require System 7.0 to operate. Most Mac OS facilities, including the Sound Manager, multiple monitors, and even the QuickTime multimedia facilities, are supported. A/UX still uses AT&T System V release 2 version 2 (the latest release is SVR4), but the BSD portions are the up-to-date 4.3 version. Supplied with A/UX 3.0 is a boatload of network, text-processing, and development tools. A/UX 3.0 also supports Apple's SCSI scanners and some third-party hard drives, tape units, and CD-ROM drives.

### Improved Installation

These enhancements have upped the hardware requirements for A/UX: You need an FPU (Mac IIci users, takenote), a minimum of 8 MB of RAM, and an 80-MB hard drive, although a 160-MB drive is preferable. The software comes either pre-installed on a Mac or on a CD-ROM.

Installation from the CD-ROM now requires only the CD-ROM itself and one floppy disk. You start the Mac and insert the installation disk and the CD-ROM in their respective drives. After several minutes, the disk ejects and code execution transfers to the CD-ROM, which functions as a slow hard drive. The A/UX installation

application closely resembles the Mac OS software Installer application. You can install all or a subset of the software.

The CD-ROM comes packed with core Unix software; development tools such as an assembler and C and ANSI FORTRAN compilers; source-control utilities; X Window System support (both MacX and X11 2.1.1), and X development tools. There's also a grab bag of networking software: NFS (Network File System) 4.1 for file sharing, UUCP (AT&T V.4 version), CSL/IP, and TCP/IP utilities. Once you've made your selections, you let the CD-ROM and computer chug away for a while, and you're done. On a Mac Quadra 950 with a 160-MB hard drive, the complete A/UX software installation took an hour and 15 minutes, and it occupied 72 MB on the hard drive.

Prior to A/UX 3.0, those using third-party hard drives had to hope the vendor's software could create the Unix partitions required by A/UX. In a great show of faith by Apple, its HD SC Setup 3.0 application, which formats and partitions Apple hard drives for A/UX, now recognizes and works with third-party hard drives.

### Setup and Performance

I tried A/UX 3.0 on two systems. One was a Mac IIci equipped with an 80-MB hard drive, 8 MB of RAM, a SuperMac 17-inch monitor with a Spectrum/8+24 PDQ display board, and a SuperMac 19-inch monitor with a Thunder/24 display board. The other was a Mac Quadra 950 with 8 MB of RAM, a 160-MB hard drive, and a Mac 16-inch monitor that used the Quadra's built-in video. To eliminate the storage-space problem on the IIci, I successfully installed and ran A/UX 3.0 on a Storage Dimensions 1-GB hard drive using only the A/UX installation software.

The IIci was connected to the BYTE network via an Apple Ethernet NB board. At first, I couldn't get the Ethernet services to work, although the LocalTalk services worked fine. I had to locate an oblique reference on the A/UX Read Me floppy disk and scan several manuals before I deduced that I had to install an Ethernet software module using newconfig. After newconfig modified the A/UX kernel, the Ethernet board began operating. I'd recommend that the first thing you do

when you get A/UX up and running is print out the on-line manual pages for newconfig, because many of the network services (e.g., NFS, TCP/IP, and CSL/IP) have to be added through this program.

With contact to BYTE's Ethernet network established, I used ftp to copy the BYTE Unix benchmarks to both computers for performance testing. As you can see in the table, the 33-MHz 68040-based Quadra 950 weighs in with an average index of 2.5, making it more than twice as fast as a Sun Sparcstation IPC. The Mac

## BYTE ACTION SUMMARY

### ■ WHAT A/UX IS

A combination of AT&T System V and BSD Unix that allows Mac applications to run concurrently.

### ■ LIKES

It offers access to Mac applications for graphics and imaging, point-and-click network and virtual memory control, and lots of Unix utilities.

### ■ DISLIKES

It still needs work on documenting Unix kernel configuration.

### ■ RECOMMENDATIONS

A/UX is valuable for Mac users who need ready access to Unix and for Unix wizards who need ready access to quality graphics or imaging applications.

### ■ PRICE

CD-ROM, \$709  
CD-ROM and AppleCD 150  
CD-ROM drive, \$1208  
Upgrade from A/UX 2.0, \$245

### ■ FOR MORE INFORMATION

Apple Computer, Inc.  
20525 Mariani Ave.  
Cupertino, CA 95014  
(408) 996-1010  
**Circle 1313 on Inquiry Card.**

## BYTE LAB BENCHMARKS

*A/UX running on a Quadra 950 makes it more than twice as fast as a Sun Sparcstation IPC. For each index, a Sparcstation IPC = 1.*

Test	Baseline	Result	Index
Arithmetic (type = double)	2541.7	2743.3	1.1
Dhrystone 2 (without register variables)	22,366.3	21,533.3	1.0
Excel Throughput	16.5	157.5	9.5
File Copy Throughput (30 seconds)	179.0	315.0	1.8
Pipe-Based Context Switching	1318.5	957.1	0.7
Shell Scripts (eight concurrent)	4.0	3.0	0.8
Sum of six items			14.8
Average			2.5

Ilci results (not shown in the table) give A/UX 3.0 an index of 1. The A/UX 2.0 review summed up the situation, still true today: Compared to new Unix workstations, the Quadra is neither a barnburner nor a lumbering cow in performance.

On the Mac side, System 7.0 features such as File Sharing and TrueType worked, as did all the Mac applications. I could move scanned images displayed by

Adobe Photoshop from one monitor to another on the Mac Ilci without problems. When copied to the /mac/system/System Folder, Control Panels and Extensions such as Now Utilities' Super Boomerang 3.0.2, Adobe's Type Manager 2.0.3, and Rock Ridge's VideoBeep 1.02 (a QuickTime player) ran flawlessly. This came as no surprise, since most Mac applications and utilities are System 7.0 com-

patible, which automatically makes them compliant with A/UX.

### A Real Improvement

How does a Mac running A/UX stack up against other workstations? A Quadra 950 with 8 MB of RAM, a 230-MB hard drive, a 16-inch Apple monitor, and a keyboard costs about \$10,300. This appears a tad pricey compared to some workstations, but the Mac brings important features to the Unix party. First, the Quadra's price includes 24-bit color. Second, to expand your view, you just add another display board and monitor. If you do huge layouts or extensive CAD work, the ability to span two or more monitors is a big win.

Finally, A/UX gives Unix wizards access to a raft of Mac desktop publishing, color prepress, image-editing, and multimedia applications. A/UX 3.0 is an improvement worth looking into. ■

Training includes AT-compatible computer system with hard drive and AutoSketch® CAD software!

# Be today's complete drafter.

**Now, with NRI at-home training, you can get the hands-on skills and equipment you need for a fast start as today's complete drafter, equally comfortable with both manual and computer-aided drafting techniques.**

Transforming rough sketches and calculations into accurate, working drawings, drafters have always been the key link in the chain of creative people who envision, design, and build the world's products. And today, thanks to the computer revolution, a career in drafting offers more job security — and opportunity — than ever before.

It's true! People with computer-aided drafting (CAD) skills are achieving breakthrough success on design teams in all areas of business and industry. In fact, employment experts predict that manufacturers will hire some 300,000 of these computer-savvy drafters over the next decade! And now — whether you want to work for someone else or even be your own boss — NRI hands-on training can help you can get in on the ground floor of this big-opportunity field.

## You learn by doing

Working with a full array of drafting tools — drawing board, templates, T-square, compass, protractor, triangles, scales, and much more — you first master the techniques required to create detailed drawings by hand.

Then, with a firm foundation in traditional methods, you move on to do the same kinds of drawings with greater speed and accuracy — using the high-powered PC and software also included with your course.

## Train with and keep a computer and CAD software

Only NRI gives you this priceless, practical experience ... with a complete computer system that's yours to train with and keep! You learn to create precision drawings using a fully

IBM PC/AT-compatible system that includes a full meg of RAM, hard disk drive, high-density floppy drive, mouse, 14" monitor, and AutoSketch CAD software.

With these state-of-the-art tools at your fingertips and a few simple commands, you'll be able to create precise, professional-quality drawings in a fraction of the time it takes to do them by hand.

**Find out how NRI helps you turn your computer into a high-tech drafting tool! See other side.** ➔

# Only NRI gives you the hands-on skills and equipment you need to succeed in drafting today!

**T**here's no doubt about it: Drafting with a computer and software will save you time, increase your accuracy, boost your creativity ... and open the door to a brand new world of money-making opportunity!

Using your AutoSketch® CAD software, you learn to draft objects with a variety of computer-generated drawing tools - from lines, arcs, and circles to fillets, ellipses, and pattern fill areas. And, once you've discovered how to draw an object, you learn how to quickly stretch it, scale it, copy it, rotate it at any angle, or change its dimensions.

You find out how fast and easy it is to manipulate your work with a single keystroke — moving or adding features such as wheels, doorways, and circuitry on your mechanical, architectural, and electrical drawings.

## **NRI Discovery Learning Method means no experience necessary**

NRI's unique at-home training method helps you learn by doing as you build a complete understanding of today's revolutionary drafting techniques.

Bite-size lessons expand your knowledge step by step while hands-on Discovery Learning projects give

*You train with and keep all these manual and computer-aided drafting tools ... from compass, T-square, and drawing board to an AT-compatible computer system with hard disk drive, mouse, and user-friendly AutoSketch® CAD software.*

you practical drafting experience with actual tools of the trade. You learn at home, at your own pace, guided by

your personal NRI instructor from the basics of manual drafting to more advanced computer techniques.

Soon you have the skills and confidence you need to draft detailed renderings of sprockets, homes, circuit boards — indeed, virtually anything you'll be called on to produce on the job — at the drafting table or your computer terminal.

## **Send today for your FREE NRI catalog**

Whether you want to change careers, advance on the job, or make good money in a business of your own, you can count on NRI hands-on training to give you the fast start you need to succeed. Send today for your free catalog describing NRI's new course in Computer-Aided Drafting.

## A New Personal Librarian

*The result of a Windows Personal Librarian concept search on the term multimedia shows related terms, a list of documents, a bar graph outlining the relevancy of each hit, and the highest-ranking document.*

**P**ersonal Librarian, one of the most powerful text managers on the market, was in the midst of a major upgrade as we wrote June's Solutions Focus on text management. Here is a quick review of the new Windows Personal Librarian 3.0.

Personal Librarian indexes files on your hard disk, leaving those files in place and storing only index and related database information. The latest version supports WordPerfect and Word for Windows files as well as text.

You can use Personal Librarian as a stand-alone document retrieval system, but the package is clearly designed for network operation. The user module allows you to search indexes and view documents, while the administration unit lets you add and remove files, create hypertext links, and perform other maintenance.

Personal Librarian supports the usual repertoire of Boolean search expressions and fuzzy searches, but its *concept search* capability is by far its most powerful feature. Concept searching is not the typical grouping of related search clauses found in other packages: Instead, the Personal Librarian program builds a concept from a single search expression by finding related words on its own.

For example, you might search an index of BYTE for the term *multimedia*, but you'd miss documents you might want to find on CD players and the like if those documents didn't contain the term itself. If you run a concept search on *multimedia*, however, Personal Librarian first expands the search list by searching through its index for related words. Then it searches for those related words in each document (see the screen). Naturally, this generates a lot of hits for each search, but Personal Librarian uses a proprietary relevancy-rank-

ing algorithm to determine which documents most closely match your request.

Personal Librarian searches almost instantaneously and indexes very quickly: We added 3 MB of BYTE article data to an index in under 15 minutes on a fast 486. But for most people, the power of Personal Librarian's concept searching will provide the strongest draw. If you have complex text documents where the proper search term isn't always obvious, Personal Librarian is the way to go.

## Good but Not GreatWorks

**B**efore we could do a review of GreatWorks 1.0, Symantec brought out a new version of its integrated software program for the Mac. This package gives you a word processor, database, spreadsheet, chartmaker, drawing program, painting program, outliner, and telecommunications program all in one box. Additions include 50 new features, the ability to paint in color, and support for System 7.0 features like Publish/Subscribe. While you can easily bring, say, a pie chart into a word processing document by cutting and pasting, Publish/Subscribe maintains hot links between such elements. So, if you make a change to the original pie chart or graphic or worksheet, or whatever, the version embedded in the word processing document is automatically updated.

Handy as this can be, there's one problem with the implementation of Publish/Subscribe. GreatWorks doesn't just make the change in the object you've put into the document; it replaces the object with a copy of the revised version. Much of the time, this is not a problem. But say you've

drawn something with the drawing or painting modules, placed that graphic in a text document, and then scaled it down to fit into a particular space. The changed drawing comes in at the size of the original, so you then have to go into the word processing module and resize the graphic again to make it fit.

The applications themselves do a good job handling typical chores. You can't assemble a fancy newsletter with the word processor, the spreadsheet doesn't do auto-summing, and the communications package will perform only XMODEM and text transfers. But for most run-of-the-mill operations, these modules are more than sufficient. More significant for some users, the whole kit and caboodle takes up only 2.5 MB of hard disk space and will run in 1 MB of RAM. GreatWorks 2.0 certainly likes more memory than that, though.

While each of the modules can stand on its own as a competent application, the integration of these modules could be more elegant. Sharing data between them is simple enough, but going from module to module could be a little easier. It would be great if you could, for example, click on a chart in a document and have the charting program fire up.

Regardless of our few quibbles with implementation, GreatWorks 2.0 is a mighty fine bargain. Eight capable programs for \$299 is a real deal. ■

# BOOK AND CD-ROM REVIEWS

HUGH KENNER

**V**annevar Bush—does that name ring, perhaps, a faint bell in your mind? A nearby dictionary says “1890–1974; U.S. electrical engineer & administrator.”

“Administrator,” indeed; how fame does fade! During World War II he was head of the Office of Scientific Research and Development—U.S. Science Czar—and one of many claimants to A-bomb fatherhood. He’d been a dean and vice president at MIT; later he headed the Carnegie Institution.

And “electrical engineer” is a futile stab. Bush was a computing pioneer at a time, 60 years ago, when it still wasn’t clear (except to Alan Turing) whether the useful future was analog or digital. I don’t know if Bush ever heard of Turing, who by the 1930s had proved that all digital computers are essentially the same computer: versions of what we now call the Turing machine.

But while Turing started from logic, Bush started from problems, such as how to get the data for contour lines on maps (normally, “several men, careful fieldwork, and tedious data reduction afterwards”). It occurred to Bush that if you pushed a wheeled box over hilly ground, gears inside the box could record changes in elevation. His profile tracer got him a patent and a master’s degree (Tufts University, 1912).

The idea, you see, was to have gears act out the problem. That’s analog thinking. Later, differential equations helped generalize it, and by 1942 the differential analyzer—gears plus relays, motors, and vacuum tubes—on which Bush had spent nearly two decades was helping win the war. But by 1950 its upkeep was merely “a burden on MIT.” That anticlimax reflects the dawn of digital.

Something else that occupied Bush from at least 1932 was how on earth we’d ever find anything amid the sheer proliferation of print. As long ago as 1866, Mendel’s crucial paper on genetics had vanished unread into “the literature,” not to emerge for decades. A library should be a memory machine. So how does human memory work?

## THE ORIGINS OF HYPERTEXT

**From Memex to Hypertext:  
Vannevar Bush and the  
Mind's Machine**

James M. Nyce  
and Paul Kahn, eds.  
Academic Press, 1992, \$39.95,  
ISBN 0-12-523270-5

Well, it works by blazing trails of association between details that catch our fancy. Never mind those authorized headings: author, title, subject. Again, analog to the rescue! For decades, Bush described and redescribed Memex, your own personal associative memory machine that lets you tag microfilm frames you want linked. Thus, you form “an associative trail through the material... closely analogous to the trails formed in the cells of the brain.”

Hypertext, you’re thinking? Yes, more or less. Memex would have been desk-size and clumsy, space and speed alike dictated by microfilm’s constraints. Hypertext emerged from a digital revolution that Bush seemed to feel was too abstract for comfort.

In 1945 he published his seminal Memex essay “As We May Think,” both in the *Atlantic Monthly* and (somewhat condensed) in the old *Life*, with its multi-million circulation. *From Memex to Hy-*

*pertext: Vannevar Bush and the Mind's Machine*, edited by James M. Nyce and Paul Kahn, now offers all the pertinent Bush writings plus pertinent commentary, not omitting a lively 1989 lecture by Norman Meyrowitz: “Hypertext—Does It Reduce Cholesterol Too?”

No one mentions a prime glitch in the analogy that underlies Memex, those paired tags for linking. Some paragraphs above, you saw Alan Turing pop into my head as I pondered Bush’s fixation on analogs. I now have, yes, a link between Turing and Bush. But what did today’s reading of Bush really link back to? Not to any tag I’d placed in my Turing trail in 1965, long before analog versus digital had meaning for me, and certainly long prior to any notion that I’d some day want a link from Vannevar Bush. By what process, then, did I fish up Turing this morning? By no process Memex ever thought to mimic. ■

## UNIX FOR THE UNINITIATED

**U**nix has changed during the past few years; it’s no longer just a language of cryptic commands and arcane syntax. Yes, those “features” are still there, but they have been complemented by sophisticated windowing GUIs that can run Unix versions of Lotus 1-2-3 and WordPerfect or even DOS software. With these and other changes has come a need for new Unix documentation and “how-to” books.

As intuitive as some of the new Unix GUIs are, however, much of the real power and usefulness of Unix come from understanding concepts like redirection and pipes and from using commands like `sed`, `grep`, and `awk`. I perused four books that all offer good descriptions of the essential Unix

commands. All four emphasize AT&T Unix System V release 4.0. They also deal with networking issues and with accessing and exchanging information from remote computers with programs like `ftp`, `telnet`, and `mail`. Beyond coverage of the most common Unix commands and programs, the contents of the books vary considerably.

*Unix for the Impatient* appears to target readers who are comfortable with somewhat terse technical material. It presents its subject matter concisely, rather than in a tutorial manner. It covers both Unix SVR4 and BSD 4.3. This book has the most detailed descriptions of the various Unix editors and has the best presentation of the `emacs` editor. *Unix for the Impatient* is written for the person who is computer-knowledgeable and doesn’t need much hand-holding. This book is the only one of the four to describe using Unix with

an X Window System GUI. It, along with *The Waite Group's Unix System V Primer*, includes an index-like listing of all the common Unix commands with short descriptions and, more important, a page reference of where a command is discussed in detail in the book.

*Introduction to Unix* is the one most like traditional Unix texts. It groups many common Unix commands and presents relatively abbreviated examples of their use. It would be a good book to use in conjunction with a more tutorial-type book. Although the book lacks the lengthier descriptions of *emacs* and *vi* found in the other three books, it is the only one of the four to include a detailed discussion of Unix system administration and details of the basic structure of the Unix operating system.

*Unix Step-by-Step* introduces you to this operating system as its title states. The book's tutorial-style approach includes a summary, review questions and answers, and exercises at the end of each chapter. It has detailed descriptions of how to write Bourne, C, and Korn shell scripts.

*The Waite Group's Unix System V Primer* also uses a tutorial approach with review questions and answers and exercises at the end of each chapter. The book makes good use of contrasting blue-type and blue-background sidebars to highlight important topics and examples. It also makes more effective use of graphics than the other books. The authors' easygoing style makes the reading pleasurable, and Bob Johnson's cartoons add some light entertainment and serve to introduce you to "Unix humor." The book has a particularly complete coverage of the *vi* editor.

Because the approach used in *Unix for the Impatient* fits my learning style, I found it suited me best. The concise style lets its authors cover more subject matter than the others without sacrificing clarity or assuming too much from the reader. This book also seems to have the best balance between the "old" and "new" aspects of Unix. It covers traditional Unix material like the file system structure and setting up a terminal as well as using the X interface and applications.

If you are more comfortable with a book that uses a tutorial approach, *The Waite Group's Unix System V Primer* is my recommendation. I give it a slight edge over *Unix Step-by-Step* for its easy-to-read layout and use of color and graphics to highlight important concepts. Many times, the best way to learn operating-system syntax is to find a specific example that is close to what you need to do and make slight revisions until you finally get it correct. This book provides ample examples of using Unix commands with their various options.

—John Unger

*Unix for the Impatient*, Paul W. Abrahams and Bruce R. Larson, Addison-Wesley, 1992, \$26.95, ISBN 0-201-55703-7.  
*Introduction to Unix*, Mark Schulman, Que, 1992, \$24.95, ISBN 0-88022-745-1.

*Unix Step-by-Step*, Ben Smith, Howard W. Sams, 1990, \$29.95, ISBN 0-672-48469-2.

*The Waite Group's Unix System V Primer*, 2nd ed., Mitchell Waite, Don Martin, and Stephen Prata, Howard W. Sams, 1992, \$29.95, ISBN 0-672-30194-6.

## ROAD MAPS ON CD-ROM

*Street Atlas USA*, \$169 from DeLorme Mapping (Main Street, P.O. Box 298, Freeport, ME 04032, (207) 865-1234; fax (207) 865-9628).

**S**treet Atlas USA, DeLorme Mapping's CD-ROM for Windows, contains over 1 million maps of U.S. streets. It installs directly from the CD-ROM drive. The program has the familiar look and feel of a Windows application, but it has no pull-down menus. All functions are accessible through push-button icons on the right side of the screen. The main screen displays the active map. When you start up *Street Atlas USA*, the main area displays a color map of the U.S. When you draw a box on this map using the mouse, you zoom in on your selected area. You scroll around the map by clicking on different compass points. To move faster, you simply slide a selection box across a thumbnail map at the bottom of the icon palette.

One click on a push button triggers rapid searches using the criteria you select. For example, enter ZIP code 30319, and you'll see a detailed map of northeast Atlanta. Type in area code 603, exchange 673, and up pops a map of Milford, New Hampshire. Or you can enter any state or town name in the U.S. to pull up a local map. From there, you search for the specific street name you want. The software then displays its location, highlighting the street on the map. At any magnification level, you can continue to scroll about using the compass controls. Push buttons let you zoom in or out at any time and copy the active map to the Windows Clipboard. The interface is fast, well designed, and efficient.

What's truly impressive is the detail of the maps. DeLorme started with the Census Bureau's TIGER (Topologically Integrated Geographic Encoding and Reference) maps and embellished them with other contracted and in-house data sources.

BYTE editors searched out old haunts, from Kailua, Hawaii, to Kasilof, Alaska. Some road names were missing from the truly backwater spots, but we found it hard to stump the program with an unknown street reference. The current maps are two years old, but DeLorme plans to update the disc annually.

If you're always getting lost, buy DeLorme's GPS MapKit. You get a CD-ROM drive, mapping software, device driver software, and an antenna and receiver to link to the Global Positioning Satellite System, a network of 24 orbiting government satellites. The GPS package lets you keep a constantly updated display of your current location on the electronic map. Hook it up to a notebook computer in your car, and tour the country with confidence. All you need is money—\$10,000 versus \$169 for the CD-ROM alone. But you may never take a wrong turn again.

—Stanford Diehl

## Development tools of every type...

### **New 286 DOS-Extender™ 2.5** by Phar Lap Software

New Version 2.5 of 286 DOS-Extender™ adds support for Microsoft C/C++ 7.0 and Borland C++ 3.1! With 286 DOS-Extender, you can build multi-megabyte DOS applications with your familiar Microsoft C/C++, Borland C++ or Microsoft Fortran compiler. You can even debug with CodeView or Turbo Debugger. Extended applications run under DOS, DESQview and Windows.

LIST: \$495 **PS Price: \$459**  
FastFacts 420-045

### **Mathematica 2.0® for Windows** by Wolfram Research

A system for doing numerical, symbolic, and graphical computation used both as an interactive calculation tool and a programming language. Numerical capabilities include arbitrary precision arithmetic and matrix manipulation. On systems with a sophisticated graphical user interface, users can create "Notebooks" that mix input, graphics, text, and sound. Generates graphics in PostScript form.

LIST: \$995 **PS Price: \$975**  
FastFacts 1394-006

### **Visual Basic Competitive Upgrade!** by Microsoft

The fastest, easiest way to build real Windows applications. Windows-hosted programming system combines graphical interface design tools and general purpose programming language. Automatic creation of empty procedures to handle events associated with objects placed on screen. Incremental compilation, automatic syntax checking, integrated debugging, more. Access API, DLLs, and DDE. **Now only \$99.**

LIST: \$199 **PS Price: \$99**  
FastFacts 502-189

### **Distinct TCP/IP for Windows** by Distinct Corporation

Distinct TCP/IP for Windows SDK extends the TCP/IP and RPC/XDR networking capabilities to Microsoft Windows. Includes the smallest and fastest DLLs today available for Berkeley Sockets, RPC, Telnet, and FTP. Coexists on the same board with Lan Manager, Novell and Banyan. Supports Packets, NDIS and ODI drivers. Only 5KB of DOS memory required.

(SDK) LIST: \$495 **PS Price: \$439**  
(Applications) LIST: \$395 **PS Price: \$379**  
FastFacts 1951-003

### **F77L- EM/32 Version 5.0** by Lahey Computer Systems

Industry leading 32-bit Fortran Language System includes Phar Lap's 386/ DOS Extender. This VCPI, XMS, and DPMI compliant extender enables users to access up to 4GB and operate in the MS Windows DOS box. The extender is royalty free and includes virtual memory support. New with Version 5.0: 32-bit debugger, arrays beyond 16MB, compression linker, and 486 optimizations. Support for popular VAX, IBM VS, and 90 features.

LIST: \$1195 **PS Price: \$1049**  
FastFacts 334-052

### **Q+E DataBase Library 1.1** by Pioneer Software

Write one application that works multiple databases! Don't rewrite code just to use a different database! With Q+E Database Library (QELIB), your applications can simultaneously and identically access, query and edit DB2, Oracle, SQL Server, Sybase, Netware SQL, Ingres, XDB, SQL Base, Btrieve, OS/2 EE DBM, Paradox, dBase, Excel .XLS files, and text files. If your favorite tool can call a DLL, you can use QELIB!

LIST: \$399 **PS Price: \$379**  
FastFacts 2137-012

### **DataBoss 3.5** by Kedwell Software

Works with your compiler to generate complete, working relational database applications in error-free C, C++ or Pascal. DataBoss cuts your development time in half, but still gives you the flexibility of traditional methods. You quickly create entry screens, menus and reports and build single-user and networked multi-user systems. Customizable source code is included, and you pay no run-time royalties. Ever.

LIST: \$695 **PS Price: \$415**  
FastFacts 5277-001

### **SQA:ROBOT for Windows** by Software Quality Automation

Fully-automated test development and unattended test execution for any Windows application. SQA:ROBOT generates scripts that can be maintained by non-programmers. Other unique features include: standalone or networked operation; run-time only option: easy to use, intuitive user-interface; user-selectable recording level generates Visual Basic scripts or low-level mouse and keystroke journal; and integrated test reporting using SQA: Manager, winner of Computer Language's 1992 Productivity Award.

LIST: \$495 **PS Price: \$469**  
FastFacts 5305-001

# ...Good prices, great service, no useless hype. Shop the Shop!

## WATCOM C/386 by WATCOM

Develop and debug 32-bit applications for extended DOS, Windows and OS/2 2.0. Includes royalty-free 32-bit DOS extender, true 32-bit Windows GUI Application Kit, our fast, tight, and reliable 32-bit Code Optimizer, licensed Microsoft Windows SDK Components, an interactive Source-Level Debugger, an Execution Profiler and More! Now includes OS/2 2.0 Support.

LIST: \$895 **PS Price: \$739**  
FastFacts 1044-020

## The PKWARE Data Compression Library by PKWARE

The PKWARE Data Compression Library allows software developers to add data compression technology to applications. The application program controls all data I/O, allowing data to be compressed or extracted to any device or area of memory. Only 35K of memory is needed to compress data, and only 12K is needed to extract data. Compatible with MSC, BC++, TC, TP 6.0, Clipper, Basic 4.5, 7.1, ASM.

LIST: \$295 **PS Price: \$275**  
FastFacts 3043-011

## WindowsMAKER™ Professional 4.0 by Blue Sky Software™

Considered the easiest and fastest way to create MS-Windows applications in C/C++. Generate the Windows .EXE w/complete source & production files (no royalties). Just Point & Click to define the Windows user interface. Lets you animate your design to instantly test look & feel and make changes on the fly without needing to compile. Custom code is preserved during code regeneration. The leading development tool for Microsoft Windows. Highly Recommended.

LIST: \$995 **PS Price: \$895**  
FastFacts 2001-006

## Janus/Ada x86 Compiler by R. R. Software

Janus/Ada for DOS: the power and reliability of Ada, priced for everybody! You get a full implementation of the Ada standard - compiler, linker, royalty-free runtime libraries, multiple memory models, environment, tools, even an Ada tutorial. And R.R. Software supports you with 11 years of Ada experience and know-how. Now's the time for you to use Janus/Ada.

At last...using more than one PC is as easy as you always thought it should be!

Save 20%

## Introducing FILERUNNER.™

The most convenient way to keep the latest versions of your files in synch on every personal computer you use!

No cables. No modems. No confusion. Now, your Notebooks/Laptops, Networks, your Home and your Office PCs will work together the way you've always wanted them to.

With the push of a button, the new FILERUNNER program provides:

- Synchronized Files on All Your PCs
- Exclusive **Overwrite Safeguard** to protect valuable data when a file has been changed on more than one PC
- Virus Detection using Virex®
- Automatic File Compression during transfer to fit your files easily onto your Runner diskettes
- Time Zone compensation and correction for inexact PC Clocks to keep your update sequence completely accurate
- Ease of Use...with Context-Sensitive Hypertext and On-Screen Help throughout
- An automatic "bonus" backup of your critical files

At last, your computers will get with the program: FILERUNNER!

### Overwrite Safeguard™

Protects valuable data when the same file is changed on more than one PC.

### Automatic Transfers and Updates

FILERUNNER shows analysis and synchronization of files, file transfer and compression.

## INSIDE QUICKDRAW

One of the Macintosh's most renowned features is its graphics. This capability is provided by a powerful yet flexible graphics engine known as QuickDraw. QuickDraw is built into every Mac's firmware and is responsible for everything that appears on the Mac's screen, whether it's the Mac's own GUI, a newsletter page in a desktop publishing application, or a 24-bit-color scanned picture in an image-editing application.

To handle this broad range of graphics operations, QuickDraw provides a rich set of drawing and imaging functions for the programmer's use. These graphics functions add a layer of abstraction between the drawing that an application performs and what appears on the screen.

What does that last sentence mean? Put another way, QuickDraw resolves an application's drawing commands into actions that affect the frame buffer and display hardware of the Mac on which the application runs. QuickDraw accomplishes these drawing operations effectively, regardless of the output device's dimensions and pixel depth. I use the term *device* here because QuickDraw can be used to draw to printers and film recorders as well as monitors.

Because QuickDraw manages every aspect of the Mac's display, you shouldn't bypass QuickDraw to draw something on the screen. If you somehow directly jam graphics data into a Mac's frame buffer, two things will happen—both of them bad. First, another application using QuickDraw will stomp on your drawing. Because

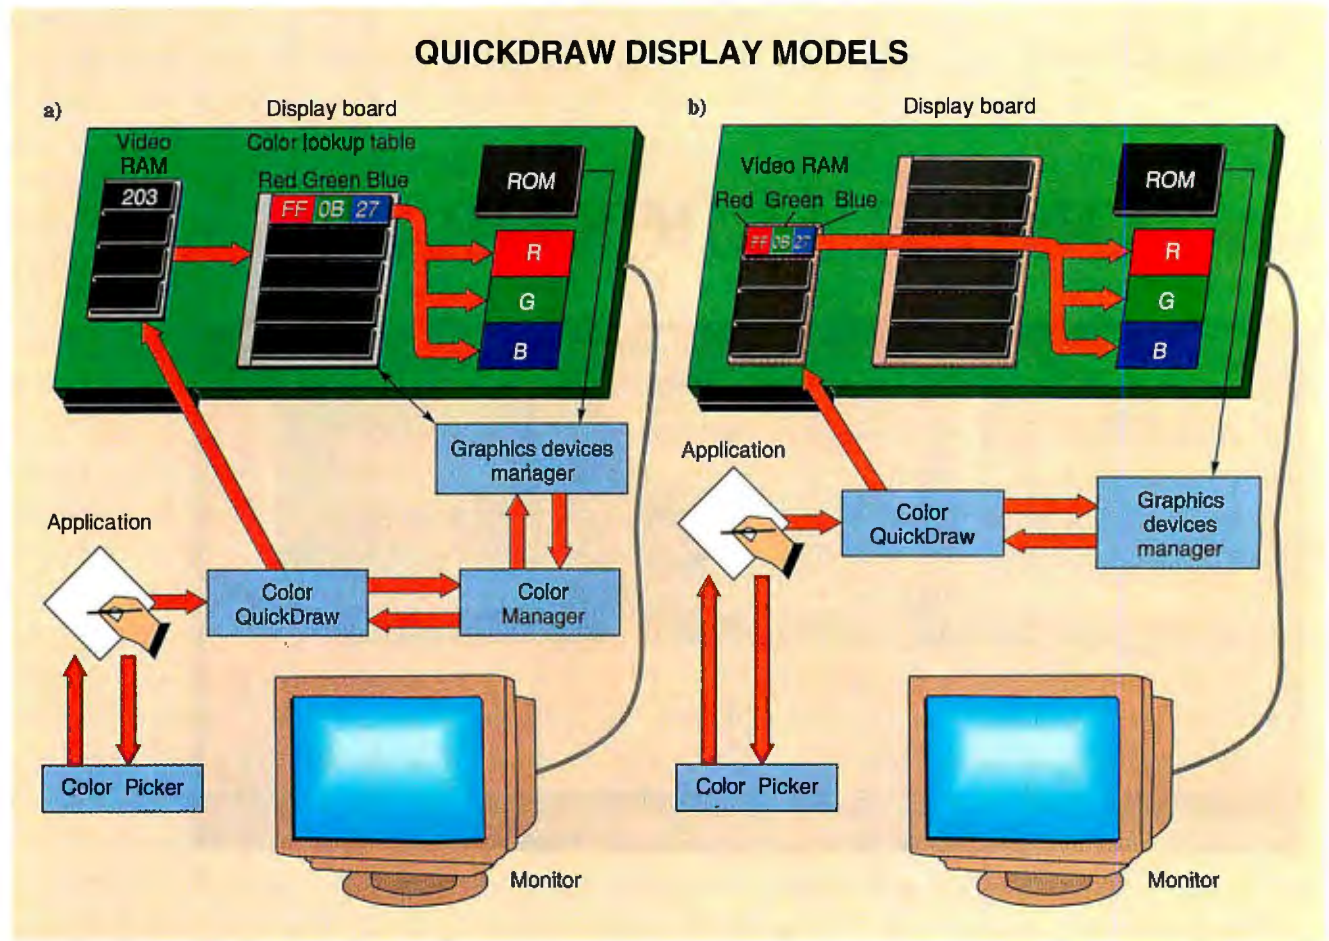

you didn't use QuickDraw, QuickDraw doesn't know you put something on-screen, so it freely draws over your portion of the screen. Second, this ties your application to one specific set of hardware, which might not be compatible with different combinations of existing hardware, and certainly not with future hardware.

Another, less touted feature of QuickDraw can be found on modular Macs with NuBus slots: You can easily expand your screen real estate by adding another monitor and display board. You can create a Desktop that consists of up to six different displays of varying sizes and pixel depths this way, and all Mac applications automatically make use of all the screens.

Having multiple monitors is extremely useful for working with several applications at once. Another benefit of such a setup is that you can configure each monitor for the operations that take place on it. When I write articles that use color artwork (like this one), I set the monitor on which I'm constructing the art to use 32-bit color and the monitor on which I'm writing the text to use 1-bit black and white. This allows me to see my artwork in full color while editing the text at top speed, because 1-bit black-and-white graphics (which includes text) are

**Here's how the Macintosh's graphics engine operates to produce optimum visual results, regardless of the display's limitations**

**Figure 1:** The QuickDraw models for displaying (a) indexed pixels and (b) direct pixels. In the indexed model, each pixel contains a value that is an index into a color table on the display hardware. In the direct model, each pixel contains the actual color information used by the display hardware.

significantly faster than those that are in 32-bit color.

### QuickDraw Basics

How does all this work? Low-level parts of the Mac OS provide QuickDraw with the address of the target device's frame buffer. Again, the target device might be a printer or a piece of imaging hardware other than a monitor. For NuBus boards, low-level routines that are part of the Slot Manager obtain the display board's frame-buffer address, image dimensions, and pixel depth. The Slot Manager also loads the driver that QuickDraw uses to control the board's hardware. (For more information, see "Macintosh Video Revealed," April 1991 BYTE.) QuickDraw uses this gathered information to render the best possible graphics on the given Mac display.

Through QuickDraw and the Window Manager, an application works in the local coordinates of a rectangular drawing area called a GrafPort (i.e., the window). The

GrafPort contains state information about how QuickDraw should perform drawing in that window. With the GrafPort state information in hand, QuickDraw can manage the accurate presentation of a window that straddles two monitors of different pixel depths.

QuickDraw can draw two basic kinds of objects: *geometric objects*, such as lines, rectangles, and text; and *pixel images*, which are arrays of color pixels termed a *pixel map* (as opposed to a black-and-white bit map). These two objects get their color information from different sources.

When a geometric object is drawn, its color is stored in the GrafPort as a 48-bit RGB value (16 bits for each of the three color components—red, green, and blue). Given the color, location, and geometry of an object, QuickDraw renders the object on each physical device the object intersects. Since individual devices have varying color capabilities, QuickDraw must determine how best to represent the source (48-bit RGB data) on each device. How

QuickDraw performs this color mapping is explained below.

A pixel map (or pixmap for short) is a 2-D grid with a color value at each integer grid point; the color information is stored within the pixmap itself. Pixmap can be scanned images, or they can represent the image that appears on the Mac's monitor(s). Currently, QuickDraw supports pixmaps that are 1, 2, 4, 8, 16, and 32 bits deep.

Pixmaps can be the source of a drawing operation, as when a scanning application takes 32-bit-color image data and places it into a pixmap in memory. Pixmaps can also be the destination of a drawing operation, as when the same scanning application takes the 32-bit-deep pixel image and draws it onto an 8-bit-deep Mac screen. Thus, QuickDraw must be able to map colors from source depths of 1, 2, 4, 8, 16, and 32 bits per pixel (for pixmaps) and 48 bits per pixel (for geometric objects) to destination depths of 1, 2, 4, 8, 16, and 32 bits per pixel.

## How QuickDraw Maps Colors

To understand how QuickDraw actually maps colors, first consider the two color models QuickDraw uses: *indexed* and *direct*.

Indexed color (1, 2, 4, or 8 bits) is limited to displaying one, four, 16, or 256 colors simultaneously, but the accuracy, or resolution, of each of those colors is very high (48 bits, even though most hardware is capable of reproducing only about 10 to 12 bits per color component accurately). In the indexed color model, each pixel's value in the pixmap represents an index into a color table. The entries in the color table contain the actual digital values the display hardware uses to present the color (see figure 1). Although the depth of the pixmap is only 1, 2, 4, or 8 bits, the resolution of the color information as provided by the color table is 48 bits.

The direct color model is fundamentally different. Direct pixmaps store the digital values in each image pixel rather than in a color table. The advantage of the direct model is that it can accommodate larger pixel values than the indexed color model, so many more colors can be displayed simultaneously. Direct pixmaps are generally easier to manipulate, since they remove the overhead required by color-table searches. The disadvantages of the direct color model are that the larger pixels require much more memory to store an image, image manipulation is slower because there is more color data to work with, and pixels are accurate to only 8 bits per color component (but this is plenty for most applications).

Thus, a source pixmap has three levels of resolution: 16 or 32 bits (direct) or 48 bits (indexed). However, life gets interesting when a source pixmap must be drawn to a destination device such as a display board. When the destination is a direct pixmap, mapping colors is easy. If the destination's pixel depth is smaller than the depth of the source, the low bits are thrown away so the color values are truncated to the size of the destination. When the source's depth is smaller than the destination, the pixel's color-table value (not its index) is copied into the destination pixmap. A special case occurs when the source is a direct pixmap that's 16 bits deep and the destination is 32 bits deep. Here, the 5 high bits of the source are taken as the top 5 bits of the destination, and the top 3 bits of the source are taken for the bottom 3 bits of the destination.

When an indexed pixmap is used as the destination, the color mapping process becomes more complicated, since QuickDraw must find the index of the closest color in the color table. Rather than search

Figure 2: The use of color thresholding helps to preserve the luminance of an image.

the color table each time an index is needed, QuickDraw builds a structure called an *inverse table*. It's commonly called an inverse color table since it maps a color to an index, rather than an index to a color as a standard color table does.

Depending on the resolution of the inverse table, QuickDraw takes the high 3, 4 (the default), or 5 bits of the red, green, and blue color components of the color in question and constructs an index that's 9, 12, or 15 bits in size. This index is used to find the relevant entry in the inverse table. That entry corresponds to the index of the closest color in the color table.

But there's a problem here: Since the inverse color table uses only several bits from each of the source color components, multiple entries in the source color table could map to the same position in the inverse color table. Thus, the inverse table by itself is not adequate for finding the closest color match.

QuickDraw solves this problem by using a *hidden color list*, which keeps track of colors that map to the same location in the inverse table. If the inverse table lookup reveals a position to which multiple colors map, QuickDraw searches the hidden color list for the closest match. To find the closest match, QuickDraw finds the difference between the color's red, green, and blue components and those of each color in the hidden color list. The maximum difference of the three channels is kept for each color. The closest—and desired—color is the one that minimizes this difference.

Unfortunately, searching the hidden color list takes time. The time is negligible for objects (since usually only one color lookup is needed) and for indexed pixmaps (since at most only 256 color lookups are needed). However, with a direct pixmap as the source, searching the hidden color list for every pixel in the source takes a prohibitively long time, so QuickDraw

Figure 3: Handling imaging under a variety of conditions. (a) A full-color image. (b) An image drawn to a 1-bit screen. Colors map to either black or white, which produces ambiguous results. (c) The desired appearance at 1-bit resolution. (d) The desired results when the image straddles an 8-bit-color monitor and a black-and-white monitor. Various QuickDraw color-mapping routines can resolve this situation.

doesn't do it. This results in QuickDraw's not using the best available color in some cases when the source is a direct pixmap and the destination is an indexed pixmap.

A color image overlapping an 8-bit monitor and a 1-bit monitor can create problems. Because the resulting color image is light, QuickDraw's algorithm for mapping colors produces mainly white, resulting in an image that is hard to recognize. There are two basic ways to overcome this problem: The first is to put smarter color translation in QuickDraw

**Figure 4:** In the popular method of color selection, the most frequently used colors, as tallied in the histogram, are used for the display.

**Figure 5:** The median method of color selection. The image's colors are grouped into a box that is divided until there are as many boxes as there are colors requested. The median colors within each box (marked with red) are used for the display.

(which happened with 32-Bit QuickDraw 1.0); the second is to allow an application to draw independently to monitors with varying screen characteristics (which is possible with System 7.0 and higher).

### Smart Color

QuickDraw's ability to map colors for geometric objects is limited to the algorithms I have already described. For drawing pixmaps, however, QuickDraw has the ability to perform an *error-diffusion dither*. Normally, the closest match available on the destination device is chosen to represent each color requested in the source. With dithering, the difference between the closest matching color and the requested color is kept as an error and added to the surrounding pixels. This ensures that the overall color (or, in the case of a monochrome image, the overall luminance) of the image is preserved. Figure 2 shows a gray ramp drawn using the 50 percent thresholding algorithm in dither mode.

Setting the dither flag results in substantially higher quality images, but the results may still be less than optimal. For example, a set of blue lines on a red background might simply look gray (with dithering) or black (without dithering) on a 1-bit display. Clearly, you can do better if you know what the characteristics of the destination device are.

QuickDraw gives an application the ability to perform drawing updates on a device-by-device basis rather than simply drawing within QuickDraw's abstract model. At first glance, it might seem that examining the destination device's characteristics to determine how to draw a given image would contradict QuickDraw's device-independent model and would be frowned upon by Apple's Developer Technical Support, its "programming police." But it turns out that device-specific drawing integrates seamlessly with the rest of QuickDraw because QuickDraw supplies a Toolbox call for your use.

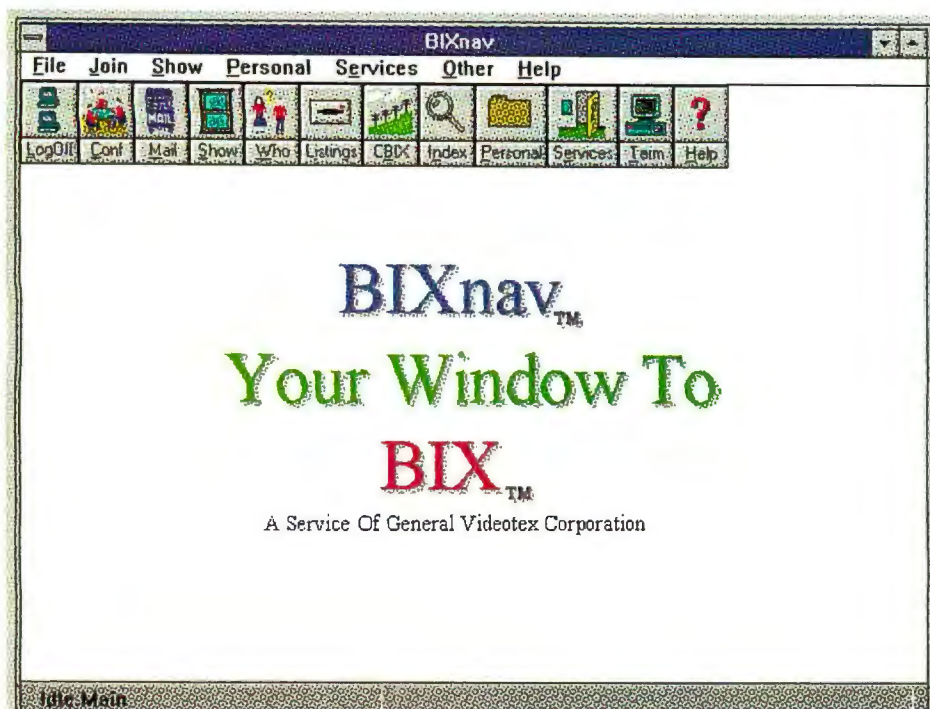

The call that permits device-by-device updates is called `DeviceLoop`. You call `DeviceLoop` with a region to update and a drawing procedure, and then `DeviceLoop` calls the drawing procedure once for every screen that the update region intersects. The drawing procedure is passed the characteristics of the device it is drawing to, and it performs the appropriate drawing for that device.

Figure 3 shows the type of problem that can be solved using the `DeviceLoop` call. Figure 3a shows the desired pixmap image in full color. Figure 3b shows this image as QuickDraw draws it to a 1-bit screen. The intent of the image is gone, however. Figure 3c shows the desired 1-bit image.

# Introducing BIXnav

- Software Libraries
- Background Downloading
- Powerful Search Feature
- Hypertext to file downloads, mail addressing, and user information

## A WINDOWS NAVIGATOR FOR BIX

### BIX Covers Computing Right!

Not only does BIX have great information, now it has a great user interface.

When you are up against a brick wall and need answers to tough programming questions fast, BIX has the solutions you need! Other online services cater to end users and computer neophytes. BIX serves computer pros like you! On BIX, you don't have to pan through mountains of trash to find the golden nuggets. You get fast answers from people who know computing.

BIX's Exchanges cover all aspects of computing in all platforms and computer languages. And BIXnav makes using BIX as easy as your other Windows applications.

### Lots of New Files

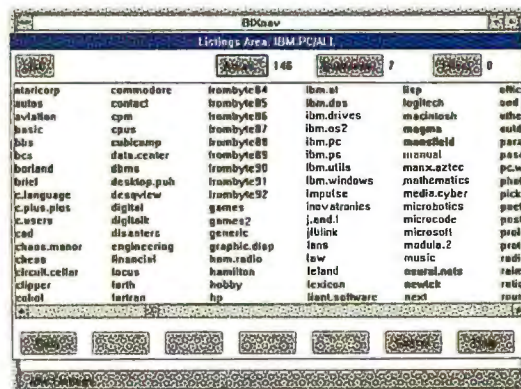

BIX publishes hundreds of new files each month. You can find files by date or keyword, and you can even download them in the background with a simple click.

### BIX is Affordable

Subscribe to BIX for only \$13 per month. Connect to BIX locally via Tymnet for only \$3 per hour.\* Or, choose the 20/20 Plan, where \$20 per month covers your first 20 hours of evening or weekend access. Additional time is only \$1.80 per hour on the 20/20 Plan.\* Once online, you can download BIXnav for only \$9.95.

### Join BIX Now!

Using any communications program, dial 1-800-695-4882. Enter "bix" at the prompt. When you are prompted for

"Name?" enter "bix.navigators" and complete the online registration. Pay by credit card for immediate access.

For additional information call  
1-800-695-4775 or 617-354-4137.

BIX is a service of  
General Videotex Corporation,  
1030 Massachusetts Avenue, 4th Floor,  
Cambridge, MA 02138.  
617-491-3342.

\*Rates listed apply for evening and weekend access from within the contiguous 48 states. Daytime access from within the contiguous 48 states is billed at \$9 per hour.

## HOW COLOR SELECTION AFFECTS IMAGES

**Figure 6:** An example of the image results you can expect when using several color-selection mechanisms. (a) is the original image, (b) uses the colors in the standard 4-bit system palette, (c) uses the 16 most popular colors, and (d) uses 16 colors as calculated by the median-cut algorithm.

Finally, figure 3d shows the image as it should be drawn when it crosses a full-color screen and a monochrome screen.

### Palettes and the Picture Utilities

QuickDraw provides applications with an additional level of color control for indexed devices of 2, 4, and 8 bits (1-bit devices are generally set to black and white). While you have control over the screen depth and its mode (i.e., grays or colors), the application controls each window's colors via a part of QuickDraw called the Palette Manager. For example, if you select a pixel depth of 4 bits for the display, the application decides which 16 colors (actually only 14, since black and white are always present) to use for each window.

QuickDraw acts as the referee that ensures that the color requests of the front-most window (i.e., the window you're working with, which thus requires the most accurate color representation) are met. Thus, the problem the application faces is finding the best palette to use. For example, a scanning application might want to determine what the best 256 colors are for

displaying a given scanned image. Fortunately, QuickDraw has the facility for solving this problem. A set of routines called the Picture Utilities returns a palette of best-fit colors for use in displaying the PICT file or pixmap.

The application can select one of two available algorithms for choosing the best colors. The first is the *popular method*, which simply returns the colors that occur most frequently in the image. The second is called *median cut*; it returns colors that cover the range of colors used in the image. You can also implement your own algorithm for color selection that the Picture Utilities can use. For more information on finding the optimal color palette, see issue 10 of *develop*, Apple's magazine for programming techniques and tips.

Figure 4 shows the operation of the popular method. A histogram accurate to 5 bits for red, green, and blue is constructed. The Picture Utilities returns the most frequently occurring colors. With the median-cut method of color selection, all the colors are first grouped into one box. This box is divided along its longest edge (the

green axis, in this case), and the colors are sorted by their green components. This produces two boxes. The box that has the longest edge is divided along that edge. This produces three boxes. This operation continues until there are as many boxes as there are colors requested. The average color in each box is returned as one of the median colors. Figure 5 shows how the median method works. This figure shows only the red-green axis.

To understand why there are several color-selection algorithms, look at figure 6, which shows four versions of the same image. Figure 6a is the original, 6b is drawn using only the colors in the standard 4-bit color table, 6c is drawn using the 16 most popular colors, and 6d uses 16 colors returned by the median-cut algorithm.

### A Visual Tool

I've covered a lot of ground in this article, but the most important point to remember is that QuickDraw has a lot of power and flexibility. QuickDraw provides a common base on which programmers can build their applications. Its device-independent design allows Mac applications to run on a variety of Macs with widely different processors and video circuitry—even Macs using multiple monitors.

Furthermore, QuickDraw uses color mapping to produce visually optimal results, regardless of a display's size and depth. In those instances where you have a specialized application that needs precise color control, you can use the Picture Utilities or well-defined operating-system calls such as DeviceLoop. These functions allow you to choose the best colors with which to display a given image, without forsaking application compatibility.

QuickDraw is a versatile tool that lets programmers concentrate on obtaining powerful imagery while it handles the intricate details of making the results look their best no matter what screen is used. Thanks to these capabilities, the Mac is still regarded as the best microcomputer for color graphics and imaging work. Better still, QuickDraw is evolving to provide even better color control and to deal with complex problems, such as color matching, that users will demand solutions for in the near future. ■

*Konstantin Othmer works at Apple Computer. He has worked on kanji TrueType, QuickDraw, and ColorSync and is the author of two books on computer software: Debugging Macintosh Software with MacsBug and Programming with QuickDraw, both published by Addison-Wesley. You can contact him on BIX c/o "editors."*

# A SHARED RESOURCE ACCESS MANAGER, PART 2

**L**ast month, I opened a discussion on resource access management and explored several ways to coordinate multiple programs requesting control of system resources. Resources can be any asset that your programs use in a multitasking or multiuser environment. Examples include *physical* resources, such as a network printer, and *logical* resources, such as database records.

This month, I conclude the discussion by looking more closely at the access manager I briefly described at the end of Part 1. The access manager is written for BSD Unix and is composed of two main pieces: a server program and a library of client routines. (I tried to isolate the network interface routines sufficiently that the access manager could be ported to other systems, such as NetWare.)

The server is a stand-alone program that runs as a background process, maintaining a list of available resources as well as handling the chore of determining whether an access request should be granted or denied. These access requests are transmitted to the server from one or more *clients*—separate programs running locally or on other workstations networked to the machine on which the server executes.

The client routines are a collection of C functions that you link into your application program. They take care of the dirty work of finding the server, establishing a connection, and so on. When it's time for your application program to, for example, obtain exclusive access to a printer or lock a record in a database, your program calls

a routine in the library that does all the communicating with the server. Most of the action within this access management system revolves around both server and client routines manipulating a list of data objects. These objects carry descriptive information for resources, clients, connections, and access requests. I'll refer to such objects as *definition blocks*.

## Handles and Blocks

Most of the important data structures that the server controls are dynamic: They come and go. Both the server and client library routines make use of a squad of such definition blocks; there is one for each entity handled by the system. Thus, any resource managed by the server is described by a definition block, any lock is described by a definition block, and so on.

The system makes heavy use of handles as shorthand identifiers of all data structures that a client program manipulates. If you've done any file-system programming, you're already familiar with how handles operate. Initially, your program provides a symbolic name of the entity on which it intends to work—in the file-system example, your program issues a call to the `open()` function, with the file's path name as an argument. The `open()` function returns a 16-bit handle that is bound to a data structure internal to the operating system.

**The network resource access manager is a true client-server application for BSD Unix systems**

*continued*

This structure carries everything the operating system needs to manipulate the file. Whenever your program wants to perform file I/O, it calls the appropriate function and passes only the handle. The operating system uses the handle as a pointer to the appropriate data function, so your program needn't use the file's path name over and over.

The resource manager uses this same principle. All definition blocks are ultimately referenced by their handles. This keeps information exchange across the network to a minimum (all handles are 16 bits long), and since a handle is an instant pointer to its definition block, it saves the server from lengthy searching.

## Clients and Connections

A client is any process or program that does business with the server. Once the client locates the server program (via its network address in the current version of the software), the client establishes a digital dialogue—a connection—with the server by issuing a login command. The login command is simply the client process saying, "Hello. I want to be a client. Here's my network address where you

should send all correspondence."

In response, the server builds a client definition block in which it stores the client's network address, and it sends the handle of the block back to the client. This handle becomes a kind of ID badge by

**A client is any process or program that does business with the server.**

which the server distinguishes that client from all other clients, since any future requests sent from that client will carry the handle (the client routines insert the handle automatically).

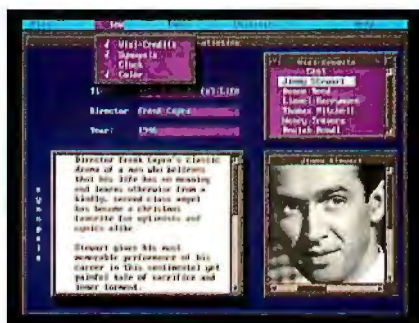

The client definition block also carries

two counters. These counters indicate the number of active and waiting lock requests issued by that client. The server can use these counters to determine whether any cleanup has to be done in case the client unexpectedly issues a log\_out command (which terminates the connection between client and server). For example, suppose a client process issues an exclusive lock on a printer queue and then logs out without releasing the lock. The server will examine the counters in the client definition block and see that the client has an outstanding lock somewhere. The server can then remove this lock, which otherwise might tie up the printer indefinitely.

From the client process's perspective, a connection with a server (often referred to as a *session*) is identified by a connection definition block. The connection definition block is analogous to the client definition block that the server maintains; that is, it contains all the information that the client process needs to maintain contact with the server. Specifically, it contains the server's network address as well as the handle that the server has assigned to the client.

Since a connection on the client side is

# Not since Jimmy Stewart has there been such a combination of character and good looks.

C-scape® lets you easily create handsome and completely portable character-based applications with integrated graphics.

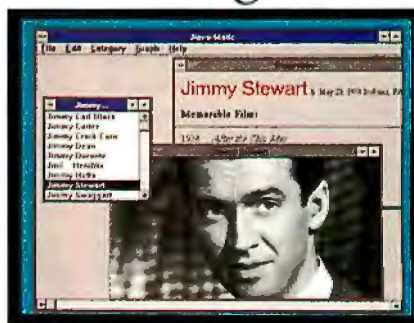

We offer a complete line of user interface toolkits to make your applications become stars. Even better, our toolkits let your applications appear on screens everywhere—from DOS to Windows to UNIX and more—without modification.

## C-scape. The most flexible user interface package

C-scape provides you with a library of powerful windowing functions such as scrolling windows, mouse support, and graphics.

## SOME ASSEMBLY REQUIRED

defined by a connection definition block, a single program can log into the server more than once and appear as more than one client. For example, you might have a

**M**aintaining the data that describes a resource is the server's job.

multithreaded program, each process of which accesses a single data file for different purposes. It's perfectly reasonable for each process to log into the server independently.

### Resources

Maintaining the data that describes a resource—its name, the locking levels it permits, the number of active locks on the resource, and so on—is the server's job. All the data defining a particular resource is held in a resource definition block.

Each resource definition block is uniquely identified by two entities: its name (a string field of up to 32 characters) and a handle. The handle is implicit; it's simply the offset to the particular resource block in the memory region that holds all resource definition blocks. The name field is an explicit symbolic identifier that clients use to initially reference the resource. This string can contain arbitrary characters (except for a NULL character, which acts as a terminator), so your programs are free to establish any naming convention you consider appropriate. For example, network printers can be named NWPRT:LASER1 and NWPRT:JET2 and can be handled by the resource manager right alongside database records with names like DBF:GENLEDGER:00103 and DBF:GENLEDGER:02344.

When a client requests a lock on a resource for the first time, that client only knows the resource by name. Consequently, the server must respond to the request by searching the name fields of all active resource blocks. To facilitate this search, all the active resource blocks are chained together on a doubly linked list.

Why did I choose a linked list rather than some other structure with quicker

While American business is trying to stay competitive with foreign companies, it's paying an added penalty. The penalty of double-digit illiteracy.

Believe it or not, 27 million American adults can't read and write. Another 47 million are literate on only the most minimal level. That adds up to almost one third of our entire population... and probably a disturbing number of *your* employees.

What does illiteracy cost you? Get out your calculator. Illiterate adults make up 50%-75% of our unemployed. Every year they cost us an estimated \$237 billion in lost earnings. They swell our welfare costs by \$6 billion annually and diminish our tax revenues by \$8 billion.

Illiteracy costs you through your community, too. It robs the place where you work and live of its resources. It undermines the potential of the people who make your products and the people who buy them. No dollar figure can be assigned to this. But over the years, this may be the costliest loss of all.

What can your company do about this? It can join in local efforts to fight illiteracy. It can volunteer company dollars and facilities for better school and tutorial programs. It can invest in a more literate community.

The first step is to call the Coalition for Literacy at 1-800-228-8813 or fill out the coupon below. Do it today. You may find it's the greatest cost-saving measure your company has ever taken.

**A literate America is a good investment.**

search times, like a binary tree or a hash table? I had two reasons.

First, the only time the server must search the list is when a client makes an initial request for resource access. After that, the client uses only the handle to reference the resource definition block, so locating the block is instantaneous.

Second, there are two resource types—permanent and transient. The definition block for a permanent resource, such as a printer queue, remains active even if no locks are present on the resource. However, the definition block for a transient resource, such as a single record in a database file, is discarded after all active and waiting locks on the resource have been released. Using a doubly linked list simplifies the task of disconnecting blocks from the list.

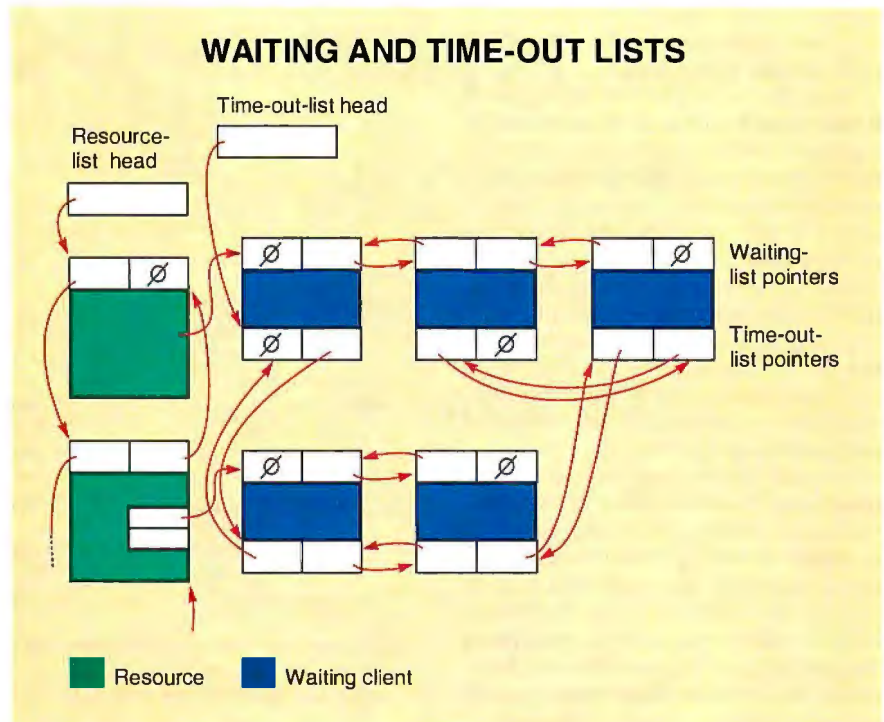

Each resource definition block also has a pair of lists attached (see the figure). One is the list of all active locks currently enforced on the resource; the other is the list of all locks that have been forced to wait because they conflict with one or more of the active locks. (I'll go into detail about the members of these lists later.)

When a client issues a lock request for a resource, the server must decide whether that request should be granted (in which case the request goes on the active list) or denied (in which case the request goes on the waiting list). Rather than force the server to search the active list each time it has to make this decision, each resource definition block carries an array `curr_locks[]`, such that the value of `curr_locks[i]` is the number of locks currently active at lock level *i*. Also, the resource block carries an array called `lock_comp_tab[]` (short for *lock compatibility table*), whose contents show which lock levels are compatible with each other. The server can examine these two arrays and rapidly decide the fate of a lock request.

The code the server must execute to make a lock grant/deny decision is actually quite simple. First, given that a lock level is stored in variable `lockl`, the server builds a bit mask that has the bit corresponding to that lock level set to 1. You can do this with the following code:

```
lockm = (uchar) (1<<lockl);
```

where `uchar` is a typedef that is shorthand for unsigned char. Now the resource manager can simply examine each member of the lock compatibility table. For any member in the table that has a bit set corresponding to lock level `lockl`, the manager checks the associated value in the `curr_locks[]` array. If that value is nonzero, then a lock already exists on the

*Attached to each resource is a list of lock definition blocks representing pending lock requests. Lock requests enter the lists in order of arrival; pending requests are also connected to a systemwide time-out list. Requests are attached to the time-out list based on the length of time each associated client will wait for lock request service.*

resource that is incompatible with the request being made. The code looks like this:

```
for(i=0;i<4;i++)
if((lockl & lock_comp_tab[i])!=
(uchar)0)
if(curr_locks[i]!=0)
return(FAIL);
```

If execution makes it out of the above loop, the lock can proceed. (I've taken some liberties with the code to preserve clarity; although I haven't shown it here, the two arrays are actually components of the structure that defines a resource definition block.) Note that the number of lock levels is easy to expand by simply increasing the size of the `lock_comp_tab[]` and `curr_locks[]` arrays and increasing the limit of the above for loop accordingly. The lock comparison table is currently defined as an array of unsigned char, which means that the current program can support up to eight lock levels with those minor modifications.

As I mentioned above, the server carries all the detailed information about a resource. Initially, a client program knows only the resource's name; it loads that name into the first lock request for the resource. The server will return the resource's handle in response to this request,

and thereafter the client program uses that handle to identify the resource.

## Locks: The Server View

A lock definition block serves to record a lock request that a client posts. You recall that all lock definition blocks live on one of two lists and that these lists are anchored to a resource definition block associated with the resource being locked. The most important component of a lock definition block is the lock level. It guides the server's decision on whether the lock can proceed or must wait. The server also uses it to update the contents of the resource definition block's `curr_locks[]` array.

Regardless of what list it's on, a lock definition block also holds the handle of the resource to which it's attached, as well as the handle of the client making the lock request. The resource handle lets the server rapidly locate a lock's target resource in case the resource definition block must be modified to reflect a change in the lock. The client handle is necessary if a client issues a log-out and still has lock requests active or on waiting lists. When this happens, the server must scan all resource active and waiting lists and remove those lock definition blocks associated with the client (a time-consuming job, to be sure, but one that should happen infrequently;

it's most likely to happen if a client's program terminates abnormally and is trying to at least die with dignity).

Typically, a lock request will arrive at the server and end up at the tail of a waiting list. As locks are released, the server removes their lock definition blocks from the active list, updates the state of the resource definition block, and then examines the head of the waiting list to see if that lock request can move to the active list. The server continues moving locks from the waiting list to the active list as long as the lock requests can be granted. This is the mechanism by which the FIFO (first-in/first-out) waiting list I described last month is implemented.

Locks on the waiting-list items are actually members of two doubly linked lists. Once again, I chose the doubly linked list structure because it is easy to rapidly attach items to and, most important, remove items from random locations within the list. My description of these overlapping lists gets complicated, so refer to the figure during this discussion. Remember that each resource possesses a waiting list. Lock-request definition blocks are attached to the end of this list as they arrive at the server. This is a FIFO queue.

However, each lock request also carries an associated time-out value. This value tells the server how long the client is willing to wait for the associated request to be serviced. The resource manager maintains yet another list to which all waiting lock requests are attached in order of ascending time-out values. This list, the *time-out list*, crisscrosses the waiting lists of every resource in the system (see the figure).

At the head of the time-out list is the first request due to time-out; next is the second request due to time-out; and so on. When a lock request arrives that the server determines must go on a waiting list, the server "wires" the request into the time-out list. At regular intervals, the server examines the first request on the list to see if that request has timed out. If so, the server removes the request from the system and sends a "request timed out" response to the client. The server repeats this process, removing the new first request if it has timed out, until it encounters a request that has not timed out. Since all requests in the system are on the time-out list, this saves the server considerable time; the server doesn't have to repeatedly examine all requests on all the waiting lists to see which ones have timed out.

### Locks: The Client View

For every lock request that a client submits to the server, the client program creates a data structure similar to the lock

**Listing 1:** *Definitions for the primary structures used on the client side.*

```

/*****
** Connection definition **
*****/
typedef struct {
    short client_handle; /* Client handle */
    int socket; /* Server socket */
} connect_def;

/*****
** Access definition block **
*****/
typedef struct {
    short result; /* Result code of request */
    char name[32]; /* Resource name */
    char template_id[4]; /* Template ID string */
    short resource_handle; /* Resource handle assigned by server */
    short lock_handle; /* Lock handle assigned by server */
    short lock_level; /* Lock-level request */
    ulong wait_timeout; /* Maximum time to wait for request */
    ulong quantity; /* Used for multi-instance resources */
} access_def; /* Access handle */

/*****
** Resource definition structure **
*****/
typedef struct {
    char name[32]; /* Name */
    short flags; /* Definition flags */
    uchar lock_comp_tab[4]; /* Lock compatibility table */
    short act_clients_allowed; /* Active clients allowed */
    short wait_clients_allowed; /* Waiting clients allowed */
} resource_def;

```

definition block. This structure is known as an access definition block, and the act of issuing a lock request to the server actually amounts to the client sending a copy of the access definition block to the server. The server attempts to satisfy the request, modifies the contents of the access definition block depending on whether or not the request succeeded, and transmits the results back to the client.

Inside an access definition block, you will find not only a resource name field, but also a resource handle field. When the server receives an access request block, it examines both fields. If the resource handle field contains a negative number, the server assumes that this is the client's first access request. So, the server must look up the resource by name and uses the contents of the resource name field to guide its search. Otherwise, the server can use the resource handle field to locate the resource directly. The access definition block also carries lock-level and time-out fields that the server must move into the corresponding fields of the lock request block.

In most cases, a client will request access to a resource that is already active in the server (i.e., has an active resource definition block). However, a client may make

an access request to a resource that is not currently active; then the server will have to build a resource definition block on the fly. An example is when a client submits a request to lock a particular record in a database. The server certainly doesn't want to keep an active resource entry for every possible record in that database—there could be millions. This is an example of a temporary resource: one whose definition block is created only when a client issues a lock request and is deleted when all requests on that resource have been released.

To facilitate the rapid creation of temporary resource definition blocks, a client's access request also carries a four-character template ID string. When the access request arrives at the server, if the server finds neither the resource's name nor its handle, it uses the template ID to read a resource definition block template—a kind of fill-in-the-blanks form that the server can copy into a new resource definition block. The template defines such things as lock levels permitted, number of active clients permitted, the lock compatibility table, and so on—everything the server needs to rapidly construct the new resource definition block. (The server builds its in-memory library of templates by reading a

# Think of it as a mathematical playground for your mind.

## Open up a whole new world of scientific and engineering problem solving with Mathcad 3.1.

Between the challenge of new problems and the reward of new solutions there is math. Often, a lot of math.

Which is why we make Mathcad.

It's the remarkable software that gives you the power to perform everything from simple arithmetic to advanced computational gymnastics more quickly, easily and naturally than with calculators, spreadsheets or programming alone.

You use Mathcad just like a scratch

pad. Simply type your work anywhere in the live screen and Mathcad does the calculating. Change variables and Mathcad automatically updates the answers. It plots in 2-D and 3-D. And prints your results, complete with text and graphics, in presentation quality documents.

Plus you see your work more clearly because Mathcad uses the same math notation you would use with a pencil and paper.

## It's the complete math system.

Mathcad comes with more than 200 commonly used functions that let you quickly build even complex equations and formulas

with exponentials, differentials, cubic splines, FFTs and more.

Full symbolic calculation capabilities are available with a menu pick. So you can evaluate any integral, Taylor series or infinite sum just by clicking.

Optional Electronic Handbooks\* give you instant access to data, formulas and diagrams once found only in reference books. They're fully interactive. Just click and paste them right into your document and work with them like any other text, value, table or formula. Or work with them right in the handbook itself.

Plus optional Applications Packs with modifiable templates are available for all major engineering and science fields.

## Over 200,000 satisfied users.

Each day, more engineers, scientists and other technical professionals discover that Mathcad opens up a whole new world of freedom in problem solving, and helps them manage their time more efficiently.

Which is why in addition to being the most popular math software you can buy, it is also the most productive.

- Microsoft® Windows,™ Motif and Open Look interfaces make Mathcad easy to learn and use
- Optional Electronic Handbooks include The CRC Materials Science and Engineering Handbook,

**NOW  
UNIX 3.1  
AVAILABLE**

Machine Design and Analysis from the *Standard Handbook of Engineering Calculations* (McGraw-Hill), and the Mathcad Treasury of Methods and Formulas

- Optional Signal Processing Function Pack contains over 60 functions including FIR and IIR filter coefficients and power spectrum

- Optional Applications Packs with adaptable templates for Electrical, Mechanical, Civil and Chemical Engineering, Statistics, Advanced Math, and Numerical Methods
- PC Windows, PC DOS, UNIX® and Macintosh® versions available

## Free demo disk.

For a free Mathcad demo disk, or upgrade information, call 1-800-628-4223, (or 617-577-1017, Fax: 617-577-8829).

Or see your software dealer.

**Listing 2:** In this simple example, a client application logs into the server and then requests exclusive access to a printer queue named `PQUEUE:LASER1`. After the client has completed use of the queue, the client releases the lock and logs out from the server.

```

/*
** We presume that the server port has been
** decided on and is globally defined as
** S_PORT. We also presume that s_name points
** to the server name string.
*/

/*
** Login to server given by s_name.
*/
rval=rs_login(s_name,S_PORT,&connection_block);
if(rval!=0)
{
    printf("Connection failed, error:
           %d\n",rval); exit(0);
}

/*
** Request exclusive access to a printer queue
** This is our first request, so we request it
** by name. Also, this is a permanent
** resource, so there is no template ID
** string.
*/
memset((void *)&access_block,0,
        sizeof(access_block));
/* Name */
memcpy(access_block.name, "PQUEUE:LASER1",13);
/* Don't know handle */
access_block.lock_hand=-1;
/* Exclusive lock */
access_block.lock_level=RS_LOCK_EXCL;
/* Wait 100 secs */
access_block.wait_timeout=(unsigned long)100;

rval=rs_req_access(&connection_block,
                  &access_block);

/*
** The code in rval indicates whether
** communication with the server somehow
** failed. The result code of the request is in
** the access block.
*/

if(rval!=0)
{
    printf("Server communication failure:
           %d\n",rval); exit(SERVER_COMMERR);
}
if(access_block.result!=0)
{
    printf("Request failed: %d\n",
           access_block.result);
    /*
     ** Code to handle request failure goes
     ** here....
     */
}

/*
** At this point, the client has exclusive
** access to the print queue.
*/

/*
** Release access to the queue.
*/

rval=rs_rel_access(&connection_block,
                  &access_block)

/*
** Again, the code in rval indicates whether
** communication with the server failed.
*/

if(rval!=0)
{
    printf("Server failure: %d\n",
           rval); exit(SERVER_COMMERR);
}

/*
** Log out. We'll ignore any errors at this
** point, but go ahead and wait for a server
** response.
*/

rs_logout(&connect_block,RS_LOGOUT_WAIT);

```

predefined file at start-up time. You can load as many templates as your applications require, up to your memory limits.)

### Show and Tell

Listings 1 and 2 present a short example of how a client application would call the access manager to gain an exclusive lock on a print queue. Listing 1 is a collection of the structure definitions used by the client application; refer to it as you look over listing 2, where the real action occurs.

The code in listing 2 shows how a client would log into the server (i.e., set up a connection) and issue a lock request. Presumably, if the request is granted, the application will proceed to access the resource (in this example, copy printer data

into a file). Once finished with the resource, the client issues a release command and then logs out from the server.

As usual, there are numerous additions you can make to tailor the system to your particular needs. For example, you may want clients to log in with an associated name, so if something goes wrong, you can create some auditing information and determine which client messed things up.

Another addition would be to add a monitoring screen that you can call up in case the system appears to be exhibiting difficulties. This screen would let you peek into the server and see which clients hold locks on which resources.

My requirements, however, are modest. I need only a systemwide lock manager

that can handle record locking as easily as file locking, and file locking as easily as queue management. Perhaps the best attribute of this system is its extensibility; a variety of management functions can be brought under the control of a single program. Simplification is always welcome in the programming world. ■

*Editor's note: The listings in this article are available from BYTE in electronic format; see page 5 for details.*

*Rick Grehan is technical director of the BYTE Lab. He holds a B.S. in physics and applied mathematics and an M.S. in mathematics/computer science. You can reach him on BIX as "rick\_g."*

# SOFTWARE WITH CURVES

If you want to draw curves in a Windows program, you can use the Bézier library routines in the Windows 3.1 SDK (Software Development Kit) or you can roll your own. With the latter approach, you have more control over the behavior of your program. You can also use the same basic routines in non-Windows graphics programs; you'll just have to remove the references to a Windows device context and substitute whatever is appropriate for the other graphics environment.

This month's software, CDRAW, is a Windows program that interprets an EPS (Encapsulated PostScript) file and displays the result in a window. I've also included a sample EPS file, created with Arts & Letters from Computer Support (Dallas, TX). The file contains dozens of curve-drawing commands. Even the text displayed on-screen exists in the file as sets of draw curve and draw line commands.

CDRAW is a C program that you can compile into a Windows executable file with a Windows-capable C compiler from Microsoft, Borland, or Watcom. The listings disk also contains the associated resource files (i.e., .RC and .ICO) for build-

## Bézier curves, inside and outside Windows, and keeping Windows menus alive

ing the Windows application. The icon for CDRAW shows "EPS" and a picture of an eye—it also shows I'm not much of an artist!

When you pick the Draw menu item, CDRAW reads and interprets the EPS data. CDRAW processes move to, line, and curve commands embedded in the file. To draw a curve, CDRAW recursively invokes logic that uses the de Casteljau algorithm for Bézier curves. I wrote the de Casteljau routine as a separate C function, so you can scavenge the code and insert it into your own programs whenever you want to draw curves, whether inside or outside Windows.

Bézier curves and quadratic b-splines are both methods of approximating smooth curves, and both have applications in font

technology. TrueType fonts are based on quadratic b-splines; Adobe Type 1 fonts are based on Bézier curves (4-point Bézier curves, to be specific). You need to store more data points to represent a TrueType font than an Adobe Type 1 font, but TrueType fonts require less computation. Nevertheless, Bézier-curve drawing, especially with the de Casteljau algorithm, is fast. So fast, in fact, that it's generally faster to convert quadratic b-splines to Bézier curves before drawing them.

If you find that CDRAW runs too fast to follow, you can slow it down by selecting the Slow Speed menu option. In this mode, CDRAW pauses for a second after each drawing command.

CDRAW doesn't turn the cursor into an hourglass while it draws. Instead, the program strategically calls the PeekMessage() Windows function to ensure that the message queue is emptied on a timely basis. If you click on the left mouse button, CDRAW sets a flag that tells the drawing function to stop. Because the PeekMessage() technique keeps the menus "alive" while the program draws, you can pick Slow Speed or Fast Speed while the drawing is in progress. ■

### MAC/Tom Thompson

## Zync Syncs Macs

Nothing creates more havoc than being out on the road, PowerBook in hand, and discovering that you left an essential file or application behind on your office Mac. You can head off trouble by simply checking that your PowerBook files match, or are "in sync" with, those on your desktop Mac. This seems easy enough, but it's easy to overlook some obscure folder or file buried deep in a collection of folders.

Fortunately, Ricardo Batista's Zync comes to the rescue. Zync, a freeware utility, compares the files of two networked Macs and makes both of the file systems match. It copies missing files to the machine that is lacking them and makes sure that the most recent copy of each file is on both computers. You can select an entire drive or just a single folder for the synchronization process. Zync requires System 7.0's file-sharing feature.

### UNIX/Ben Smith

## The Bit-Map Translators

Few subjects more resemble the post-Tower biblical community of Babel than image file formats. Different applications use a wide variety of formats (e.g., TIFF, GIF, and PCX), and translating between formats is a common problem.

Several sets of public domain translation utilities have grown up around the idea of translating all these formats to a common base format. From the base format, you can convert to whatever format you need. The least of these base formats (and the seed from which all these utilities sprang) is PBM (Portable Bit Map), developed by Jef Poskanzer. Now there are also PGM (for gray scale), PPM (portable pix map, for full color), and Michael Mauldin's FBM (Fuzzy Bit Map). This month's listings include utilities by these authors for working with all four of these formats, with features including sizing, scaling, retoning, halftoning, and quantizing, as well as translating.

Editor's note: Software Corner highlights public domain, freeware, and shareware programs. The programs are available in electronic format. See "Program Listings" on page 5 for details. We solicit your contributions. We pay \$50 for any program we use. Write to: Software Corner, BYTE, One Phoenix Mill Lane, Peterborough, NH 03458.

JON UDELL

# IN SEARCH OF AN OBJECT-ORIENTED FILE SYSTEM

**W**indows, like the Roman god Janus, has two faces. Program Manager surveys an abstract landscape of groups and items, and File Manager presides over a set of real tree-structured disk volumes. No such logical/physical duality confronts Mac users because Finder's nested-folders-and-icons view of the contents of a disk maps directly to actual directories and files. To reorganize your view of programs and documents, you have to literally haul them around on the disk. Deep within the Mac OS, the windowing and file systems conspire closely to make this approach fast and effective.

Windows 3.0, unable to emulate the Mac in this regard, charted a new direction. You saw programs and documents primarily as collections of Program Manager objects. In principle, this was a great thing. You could create pseudodocuments as program items configured to load data files. Thus, the group "Weekly reports" might contain the item "Week of February 12." This would launch WRITE.EXE and feed it the file C:\JON\WEEKLY\FEB1292.WRI.

Unhappily, the item "Week of February 12" didn't have all the properties a document should have. You could launch it, but you couldn't search for it. For that, you went to File Manager and hunted for, say, "FEB\*.WRI"—*not* "Week of Feb\*." Worse, you had two sets of copy/move/delete semantics to contend with. Are you copying/moving/deleting a Program Manager object—merely a pointer to a file? Or are you working with a File Manager object—the file itself?

Windows 3.1's new drag-and-drop features drove Windows' two faces even farther apart. In version 3.1, you can drop a file onto Print Manager to print it or onto the icon of a running program to load it into that program. But only File Manager can act as a drag-and-drop donor. So your effort to hide FEB1292.WRI behind a Program Manager abstraction comes to naught

if you want to use version 3.1's direct-manipulation printing feature. You have to reveal the object's physical location, by File Manager navigation, to be able to drag it to the printer.

## New Windows and OS/2 Desktops

Three new Program Manager replacements—Norton Desktop 2.0, WinTools, and NewWave 4.0—wrestle with the duality of the Windows desktop. There's also the OS/2 2.0 Workplace Shell, IBM's effort to smooth out a similar division that had plagued the Presentation Manager desktop. All four products add something that the original Windows and PM desk-

tops lacked—a fully hierarchical logical view.

At first blush, the nested folders, groups, or objects seem to make these environments more Mac-like. But there's always a separate file manager hanging around, because none of these shells can free you completely from the need to navigate the file system. Further, as the logical view grows more ambitious, the logical/physical duality worsens.

While Norton Desktop and WinTools do allow nested objects, they don't really push these as the preferred method of document organization. The tip-off is that neither product can search its respective object name space. To find a "Weekly report" object, you have to remember where you put it or bypass the logical view and use a file manager to track down its data file directly. Clearly, you're not expected to build a logical view that rivals the complexity of the physical one, which for typical users can involve thousands of files and many levels of nested directories.

NewWave and the Workplace Shell, on the other hand, do want you to build elaborate logical views, and they include tools for searching the logical namespace. Both enable you to pull existing material into their logical views (when installed onto a DOS partition already full of programs and documents) and to capture newly created material as well.

The Workplace Shell's migration tool automatically captures DOS, Windows, and OS/2 applications as Workplace Shell *program-file objects*, but it's up to you to create *data-file objects* by dragging data file icons from the Templates folder and specifying the applications that created them. NewWave goes further, automatically migrating both programs and documents into its environment.

Because NewWave's list of document types is richer than OS/2's and more closely coupled to program-launch behavior, things integrate much more smoothly. NewWave takes great pains to capture

**Only an object-oriented  
file system can resolve the  
File Manager/Program  
Manager duality**

your work in its object database. That's a given if you run NewWave-aware applications like TextNote, the Notepad-like text editor included with the *pack2.gz*. The desktop's Create a New dialog box offers TextNote as an object type.

When you create a TextNote, you get an appropriately typed document object that you can drag from folder to folder and that launches the TextNote editor when you double-click on it. Unlike Notepad, TextNote's Save As menu option doesn't invoke Windows 3.1's Common File dialog box. You can rename the *object* using Save As, but NewWave won't let you get at the file.

It does have a real DOS identity—out of perverse curiosity, I found that “Memo to Anne re: PC EXPO” was stored as C:\HP-NWDATA\HPOMF002\0000006\B.SRD—but you don't need to know that to search for, edit, delete, or print the document. You do, however, have to reconstitute a DOS identity for the file if you want to, say, copy it to drive A. NewWave provides the admittedly awkward Detach DOS File from Object function for this purpose.

Alternatively, you can register non-NewWave-aware applications as *object* types. Because real NewWave applications are scarce, this is the usual arrangement. If you add Notepad to the set of types known to the Create a New dialog box, things appear to work just as with a TextNote.

There are subtle differences, however. You can have a Notepad object refer to a normal DOS text file “in place,” or you can choose to have NewWave move the data into its object database. If you double-click on the object's name reveals a DOS path name, NewWave doesn't own its storage; otherwise, NewWave does. The distinction matters. If you dump a DOS-managed object into the Waste Basket, you'll just delete the object; if you trash a NewWave-managed object, you'll delete its data as well. With two file systems co-existing, conflicts are inevitable.

Ultimately, neither NewWave nor the Workplace Shell can guarantee that you'll be able to find a given document by searching the logical namespace rather than the physical one. Users must constantly decide whether to commit a newly created document to one environment or the other. Even if you're a true believer in the value of a logical scheme, applications (NewWave-aware ones excepted) are constantly working to subvert that belief.

They happily offer File Save dialog boxes that invite you to write straight to the file system without the knowledge or consent of the desktop environment. For today's applications, the ability to name and use

files is a sacred and inalienable right. Until that changes, the marriage of Program Manager and File Manager can never be truly consummated.

### Farewell to Filenames

Imagine how an OOFS (object-oriented file system) would help solve this dilemma. Suppose the operating system doled out to applications not named chunks of disk space but opaque handles to storage objects. These objects would be registered in a class hierarchy. A text editor might request an object of class Text, subclass ASCII; an image editor might ask for an object of class Image, subclass GIF. And they'd have long descriptive names completely unrelated to their storage location,

**The key change in OLE 2.0 will be in-situ interaction.**

which the operating system would determine based on their handles.

You'd search for storage objects by descriptive name—which wouldn't need to be overloaded with type information—or by type. Thanks to the class hierarchy, you could conduct general searches (e.g., all images) or specific ones (e.g., all GIF images). Object linking would be simplified enormously. Links wouldn't break when users renamed storage objects, because the underlying handles would persist. Object embedding, as implemented today in OLE (Object Linking and Embedding), would not even be needed. Its *raison d'être*—the anonymity of embedded objects—would evaporate if regular storage objects became handle-based.

Ironically, OLE's embedding technology may offer the best practical migration path. Suppose Windows 4.0 or NT 2.0 provides an OOFS API supporting the features I've described and an OOFS-aware shell. These systems won't be allowed to break every application in the world, so they'll have to support the old file-system APIs and the new object-oriented ones.

During the long transitional period, how can applications that use the older APIs be kept from violating the abstract view imposed by the OOFS-aware shell? The Hewlett-Packard folks showed me an ex-

perimental version of NewWave 4.0 that solved this problem in an intriguing way. They demonstrated NewWave launching Paintbrush in embedding mode—just as if you'd started the application from an OLE client like Write using Insert Object. HP had Paintbrush thinking that NewWave was an OLE client while it slyly redirected the bit-map data that Paintbrush pumped through the OLE pipe into NewWave's object database.

In normal OLE, the anonymous chunk of data that is an embedded object resides within the client-created document, accessible only to the client. HP's clever hack exposed the name and type of that data to systemwide access while hiding its location. Unfortunately, this feature didn't make the final cut, so it's now slated for the next release of NewWave. Still, hats off to HP for championing the object-oriented file system we all know we need and for blazing a trail that could take us from here to there.

Meanwhile, Microsoft is busily nailing down the specification for OLE 2.0. For users, the key enhancement will be *in-situ interaction*. In OLE 1.0, when you activate a Paintbrush object that's embedded in or linked to a Write document, an instance of Paintbrush launches in a separate window. Once these applications comply with OLE 2.0, Paintbrush will simply take over Write's window, so Write “becomes” Paintbrush while the embedded/linked object is active.

Under the covers, the client (e.g., Write) and the server (e.g., Paintbrush) will exploit a vastly improved method of communication. OLE 1.0 requires the client to pump all of an embedded object's data through a DDE pipe to the server, which does its editing and then pumps everything back. OLE 2.0 introduces a new object storage system, the “Docfile,” which gives servers direct read/write access to objects embedded in client-owned documents. (Optionally that access may be transactional, so a user could choose to commit or roll back edits performed during in-situ interaction.)

A Docfile, contained within an ordinary DOS file, can itself contain a mixture of embedded or linked objects and subsidiary Docfiles. When you link to an object in a Docfile, you're no longer using a DOS filename, but rather an OLE 2.0 “Moniker”—that is, an opaque object handle. Here's another evolutionary path that will, hopefully, lead someday to a full-blown OOFS. ■

# ASK BYTE

## Weather by PC

I am looking for a system to receive and store weather maps on my computer. I have a shortwave radio and an IBM AT. Where can I find a radio-to-PC interface?

Pascal Gilles  
Frascati, Italy

Going to a commercial service is probably your best solution. Global weather maps and reports are currently available to members of CompuServe (5000 Arlington Centre Blvd., Columbus, OH 43220, (800) 848-8990 or (614) 457-8600) who use the optional CIM (CompuServe Information Manager) software. You need CIM 1.3 or higher for DOS machines and version 1.5 for the Mac.

CIM lets you access current conditions and a 72-hour forecast for the U.S., Canada, and 85 additional cities worldwide, with hourly updates. You can also receive current conditions, a 24-hour forecast, and satellite maps for the U.K./Ireland, continental Europe, the Pacific Rim, and Australia/New Zealand in 16-color or black-and-white graphical representations.

For Mac users in the U.S., Mainstream Data (420 Chipeta Way, Suite 200, Salt Lake City, UT 84108, (801) 584-2800; fax (801) 584-2831) has released Mainstream Newscast, a broadcast information service that delivers news to users in the U.S. and Canada via FM radio or satellite.

Mainstream does not yet have a weather service, but you can monitor business and general news from such sources as Associated Press, Reuters, Knight-Ridder, Market News Service, Newsnet, PR Newswire, Business Wire, Sports Network, and others. Along with software, you need an FM antenna or satellite dish, coaxial cable, and the Mainstream Intelligent Data receiver, which receives the FM or satellite signal and formats it for use by the computer.

Prices for news delivery to a stand-alone Mac start at about \$50 per month. The software and hardware prices range from \$495 for FM service (in 12 U.S. cities only) to \$990 for a small-dish satellite connection (U.S. and southern Canada only).

I'm not aware of any such services in Europe. Perhaps some of our readers can offer suggestions.—Stan Wszola

## Column Conundrum

I am looking for an editor that I can use to draw up a seven-column chart. I want something that will let me edit font size, line spacing, and page breaks easily. Do you know of anything that would meet my needs?

Sara Little  
Amherst, NH

The BYTE Lab has had to assemble many tables for comparative reviews. Many of the newer high-end word processing programs will work. Microsoft Word for Windows 2.0 has built-in table creation and editing functions, and it supports a table with up to 31 columns and an almost unlimited number of rows. Word can convert ASCII text to a table, where table cells can be sized, copied, and moved.

You can insert the table directly into an article's text and retain the correct formatting.

Alternatively, you can use a spreadsheet program like Borland's Quattro Pro or Microsoft Excel. They can't manipulate text as well as a word processor does, but you get the advantage of built-in calculation functions. Many spreadsheet programs let you rotate cell locations to change the table's format.

If you want the best of both worlds

and have two applications that support OLE (Object Linking and Embedding), you can embed a table created in a spreadsheet program directly into your word processing file. Excel and Word offer this feature. Without OLE, you would have to convert the spreadsheet file into a text file before importing it into your word processor. In the process, you'd lose all your formatting.—Stan Wszola

## Which Unix?

I plan to buy a 33-MHz 486 and run DOS and Unix on it. I will use this machine as a single-user multitasking system, typically for xterm. Which Unix should I use? Are the X Window System versions from The Santa Cruz Operation and Interactive fully compatible with the MIT version? How should I configure the system?

Claudio Fornaro  
Turin, Italy

The BYTE Lab has tested the most recent releases of SCO and Interactive Unix. Both are good. When Interactive comes out as Solaris, it should be even better. SCO is more popular and is well known in the VAR world, but it is not a typical Unix environment. It will be a long time before it becomes System V release 4.0—if ever. SCO Unix is available from The Santa Cruz Operation (400 Encinal St., P.O. Box 1900, Santa Cruz, CA 95061, (800) 726-8649 or (408) 425-7222; fax (408) 425-4222). For Interactive Unix, contact Sunsoft (2550 Garcia Ave., Mountain View, CA 94043, (415) 960-3200; fax (415) 960-9131).

BSDI Unix from Berkeley Software Design (3110 Fairview, Suite 580, Falls Church, VA 22042, (703) 876-5040; fax (703) 876-5059) includes full source code. Judging by the beta copy we received recently, BSDI Unix looks like the best choice for anyone who plans to do any serious system hacking.

You can install these operating systems on 30-MB drives, but you won't have enough room for the compiler, libraries, and other niceties (e.g., the man pages, networking, and X). I run SCO Unix with the developer's tools and X on a system with a 150-MB hard drive and 8 MB of RAM. Interactive Unix is about the same. SCO Open Desktop will hog all 150 MB if you install everything, including the database server.

The MIT sources are raw source code. Thus, they require considerable work to install on any system. The most recent versions of X servers for Intel-based Unix support only through version 1.1 release 4.

If you don't plan to run X, a 9-inch monitor is fine. I find that Super VGA and a noninterlaced 17-inch display

are preferable for X. If you aren't working with graphics, however, you can get by with much less. My SCO system, which I use primarily for writing books, has a VGA card with a noninterlaced 13-inch screen.

Get a system that has maintained a reputation for dependability for at least a few years. Don't get the motherboard with the newest technology; there may not be drivers or utilities for installing Unix or Unix drivers for its devices. The same goes for device controller boards.

As for memory, 8 MB is tight, but sufficient. You will need to do some system tuning to be sure that the process tables don't overflow. At less than US\$100 per megabyte of RAM, it is worth going to 16 MB. Be sure to install the memory before you configure your disk, or at least set aside a swap space for the amount of memory that you intend to install. Reconfiguring your disk for a bigger swap space after the fact is a lot of work on Intel-based systems, because you have to repartition it.—Ben Smith

## Pixels, Pixels Everywhere

I found "Monitors: Beyond VGA" (May BYTE) helpful, but I am puzzled about the relationship between resolution and screen size. On page 210 you say, "Screen characters shrink each time you boost screen resolution." Does this mean that increasing screen resolution merely crams more of the "page" on the screen? How can I increase the resolution of the characters and images on the page?

Donald V. Etz  
Kettering, OH

For a given monitor of any size, character (and picture) size decreases as screen resolution increases. The reason is simple: A character defined as 9 pixels wide by 12 pixels high will always display as a 9- by 12-pixel matrix. Increasing resolution simply packs the pixels together more closely. That's why buying a 13-inch monitor for use as a 1024- by 768-pixel display doesn't make a lot of sense; the text and images will be too small to read easily. If you want to upgrade to a higher resolution, you need a bigger monitor to keep the image readable.—Raymond GA Côté

## What's in a Name?

The March BYTE has a Microbytes item about the standard programming interface for electronic image processing, CLASP (Connecting Link for Applications and Source Peripherals). Because I am currently conducting a study about image acquisition and restitution, I am very interested in CLASP. However, I cannot find any information about it. Can you help me?

Michel Bories  
Valbonne, France

Currently, there is no standard format for exchanging data between computers and peripherals that create or capture graphics images. Such a standard would make it far easier for programmers to write applications that would accept this graphical data rather than dealing with an alphabet soup of graphics image file formats (e.g., GIFF, TIFF, PCX, PICT, and BMP) on a variety of platforms.

CLASP's name has changed to TWAIN (Toolkit With-

out An Important Name). It provides a consistent, easy integration of image data between input devices and software applications. The specification has several goals. It must work with System 7.0 and Windows, but it should also be able to extend to Unix, OS/2, and other environments. It should support multiple devices, including handheld scanners, flatbed scanners, slide scanners, image-capture boards or frame grabbers, digital cameras, and image databases.

It should provide a well-defined interface that lets hardware and software developers provide drivers for their devices or include support through their applications. It should be extensible, and revisions should be backward-compatible with code written to earlier versions of the specification.

The interface and its documentation should be clear, well structured, well written, and intuitively designed. It should provide a single solution for the industry that will last for several years, or until such time as a facility like this might be supported at the operating-system level. This general data-interchange mechanism must be able to transmit data in existing standard formats and native file formats (e.g., TIFF, PICT, and DIB).

Several companies have got together to define TWAIN. The principal companies are Aldus, Caere, Eastman Kodak, Hewlett-Packard, and Logitech. Adobe, Howtek, and Software Architects are among the more than 160 other contributors. You can order the TWAIN programmer's toolkit and disk by calling the TWAIN distribution center at (800) 722-0379. You can send a fax to (303) 352-6152. Ask for document 9154. The cost is US\$30.—Stan Wszola

## VGA Interrupts

My Super VGA card (which uses a Tseng ET4000 chip set) has a jumper that lets me enable and disable IRQ2 (interrupt request). I have COM3 configured with IRQ2 and have the interrupt on the Super VGA card disabled. What exactly do I gain or lose by enabling or disabling IRQ2 on the Super VGA card, and would it be worth my time to reconfigure my COM port and enable the interrupt on my video card?

Gary Foster  
Wichita, KS

You are quite safe in leaving the interrupt disabled. The IRQ was originally introduced by IBM on the EGA video card. It triggers during every vertical retrace, thus letting you perform smooth animation by changing the screen contents while the data is not being drawn to the screen. Unfortunately, early IBM EGA adapters did not properly implement this interrupt. Because of that, there is little, if any, software that requires its presence.

—Raymond GA Côté ■

## START WITH THE WAITE GROUP'S NEW WORKOUT C.

This balanced training program covers all topics and concepts of C programming, from simple to complex. Throughout more than 800 pages of illuminating text, hundreds of hands-on exercises illustrate everything from arrays to unions and bit fields.

Workout C includes special versions of our Power C compiler and split-screen text editor, so you can compile and execute the example programs at the press of a key. There is no substitute for practice, and you get plenty of it with useful and interesting programs such as a calculator, card playing game, file dumping utility, and animated graphics.

By the time you finish Workout C, you'll have a very solid foundation on which to build a successful C programming career.

## AFTER PUMPING UP WITH WORKOUT C, YOU'LL BE READY TO DO SOME HEAVY DUTY PROGRAMMING WITH POWER C.

This ANSI standard C compiler is now used by over 100,000 programmers worldwide. PC magazine calls it "a heavy-weight contender at a bantam-weight price," and Power C is a three time winner of Computer Shopper's Best Buy award.

Even though it's powerful, Power C is very easy to use. That's why The Waite Group chose it over all other compilers for Workout C. And unlike some compilers that hog 30 or 40 megabytes of disk space, Power C requires only 1 megabyte.

### FEATURES INCLUDE:

- ☒ Over 450 Library Functions
- ☒ Small, Medium, & Large Models
- ☒ Mixed model with near/far/huge
- ☒ Supports 8088/286/386/486
- ☒ Supports 8087/287/387
- ☒ CGA, EGA, VGA, Hercules Graphics
- ☒ 650 page manual

## AS YOU DEVELOP YOUR OWN C APPLICATIONS, POWER CTRACE PLAYS A CRUCIAL ROLE IN THE PROCESS.

This state-of-the-art debugger helps find your programming errors fast. Describing Power Ctrace in a word, Computer Shopper simply calls it "magnificent."

No other debugger shows you the internal working of your program the way Power Ctrace does. Watch your C source code executing not just line by line, but statement by statement. While viewing source code in one window, simultaneously view variable values and program output in other windows. Break and watch points stop execution at suspected trouble spots.

Like Power C, Power Ctrace is very simple to use. Combined with Workout C, this trio of products will end your struggles and put you in great C programming shape.

# Get A Lode Of This.

## Our Three-Way Guarantee Just Got Better.

**T**he LodeStar Three-Way Personal Guarantee has always been one of the industry's most comprehensive. But now it just got better. Introducing The LodeStar Five-Way Personal Guarantee. Now, every LodeStar system is covered five ways to insure your complete satisfaction. And that should take a lode off your mind.

### 1. MONEY BACK GUARANTEE.

If you change your mind for any reason, simply return your LodeStar system to us in original condition within 30 days of your receipt and we'll refund your money.

### 2. FREE LIFETIME TECHNICAL SUPPORT.

For as long as you own your system, we'll give you FAST, FREE unlimited technical advice and guidance from our expert staff. This includes any support needed to upgrade or modify your system.

### 3. FREE LIFETIME LABOR SUPPORT.

Although you will probably never need it, for as long as you own your system, it will be protected by our 100% labor warranty.

### 4. FREE 2-YEAR PARTS WARRANTY.

For a full two years after purchase, your LodeStar computer will be covered by our 100% parts warranty with fast turn around on any replacements.

### 5. FREE 1-YEAR ON-SITE SERVICE.

For a full one year after purchase, you'll have the added security of our coast-to-coast FREE on-site service.

## Modulless Upgradeables

## Carry A Greater Lode In The Future

**E**asy and inexpensive upgrades are built right into your LodeStar Starflex computer. Unlike conventional modular upgradeable systems from other Companies, you can upgrade your LodeStar Starflex system at a fraction of the cost—all the way from 386DX to 486SX or 486DX, at any clock speed.

Thanks to our unique non-proprietary Modulless Upgrade design, LodeStar Starflex systems can be upgraded by simply plugging in the new chip and oscillator that comes in their inexpensive upgrade kit. Another bright idea from LodeStar-It's just that simple!

**E**very LodeStar computer is fully loaded with value. This includes unsurpassed quality throughout. To make certain of this, every system is individually pre-tested and burned-in for 72 hours prior to shipment. And of course, we stand behind our quality with our comprehensive Five-Way Personal Guarantee. You will see this quality all the way from our StarView SVGA Non-Interlaced Monitors with flicker-free image, to our own StarKey extended keyboards. And we pack in even extra value by pre-loading MS DOS 5.0 & Windows 3.0, as well as a Hi-Res 400 DPI serial mouse on every system. And our systems can be upgraded to include optional cache, RAM, more hard disk capacity, larger monitor, and a host of other enhancements you may require. Add it all together - stellar performance, brilliant quality, and guarantee that outshines all others - and you've got LodeStar.

### 486-DX Local Bus Plus 486-DX/33 \$1889

- ☐ 2 32-bit Local Bus expansion slots for more 32-bit power expandability
- ☐ 64K ultrafast write-back cache SRAM
- ☐ Built-in 487 math coprocessor & 8k cache in the CPU
- ☐ 4MB RAM expandable to 32MB
- ☐ 130MB 15ms IDE hard drive w/64K cache
- ☐ 1:1 interleave 2H/2F IDE controller
- ☐ Teac 1.2MB 5.25" & 1.44MB 3.5" drives
- ☐ 32-bit Local Bus SVGA card w/1MB RAM. Six times faster than ISA SVGA, 1280x1024 resolution & 32,768 colors
- ☐ 14" StarView 1024 non-interlaced 0.28mm dot pitch SVGA monitor. VESA 72Hz flicker-free display

### 486LB WINstation 486-DX/33 \$2139

- ☐ 2 32-bit Local Bus expansion slots for more 32-bit power expandability
- ☐ 64K ultrafast write-back cache SRAM
- ☐ Built-in 487 math coprocessor & 8k cache in the CPU
- ☐ 4MB RAM expandable to 32MB
- ☐ 130MB 15ms IDE drive w/64K cache
- ☐ High throughput Super IDE Caching Controller. Reduces average disk seek time to 0.2ms
- ☐ Teac 1.2MB 5.25" & 1.44MB 3.5" drives
- ☐ 32-bit Local Bus S3 Graphics Engine w/1MB VRAM. Up to 1280x1024 resolution & 32,768 colors
- ☐ 14" StarView 1024 non-interlaced 0.28mm dot pitch SVGA monitor. VESA 72Hz flicker-free display
- ☐ 2 serial, 1 parallel & 1 game port
- ☐ MS DOS 5.0 & MS Windows 3.1
- ☐ Enhanced 101-key keyboard
- ☐ High resolution serial mouse
- ☐ Desktop or mid-vertical case

**486-DX2/50 \$2309**

**486-DX/50 \$2429**

### 486 EISA Datamaster 486-DX/33 \$2099

- ☐ 256K ultrafast write-back cache SRAM. Provides better Hit-rate
- ☐ Built-in 487 math coprocessor & 8K cache in CPU
- ☐ 4MB fast RAM 60ns
- ☐ 130MB 15ms IDE hard-drive w/64K cache
- ☐ Teac 1.2MB 5.25" & 1.44MB 3.5" drives
- ☐ 16-bit 1024x768 SVGA card w/1MB RAM
- ☐ 14" StarView 1024 non-interlaced 0.28mm dot pitch SVGA monitor. VESA 72 Hz flicker-free display
- ☐ 2 serial, 1 parallel & 1 game port
- ☐ MS DOS 5.0 & MS Windows 3.1
- ☐ Enhanced 101-key keyboard
- ☐ High resolution serial mouse
- ☐ Desktop or mini-vertical case

#### Warranty

"One of the most conspicuous things that differentiate LodeStar from its competitors is extensive warranty support."

#### Craftsmanship

"Layout is excellent. . . . Wonderfully uncramped sight that greets you when you open the case with LodeStar's tower. You don't have to fight a mass of tangled cables and jagged edges."

#### Technical Support

"As a further test of technical support, I deliberately destroyed. . . . I then gave the system and a phone to an inexperienced friend. A LodeStar technician competently took her through the process."

#### Prompt Response

"When I called with a question. . . . I was immediately connected to a knowledgeable technician."

#### Summary

"The combination of high performance, low price, and one year of free on-site services makes LodeStar 486 an attractive buy."

## Printer Upgrades

If your printer is behind the times and can't keep up with your workload, consider an upgrade to the latest Star Micronics has to offer. Star's award winning NX-2420 Rainbow 24-pin color printer can supply the letter quality, crispness and speed you need, plus seven vibrant colors to make your print outs come alive. If it's laser quality you require, the StarJet ink jet printer can produce professional laser quality at a fraction of the cost of a true laser printer.

### NX-2420 Rainbow \$279<sup>00</sup>

- 250 cps draft speed
- 83 cps letter quality
- 5 fonts
- 7 color output
- 10 Enhancement modes
- User switchable push/pull tractor

### StarJet SJ-48 ink jet \$289<sup>00</sup>

- 100 cps near laser quality speed
- 360 x 360 dpi high resolution available
- 4 near laser quality fonts
- 13 scalable fonts with windows
- 2 paper paths
- IBM™, Epson™ and NEC™ 24-pin graphics compatible

# MEMORY... YOU JUST CAN'T DO WITHOUT IT.

## **Picture this:**

You bought a new software package. You try it out on your computer and soon find yourself working for hours on a sophisticated graphic design. While scrolling through your worksheet, it feels like you are moving through pudding. Your hard disk has a tough time trying to catch up. You then try to print, but the laser printer's buffer is full. You reset it, try again, and find that it spits out only part of your beautiful graphic....

## **No problem!**

We'll take it from here. With our **JetRam™** line that supports the leading brands of laser printers and the **PcRam™** line that upgrades your notebook, laptop or desktop computers, **Transcend** can help solve your memory problems.

## **What you get from our memory upgrades**

- Life time warranty on all our products
- Full memory lines support a variety of brand names of laser printers and PCs
- High quality at a reasonable price
- Easy-to-install

Office hours: 6:00 a.m. to 6:00 p.m.

Brand new microprocessor based Lapine 101 key programmable keyboard. Multiple functions with one keystroke. Standard on LP-433L and LP-450L.
- **FREE LOTUSWRITE® or LOTUSWORK®**  
Your choice with any system purchase.

Lotus Write  
Your first word processor for Windows.

Version 2.0  
for Windows

# Power Is Within Your Reach.

Powertools by Lapine are the office machines that make all the difference for all kinds of businesses.

Lapine is the first computer manufacturer to offer local bus computing with the S3 graphic accelerator chip for 32-bit, 33 and 50mhz processing of graphics. This means graphics that are 50x faster than standard 16-bit processing. The local bus feature is standard on LP-433L and LP-450L models.

Powertools are designed right. Whether it be our true tactile programmable and non-programmable keyboards, ergonomic stylings or crystal

Mini Upright

Standard Upright

clear monitors; we invite comparison. You'll find Lapine's superior quality is evident.

For 5 years Lapine has been committed to bringing corporate America the absolute latest technology faster than any other name brand computer manufacturer. And Lapine's service and support team is dedicated to keeping your office running at maximum efficiency.

Owning a Lapine Powertool puts a great computer and a great company in your hands.

## BOCA MULTI PORT 1004/1008

A cost-effective interface solution for serial devices.

A high-speed, non-intelligent, multi-port enhancement board. Available in two versions, the board provides either 4 or 8 ports on a single board.

- Choose 4 or 8 ports on a single board
- Install multiple boards into one system
- Utilizes ST16C554 UART technology - each ST16C554 chip is equivalent to four NS16C550s with FIFO buffering
- 8/16 bit interface
- Compatible with ISA & EISA systems
- One 6' RJ-11 cable with DB-25 adapter for each port and software drivers
- Software Drivers on 5.25" diskette for SCO XENIX system V & SCO INIX system V. Software driver not required for PC-MOS/386

# THIS IS ONE FLIGHT YOU DEFINITELY WON'T BE SLEEPING THROUGH.

So the novelty of flying wore off a long time ago. Cancel those reservations and strap yourself into the cockpit of the *F-15 Strike Eagle® III* jet fighter computer game. This is

flying as it should be. Slicing through war theaters around the world. Blasting enemy fighters to smithereens with high-tech missiles.

Devastating strategic targets in dangerous bombing runs.

Performing fantastic aerial aerobics.

And dogfighting against a friend via modem. All brought to life by dazzling, state-of-the-art graphics. Sure, it's not like flying first class.

But when's the last time you had fun flying first class?

*F-15 Strike Eagle III* from MicroProse.

To get your copy, visit your favorite computer game retailer today.

## Feather Light & Priced Right!

### AST Premium® Exec™ Notebook Series

AST's Premium Exec Notebook computers pack the highest performance, processing, and more standard features, into a convenient compact package weighing only 7 lbs.

The Premium Exec 386SX/20 and 386SX/25 include the latest flat panel display technology, providing high-resolution VGA on a "paper white" screen, capable of supporting 32 shades of gray.

The New Premium Exec 386SX/25C offers passive matrix color, 16 colors at 640 x 480 resolution and 256 colors at 320 x 200. And, at a price other manufacturers charge for slower speed monochrome systems.

### Premium Exec 386SX/20 Features:

- 386SX/20MHz processor
- 40MB or 60MB fast-access, 2.5" lightweight HD
- 2MB RAM exp. to 8MB
- 3.5" 1.44MB FDD
- Ports: 1S, 1P, 1Video 1KB or mouse
- MS-DOS 5.0 from AST
- Free carrying case with handle

### Premium Exec 386SX/25 & 386SX/25C Features:

- 386SX/25MHz processor
- 60MB, 80MB or 120MB fast access, 2.5" lightweight HD
- 4MB RAM exp. to 8MB
- 3.5" 1.44MB FDD
- Ports: 1S, 1P, 1Video, 1KB or mouse
- MS-DOS 5.0 from AST
- Free carrying case with handle

# A legendary year in the history of naval conflict has returned.

The Pacific Solomons 1942. Setting for a series of naval confrontations that would change the course of World War II. And the setting for the first in a new series of spectacular Pacific War simulations from MicroProse.

Task Force 1942 is your chance to command a fleet of destroyers, cruisers, and battleships against aggressive enemy forces in the South Pacific.

No detail has been overlooked in this painstakingly researched simulation. Torpedo wakes. Thrilling night combat. Blinding explosions. Flares. Even harsh weather conditions. All presented in breathtaking realism.

Issue commands to ships and convoys. Fire torpedos into enemy backsides. Control crucial battle positions. Shell enemy targets. Confront enemy ships head-on. And, if you choose, lead the Japanese forces into battle.

Task Force 1942 from MicroProse. It's the *only* way to experience the thrills...and risks...of naval combat in World War II. To order, visit your nearest retailer or call **1-800-879-PLAY**. Call today.

Actual screens may vary.

# Say Good-bye To The Language Barrier.

## Breakdown

A global computing event that unites, under one roof, today's connectivity experts for one targeted purpose — to pronounce that networking is the universal language of choice.

## NetWorld 92

### The United Nations Of Networking

NetWorld 92 is the talk of the connectivity industry. A cutting-edge exhibition of conferences and seminars where hardware and software developments are introduced, discussed and demonstrated. A conference that speaks the language of productivity and translates ideas into action.

Whether you communicate over LANs, WANs or wireless networks, or operate over diverse operating systems, NetWorld 92 is your primary venue for innovative products and services. Converse in many languages with industry-leading manufacturers and form a lasting connection that can translate into increased efficiency and sales.

## Educational Seminars

### A Universe Of Networking Possibilities

NetWorld 92 presents an encyclopedic display of intensive educational conferences and hands-on educational

seminars on internetworking. Digest state-of-the-art technologies and processes that can propel your present networking plans forward, allowing you to expand software applications into new environments. And learn an unlimited vocabulary that will place you at the forefront of future strategies.

## Improve Your Communication Skills

Don't isolate yourself and your company within the confines of yesterday's network architecture. NetWorld 92 lets you open your lines of network communication, resulting in bottom-line benefits to your company.

For additional show information, contact Jodi Levine, Show Manager, at 201-346-1400 or Fax 201-346-1602.

card from  
National  
Design's

**Volante Series  
of high speed graphics boards.**

**PC**  
MAGAZINE  
EDITORS'  
CHOICE

June 25, 1991  
National Volante AT1000

All Volante high speed graphics boards offer:

- Built on ISA, MicroChannel or VME bus
- Video memory upgrades to 4 MB
- Program memory upgrades to 4 MB
- Razor sharp resolutions from 1024x768 up to 1600x1280
- Blazing color selection from 8-bit to 24-bit true color
- Optional TI TMS34082 floating point processor for enhanced 3D acceleration
- Superior speed of the TI TMS34020 graphics engine paired with National Design's advanced ASIC technology
- LIFETIME WARRANTY - no gamble here!

Whether your game is CAD, Microsoft Windows, graphic arts, multi-media or medical imaging, Volante has a card for you at a fraction of the cost charged by the competition.

Call 800-253-8831 now for information  
on the breathtaking Volante series.

## TURN YOUR 286 INTO A 386 WITH THE SX/NOW!

True multitasking, background operation for Windows 3.0, OS/2, and 386 software. SX/Now! Improves system performance by up to 350%.

### SX/Now! available for:

- ✓ HP ES286/12 & ES/8
- ✓ Epson Equity IIe & II+
- ✓ IBM Original AT & XT/286
- ✓ AGI 1800A, 1800B & 1800C
- ✓ AST Premium 286; Bravo 286
- ✓ Compaq Portable III, DeskPro 286
- ✓ NEC PowerMate 286+ & Portable+
- ✓ IBM PS/2 25/286, 30/286, 50, 50Z, 60

Kingston Technology Corp.'s SX/Now! is the undisputed performance champ.

# PRINTER SHARING THAT MAXIMIZES YOUR HIGH SPEED PCS AND PRINTERS

## Outstanding Features:

- 5.5 M bps total throughput speeds
- Up to 60,000 character per second parallel communications
- 46,000 character per second serial communications (printer sharing)
- Use with BayTech Tran-x parallel extension products for data transmission to 46,000 characters per second over 1000+ feet
- Expandable up to 24 ports
- Up to 16MB dynamically allocated buffer
- Full duplex communication at 115.2k baud for high speed file transfer
- Device selection while in Windows® or graphics programs

**T**he Model 24SII Data Exchange System (DES), with total throughput speed exceeding 5.5M bits per second, is the answer to your need for the fastest, cost effective peripheral sharing available.

These high speeds allow computers and file servers to off-load large text and graphic files to plotters, modems, printers, and other computers at extremely fast rates.

With more than 1.5 million connections, BayTech has been serving customers worldwide for over 16 years. For high speed data communications, contact a BayTech representative *today!*

# CYBERRESEARCH PC PRODUCTS FOR SCIENTISTS & ENGINEERS

## CyberResearch System of the Month Features RTI<sup>®</sup> DAS from Analog Devices

### Package includes LABTECH NOTEBOOK

The RTI series of data acquisition boards were designed by **Analog Devices** with industrial users in mind. With the lowest failure rate in the industry, these are the boards to choose when reliability is critical. Designed from the outset to be compatible with the full line of **Analog Devices**' signal condition-

ing modules, RTI boards can be used for the broadest possible range of data acquisition applications.

CyberResearch has now made this top-of-the-line product affordable for everyone. By bundling an **RTI 815A** together with **LABTECH NOTEBOOK<sup>®</sup>** software at one low price, we've saved over \$500 and made it possible for you to afford the very best.

Labtech Notebook

Each combination package includes:

- **RTI 815A** data acquisition board configured for 32 Single-Ended or 16 Differential analog input channels with a 50KHz A/D conversion rate, 2 analog output (D/A) channels, 16 Digital I/O lines, and 3 Counter/Timer I/O channels.
- **LABTECH NOTEBOOK** menu-driven software with new IconView diagramming user interface and drivers for controlling the RTI 815A board.

Order #RTI 815LN RTI DAS Combination Package. \$1995

### Guarantee Valid Data

### with Signal Conditioning Modules

Signal conditioning modules serve several purposes: they protect your computer, isolate your signal of interest from noise, amplify low-level signals, and provide power and excitation to transducers.

One name is virtually synonymous with signal conditioning: **Analog Devices**. And CyberResearch is your Analog Devices distributor carrying every signal conditioning line: the versatile **3B** series, the low-cost **5B** series, and the new, intelligent **6B** series with on-board A/D conversion.

Call 800-394-3300 to receive additional information.

Low-cost 5B Series Modules

## Low-Cost 16-Bit A/D Board offers High Resolution

New from Keithley Metrabyte, the **ADC 16** is a low-cost, 16-bit data acquisition board, ideal for high-resolution applications and portable PC DAS systems. The Advanced Software Option provides File I/O drivers for all languages; call drivers for Pascal, C, & Turbo Pascal; and a Windows-compatible Dynamic Link Library with Visual BASIC example program. Perfect for temperature or flow measurement, the **ADC 16**'s features include:

- 8 Fully-Differential Analog Input Channels
- 16-Bit Resolution for Highest Accuracy
- On-board 1mA source for Sensor Excitation
- 16 Sample-per-second Data Acquisition
- Input Autozeroing helps eliminate offset errors
- QuickBASIC & QBASIC drivers included free
- $\pm 5V$  &  $\pm 3.2767V$  Input Ranges
- Programmable Gains of 1, 10, or 100

## 100 MHz PC-Based Oscilloscope

**CompuScope 250** from Gage Applied Sciences is a family of high quality 100 MegaSPS PC/XT-compatible Data Acquisition Cards with advanced oscilloscope software. Features include:

- 100MHz sampling on 1 channel (10ns/sample) or 50MHz simultaneous sampling on 2 chan.
- 8-bit resolution
- 50MHz bandwidth
- 32 or 128-KiloByte memory buffer
- Software programmable input gains
- Store and load setups and signals
- Drivers available in C, Pascal and Basic.

## New 19" Rack-Mount Computers & Peripherals

CyberResearch, Inc. offers a complete line of rack-mount computers and data acquisition hardware. Affordable EIA 19" rack-mount monitors, printers, surge protectors, keyboards, UPS's, and other PC peripherals can seem impossible to find, but here at CyberResearch, they've been a specialty of ours since 1984.

The rugged & reliable Elma keyboard shown here is made in the USA. It features extended 101-key layout, full-travel keys for touch-typing, and is only 1 rack-space (1.75") high. Call for additional information.

# Break into Higher Performance!

SmartCache Plus is the SCSI controller that delivers higher performance without a higher price!

Windows, Network, Unix and other high-end applications need a SCSI controller that delivers top disk I/O performance and a growth path. Only SmartCache Plus delivers both — and costs no more than less advanced controllers!

As the industry's fastest SCSI controller, SmartCache Plus is the easy choice. It's the smart choice, too — because if your system needs a performance boost, you can transform it from a non-caching host adapter into the world's fastest **caching** controller! Expandability is so simple: plug-on modules add caching, up to a total of 16MB of cache memory, and disk mirroring!

SmartCache Plus is supported by all major operating systems and applications, and provides connectivity to hundreds of SCSI devices. Reliable, scalable and simple to install, SmartCache Plus breaks your system's disk I/O bottleneck without breaking your budget!

# The Ultimate Power Platforms.

## For 486 Windows and CAD - Comtrade's EISA or Local Bus.

### 486 EISA Win-Station

- 64K Super Fast Write-Back Cache SRAM
- 4MB RAM & Built-in 487 Math Coprocessor
- 1.2MB 5.25" & 1.44MB 3.5" Floppy Drives
- 32-Bit EISA Hard Disk Controller (350% faster DTR)
- 130 MB 15ms IDE Drive with 64K Cache
- Diamond Stealth S3 Graphics Accelerator w/ 1MB VRAM (Up to 25 times faster than standard super VGA)
- 14" Non-Interlaced .28mm SVGA Color Monitor
  - 2 Serial, 1 Parallel, & 1 Game Ports
  - Enhanced 101-Key Keyboard
  - Hi-Resolution 400DPI Serial Mouse
- Microsoft DOS 5.0 & Windows 3.1

486/33 DX \$2245  
486/50 DX2 \$2425  
486/50 DX \$2625  
486/66 DX2 \$2825

- 8MB RAM & 210MB Drive Upgrade Add \$360
- 15" MAG Flat Screen 1280x1024 Monitor Add \$290

### Local Bus Win-Station

- 64K Super Fast Write-Back Cache SRAM
- 4MB RAM & Built-in 487 Math Coprocessor
- 1.2MB 5.25" & 1.44MB 3.5" Floppy Drives
- 130MB 15ms IDE Drive with 64K Cache
- 32-Bit Local Bus Viper S3 Graphics Accelerator w/ 1MB VRAM (Up to 1280x1024 & up to 32K Colors) (Up to 50 times faster than standard super VGA)
- 14" Non-Interlaced .28mm SVGA Color Monitor (VESA Standard for 72Hz Flicker-Free Display)
  - 2 Serial, 1 Parallel, & 1 Game Ports
  - Enhanced 101-Key Keyboard
  - Hi-Resolution 400DPI Serial Mouse
- Microsoft DOS 5.0 & Windows 3.1

486/33 DX \$1925  
486/50 DX2 \$2125

- 8MB RAM & 210MB Drive Add \$360
- 32-Bit Local Bus Hard Disk Controller Add \$90

### Local Bus CAD-Station

- 64K Super Fast Write-Back Cache SRAM
- 8MB RAM & Built-in 487 Math Coprocessor
- 1.2MB 5.25" & 1.44MB 3.5" Floppy Drives
- 210MB 15ms IDE Drive with 64K Cache
- 32-Bit Local Bus Viper S3 Graphics Accelerator w/ 1MB VRAM (Up to 1280x1024 & up to 32K Colors) (Up to 50 times faster than standard super VGA)
  - AutoCAD Display List Driver
- 17" Flat Screen 1280x1024 SVGA Monitor
  - 2 Serial, 1 Parallel, & 1 Game Ports
  - Enhanced 101-Key Keyboard
  - Hi-Resolution 400DPI Serial Mouse
- Microsoft DOS 5.0 & Windows 3.1

486/33 DX \$2875  
486/50 DX2 \$3075

- Above System with 12"x12" Digitizer Add \$330
- 32-Bit Local Bus Hard Disk Controller Add \$90

### 486 EISA Advantage

- 64K Super Fast Write-Back Cache SRAM
- 4MB RAM & Built-in 487 Math Coprocessor
- 1.2MB 5.25" & 1.44MB 3.5" Floppy Drives
- Optional 32-Bit EISA Hard Disk Controller \$130
- 130 MB 15ms IDE Drive with 64K Cache
- 16-Bit 1024x768 SVGA Card with 1MB RAM
- 14" Non-Interlaced .28mm SVGA Color Monitor (VESA Standard for 72Hz Flicker-Free Display)
  - 2 Serial, 1 Parallel, & 1 Game Ports
  - Enhanced 101-Key Keyboard
  - Hi-Resolution 400DPI Serial Mouse
- Microsoft DOS 5.0 & Windows 3.1

486/33 DX \$1945  
486/50 DX2 \$2125  
486/50 DX \$2325  
486/66 DX2 \$2525

- 8MB RAM & 210MB Drive Upgrade Add \$360
- 510MB Hard Drive & EISA Controller Add \$960

### Local Bus SVGA

- 64K Super Fast Write-Back Cache SRAM
- 4MB RAM & Built-in 487 Math Coprocessor
- 1.2MB 5.25" & 1.44MB 3.5" Floppy Drives
- 130MB 15ms IDE Drive with 64K Cache
- 32-Bit Local Bus Turbo ET-4000 Card w/ 1MB RAM (Up to 1280x1024 & up to 32768 Colors) (5 times faster than standard super VGA)
- 14" Non-Interlaced .28mm SVGA Color Monitor (VESA Standard for 72Hz Flicker-Free Display)
  - 2 Serial, 1 Parallel, & 1 Game Ports
  - Enhanced 101-Key Keyboard
  - Hi-Resolution 400DPI Serial Mouse
- Microsoft DOS 5.0 & Windows 3.1

486/33 DX \$1775  
486/50 DX2 \$1975

- 8MB RAM & 210MB Drive Add \$360
- 32-Bit Local Bus Hard Disk Controller Add \$90

W

HEN IT COMES TO HIGH-SPEED EISA PERFOR-

MANCE, COMTRADE IS FURIOUSLY BLOWING AWAY THE COMPETITION. "A VERY SWIFT GRAPHICS MACHINE," SAYS COMPUTER SHOPPER (MAY 1992). • AND THIS HURRICANE EISA POWER IS FINALLY AVAILABLE TO YOU AT A PRICE THAT WON'T BLOW YOU AWAY. • THESE EISA SYSTEMS FEATURE A POWERFUL 32-BIT EISA HARD DISK CONTROLLER THAT PROVIDES REAL 32-BIT ACCESS TO THE HARD DRIVE. THE RESULT IS A 350% FASTER DATA TRANSFER RATE (DTR). • COMTRADE 486 EISA SYSTEMS - THE ULTIMATE MACHINE THAT LETS YOU TAKE YOUR WORKLOAD BY STORM.

## Comtrade Local Bus Wins Big!

In Comparison With Other Leading High Performance Super VGA.

INTRODUCING COMTRADE'S 32-BIT LOCAL BUS. • TRADITIONALLY, 486 ISA MACHINES COULD ONLY SUPPORT 16-BIT VIDEO CARDS AND RUN AT STANDARD 8MHZ BUS SPEED. • THAT WOULD RESULT IN A BOTTLENECK REGARDLESS OF HOW FAST THE CPU COULD RUN. • NOW YOU HAVE AN ALTERNATIVE. • COMTRADE'S LOCAL BUS SYSTEM USES A 32-BIT VIDEO CARD WHICH NOT ONLY PROVIDES DOUBLE THE DATA PATH, BUT ALSO THE VIDEO BUS RUNS AT TRUE CPU SPEED. • THE RESULT IS VIDEO SPEED UP TO 5X FASTER THAN REGULAR SVGA AND UP TO 50X FASTER WITH OUR LOCAL BUS S3 VRAM GRAPHICS ACCELERATOR.

Source: COMPUTER SHOPPER, July 1992, Local Bus Video Review, Page 184.

If you think your notebook computer is portable, think again.

## BICOM B260i

When we travel with our computers, we want to be able to take with us all the data and information we need for the trip without adding too much weight to our already overloaded baggage. The BICOM B260i weighs only 2.2 lbs. with a size just half that of a notebook and operates on "AA" size batteries; it is the ideal computer for business travellers. BICOM B260i is compact yet powerful. It comes with a 60MB Hard Disk Drive, IC Card interface with which you can use credit-card-size memory cards to store your important information or modems to send your urgent messages home. Transferring programs between BICOM and your Desktop is easy with the serial cable and file transfer software provided or through the optional external floppy drive. BICOM B260i is an enhanced 286-based computer with 386SX class performance that you can really carry around.

- Weight 2.2 lbs. (BICOM and Battery)
- Dimension 8.78" x 6.36" x 1.22"
- 16 MHz AMD 80286LX Processor, 386SX Class Performance.
- 5 "AA" size NiMH Batteries, 4-hour operation\*
- 60 MB Hard Disk Drive
- 2MB RAM
- PCMCIA 2.0/JEIDA standard port for memory card and I/O card
- Double-scan CGA Screen 640 x 400 resolution
- 64-key Keyboard
- 1 parallel (bi-directional)/ 1 serial
- External FDD port for optional Floppy Drive
- DR-DOS 6.0, File Transfer Software & Serial Download Cable
- Built-in Personal Data Manager software
- Built-in Programmable Power Management Software
- Universal AC/DC adaptor

**\$1250**

Options: External Floppy Drive, SRAM Memory Cards, 2400bps IC Card Modem, extra batteries

## 2.88MB Solutions for DOSs and OS/2

### FEATURES:

- 1.Support 2.88M / 1.44M / 720K / 1.2M / 360K floppy disk drives.
- 2.Compatible to DOS 3.x/4.x/5.0, OS/2 2.0 DR.DOS 6.0.
- 3.Formatting operation with DOS command.
- 4.Can diskcopy 5 1/4" diskettes to 3 1/2" diskettes.
- 5.Can boot from any floppy drives.
- 6.Non DOS trapped switch for UNIX and CP/M OS.
- 7.Can exist with any other FDC and HDC.
- 8.Support 4Mb drives as TOSHIBA, TEAC old & new and PS/2 spec.

### PCSS-8F INTELLIGENT SERIAL COPROCESSOR

- The PCSS-8F is GTEK's newest, fastest serial coprocessor. With a real-time status port and a 24MHz processor, it boasts two times the data throughput of GTEK's popular PCSS-8I.
- Up to 128K bytes of Dynamemory for on the fly allocation and re-allocation of buffer memory. Does not use any computer memory.
- Eight RS-232 channels per card. (RS-485 or RS-422 optional)

## Intelligent PrintShare

### SPECIAL OFFER - STARTER KIT

Everything you need to share your printer with two computers is included. (1) printer transmitter, (2) computer receivers, (2) 25 ft interconnect cables and a manual. Allows expansion up to 40 computers. Employs collision avoidance technology, intelligence detection, auto switching, no software required. Any topology wiring, uses popular 4 wire modular cables. PrintShare Kit as described \$248.00 + \$4.50 S&H. Additional computer adaptors with 25 ft. cable \$89.50, PP. Toll free ordering: 800-343-1455.

Call or fax for further information on this and also multi printer PrintShare network systems.

### MiniSCSIplus

PARALLEL-TO-SCSI ADAPTER

## WANT BETTER CONNECTIONS?

CONNECT UP TO 7 SCSI DEVICES AND A PRINTER TO YOUR PARALLEL PORT!

Up to twice as fast as our original MiniSCSI, the MiniSCSI Plus lets you run a CD-ROM, tape drive, SCSI hard disk, SyQuest, Bernoulli or other SCSI device from almost any parallel port (tape software optional). For most notebook users, it's the only way to use SCSI CD-ROMs and tape drives. Plus, its integrated cable makes it a snap to move and share SCSI devices between desktops and notebooks.

**STOP**

**NEW!**

**Virus Protection Power**

The card that provides a comprehensive and continuous protection automatically!

Why choose the AVP card and not the leading anti-virus software?  
Because unlike anti-virus software:  
AVP does not occupy RAM memory...  
AVP does not waste time scanning your drives...  
AVP is not vulnerable to viral infection...  
AVP provides an optional password to prevent the unauthorized use of your computer...  
AVP does not require software and therefore you will not need constant updates, nor can it be inadvertently deleted...  
AVP is easy to install, easy to use and easy to pay for!

The Card...don't leave your computer without it!

# TVR

## Silencer for Personal Computers

Let us help you remove the noise from your PC. Everybody is aware of the constant noise from a PC. It causes you headache and gives you stress.

This noise comes from the fan. Our TVR-Silencer is mounted between the PSU and the fan. It reduces the noise level from approximately 45dB to 35dB. That's almost 50% less noise.

1. Regulation of the temperature is monitored by a thermostat, which ensures that internal operating temperature of the PC is kept within that specified by the manufacturer (approximately 35°C); as operating temperature increases through heavy use or ambient temperature, the unit will increase the speed of the fan to maintain safe operating temperature.
2. A primary backup circuit ensures that the voltage to the fan never falls below 6.2 volts to maintain rotation and therefore supply the sensor with airflow.
3. A secondary circuit ensures that in the event of failure, the fan will return to full operating speed.

The TVR-Silencer suits almost every PC-model. No service after installing. A liability insurance exists for this product.

This product has been approved by DEMKO in Denmark and by the German TUV. It has been distributed successfully for about 2 years. We are looking for importers and distributors all over the world.

Please do not hesitate to contact us by phone or fax for further details. The TVR-Silencer - Made in Denmark, is probably the most reliable Silencer in the world.

### Pick of the Professionals

"cream of the crop"

Tom Swan, PC World

"highly useful"

R. Bradley Andrews, DDJ

"not only solves problems, it inspires new possibilities.  
It is destined for the programmer's Hall of Fame"

Joe Campbell, Author C Programmer's Guide to Serial Communications

"the size of any program you create with CodeRunnerR  
will astound you"

Mark Davidson, Computer Language

"excels in its TSR capabilities, coexistence with  
other DOS applications and support"

Victor R. Volkman, The C Users Journal

"professional development tool that'll let you create  
compact, fast TSRs"

Gary Entsminger, Micro Compucopia

# THE BUYERS MART

## A DIRECTORY OF PRODUCTS AND SERVICES

THE BUYER'S MART is a monthly advertising section which enables readers to locate suppliers by product category. As a unique feature, each BUYER'S MART ad includes a reader Inquiry number to assist interested readers in requesting information from participating advertisers.

Effective January 1, 1992.

RATES: 3 issues—\$625 6 issues—\$600 12 issues—\$525 13 issues—\$500

Prepayment must accompany each insertion. VISA/MC accepted

AD FORMAT: Each ad will be designed and typeset by BYTE. Advertisers must

furnish typewritten copy. Ads can include headline (23 characters maximum), descriptive text (250 characters is recommended, but up to 350 characters can be accommodated) plus company name, address and telephone number. Do not send logos or camera-ready artwork.

DEADLINE: Ad copy is due approximately 2 months prior to issue date. For example: November issue closes on September 8. Send your copy and payment to THE BUYER'S MART, BYTE Magazine, 1 Phoenix Mill Lane, Peterborough, NH 03458. For more information call Margot Gnade at 603-924-2656. FAX: 603-924-2683.

## NEURAL NETWORKS

### NEURAL NETWORKS

We needed a good development system, were dissatisfied with the available ones, so wrote our own: N-TRAIN™, an industrial strength neural network training tool designed for power, speed, accuracy and reliability. Runs *much faster* than several popular systems. Trains on difficult fact sets. No limit on number of interconnections, layers or facts. Many highly desirable features. For 386/486 or i860. Also available: pretrained neural network systems for financial forecasting.

### DON'T DEVELOP NETWORK APPLICATIONS

without NPPC, a powerful library sub-routine package that handles all the details of NetBIOS or IPX programming! NPPC supports high-level program communications at the message level for all server/client and peer-to-peer models. If you are using C or Assembler, NPPC allows you to write a single application that runs on BOTH IPX AND NetBIOS without any modifications. NPPC is compatible with any true NetBIOS emulator, therefore applications written with NPPC will work with most LANs in the marketplace. We offer a 30 day money back guarantee.

NPPC for IPX or NetBIOS: \$195.00, with source: \$395.00

# Decisions, decisions, decisions.

## Decider, decider, decider.

There are more computer products, more emerging standards, more technical issues to consider than ever before. So how do corporations make buying decisions?

According to IntelliQuest, they turn to the only person qualified to decide. An individual with over 10 years of technical experience. Who spends 24 hours a month learning about products and technologies.

They turn to the BYTE reader. A full 94% of whom are directly involved when products are bought. Each of whom influences 107 others.

If you want to reach people who make buying decisions, decide to advertise in BYTE.

BYTE reader Davis M. DeBard, Financial Systems Analyst, The Boston Company, a subsidiary of Shearson Lehman Brothers, an American Express Company.

Circle 87 on Inquiry Card.

It doesn't get bought without

# HOW DO YOU GET A JOB WITHOUT EXPERIENCE? AND HOW DO YOU GET EXPERIENCE WITHOUT A JOB?

Most young people have one answer to this problem. They avoid it until they're out of college. But they could be getting solid work experience while they're still in college. With your company's help. And ours.

We're Co-op Education. A nationwide program that helps college students get real jobs for real pay, while they're getting an education.

But we can't do it without you.

Those real jobs have to come from real companies. Like yours.

For more information on how you can participate in this valuable program, write Co-op Education, Box 775E, Boston, MA 02115.

Not only will you be giving students a chance to earn money and pick up the most valuable kind of knowledge, you'll be giving yourselves a chance to pick up the most valuable kind of employee.

## Co-op Education.

You earn a future when you earn a degree.

# COPY SOFTWARE ILLEGALLY AND YOU COULD GET THIS HARDWARE ABSOLUTELY FREE.

Software piracy isn't just a crime. It's a shame. Because most people who do it aren't even aware that it's illegal. If you copy software that's protected by copyright, you could lose your job, face a civil suit, pay a \$100,000

fine and possibly be imprisoned. So get the facts now. To request more information, contact the Software Publishers Association at 1-800-388-7478. Because in a court of law, ignorance is one thing you won't be able to plead.

Please send me more information on the legal use of software.

# THE ARTICHOKE THEORY

**Why not tailor the user interface to each user's ability level? I call this the artichoke approach.**

**I**n the beginning, we were the gigafreaks, nerds, and dweebs. We thought Pascal was a romance language, and we all had girlfriends named Ada. We read BYTE and loved those intricate line drawings, which we discussed at Homebrew and the Boston Computer Society. We spawned the PC revolution, and we began it by meeting and selling products to each other. But we didn't get rich until we figured out how to sell the stuff to the "others."

The others were not computer champs. They were people who wore white socks only with running shoes. They were people with "real" jobs who used PCs not for the sheer joy of it, but for solving problems at work. They hated user's

manuals thicker than unabridged dictionaries. They found the dot prompt user-hostile. Nevertheless, they were willing to climb that steep learning curve for the productivity benefits offered by products like dBase and VisiCalc. Times have changed.

Twenty years ago, I created a computer interface that was so easy to use that people understood how to operate my program within 15 seconds. The interface was so compelling that people were willing to pay 25 cents every few minutes for the excitement of using it. It was called Pong, and it started Atari.

My contribution to the PC revolution was in trying to make computers easy to use and compel millions of people to play. To some degree, that has happened. But it has not gone nearly as far as I had hoped.

The PC cannot be mastered in 15 seconds. It still isn't as easy to use as a toaster or TV. And when I think of all the aspects of new technology—networking, voice-mail, E-mail, fax, and video—I fear that things may be getting more difficult.

Go to Comdex and walk the floor. Everyone is jabbering about tying together all aspects of automation. To use the stuff, all one needs is an E.E. degree from MIT. To install it, one needs about five consultants. And to afford it, one needs to float junk bonds on the house, business, wife, and kids. Then, the E-mail, LAN, PCs, telephone, video, fax, peripherals, and so on probably won't be compatible. And even if they are, it's going to take a few hundred years to actually get them to work together and to learn how to use them. No wonder the industry hit a slump.

The problem goes beyond simply providing an easy-to-

use product. Different people—from the receptionist to the MIS manager to the CEO—have different needs to know the many aspects of integrated or unified systems. And they each have different desires to understand it. Yet we force them all to use the same interface.

Why can't we technologists assemble a multidimensional interface system? Why not let those who have the greatest fear and the least time to learn deal with just the outer level of a complex system? Let the technologists in an organization have access to the depth and complexity. I call this configuration the artichoke approach.

The complexity of the technology may be a joy to the gigafreak, but it is an intimidating nightmare to the others. We need to make all of it run so easily that even a CEO can comprehend how to use the system productively. I am only partly joking. CEOs are the busiest people in an organization, and they have less time to learn new things than anyone else. If a CEO is not part of a unified automation system, then that automation system will not truly be the spine of the organization.

How do we take this incredible complexity and present it so that everyone is empowered to use it? With games, we tell the machine our level of expertise. Why not with networked office systems?

The interface can best be described as a great electronic artichoke. At its heart is a complex mass of technology in which the systems integrator can feast. At the outer leaf is a system so easy to use that even a CEO will partake.

The CEO can learn the outer leaf of this electronic artichoke in 30 seconds. Once the user learns and digests the first leaf, the next leaf can be taken, digested and understood, and so on, until he or she readily understands all the capabilities at its heart.

The key to true ease of use is to make the front end enjoyable, easy, nonintimidating, and intuitive. The value of the system should be apparent. Everyone should want to take the next bite. ■

# LAW.

MURPHY'S LAW #43

AN  
AFFORDABLE  
NOTEBOOK IS  
A BLACK  
AND WHITE  
NOTEBOOK.

# OUTLAW.

It's things like this that put us on everyone's most wanted list.

A 7.1 pound, 25 MHz i386™SL notebook for only \$2,899. That's a color notebook, mind you. The Dell 325NC.

Considering that's a better price than other leading black and white notebooks, you must be thinking we're skimping somewhere, right? Wrong.

You not only get 4 MB RAM and an 80 MB hard drive, you also get Dell's unmatched guarantees.

Namely, guaranteed next-business-day lapside service: in your office, home or hotel.

Guaranteed response within five minutes to support phone calls. And a guarantee to help

you solve any compatibility issues you might have.

DELL 325NC i386SL  
25 MHz COLOR NOTEBOOK

LEASE: \$107/MO. • 4 MB RAM • 80 MB HARD  
DRIVE • VGA COLOR LCD (9", 640 X 480) •  
3-HOUR BATTERY LIFE • MS-DOS 5.0

So call us. And Murphy, take a hike. Because now there's a new law in these parts.

## DELL™

### 800-232-5620

WHEN CALLING, PLEASE REFERENCE #11E75.

HOURS: 7AM-9PM CT MON-FRI,  
8AM-4PM CT SAT, 10AM-3PM CT SUN.

IN CANADA, CALL 800-668-3021. IN MEXICO CITY, 250-7111.

# THE BEST COMPUTER IN AMERICA,

We call it a notebook, but it's actually smaller. Just 7 7/8" x 11" and only 1 1/4" thick. So you might be able to fit some briefs in your briefcase. Maybe even a sandwich or two.

That's not all you'll find in here. There's room for a 120 MB hard drive, math coprocessor, and 10 MB of RAM. There's even an industry-standard PCMCIA slot for a modem or other expansion.

Dell's toll-free support lines are now open 6 AM to midnight every day. And the 320SLi's field serviceable components and next-day, upside service let you keep your data and your composure in the event of an emergency.

## \$2,149

LEASE ♦ : \$80/MONTH

This small number gets you all these big numbers: 20 MHz i386SL processor; 2 MB of RAM; 60 MB hard drive, (80 or 120 MB hard drive optional), VGA Reflective (9.5" 640 x 480) LCD, external 3.5" floppy drive, and up to 4 hours of work from the NiMH battery.

Comes standard with everything you need to run even the most hardcore software: MS-DOS 5.0, Microsoft Windows™ 3.1 and a keyboard mouse. We'll even throw in the new Lotus® Organizer so you can throw out that outdated datebook.

Your hands don't get smaller just because your computer does. So Dell gave the 320SLi a full 85-key keyboard, including special screen navigation keys in the familiar inverted-T layout.

\*Guarantees available in USA only. For a copy please write Dell USA L.P., 9505 Arboretum Blvd., Austin, TX 78759-7299, Attention Guarantees or call our Tech Fax line at 1-800-950-1329. ΔService provided by BuncTec Service Corporation. On-site service may not be available in certain remote locations. ♦Leasing arranged by Leasing Group, Inc. i386, i486 and the Intel Inside Logo are trademarks of Intel Corporation. MURPHY'S LAW #17

NEW  
TECHNOLOGY  
IS ALWAYS  
PRICED JUST  
BEYOND  
YOUR BUDGET.

## IF THAT'S THE LAW THEN THIS IS A CRIME.

We didn't get to be a FORTUNE 500® company by playing by the rules. Why start now?

Take our new Dell® i486™ 66 MHz systems, for example. They're all based on Intel's incredibly fast 66 MHz i486DX2 chip. They're available in four platforms, and in hundreds of configurations. And you can get a complete system for just \$2,499. (Sorry, Murphy.)

Likewise, you can't find guarantees like ours with any other make of computer.

That is, guaranteed response within five minutes to

support phone calls. Guaranteed next-business-day service.<sup>Δ</sup> And a guarantee to help you solve

any compatibility issues.\*

So, fact is, we broke quite a few of Murphy's laws.

To us, it's the perfect crime.

### DELL 486P/66 i486DX2 66 MHz SYSTEM

LEASE: \$92/MO. • 4 MB RAM • 120 MB  
HARD DRIVE (17MS) IDE HARD DRIVE  
• SUPER ACCELERATED VIDEO  
CONTROLLER • SUPER VGA 1024i MONITOR  
(14", 1024 X 768, .28mm) • ONE FLOPPY  
DRIVE (3.5" OR 5.25") • MS-DOS® 5.0
