SO HOW COME YOU NEVER CALL?

THE NEW DELL SYSTEM 316 16 MHz 386SX

STANDARD FEATURES:

- Intel 80386SX microprocessor running at 16 MHz.
- Choice of 1 MB or 2 MB of RAM* expandable to 16 MB (8 MB on the system board).
- Page mode interleaved memory architecture.
- VGA systems include a high performance 16-bit video adapter.
- LIM 4.0 support for memory over 1 MB.
- Socket for 16 MHz Intel 80387SX math coprocessor.
- 5.25" 1.2 MB or 3.5" 1.44 MB diskette drive.
- Integrated high performance hard disk interface and diskette controller on system board. (ESDI based systems include a hard disk controller.)
- Enhanced 101-key keyboard.
- 1 parallel and 2 serial ports.
- 200-watt power supply.
- 8 industry standard expansion slots.

OPTIONS:

- 16 MHz Intel 80387SX math coprocessor.
- 1 MB or 4 MB RAM upgrade kit.
- Graphics Performance Accelerator GPX-1024.
- Graphics Performance Display GPD-16C, GPD-19C.

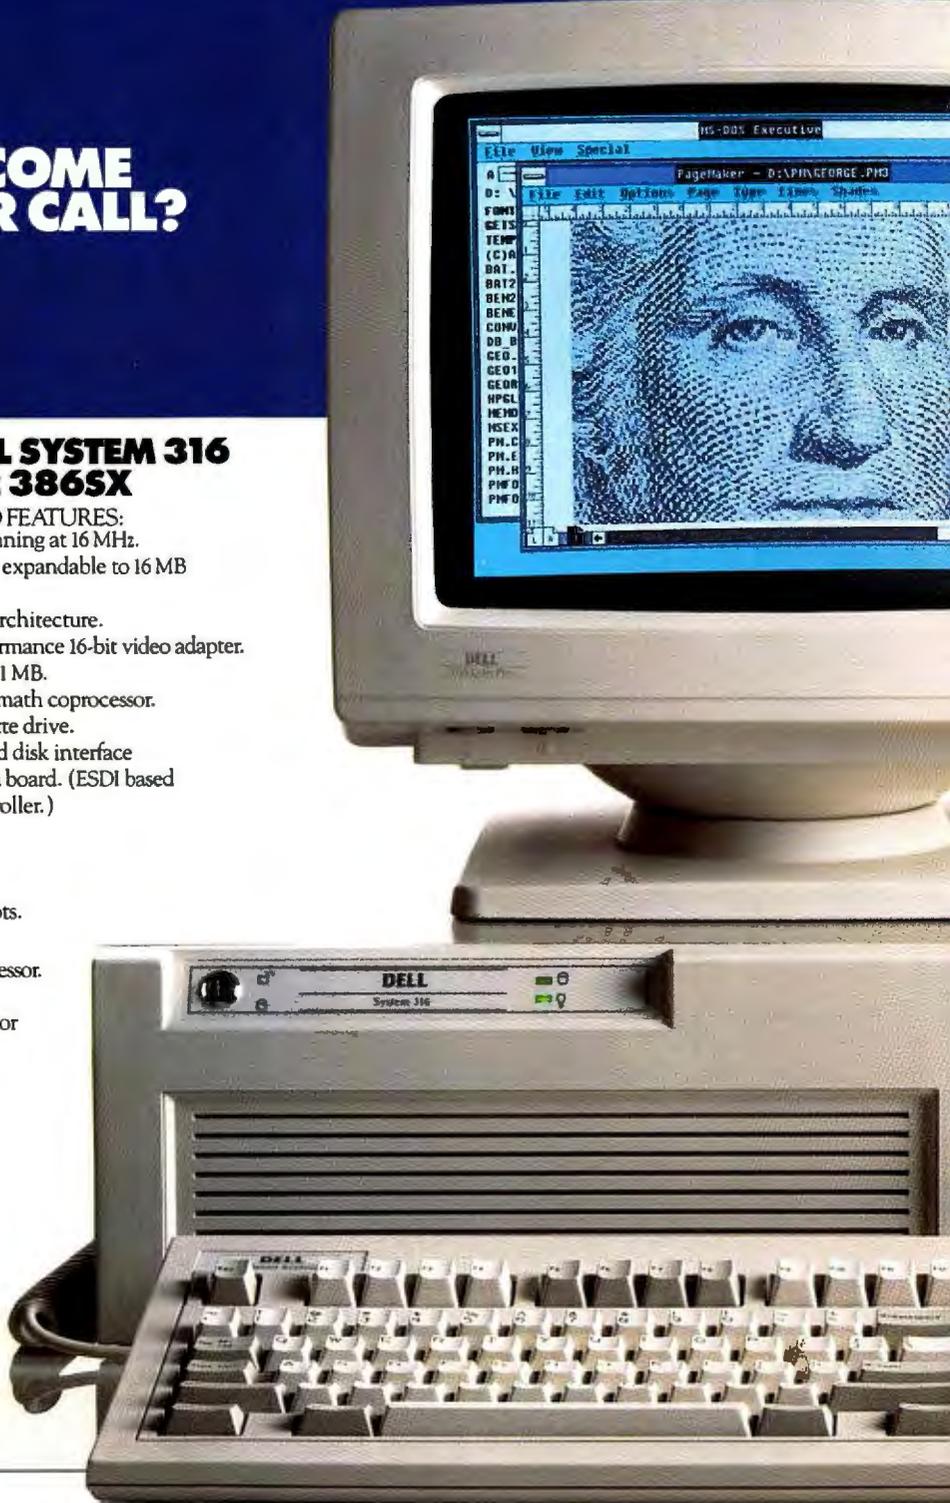

** Lease for as low as \$109/Month.

Extended Service Plan pricing starts at \$234.

es per minute: \$5,995
 per minute: \$3,295
 per minute: \$2,195
 Dell laser printers come with
 1.5 MB RAM, full-page 300
 DPI graphics, and have 31
 standard fonts (7 resident and
 non-loadable from diskette).
 Laser printers also provide
 Hewlett-Packard LaserJet Plus,
 Epson/FX, IBM Proprinter* and
 up to 630* emulations.

THE DELL SYSTEM 325
25 MHz 386.

When you need the highest performance 386 computer, this is it.

STANDARD FEATURES:

- Intel 80386 microprocessor running at 25 MHz.
- Choice of 1 MB or 4 MB of RAM* expandable to 16 MB using a dedicated high speed 32-bit memory slot.
- Advanced Intel 82385 Cache Memory Controller with 32 KB of high speed static RAM cache.
- Page mode interleaved memory architecture.
- VGA systems include a high performance 16-bit video adapter.
- Socket for 25 MHz Intel 80387 or 25 MHz WEITEK 3167 math coprocessor.
- 5.25" 1.2 MB or 3.5" 1.44 MB diskette drive.
- Dual diskette and hard disk drive controller.
- Enhanced 101-key keyboard.
- 1 parallel and 2 serial ports.
- 200-watt power supply.
- 8 industry standard expansion slots.

OPTIONS:

- 25 MHz Intel 80387 math coprocessor.
- 25 MHz WEITEK 3167 math coprocessor.
- 1 MB or 4 MB RAM upgrade kit.
- 2 MB or 8 MB memory expansion board kit.
- Graphics Performance Accelerator GPX-1024.
- Graphics Performance Display GPD-16C, GPD-19C.

**Lease for as low as \$199/Month

Extended Service Plan pricing starts at \$370

System	With Monitor & Adapter

THE DELL SYSTEM 310
20 MHz 386.

The best combination of performance and value available in its class.

STANDARD FEATURES:

- Intel 80386 microprocessor running at 20 MHz.
- Choice of 1 MB or 4 MB of RAM* expandable to 16 MB using a dedicated high speed 32-bit memory slot.
- Advanced Intel 82385 Cache Memory Controller with 32 KB of high speed static RAM cache.
- Page mode interleaved memory architecture.
- VGA systems include a high performance 16-bit video adapter.
- Socket for 20 MHz Intel 80387 or 20 MHz WEITEK 3167 math coprocessor.
- 5.25" 1.2 MB or 3.5" 1.44 MB diskette drive.
- Dual diskette and hard disk drive controller.
- Enhanced 101-key keyboard.
- 1 parallel and 2 serial ports.
- 200-watt power supply.
- 8 industry standard expansion slots.

OPTIONS:

- 20 MHz Intel 80387 math coprocessor.
- 20 MHz WEITEK 3167 math coprocessor.
- 1 MB or 4 MB RAM upgrade kit.
- 2 MB or 8 MB memory expansion board kit.
- Graphics Performance Accelerator GPX-1024.
- Graphics Performance Display GPD-16C, GPD-19C.

**Lease for as low as \$135/Month

Extended Service Plan pricing starts at \$251

System	With Monitor & Adapter		
	Hard Disk Drive	TTL Mono	VGA Color Plus

322 MB-18 ms ESDI		\$5,499 \$5,698	\$5,999 \$6,198

THE DELL SYSTEM 220
20 MHz 286.

It's fast as most 386 computers. But at less than half the price. The footprint is small, too.

STANDARD FEATURES:

- 80286 microprocessor running at 20 MHz.
- 1MB of RAM* expandable to 16MB (8 MB on system board).
- Page mode interleaved memory architecture.
- LIM 4.0 support for memory over 1 MB.
- Integrated diskette and VGA video controller on system board.
- Socket for Intel 80287 math coprocessor.
- One 3.5" 1.44 MB diskette drive.
- Integrated high performance hard disk interface on system board.
- Enhanced 101-key keyboard.
- 1 parallel and 2 serial ports (integrated on system board).
- 3 full-sized industry standard expansion slots available.

OPTIONS:

- External 5.25" 1.2 MB diskette drive.
- 3.5" 1.44 MB diskette drive.
- Intel 80287 math coprocessor.
- 1 MB or 4 MB RAM upgrade kit.

**Lease for as low as \$109/Month

Extended Service Plan pricing starts at \$264

System	With Monitor		
	Hard Disk Drives	VGA Mono	VGA Color Plus
		1MB 2MB RAM RAM	1MB 2MB RAM RAM

100 MB-15 ms IDE		\$3,599 \$3,798	\$3,899 \$4,098

THE DELL SYSTEM 200
12.5 MHz 286.

This full-featured 286 computer runs at 12.5 MHz, and is completely Microsoft MS-DOS and MS OS/2 compatible.

STANDARD FEATURES:

- 80286 microprocessor running at 12.5 MHz.
- 640 KB of RAM expandable to 16 MB (4.6 MB on system board).
- Socket for Intel 80287 math coprocessor.
- Dual diskette and hard disk drive controller.
- Enhanced 101-key keyboard.
- 1 parallel and 2 serial ports.
- 200-watt power supply.
- 6 industry standard expansion slots.

OPTIONS:

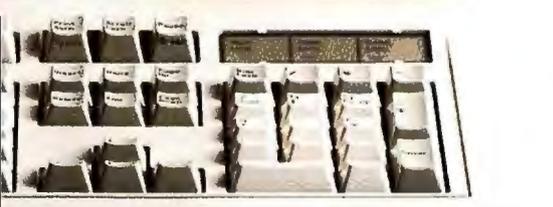

- Intel 80287 math coprocessor.
- 512 KB RAM upgrade kit.
- 2 MB RAM upgrade kit.

Extended Service Plan pricing starts at \$166

System	With Monitor & Adapter		
	Hard Disk Drive	VGA Mono	VGA Color Plus

 - (Both MS-DOS versions with disk cache and other utilities.)
 - Dell Enhanced MS® OS/2 Standard Edition 1.0: \$324.95
 - Dell UNIX® System V/386, Release 3.2:
- Now available. Call for details.

APPLICATION SOFTWARE.

We offer a complete line of software. Everything from complex CAD/CAM applications to fun flight simulator programs. All at extremely competitive prices.

All prices and specifications are subject to change without notice. Dell cannot be responsible for errors in typographical or photographic. **Payments based on a 36-month open-end lease. *Leasing arranged by Leasing Group, Inc. In Canada, configurations and prices will vary. Microsoft, MS and MS-DOS are registered trademarks owned by Microsoft Corp. UNIX is a registered trademark of AT&T. Dell UNIX System V is based on INTERACTIVE Systems Corporation's 386ix.™ Intel, 386 and 386SX are trademarks of Intel Corporation. †Signifies trademarks of entities other than Dell Computer Corporation. ‡Service in remote locations will incur additional travel charges. © 1989 DELL COMPUTER CORPORATION.

THE \$3500 DELL 386SX SYSTEM COMES WITH SELF-DIAGNOSTIC SOFTWARE, TOLL-FREE TECHNICAL SUPPORT, 30-DAY MONEY-BACK GUARANTEE AND NEXT-DAY, DESKSIDE SERVICE.

Right away, it's easy to see what makes the new Dell System 316 different from the Compaq[^] 386s.

While they both utilize Intel's new 386SX™ chip, the System 316 is a full featured system designed to give you uncompromising 386SX/16 MHz performance.

But for a price that's somewhere in the neighborhood of a 286-based system.

Now, cynics might be inclined to think we achieved this at the expense of expandability.

Obviously these people own the 4-slot Compaq.

The System 316 has a total of seven open slots. Leaving you enough room to add modems or

network cards, fax boards, high-performance graphics cards or tape backups. Not to mention all the bells and whistles that'll be coming out next year. And the year after that.

And the year after that.

Point is, the Dell System 316 was designed for the long haul.

Not as a passing fad.

IT'S YOUR CALL.

If the System 316 is beginning to sound like the perfect business computer, it's because it is.

How perfect though is entirely up to you. Because every 316 is custom configured. To give users

exactly what they need.

For example, the System 316 comes standard with your choice of 1 MB or 2 MB of RAM. If you'd like more, we can add as much as 8MB to the system board. Okay, we can add another 8MB by installing a memory expansion board.

What about storage? We can set your 316 up with a 40, 100, 150 or 322 MB hard drive. And a 40 or 150 MB tape drive.

Tell us, what type of monitor do you prefer? VGA mono with paperwhite screen, or VGA Color Plus for high resolution colors displayed on a larger screen? Or perhaps you'd like even larger monitors, capable of displaying 1024 by 768 pixel--

resolution? You've got your choice. You've got your choice of operating systems, too. The 316 can run MS-DOS®, OS/2, or UNIX® systems. Making it extremely versatile, as well as extremely powerful.

Once you've told us what you want, we'll make sure what you want works, by burning-in the system unit.

And even though each and every 316 we build is individually configured, they're all guaranteed dependable just the same.

DON'T GET STUCK IN THE MIDDLE.

Have you noticed how most computer retailers seem to know far too much about sales techniques and far too little about computer technology?

Ask even the simplest of questions and the answer will undoubtedly involve the highest margin item in the store.

And heaven forbid you should ever have to go back there for service.

Well, when you buy from us,

you never set foot in a store.

Because we've eliminated it.
Along with the retailer.

Instead, you talk directly with
a computer expert.

Someone who can help you
configure a system that not only
meets your needs, but meets
them for about 35% less than
you'd pay a retailer.

**WE COME
WHEN WE'RE
CALLED.**

One of the things that very
clearly sets a Dell system apart
from other computers is not
just how they're sold but how
they're supported.

Overkill was one description
used in a PC Week article.

Perhaps.

But then, we think you'll
agree, when something goes
wrong, you want as much help
as possible, right?

Which is why every Dell
system comes with self-
diagnostic software and a toll-
free technical support line.
We're able to solve 90% of all
problems right over the phone.

The other 10% receive
next-day, deskside service.

Thanks to our new alliance
with Xerox Corporation.

And you get all this help
for a full year—whenever you
need it—at no extra charge.[△]

You've probably guessed
by now, one of the things
that drives us most is
customer satisfaction.

So we'd like to give
you the ultimate guarantee:
Try a System 316 in your office
for a month. Run your toughest
applications. Put it through its
paces, at your pace. If you're
not completely satisfied, send it
back anytime within 30 days.
And we'll refund your money.
No questions asked.

**I HAVE
MY OWN
COMPUTER
COMPANY**

**THE \$4900 COMPAQ 386S
COMES WITH A GUY IN A SUIT.**

**MAYBE YOU
SHOULDN'T BUY
ONE AFTER ALL.**

No matter how many reasons
we give you to buy a Dell system,
sometimes it makes more
sense to lease one instead.

Whether you need a
single computer, or an
entire office full, a leasing
plan is just like 100% financing.
So you don't tie up working capital.
Or credit lines. Of course, there
can also be tax advantages as well.

And just as we can custom
configure your computers, we can
see to it you get a custom designed
lease plan to fit the exact needs
of your business. †

Maybe that explains why
over half the companies in the
Fortune 500 now own or lease
Dell computer systems. And
why, in two separate PC Week
polls, 1400 corporate volume
buyers rated Dell number one in
overall customer satisfaction.

Because we give people exactly
what they want.

No more. No less.

REVIEWS

88 Seven Top LANs: A Hard Look at Ease of Use

Robert Lauriston

PC World checks out the hot names in networking—including Novell, 3Com, and IBM—to see which are easiest for user and administrator alike.

102 25-MHz Speedsters—A Buyer's Market

TJ Byers

In high-performance computing, it's getting harder to tell the players apart. We test seven 386s—speed demons all—and find that speed isn't the only measure of success.

114 Solid Bargains in Personal Printers

Paul Meyers

A look at seven 9-pin printers that sell for under \$500 turns up some of the best deals going.

126 The Hardware Shelf

Edited by Michael Goodwin

- NEC's PowerMate SX offers 386SX capabilities at 286 prices
- The HeadStart III's easy setup and array of software rate a Best Buy
- Three WORM optical drives store mountains of unchanging data—Panasonic's LF-5000 is the simplest to install and use, the LaserStor LS800AT-E is fast and cheap, and IBM's 3363 is easy but pricey

148 The Software Shelf

Edited by William Rodarmor

- Cut and paste between applications with *ViewLink 1.0*
- A worthy communications upgrade, *Crosstalk XVI 3.7* is still no standout
- *QuickC 2.0* becomes the best C compiler in the business
- *Lucid 3-D 2.0* hot-links worksheets for a low, low price
- Managers can take the long view with *Project Workbench Advanced 3.0*

164 Second Look: Tape Drives—A Closer Finish

Scott Spanbauer

PC World gives the twice-over to five internal tape backup drives costing less than \$600, and brings the Best Buy total to two.

Cover Story: We have seen the future, and it runs at 33 MHz. Hot new systems from Zenith, AST, and Everex redefine the meaning of desktop speed, page 62.

The Right Connections

Network consultant and reviewer Robert Lauriston

For one who makes his living installing and troubleshooting networks, Robert Lauriston has some curious ideas. "Networks aren't for everybody," he says. "Don't install a network because you think you'll save money. Install one because you need it. You might think that you're going to save money, but in the long run your support needs increase exponentially."

Lauriston, a San Francisco-based consultant who specializes in *WordPerfect* and network setups, had more than his share of support headaches during the preparation of this month's roundup of high-powered network operating systems ("Seven Top LANs: A Hard Look at Ease of Use"). "We installed, uninstalled, and occasionally reinstalled seven systems, one after the other. It was an interesting experience, but I don't recommend it for everyone."

Because *PC World's* test network is right in the heart of the editorial department, most of our staffers got to know Lauriston during the month he spent holed up in the lab. Lauriston himself got to know the seven contenders in our roundup very well indeed.

"At one level," he reports, "these operating systems all do the same things—they let you share files and resources and run applications. Beyond that, there is a huge range of features,

approaches, and capabilities. Good interface design is perhaps the most important measure of a LAN operating system. A well-designed interface can make complicated tasks seem a lot less difficult."

Novell's *NetWare* earned our Best Buy recommendation, and Banyan's *Vines* scored points for its prowess in dealing with multi-server networks. NSTL's tests and our reviewer's hands-on experience suggest that the next revision of 3Com's OS/2-based *3 + Open* may give both products a serious run for their money. "More and more," Lauriston concludes, "high-end networks are competing with minis and mainframes. And they're competing strongly, too, on price, performance, training, and support."

Also in this issue: For our roundup of top-flight 386s ("25-MHz Speedsters—A Buyer's Market"), we've assembled the most complete suite of NSTL system tests ever. If you've got a big computing job, these systems have all the muscle you'll need. Or do they? The next generation of 386 systems is nearly one-third faster, and they're ready to hit the streets. Senior Editor Eric Knorr and News Editor Mike Hogan ("Preview: Zenith, AST, and Everex Hit 33") have put together an inside look at three hot new 33-MHz systems with impressive pedigrees and price tags. ●

Ed Bott

Hatfield.

McCoy.

We had these two talking in no time at all.

Seems like every time these two boys set down together, they commenced to fightin'! If one said day, the other night. Good thing the folks at TOPS settled this feud once and for all. It's so dang simple, too. Just install TOPS software in each Macintosh and PC in the

place. Throw in a network card for each PC. Add a little twisted-pair telephone wire, and suddenly they're behaving like family.

Next thing you know, they're swapping files, sharing peripherals, and trading data from Lotus 1-2-3 to Excel, dBase III to dBase Mac, and most other PC and Mac applications. Or tapping into whole other networks and systems, such as Novell, AppleShare, Sun, and VAX.

What's more, no central file server is needed—though TOPS can easily accommodate one as a business grows. And no special training is required. No wonder TOPS is the standard for easy-to-use PC to Mac connectivity.

Maybe that's why folks say, when it comes to making connections, TOPS is the real McCoy. Call the TOPS Division of Sun Microsystems at 800-445-TOPS (from outside the U.S. and Canada, call 415-769-8700). Or write 'em at TOPS, 950 Marina Village Parkway, Alameda, CA 94501.

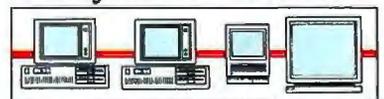

TOPS Tech Specs

- One copy of TOPS software required for each network station.
- TOPS supports AppleTalk and FlashTalk running on twisted-pair cabling (telephone wire), and EtherTalk on thick or thin Ethernet cabling.
- IBM PCs, PS/2 Models 25 or 30, or compatibles require TOPS FlashCard, 3Com EtherLink II or other network card. PS/2 Models 50 through 80, or compatibles require 3Com EtherLink/MC card or equivalent.
- TOPS can be configured as a distributed, dedicated, or combination network.

art of persuasion.

Today, having a good idea isn't good enough. You also have to convince other people it's a good idea. And nothing gives your ideas more power and impact than DRAW APPLAUSE™ from Ashton-Tate®.

It's the state-of-the-art presentation tool for IBM's PS/2 family and other 286-386 based computer systems. Because its amazing array of graphics capabilities takes you far beyond conventional business charts. To a whole new level of persuasion.

DRAW APPLAUSE lets you integrate graphics, text and data. Quickly and easily. To produce dynamic overheads. Impactful full-color slides. Impressive printed documents. Everything you need to create winning presentations.

Maybe that's why it was rated a "Best Buy" in the October 1988 issue of PC World.

DRAW APPLAUSE transforms dull numbers into powerful charts and graphs. At the touch of a key or the click of a mouse. It also lets you integrate text and graphics in seconds. And you can quickly change typefaces, type sizes, and colors to create the exact visual effect you want.

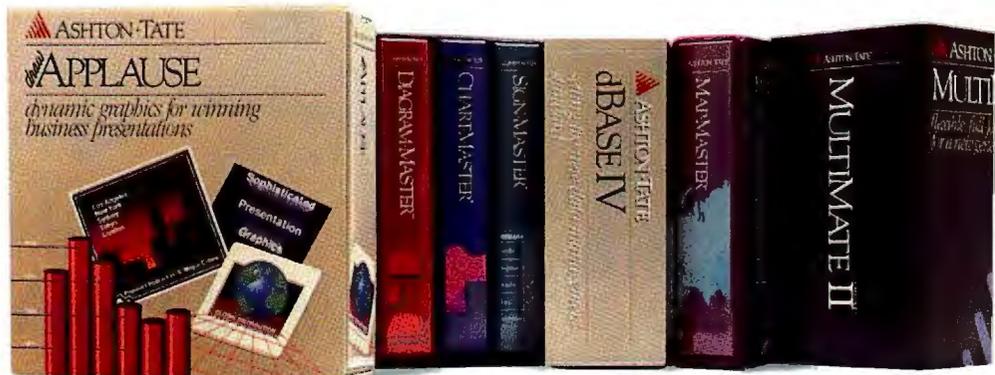

DRAW APPLAUSE also gives you a ready-

to-use library of professionally-drawn, full color pictures and graphics images. Everything from a house to a hamburger.

Easy-to-use drawing tools allow you to customize charts and graphs. Or create your own original images. And bring them to life with a choice of over sixteen million colors.

DRAW APPLAUSE can also draw on other programs for input. Like Ashton-Tate's dBASE® software and PRESENTATION PACK.™ You can even import DIF and CGM files.

DRAW APPLAUSE lets you project the most polished professional image possible. With 35mm color slides, overheads or hard copy you can produce yourself. Or we can process and ship to you. All that's required is a modem and our Ashton-Tate Graphics Service.™

For a free self-running demo* or information about the Ashton-Tate Graphics Service, just call 1-800-437-4329, ext. 0210.**

DRAW APPLAUSE from Ashton-Tate.

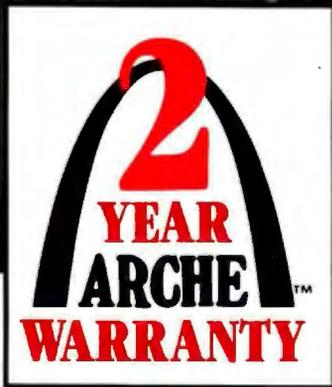

When it comes to persuasive presentations, it deserves a standing ovation.

The new
quality
benchmark
in powerful
computing

While others in the computer industry seem preoccupied with offering cheap technology, Arche Technologies offers something different: Quality Technology.

That's why the Arche Rival 286 and Rival 386 were designed by some of the best engineers in the business, and why each unit is hand assembled in the United States, passing through a rigorous series of tests and inspections.

QUALITY ABOVE ALL™

Rival™ 386

- 80386 10/20 MHz
- 2MB RAM Expandable to 16MB
- Also supports LIM Expanded Memory
- 80287/80387 Co-processor Socket
- Two 8 Bit and Four 16/8 Bit and Two 32 Bit Expansion Slots
- Battery Backed Real Time Clock/Calendar
- 1.2MB/360KB 5.25" Disk Drive
- Enhanced 101 Keyboard
- 2-Parallel and 2-Serial Ports
- Monochrome and Hercules™ Graphics

- Compatible Display Adapter
- 14" High-Resolution (1000 line), Flat Screen, Amber Monitor
- 16 Bit FDD/HDD Controller (Supports both 5.25" and 3.5" including the new IBM® 1.44MB PS/2™ Format)
- 200 Watt Switching 110/220V Power Supply
- Small Foot Print 16.5" (D) x 17.125" (W) x 6.18" (H)
- MS-DOS® 3.3 and GW BASIC®
- Two Year Limited Warranty
- **Only \$3,895.00 Complete**

TOP OF THE NEWS

Two-Inch Drive Debuts

Standard-Busting Media Chosen for Zenith's Sub-7-Pound Portable

Zenith Data Systems will build a 2-inch disk drive into a light new laptop scheduled to ship this summer. Seeking to develop a computer that weighs less than 7 pounds and can run for 3 hours on a single battery charge, Zenith will switch from the traditional 3½-inch floppy drive, which takes up approximately 24 cubic inches and accounts for about 2½ pounds (with batteries). The new drive, made by Sony and used in its Mavica camera, measures about 7½ cubic inches and weighs 6 ounces. Because it consumes half the power of 3½-inch units, the drive requires only a half-pound of batteries. Zenith decided against RAM cards, which are be-

ing considered by competitors, because of the relatively high cost of adding incremental storage using DRAMs rather than magnetic media. Zenith won't ship software on the 720K disks; DOS will be in firmware on the laptop. Programs and data can be transferred to the PC-compatible disks from an external 3½-inch add-on or a desktop via a bundled serial-cable transfer system. Zenith vice president of product marketing Andy Czernek doesn't see the new media becoming another industry standard, but he does anticipate its use in rival laptops because the drive won't raise prices.

System Prices Fall

Bargains to Be Found, Especially for 80286 Machines

PC price cutting has become epidemic as the computer industry heads into the summer doldrums and 80386-based systems begin to become the standard. Intel Corporation, which sells 80 percent of all IBM-compatible CPUs, expects to start shipping more of the 32-bit chips than 80286s over the next few months as 286 prices slide downward to make room for 33-MHz 80386s and a rash of cheap 80386SX-based systems. Some of Compaq's new small-footprint Deskpro 286e models are \$1500 cheaper than comparably configured versions of its Deskpro 286. IBM also cut \$500 to \$945 off PS/2 Model 50Z and 70-E61 prices and has discontinued its cheapest Models 30 and 50. Other manufacturers have taken even more drastic steps, reports In-

ternational Data Corporation analyst Bruce Stephen. "We are probably seeing what we should have seen last year, but it was derailed by high DRAM prices." Stephen also notes that intense price jockeying has hit the SX market. Compaq, which lopped \$200 off its Deskpro 386S price tag in February, slashed another \$300 to \$800 in April. Prices on SX models will be further buffeted by lowball newcomers like Dell Computer's \$2949 system, predicts StoreBoard, Inc., president JoeAnn Stahel. Street prices, she adds, indicate still more discounting at the retail level—the Deskpro 286 recently sold for \$2185, about \$500 below list—and these don't reflect the recent softening in memory prices.

Novell Unveils NetWare 386

Broadening Links to Other Nets, Workstations

Novell has launched a major upgrade of its network operating system designed to facilitate open network standards and interoperability. Exploiting the 80386's speed and greater memory addressability, *NetWare 386* version 3.0 runs under multiple network protocols and provides connectivity to a variety of machines (including DOS, OS/2, Macintosh, and UNIX workstations) more effectively than earlier *NetWare* versions designed for the 80286. Available in the second half of the year, Novell's new flagship runs three times faster in about the same amount of system memory and supports files of up to 4 gigabytes and server storage of up to 32 terabytes. In addition to the usual filing and printing services, *NetWare 386* will offer a SQL-compatible Btrieve relational data base, MHS-based E-mail, and other communications services,

with plans for gateways to IBM SNADS and X.400 nets. Novell also will improve *NetWare* SNA gateways to large systems and wide area networks. Moreover, *NetWare 386* promises greater ease of installation and use. Its DOS-oriented programming platform provides for more flexible and streamlined system configuration, and it speeds porting of *NetWare* applications to other network operating systems. Promoting open systems, Novell publishes all *NetWare* application program interfaces, licenses source code to third parties, and offers a broad range of application tools. Novell recently merged with Excelan, a licensee of Microsoft's *LAN Manager*. It plans to support *LAN Manager*'s Server Message Block protocols, plus crucial IBM OS/2 Extended Edition net interfaces.

Color Laptops Coming

New Display Technologies May Bring Color to Laptops by Year-End

Several portables vendors—most notably Zenith, Sharp, Toshiba, and Mitsubishi—demonstrated color LCD prototypes at Spring COMDEX, pre-saging the introduction of color-equipped laptops as early as year-end. The technology is sufficiently mature to make even VGA color displays viable, but vendors are proceeding cautiously because they aren't sure which users will pay the necessary premium. They are focusing on top-of-the-line 80386-based machines and two types of color LCD. One is exemplified by the 14-inch double-supertwist display shown by Sharp Electronics. This technology, also exhibited by Mitsubishi Electronics and Toshiba America, is called "passive matrix" because its transistors are shared by groups of pixels. Cheaper and easier to produce than active-

matrix designs—each of whose pixels is driven separately—this display should appear in an AC-powered Sharp luggable by year's end. National Marketing Manager Steve Sedeker estimates that this kind of color adds from \$900 to \$1200 to the price of a portable. By contrast, Zenith demonstrated a battery operated 6½-inch display using Hitachi's 640 by 200 active-matrix color panel. Active-matrix panels cost more but produce more saturated colors. One vendor, who asked not to be identified, figures they'll add a \$2000 price premium. That's the reason for the COMDEX demos, explains Tom Sherrard, PC marketing director for Toshiba, which also has an 11-inch active-matrix design. "Our assumption is that the market is not willing to pay what they cost now."

Businessland to Sell Next

Largest Corporate Reseller Will Market UNIX Workstation

In one of the industry's most unusual pairings, Businessland has agreed to distribute the avant-garde UNIX workstation offered by Next, the high-profile start-up run by Apple founder Steve Jobs. The ink was barely dry on Businessland's divorce from Compaq (see *Top of the News, PCW*, May 1989) when the high-end reseller announced plans to offer the Next machine to corporations. Sold for \$6500 on campus and \$10,000 at Businessland, the sleek black Next cube includes a Motorola 68030 processor, 8MB of memory, a 256MB optical disk, a development environment, and several applications, such as Sybase's SQL data base server. More important, Lotus, Aldus, and other leading PC developers plan to port business productivity

software to the Next machine, while Novell creates a Next version of *NetWare*. Negotiations with Jobs preceded the loss of Businessland's \$150 million Compaq distribution agreement, reports spokesperson Beverley Bird. But Chairman David Norman made a point of predicting that Businessland would sell as many Next computers this year as it did Compaq systems last year. That would make Businessland Next's largest customer. It also would boost mainstream use of UNIX systems, which generally have been devoted to technical tasks or multiuser applications. Bird adds that Businessland's IBM and Apple sales are up in the wake of the Compaq loss, and so are earnings estimates.

Amstrad Attacks Business

British Supplier Aims All-for-One-Price Strategy at Corporate Market

This summer Amstrad, Inc., will begin selling two business PCs that follow the all-for-one-price strategy that made parent Amstrad, plc., one of the top business PC suppliers in Europe in only three years. For the past two years, the Irving, Texas, subsidiary of the \$1.5 billion-a-year London company has been marketing the under-\$1000 PC1512 and a slightly pricier PC1640 to home-office users and small businesses, selling through mass merchants and a few third-tier resellers. But at Spring COMDEX, it began pushing for midsize to large business customers in earnest with low-price, all-in-one bundles intended to be sold through upscale specialty resellers. The PC2286 and PC2386 will ship with extras like hard and floppy drive controllers and a 16-bit VGA adapter built into the

motherboard, up to 4MB of base memory standard, a mouse, and the appropriate version of *Windows*. The PC2286 with 1MB of memory will start at \$2000; the 20-MHz PC2386 with 4MB and a 64K cache will sell for \$6000. All prices include a choice of monitors and 1:1 interleave hard drives. Amstrad would like to jump right into Fortune 1000 companies, says President Vernon Moore, but figures that, as in Europe, it will have to swim upstream from the home office to larger businesses. In order to overcome corporate skepticism, it will offer a one-year on-site service policy at no extra cost. International Data Corporation reports that Amstrad sold about 100,000 units in the United States last year. ●

WORDPERFECT GIVES YOU THE POWER. RIGHTWRITER GIVES YOU THE CLARITY.

RightWriter Checks The Grammar, Style, Usage And Punctuation In Your Business Writing.

RightWriter 3.0 helps you produce clear, powerful business writing. Not a spelling checker—RightWriter is a sophisticated expert system for checking errors in grammar, style, usage and punctuation.

- ✓ **Easy To Use**—Just a two-key sequence—WordPerfect® does the rest. PLUS—expanded on-line help!
- ✓ **Recommendations** are inserted into your text to point out problem areas.
- ✓ **Graphical Indexes** measure the strength, readability, and other overall qualities of your writing.
- ✓ **New Menu System** allows you to change RightWriter to meet your specific needs.
- ✓ **Recommends, Never Decides.** RightWriter is a writing aid; the final decision is always yours.
- ✓ **Includes RightWords® FREE!** A \$30 value—quickly customize RightWriter's vocabulary to fit your needs.
- ✓ **For use on IBM PC, PC/AT, PS/2 and compatibles.**

Call us for upgrade information.

VISA, MasterCard & AMEX accepted. Add \$4.50 for shipping. FL residents add 6% sales tax. International orders add \$15. We offer a 30-day money-back guarantee on direct orders.

And now RightWriter can be used *from within* WordPerfect 5.0!—A full document analysis can be done with just a *two key sequence* without exiting to DOS.

With a rule base of over 4,000, RightWriter is the one writing tool you shouldn't be without. It's faster, more powerful—and now more convenient for WordPerfect users.

Richard Landry

I got those workstation,
I got those workstation blues...
I got too much workstation, but
no work to do...."

I'm the first to admit that Muddy Waters is probably not playing this tune from his vantage point in the sky. But plenty of us down here below have been waiting patiently for software to fulfill the promise that's been inherent in hardware since the birth of the 286. To us, mounting hardware bills and a drought of software to take advantage of our investment in technology seem like reason enough to sing the blues.

Intel recently turned up the volume on this melody with the introduction of the 80486 microprocessor. A logical extension of the 386, the 486 is also especially suited to multiprocessing—getting a task done more quickly by dividing it among two or more microprocessors within a single PC. No personal computer—AT class, Micro Channel, or any

The Workstation Blues

Now that computer hardware is a full two generations ahead of PC software,

users have a right to ask if the promise of greater productivity from more powerful workstations will ever pay off.

other—can manage that job today. But the truth of the matter is, machines that can are just around the corner.

Meanwhile, the big news on the software front is that Lotus has given up trying to make 1-2-3 release 3.0 live within DOS's 640K memory budget (see the preview in *PCW*, May 1989) and has opted instead for DOS extender technology like that in Borland's *Paradox/386*. DOS extenders can give 286 or 386 systems with a megabyte or more of memory some extra breathing room for large programs or files. There's even some behind-the-scenes talk about establishing a DOS extender standard to compete with EMS 4.0. But almost everyone who entertains that notion also knows it's a patch. More memory space will make DOS programs run better, but you have to wonder if that justifies the expense of equipping yourself with a fast 286 or 386.

It's practically an article of faith among PC vendors that the more power available on the desktop, the better. As the gap between Intel's and Lotus's announcements shows, however, the industry is struggling to match reality to its notions of the way things should be. Nobody wins when hardware makes great leaps forward while software sees only incremental improve-

ments. For all we know, by the time software acquires some next-generation capabilities, Micro Channel and EISA, 286 and 386 will all be obsolete. Just the thought gives prospective PC buyers pause.

We can take some comfort, however, from observing what's happening today with UNIX workstations. Power hasn't been a problem for workstations for some time; vendors like Sun and Hewlett-Packard seem most concerned with getting computers to communicate in ways that are simple and natural to users. Peer-to-peer networking—where each workstation has the power to host information and share it with every other workstation on the net—has replaced the PC's more hierarchical scheme, where a powerful central server provides information to a work group that has less powerful PCs. UNIX workstations don't use their power just to blast bits faster—they use it to let people communicate more effectively. If we accept this as a model of the way computing will evolve, today's PC LANs are pale shadows of their future selves.

Still, it's worth noting that UNIX workstations have the same problem that power PCs do—not enough software that *(continues)*

3 1/2 INCH 1.4 MB DISKS FOR ONLY ONE DOLLAR!

New Invention Makes It Possible!

Do you use the new, high capacity, 3 1/2 inch disks? If so, you have paid four, five, even six dollars per disk! Byte for byte, that is as much as SIX TIMES the 'old' 360K floppies. Now you can convert all your programs, data, and files to the new format, WITHOUT PAYING THESE PRICES!

HOW IS THIS POSSIBLE? Have you ever tried to format a regular, 'low density' 3 1/2 inch disk to 1.44 MB? Of course you have! It doesn't work! The computer gives an invalid media error. Our company was putting in a large network of IBM Clones. We have grown from a small company to a million-dollar corporation in two short years, and we didn't do it by wasting money. So, of course, we tried to use the cheap, 720K disks. Total failure.

ENTER OUR CRACKPOT ENGINEER. Our Crackpot Engineer wondered what was the difference between the disks. He tore them apart, analyzed the media. He found NO DIFFERENCE WHATSOEVER! Yet, they would not format. Why? Then he started examining the plastic housing. And he found the difference. It is NOT in the media, IT IS IN THE PLASTIC CASE!

TOTAL FAILURE! Our Crackpot Engineer (among other things, he invented the Electronic Flea Collar) sent a brand-new 720K disk to our machine shop, and asked them to modify it. They did... and the DISK IMMEDIATELY FORMATTED! But, within 10 minutes of use, it totally failed. It lost data all over the place. Back to the drawing board. The disk was dis-assembled and examined. It was found that, in performing the conversion, a microscopic piece of plastic had entered the housing, and totally ruined the disk. It was obvious that, if the conversion could be done reliably, it required extreme precision.

ENTER OUR OTHER CRACKPOT ENGINEER. Our president is a mechanical engineer. One of the best in the country. While a research scientist at Colorado School of Mines, he completely revolutionized the field of water jet drilling. He tackled the problem. Finally he came up with a solution - a precision tool which could perform the modification EVERY TIME and leave no plastic particles which would damage the disk!

MONTHS OF TESTING. We then commenced on a testing program. We modified and formatted thousands of disks, and tested them for data integrity. Out of one thousand disks, one would not format, two had one bad track. NOT ONE LOST ANY DATA! We then put a disk on a computer with a bat file which copied data to a disk, read and checked every byte, then copied the data back to the disk. The program ran 24 hours a day, for TWO SOLID WEEKS without even one error! We were finally convinced that the procedure was reliable enough for a product.

OUR OFFER. Here is our irresistible offer. Purchase our DoubleDisk Converter for the price of \$39.95. If you are not COMPLETELY SATISFIED, return the DoubleDisk. You will receive a FULL REFUND! What is more, if a disk ever does not convert properly, send us the disk, and we will send you a 1.44MB disk from a major manufacturer in exchange!

YOU CAN'T LOSE! You will save MORE THAN THE PURCHASE PRICE IN CONVERTING ONLY YOUR FIRST TEN DISKS! From that point on, it is all profit. After converting only 100 disks, and after deducting the cost of the DoubleDisk, you will have saved AT LEAST \$425.00! Quite a return for an investment of only \$39.95!

CREDIT CARDS AND CHECKS ACCEPTED! Purchasing our DoubleDisk is easy! Simply call our 800 number. We accept all major credit cards. Or, return the coupon below, and we will ship you one immediately. We will gladly accept your personal check.

24 HOURS **ORDER TOLL FREE — 1-800-537-4226** 7 DAYS
(In Colorado call 303-872-8945)

YES! I want to try your DoubleDisk on your UNCONDITIONAL MONEY BACK GUARANTEE! I enclose only \$39.95 plus \$3.50 Shipping and Handling (California residents add \$2.40 Sales Tax) for each DoubleDisk Converter. If I am not COMPLETELY SATISFIED, I will return the DoubleDisk for a FULL REFUND! If any disk ever fails to convert, I will send it to you and you will IMMEDIATELY send me a 1.44MB Disk in exchange!

PC WORLD

RICHARD LANDRY

turns them into more than hot iron. Their superior peer-to-peer networking support still awaits the word processors, spreadsheets, data bases, and E-mail software that can unlock its potential. Ironically, *Paradox*—the same program that employs incremental DOS extender technology—is one of the few programs today that can take advantage of the network both to give users free access to all the information that resides on it and to exploit its processing power. But *Paradox* is a PC program—not a workstation DBMS.

So can anyone guess what benefits we'll get from the PCs of the future? It's pretty easy to figure the hardware side of the next generation's productivity equation. Networks and 386 PCs will provide the grist for computing well into the mid-1990s. And the software side? It's still too early to say what will make the hardware hum.

As always, I'm interested in your opinions on this or any other subject. Write to me at *PC World*, 501 Second St., San Francisco, CA 94107; fax 415/442-1891; MCI Mail Richard Landry/301-3685. ●

COREL OPTICAL DISKS *for* NOVELL LANs

COREL announces the finest in data security and mass storage for Novell Networks.

As the world's leading developer of WORM (Write Once Read Many) interface software for IBM and Apple Mac computers, COREL brings its record of software excellence to the network environment.

Now, Novell Netware 2.15 has a new storage solution breakthrough. COREL optical disk subsystems provide the ultimate back-up and highest security options available.

Operating on the network file server, COREL's optical software supports elevator seeking, directory hashing, and directory caching. Complete access

across Network Bridges let you support and run even your largest applications. No extra hard disk space or workstation memory is required.

Optical storage gives you the potential for infinite capacity since removable optical cartridges are used. And security is insured with the write-once character of the technology. You'll never worry about losing data again.

COREL software is completely compatible with Novell Netware utilities, security levels, and all existing applications. The world's leading developer of WORM interface software invites you to make the networking breakthrough. For details, contact COREL Systems today!

EQUITY COMPUTERS

POWER

How Much Do You Need?

*The Equity 386/20 is
Epson's most powerful
computer. But is it
the right Equity
computer for you?*

It depends. Do you have a massive database to manipulate? Or lengthy reports to write? Do you want bolder, gutsier graphics? Or more sharply displayed spreadsheets?

The point is, more power may not be the only answer. What you really need is a personal computer with your ideal combination of features.

Enter the efficient, affordable Epson® Equity™ line. Each machine provides a different degree of speed, power, memory and flexibility. And though the features vary from one Equity computer to the next, they all share one important thing in common. Epson's renowned reputation for quality, reliability and value.

So which Epson Equity computer is most appropriate for the work you do?

EPSON

**WHEN YOU'VE GOT AN EPSON,
YOU'VE GOT A LOT OF COMPANY.™**

continued from previous page

For straightforward word processing, spreadsheets and business graphics, the 8088-powered Equity I+ is an uncommonly good value. It's Epson's most popular computer with first-time buyers, schools and small businesses.

Need more speed and color? Consider the intriguing Equity Ie. It's 25% faster than an IBM® Model 30 and features four available expansion slots—one more than IBM. Built-in MCGA video provides impressive color and clarity. In short, the Equity Ie is ideally suited for office work or for work you bring home from the office.

At 12MHz, our agile Equity II+ is the personal computer cornerstone many businesses are building on. The Intel® 80286 processor moves work along at a rapid clip, handling everything from database management to desktop publishing with equal grace and efficiency.

The Equity III+ delivers the same quick-paced 80286 performance plus nine expansion slots and room for five

mass storage devices. It's the Equity 80286-based computer with the greatest growth potential.

For CAD/CAM users, database devotees and other serious power users, there's the forceful yet affordable Epson Equity 386/20. This top-of-the-line 20MHz machine handles intense number crunching applications with great speed and sophistication.

To see which Epson Equity computer fits your power requirements, visit your Epson Authorized Dealer. Or for a detailed brochure on any Epson Equity computer, phone (800) 922-8911.

What you'll discover, quite quickly, is what you've been needing all along. An Epson.

LETTERS

Reactions and responses from the PC World community

Where's the OS/2 Payoff?

I agree with Richard Landry's comments about PC productivity and cost [*PCW*, January 1989]. Although I am a *Windows* fan, I'm not certain that OS/2 is a step in the right direction, either. The cost of equipping a machine to run OS/2 seems ridiculous. It will demand at least 4MB of memory; for the kind of applications that will make OS/2 successful, you'll probably need upwards of 8MB to 10MB. Given those costs, I don't see why anyone would stick with the PC architecture. The Mac would be a far better choice. Since we'll all have to chuck our software to migrate to OS/2 anyway, why not go with proven technology? Even UNIX with a graphic interface would make more sense.

Kerry Dawson
Toronto, Ontario, Canada

Who's Reading Your Mail?

Judy Getts's article "How Private Is E-Mail?" [*Industry Out-*

look, *PCW*, February 1989] suggests E-mail communications may not be as private as mail delivered by the U.S. Postal Service. The Electronic Communications Privacy Act of 1986 clearly protects the privacy rights of electronic mail users. It provides for a term of imprisonment and a fine of up to \$250,000 for any person who accesses an electronic communications service without authorization.

The article states that an electronic mail service can be required to disclose a message to a law enforcement agency with a warrant issued by a judge, but it fails to point out that the situation is no different for letters in the care of the Postal Service, Federal Express, Airborne, and all of the other "hard copy" carriers.

Systems Integrity
MCI Communications
Washington, D.C.

Know Your SYSOP

Mary Dolce is incorrect when she says that virus software cannot attach to read-only files [*Another Angle*, *PCW*, February 1989]. Any virus clever enough to find .EXE or .COM files—and that's not all that clever—can change their file attributes, wreak havoc, then reset the read-only attribute.

The best way to protect yourself is to deal with bulletin boards whose SYSOPs you know and trust. Good SYSOPs don't want or tolerate viruses on their boards. Stick with BBSs that test each uploaded program, and avoid downloading from those that don't.

J. Brook Monroe
Durham, North Carolina

Backing Up Again

Thanks for your article on tape backup ["Tape Backup on a Budget," *PCW*, February 1989]. While it was informative, it left some questions unanswered. The NSTL test report included the backup times and the number of files backed up, but not the number of bytes backed up, so data rates were not calculable. What good is a number-of-files statistic anyway? Just how fast are these drives?

Jon Bondy
Ardmore, Pennsylvania

The review in February compared five popular, inexpensive tape backup units. The first-past-the-post approach is fine for this kind of comparison. However, readers looking at other types of backup drives need more information to calculate transfer rates. In this issue's "Reviews" section, we take a second look at the QIC-40 tape backup units. The test report (continues)

We Interrupt T War For This Im

To all those unlucky enough to be stuck smack in the middle of the current spreadsheet confusion, take heart.

There is, at last, a viable alternative to war: revolution.

One that delivers even more performance than you have (ahem) been waiting for, but without demanding expensive new hardware or extensive retraining. And without abruptly cutting you off from any user in your company, even those on mainframes.

The name of the spreadsheet is SuperCalc®5.

And what it can do for you is, frankly, quite revolutionary.

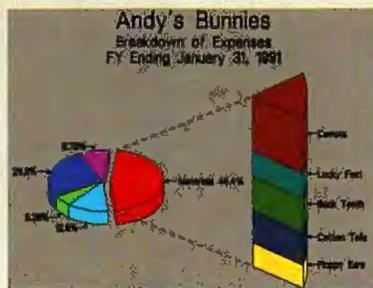

Let's begin at the end. Stand-alone quality graphic capabilities have been built in.

Offering hundreds of presentation treatments from word charts to three-dimensional bar, pie, scatter, and polar graphs.

And with SuperCalc5, you select fonts, lines, boxes, grids and shading. All of which can be used to produce the highest quality customized reports.

Plus, SuperCalc5 actually makes productivity easier. An integrated Undo feature simply reverses unwanted commands. And a truly comprehensive system of debugging highlights costly errors and analyzes macro logic.

Perhaps even more impressive

Produce annual-report quality output everyday.

Letting you easily move 1-2-3 macros into SuperCalc5 and back again. Even toggling between menus is a snap for SuperCalc5.

But not for Excel®

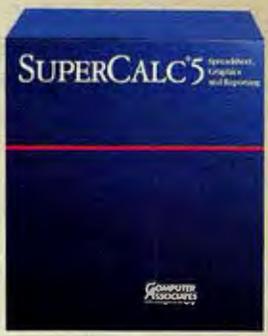

Which now brings us to the "E" word. Unlike Excel, SuperCalc5 runs on all IBM®

Microsoft. IBM is a registered trademark of International Business Machines.

and compatible computers but also takes full advantage of 286 and 386 machines when you decide to make that transition.

And if all that isn't enough to make you run out today and join the revolution, there's even more incentive.

Like our free demo disk offer through July 31, 1989. And our \$100 upgrade offer for just about any spreadsheet you're using. Call 1-800-531-5236. In Canada call 1-800-663-6904.

Which finally brings us to our admittedly biased outlook for the much touted spreadsheet war. With SuperCalc5, peace is at hand.

methodology contains both the number and size of backed-up and restored files. —Ed.

Tax Facts

Why did you assess *J. K. Lasser's Your Income Tax* as suitable for renters and homeowners, but not for investors and the self-employed ["Personal Tax Preparation Software," *PCW*, February 1989]? It includes more forms that are of interest to investors than any of the other packages. On the other hand, it appears that *Ask Dan About Your Taxes* and *Tax Preparer* don't support Form 4952 (Investment Interest Income), which is important—if not critical—to investors. Yet you suggest that both of these are suitable for the needs of investors. Is there something beyond the supported forms that renders software suitable for investors?

James K. Patterson
Houston, Texas

The *J. K. Lasser* package offers only two built-in Schedule D forms, making it cumbersome for reporting extensive capital gains and losses. Also, it provides only two Schedule E forms, for a maximum of six properties. It's quality software for the average taxpayer's needs, but it may fail to satisfy an investor in multiple companies or multiple Schedule E properties. The other two programs' lack of Form 4952 is indeed a shortcoming, but it does not negate their other benefits: multiple copies of key forms, automatic data flow between forms, and the ability to handle investment-specific "what if" queries. —Alan Southerton and Cameron Wicker

Index Link

Thank-you for your informative magazine! I especially appreciate the year-end index you print every January. I am interested in having these indexes for use on my computer. Are they available in an electronic format?

Bryan Bird
Lindale, Texas

PC World's 1988 Index is available as a 153K hypertext file—PCW88.ARC—on disk or on line. Disks can be ordered directly from Bayside Indexing Service, 265 Arlington Ave., Kensington, CA 94707; the cost is \$10, plus tax for California residents. Members of FOG, the International Nonprofit Computer Users Group, P.O. Box 3474, Daly City, CA 94015, can order it as FOG-DOS.328 for \$4 (\$8 for nonmembers). Specify the disk format (5¼ or 3½ inch) when ordering. PCW88.ARC can also be downloaded from CompuServe's IBMAPP forum, and GENIE's IBM PC round-table. The index is in the public domain and can be circulated freely. —Ed.

Two-Fisted Printing

The utility SWAPLPTS.COM [*The Help Screen*, *PCW*, February 1989] is a lifesaver. Using SWAPLPTS, I can now switch printers from any application. I had never used DOS's DEBUG before, and SWAPLPTS worked the first time. Keep up the good work and don't change...unless it's for the better.

Jon M. Stewart
Palm Desert, California

Clarifications and Corrections

The review of HP's LaserJet IID (*The Hardware Shelf*, *PCW*, March 1989) should have stated that *WordPerfect* supports duplex printing and the IID's envelope feeder.

In the February 1989 article "Q&A Message Center" (*Tips & Techniques*), George Beinhorn suggests pressing <Esc> six times to return to the main menu so the macro will work from any point in Q&A. But if you haven't already saved your work, Q&A produces a warning screen. You need to create two memo macros to save your current file automatically. In the Write macro, for example, add the following commands to your macro file after <Alt>-M:

```
<capsf10> <capsf8> ZZ <enter> y
Then reload the macro using
<Shift> - <F2> G <Enter>
```

This macro saves your Write file to a temporary file ZZ, which you can retrieve with a command at the end of the macro.

Star-Dot-Star's January 1989 Where to Buy listing didn't mention Crescent Software's unlimited technical support during office hours for *QuickPak Professional*.

"Cut Costs on CompuServe" (*Tips & Techniques*, *PCW*, February 1989) should have stated that "CompuServe's rates remain the same at all times; Tele-net and Tymnet reduce their rates at night." *PC World* regrets the errors.

To send correspondence, please see *How to Contact PC World*, page 4. ●

LAN's Best Friend

Dependable UPS systems from American Power Conversion support the UPS monitoring functions of:

- Novell's ELS, Advanced and SFT NetWare
- 3-Com's 3S/400 server
- Banyan Vines

Here's the American Power Conversion Advantage

- Systems allow automatic, secure network shutdown during extended power outages.
- No supervisor intervention is required.
- Ideal for file servers which are sometimes unattended or attended by untrained personnel.
- Complete power protection from blackouts, brownouts, sags, noise, and surges.
- The largest selection of optional UPS interface kits in the industry, including kits for 3-Com, Novell (AT and PS/2), Banyan (VINES and DTS), SCO XENIX, Convergent (SPC), Prime (2350).

A broad range of UPS products covers all networking requirements:

110SE	Compact UPS for Macintosh SE or PLUS and diskless workstations
330XT	Low cost UPS protection for network workstations
450AT	For Compaq 386, MAC II, and CAD workstations
520ES *	For NetWare, VINES, and 3-COM file servers
800RT *	For large file servers with multiple hard drives
1200VX *	For multiple PC's or very long backup power duration

*These models provide interface for use with optional interface kits.

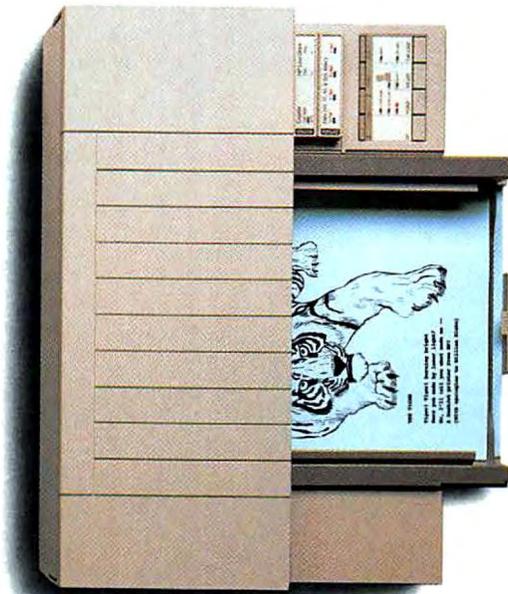

International models available. Inquire about our UPS applications handbook.

We keep telling people
this is not a laser printer.

The new \$995 HP DeskJet PLUS Printer.

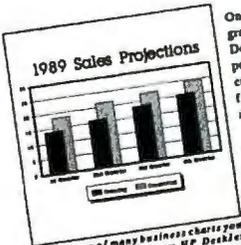

But they keep looking at the evidence.

M. Arnold R. Jones
220 Bush Street, Suite 845
San Francisco, CA 94104

Dear Reader:

Imagine being able to put out merged text and graphics that look like a single document. In fact, that your clients will think you're using a laser printer. You're not. You're using the \$995 HP DeskJet PLUS printer instead.

This is one of many business charts you can print out on the new HP DeskJet PLUS printer. Software for this text and graphics demonstration by Harvard Graphics.

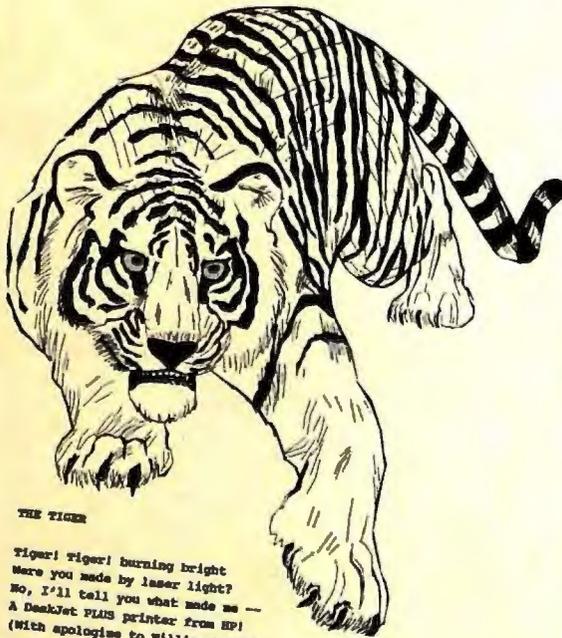

Sincerely,

Alan Grube
Alan Grube

One reason you can't get graphics around so fast is that popular software programs create your messages and beautiful.

We call it a price that's small price, for a big return.

Of course, we know how good it is for your trip to your printer for yourself.

THE TIGER

Tiger! Tiger! burning bright
Were you made by laser light?
No, I'll tell you what made me --
A DeskJet PLUS printer from HP!
(with apologies to William Blake)

MegaCorp 1988 Sales History

You won't believe your eyes (or ears), either. The HP DeskJet PLUS printer gives you the same crisp, black lettering. Clean, sharp graphics. And whisper-quiet operation. But it uses advanced inkjet technology to supply these laser-like qualities for the price of a 24-wire printer.

For just \$995, you get 300 dpi in a trim 15-pound package that's twice as fast as the original. What's more, it has built-in landscape and improved font selection. Including ten built-in fonts and over 100 optional fonts, with sizes up to 30 points. And its 20,000-hour MTBF

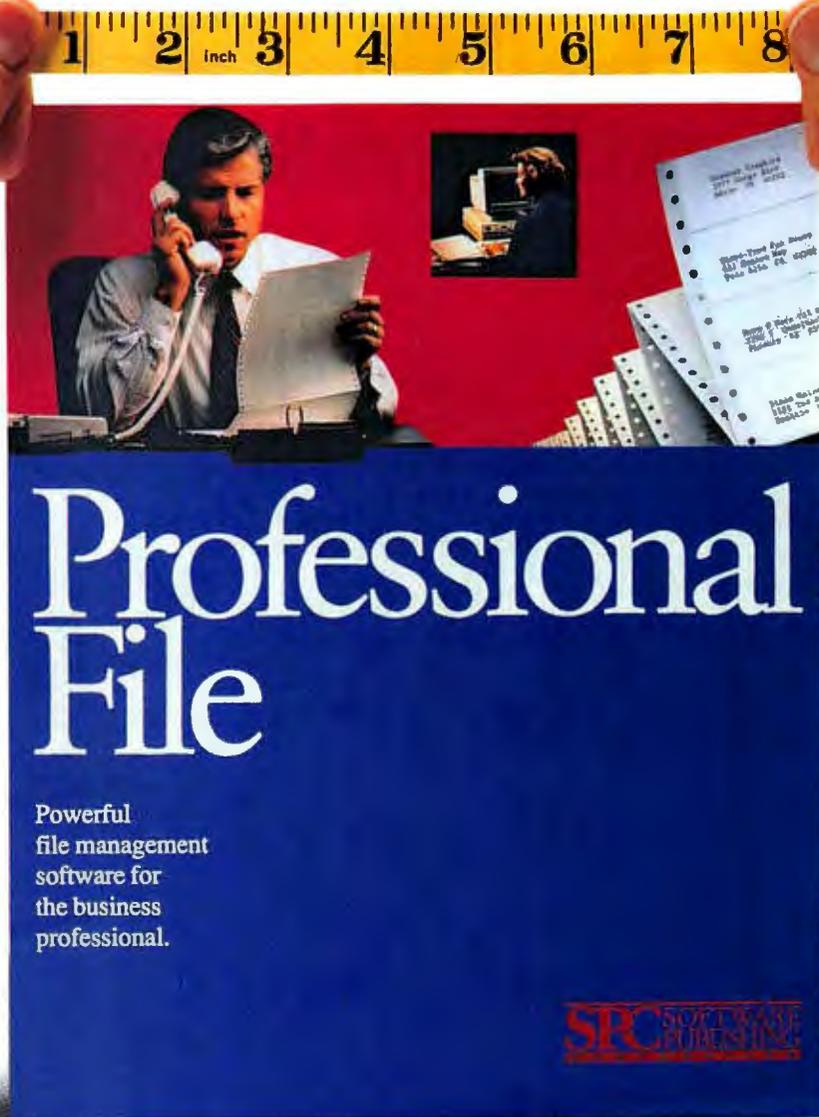

assures a long, happy life.

So call 1-800-752-0900, Ext. 276J for the name of your nearest authorized HP dealer. Then judge the HP DeskJet PLUS printer for yourself.

THE HELP SCREEN

PC World offers answers and advice at every level

Why a half-full disk won't hold more files, how to manage more memory-resident utilities than will fit in 640K, why dates differ in Excel for the PC and Excel for the Mac, and what spoolers and buffers can and can't do for desktop publishing

Karl Koessel

Limited Directory Space

Q. I recently tried to clean up my hard disk by copying some old E-mail files to a floppy disk. Before all the files were copied, however, I received a 'File creation error' message. There's nearly 120K of disk space still free, and CHKDSK doesn't show any bad sectors. Why can't I put more than 112 files on a disk?

*William Garvey
Battle Creek, Michigan*

A. When you format a double-sided double-density 5¼-inch (360K) or 3½-inch (720K) floppy disk, 3.5K of disk space is set aside for the root directory. Each directory entry—whether for a file, a label, or a subdirectory—occupies 32 bytes, so there's room for only 112 entries. Single-sided (180K) floppy disks get 2K root directories that hold a maximum of 64 entries; double-sided high-density (1.2MB and 1.44MB) floppies get 7K, with a capacity of 224 entries. Hard disks usually have 8K or 16K root directories that can accommodate 256 or 512 entries, respectively. Subdirectories, on the other hand, can grow; the number of entries they'll hold is limited only by available disk space.

Because the space held for the root directory doesn't change, you must use at least one subdirectory to put more files on a disk than its root directory can manage. If you create a subdirectory on your floppy disk and copy your files into it, you'll avoid the root directory file limitation and fill the disk. However, if there are more files to archive than will fit on one floppy, you have another problem: To copy the remaining files to another disk, you'll have to painstakingly specify each file name individually.

To make archiving E-mail (or any directory's files) easy, use this semiautomatic technique (which assumes that you are using DOS 3.2 or a later version

and that the DOS commands ATTRIB and XCOPY are available from a directory listed in your system's PATH): First, format a few disks and use the command `MD A:\EMAILARC` to make a subdirectory on each disk. Let's assume that `C:\EMAIL` is the directory with the files you want to archive. Make `\EMAIL` the default directory for drive C:, and then issue the command `ATTRIB +A C:.*` to set the archive flag of every file in the `\EMAIL` directory. Slip one of the archive disks into drive A:, use `CD A:\EMAILARC` to set the default directory for drive A:, and enter the command `XCOPY C: A: /M` to begin archiving. When the floppy has filled, DOS will display an 'Insufficient disk space' error message (don't fret), followed by the DOS prompt. Exchange the full floppy for a new one, and reenter the `XCOPY C: A: /M` command.

XCOPY's `/M` parameter tells XCOPY to copy only those files that have their archive flag set and to remove the archive flag from each file that is copied. Thus, each subsequent XCOPY `/M` command begins copying where the last XCOPY command left off, since only those files that still have their archive flag set are copied.

(continues)

Breaking the 640K Barrier

Q. *I work with Software Publishing's Professional File 2.0 on my AST Premium 286. I also use a pair of TSRs—Borland's SideKick and Personics' SmartNotes—that require 90K each. But because Professional File takes up 512K of the 640K of usable RAM, there's not enough memory left to install both utilities. So to use the utility not currently installed, I have to save my Professional File data, exit that application, uninstall one utility, install the other, and reload Professional File and the data.*

Is there a way for me to unload one memory-resident utility and load another without having to close Professional

File? Please keep in mind that I'm just a computer user, not a computer programmer.

*Robert B. Hendrix
Arcadia, Texas*

A. Many PC users are finding that 640K is not enough. Sometimes a favorite program is just large enough that it won't fit in the memory that remains after loading network drivers and terminal emulation programs. Others, like yourself, notice RAM cram when they try to add one more TSR to their usual set of programs.

While several TSR managers have popped up on the computer scene, Helix Software's *Headroom* stands out from the crowd. It's the only one I know of that enables you to swap TSRs while in the middle of an application and still use your TSRs as

though they're both in memory. You could, for example, use *SmartNotes* to attach a note to a *SideKick* Notepad file. You can even use it to swap applications and TSRs in and out of memory with a single keystroke.

Headroom manages up to 32MB of TSRs and applications, resolves TSR conflicts (some are notoriously ill-behaved, especially in the presence of other TSRs), and uses extended memory, expanded memory, or a hard disk to hold swapped-out TSRs and applications. Swapped-out programs take up no user RAM, and *Headroom* itself uses only 50K.

Four More Years?

Q. *In my office, we use Microsoft Excel on both PCs and Macintoshes. A co-worker and I have mastered the intricacies of file transfer so that we're able to exchange worksheets between his Mac and my PC, but the translation process seems to have one bug in it. If his spreadsheet contains a date like June 15, 1989, it will show up on my PC as June*

15, 1985—exactly four years earlier. I've been changing all these dates manually, but there's got to be a better way.

*Kathy Lopez
Marysville, California*

A. The Mac and PC versions of *Excel* are remarkably similar, but there are some differences, and you've discovered one. To understand why your dates don't agree, it might help to review how spreadsheets store and format date (and time) information.

Excel uses 1-2-3's date system, which treats dates as serial numbers, with each whole number equal to one day. As long as you input a date in a format that *Excel* recognizes, the program will store the date as a serial number and display it using the default date format. In the PC version of *Excel*, the number 1 translates to

January 1, 1900; thus, when you enter 6/15/89, *Excel* translates that date into its equivalent serial value—32674. The 32,674-day total is one more than you'd expect, since 1-2-3's date system mistakenly classifies 1900 as a leap year. In the Mac version of *Excel*, however, the numbering scheme begins with January 1, 1904. Using that date as the starting point, June 15, 1989, would be represented by 31212.

Fortunately, there's a simple fix—at least for the Mac-to-PC direction. Open the worksheet in the PC version of *Excel*, and select Options Calculation 1904 Date System. Save the worksheet with this option selected so dates will appear as you expect (the file's serial date numbers are not changed).

If Everyone Worked Alike, We Would Only Have To Make One Computer.

But they don't. So we created a broad line of PC compatible computers to meet your individual computing needs while working within your budget.

Whether you are with a Fortune 1000 corporation, manage a small business or work at home, there's a Mitsubishi* computer to fit your requirements in size, speed and power.

The sleek mp286L portable is easy to use at home or carry from home to the office. The MP286 is a small footprint desktop PC. For expandability, it's the 32-bit MP386 or the new 16 MHz MP386s — the perfect balance of size and power.

For greater convenience and performance flexibility, you can integrate your PC with a wide choice of Mitsubishi peripherals including color monitors, disk drives, scanners and color thermal transfer printers.

See our full line at your authorized Mitsubishi dealer who is ready to listen and recommend just the right Mitsubishi system and peripherals. Or contact the Mitsubishi Information Center by calling in the U.S. and Canada 1-800-556-1234, ext. 25 (in California, 1-800-441-2345, ext. 25).

With over a decade of experience, Mitsubishi has delivered over a half million personal computers earning a reputation for unparalleled quality and dependability.

Do they call it a h it's so hard to find wh

You're looking for a specific piece of information on your PC. But you can't remember which memo, spreadsheet or even which file it's contained in.

And you're certainly not about to

search through each directory, much less load and unload every file to find it.

That's why we created Magellan.[®] The first utility that helps you find your files by letting you instantly see their contents as

Hard disk because at you're looking for?

they appear in your favorite applications.

Without even having to load the specific applications that created the file.

With Magellan, all you need is a general idea of what you're looking for.

Because unlike other programs, the Magellan Explore function can perform a search on a phrase, a topic, an idea or even an entire file. Not just key words.

Then it lists your "found" files on the left of your screen in order of how relevant the contents are to the search topic.

As fast as you can scroll down this list, the

Magellan SpeedView function instantly displays the complete contents of each file on the right of your screen, highlighting the relevant text for you.

Using the information is easiest of all. Because all it takes is one keystroke to launch into the application that created the file, and it'll be loaded and ready to go.

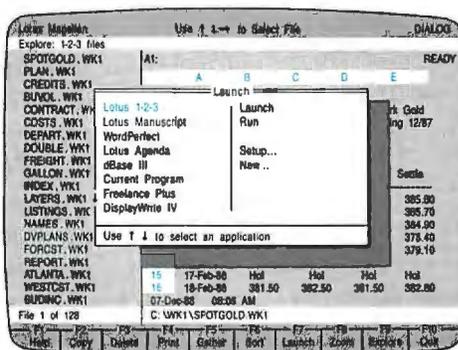

Or you could use Magellan to gather the

Introducing Lotus Magellan

information you choose from several different applications (like a 1-2-3[®] spreadsheet and a WordPerfect[®] memo)¹ and put it into a single file so you can start using it right away.

Best of all, you're productive literally

five minutes after installing Magellan. The menus are intuitive, and everything you need to run the program is on the screen right

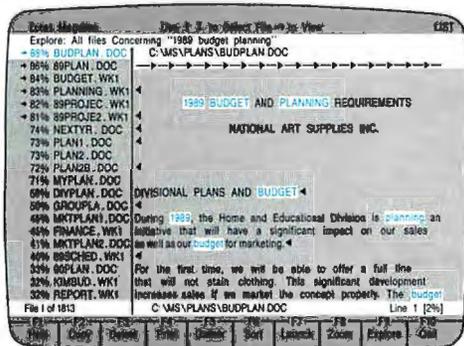

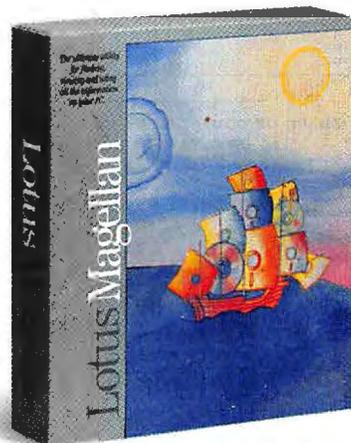

With one keystroke, Magellan loads the selected file and application, in this case 1-2-3, so you're ready to go to work.

in front of you. Which means that there is virtually no learning curve.

Call 1-800-345-1043 for your free Magellan demo kit. Ask for ALL-3593 to learn more on why Magellan is the quickest, easiest way to access all the information on your hard disk.

That way, you can spend time working with information, instead of just looking for it on your PC.

The Magellan Explore and SpeedView functions let you locate everything related to a particular topic and see it as it would appear in its native application.

7)	14) Configure Menu System

Multiple Menu Styles
Single Key Maneuverability
Easily Command The Powers Of Dos
Single Logon Password Protection
Easily Customized

MULTIPLE MENU STYLES

Organize your menus and menu items in any manner you wish. Choose from 5 menu styles for each menu or customize your own screen using the boxing style. Display up to 39 items on a single screen.

SINGLE KEY MANEUVERABILITY

Menu items are selected by highlighting an item or entering a number. Randomly maneuver from menu to menu by pressing a single function key.

EASILY COMMAND THE POWERS OF DOS

Expand file descriptions to 30 characters. Save the commands and paths of each menu item and execute them with a single key stroke. The unique design of this system eliminates the need for training in dos.

SINGLE LOGON PASSWORD PROTECTION

Initial logon password protection controls access to all programs. Access levels are assigned to users, menus and menu items to protect sensitive data. This procedure allows time sharing and networking management.

EASILY CUSTOMIZED

Uses a configuration utility that saves the commands and paths of each menu item making the customization of your menu an easy task. Add, change or remove menus and menu items, control password protection, protect data files, setup user IDs and passwords and establish access levels.

Interestingly, the Macintosh version of *Excel* doesn't offer an equivalent function. If you import a worksheet created on a PC to a Macintosh, be prepared to fix the dates manually.

Buffers and Spoolers Demystified

Q. *I use PFS: Professional Series and First Publisher on my XT clone. Printing one page of text and graphics takes more than 45 minutes with my Star NX-10 dot matrix printer. During that time, I can't use my PC to do anything else.*

Will a spooler or buffer restore the use of my computer sooner, or must I get a faster printer? And while we're on the subject, just what is the difference between a spooler and a buffer, and what are the advantages and disadvantages of each?

Tom Gilmartin

Staunton, Virginia

A. What you really need is a faster computer. During most of the 45-plus minutes of "printing," your publishing program is making up the page before sending it to the printer. Neither a faster printer, a spooler, nor a print buffer will reduce page-makeup time. That said, here's an explanation of spoolers and buffers. Keep in mind that they are not mutually exclusive; many people use them together.

A print spooler is a memory-resident utility that intercepts an application's printer output and stores it on a hard disk (or, in some cases, in RAM). This process generally takes much less time than actually printing the

output. Then the spooler sends the stored output to the printer as a background task, while you continue to work in the foreground.

A print buffer, on the other hand, is a hardware device that consists primarily of RAM and usually is connected between the PC and the printer. Like a spooler, a print buffer intercepts and stores an application's printer output so that control of the computer returns to the user more quickly. From then on, unlike the spooler, the print buffer alone handles the task of passing the print data to the printer. Thus the PC can work at full speed; it does not need to slice up its processing or disk-access time between the spooler in the background and the application in the foreground.

A spooler is far less expensive than a print buffer (buffer RAM can cost a bundle), but it's also slower; the amount of processor time that spooling steals from the main application can be annoying, especially on slower systems such as yours. Also, any PC (with the appropriate port) can use a printer and buffer, but a spooler makes sense only if you have a hard disk or a lot of free RAM. Some print buffers enable several PCs to share a printer, automatically queuing print jobs. For more information about print spoolers and buffers, see "Buyers' Guide: More Power to Your Printer," *PCW*, May 1989.

To send correspondence or to submit material for publication in this column, please see How to Contact PC World, page 4. ●

Sometimes even the most advanced technology starts with a simple idea.

Finding a way to make a printer with laser quality, but without laser cost, was no easy task. So when Canon engineers designed the BJ-130, they were quite surprised to find such a simple answer. Bubbles. Millions of tiny ink bubbles, in fact, that quickly and quietly print at up to 360 DPI for performance that's almost unheard of in a non-impact printer.

The BJ-130 Bubble-Jet Printer provides incredibly precise print quality for everything from text to graphics and lets you print on just about any plain paper you choose. Even paper as wide as 16.5 inches,

Canon
BJ-130
Bubble-Jet Printer

thanks to a 136-character/line carriage that's the widest in its class.

And when it comes to virtually maintenance-free performance the BJ-130 is also in a class by itself, with built-in automatic cleaning and a unique 48-nozzle print head that lasts for years. Along with high speed operation that's so quiet you can keep the unit right by your desk, convenient cut-sheet feeding plus complete software compatibility, the BJ-130 Bubble-Jet Printer is simply faster, simply quieter, simply clearer.

Quite simply, it's a better way to print.

For more information, call the Bubble-Jet Hot Line 1-800-453-7000

How to tip the balance in your favor.

Introducing
one heavy-duty PC.

Processor: 80386	Speed: 25 Mhz
Memory: 2 Mb-18 Mb RAM	Total Slots: 8

PW² Series 300/10 80286 10 Mhz

PW² Series 500/12 80286 12 Mhz

PW² Series 800/20 80386 20 Mhz

Getting more from personal computing doesn't mean more PCs. It means balancing the right PCs with the right business solutions and connections.

PRESENTING Our new PW² Series
THE RIGHT PC 800/25A starts with 25Mhz, 80386 desktop muscle. Up to 640 Mb of mass storage, cache memory, with tape back-up and VGA displays. And Windows/386 with MS-DOS to give you both ease of use and multi-tasking flexibility.

THE RIGHT BUSINESS SOLUTION The best solutions are created with specific businesses in mind. So we offer you our dealer network to bring you custom-tailored software. A free book tells you who and where you can get everything from Distribu-

tion inventory control to Healthcare payroll applications.

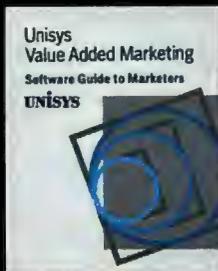

THE RIGHT CONNECTIONS Unisys is an industry leader in networking. And that includes our PCs. With our **USERNET²**, you can choose from Ethernet, Token Ring or simple twisted-pair wiring to communicate with minis, mainframes, or other PCs.

And don't worry. Despite all the added power, these are true PCs. So you can run MS-DOS, XENIX, and MS-OS/2 operating systems.

Call today for your **FREE** copy of the Unisys Guide to Marketers. Find out more about the new PW² 800/25A. And discover how one heavy-duty PC can tip the balance in your favor. Call 1-800-547-8362.

EasyFlow

An on-screen chart processor that knows about charts and diagrams, not just another "screen-draw" program that makes you do most of the work. **EasyFlow** is a powerful full-screen graphics program dedicated to data-flow diagrams, flow charts and organization charts. With it you can quickly compose diagrams. More important, you can easily modify them so they are always up to date.

Automatic. Fully automatic text centering within shapes. Fully automatic line routing & re-routing. Fully automatic placement of text along lines.

Fast. Written in assembly language for speed.

Large. Diagram size limited only by available memory. Supports LIM expanded memory. Diagram too large for your printer? EasyFlow automatically breaks the diagram up & prints it in page size pieces.

Standard. All standard data flow and flowcharting shapes included. Other shape libraries are available.

User friendly. Don't take our word for it. PC Magazine says "EASYFLOW lives up to its name. It's hard to imagine any easier and more flexible way to produce basic and even complex flowcharts".

Mouse. Optional but fully supported.

It works. Over 50,000 copies sold. Two of the "big eight" accounting firms have world wide site licenses for the use of EasyFlow.

It prints. On most popular printers including IBM, Epson, Toshiba, HP LaserJets, HP Desk Jet XEROX 4045, postscript printers and many others.

It plots. On HP7440, 7475, 7550 and 7585B plotters.

Documented: 130 page manual plus over 150 screens of context sensitive help.

Rush delivery: Order by noon today (eastern time) and you'll have it tomorrow. Rush delivery charge is \$10.50 (instead of \$2.00) and is available only to continental USA and Canada.

EasyFlow works on IBM PC's, IBM PS/2 and compatibles. Requires 512K memory, hard disk and an IBM CGA/EGA/VGA or Hercules monochrome compatible adapter card.

Order direct for only **\$149.95** + \$2.00 S&H (USA/Canada), \$10.00 (foreign).

Payment by M.O., check, VISA MasterCard or Company PO.

PC WORLD

July

1989 Software Update

PC World's third annual blockbuster software issue explores six pivotal business applications. With the help of NSTL performance benchmarks and our extensive Features Evaluations, we look at more than 30 cutting-edge programs.

An All-Review Cast

Microsoft Word and WordPerfect may be well known, but they're not alone. We examine how skillfully eight leading word processors balance ease of use and power features. Plus, our Buyers' Guide to word processing utilities.

If you spend your work-day filling out forms, don't miss our forms software roundup. Five packages prove creating attractive and useful business forms doesn't have to be a full-time job.

Our software update also includes reviews of four top relational data base managers, seven multi-user accounting systems, a handful of drawing tools, and four work-group packages.

Circle 79 on reader service card

No Matter How It's Protected, Be Sure You Can Back It Up.

Several products can back up protected software. But only two are tough enough to handle even the trickiest protection schemes.

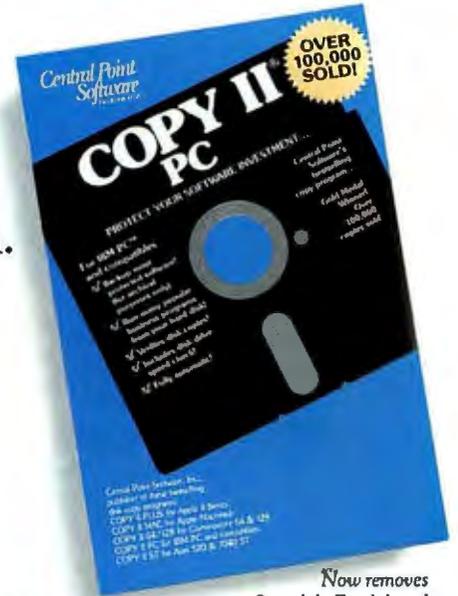

Copy II PC,[®] for just \$39.95, backs up more protected software than any other program. What's more, it can remove copy protection already on your hard disk. *PC Magazine* calls it the "easiest of such programs to use." And now, with our menu-driven Noguard, it's a snap. Copy II PC easily handles Lotus 1-2-3 and over 100 other top-selling programs.

For the ultimate solution, try the **Copy II PC Deluxe Option Board**. For just \$159, it gives you the same advanced technology used by commercial disk duplication firms.

PC Magazine reported it "could not find a program this board couldn't handle." It's so powerful, in fact, it even lets you read and write Mac data files in a IBM PS/2 Model 25 or 30, or a PC or AT with a 3.5" internal drive.

No matter how it's protected, be sure you can back it up. For the dealer nearest you, or to order direct, call (503) 690-8090,

M-F, 8 a.m. to 5 p.m.
(West Coast time).

Now removes
Superlok, Everlok and
Prolok copy protections.

KODAK**

Introducing the perfect companion for your laptop computer: the new Kodak Diconix 150 plus printer.

Hundreds of thousands of laptop users loved the Diconix 150 printer. Now there's a 150 plus. It delivers improved print quality, on plain paper, and is faster than ever. It's still the smallest, lightest, quietest printer in the world.

- Faster than ever—180 CPS.
- Improved print quality—even higher resolution and improved font design.
- Prints on plain paper.
- Improved paper handling, easily handles tractor feed and cut-sheet paper.
- So compact and light you can carry it anywhere—3.1 lbs.
- So quiet you can use it anywhere.
- The proven reliability you expect from Kodak.

The Kodak Diconix 150 plus printer. Now you can read what you write before you get back to the office. For details, and the name of your nearest dealer in the U.S. or Canada, call 1 800 255-3434.

Portable power for the printed page.

The new vision of Kodak

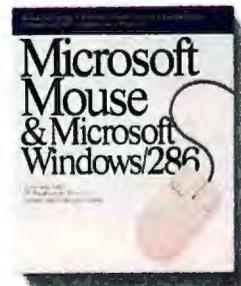

Push your software to the limit.

If you want to get the most out of today's new, high-powered software applications, we have a few words of advice:
Use a Microsoft® Mouse.

The Microsoft Mouse gives you easy access to all the powerful features today's software has to offer.

It looks innocent enough here, but wait until you see how the Mouse makes your software scream.

The Mouse can unleash your software—and take full advantage of the features intended to make your work easier.

With the Mouse you can effortlessly manipulate menu-driven applications without taking your eyes off your screen. You can pull down menus. Highlight text in one fell swoop. Copy, cut and paste formulas in spreadsheets easily. And move things from here to there without any command-key mumbo jumbo.

Literally hundreds of applications support the Mouse. But as the leading software developer for personal computers (and one of the first to bring a graphical interface to PC screens), we've gone a step further:

Microsoft Windows/286 with PC Paintbrush® for Windows, Microsoft Paintbrush or EasyCAD™2 actually come with the Mouse (or vice versa).

Already, the Microsoft Mouse has made its way into the hands of over one million personal computer users. And that number is sure to grow even faster. After all, graphically oriented software is the driving force behind improved productivity.

But it's the Microsoft Mouse that puts you in the driver's seat.

Microsoft®
Making it all make sense.™

WINDOWS JOURNAL

First-hand dispatches from the Windows front

In this new department, Stewart Alsop makes the Windows commitment. He offers a few thoughts on the state of the graphic interface and describes the ground rules for living with Windows.

Stewart Alsop

If you've been reading my columns here in *PC World* for the past 22 months, you know I've been writing about general industry issues. This new column is specifically about the experience of using *Windows* as a standard graphic environment, and its inception reflects the tremendous number of *Windows*-specific programs that have begun to come to market.

Some of those programs, like *Microsoft Excel*, *Aldus's Page-Maker*, and *Xerox Presents*, are basically Macintosh software rewritten to run with *Windows*. But a lot of the new programs—

Micrografx's Designer, *Samna's Ami*, *Premise Software's Designview*, *Columbia's Formbase*, and others—have been written specifically for *Windows*. They're also interesting applications in themselves.

This surge of new products means *Windows* is finally becoming a viable user interface and operating environment. Indeed, the introduction of original *Windows*-only software is beginning to build the same momentum and excitement that developed when software for the Macintosh showed up in quantity in 1986.

I think I have the credentials to write about *Windows*, not so much because I'm an industry analyst but because I actually use a lot of this stuff and know what it's like to experience both the joy of discovering a really good piece of new software and the frustration of struggling with a bad program. I've used DOS (reluctantly) for about six years, and I've been using a Macintosh to produce my newsletter for several years. I've also had intermittent experience with *Windows* since it was introduced, although I've never used it as my standard environment.

The Interface State of the Art

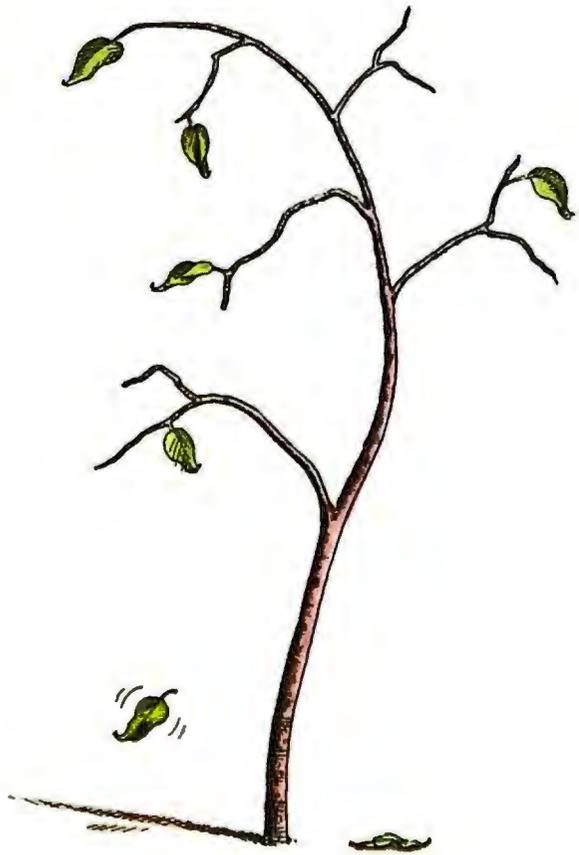

Here's where the state of the art is in graphic interfaces. The Macintosh is still the clear leader in interface design, not because

Apple has some higher authority or moral position on the subject, but simply because the company has a longer history of selling such interfaces and dealing with user complaints and suggestions. Indeed, in real terms (as opposed to political positioning), Apple still maintains about a three-year development lead over Microsoft and the IBM world.

But Microsoft has made serious progress and is beginning to figure out what Apple has been talking about all these years. Though *Windows* still lacks many useful little utilities that populate the Macintosh world, it's now a usable environment with a distinct personality and a large and growing selection of application software.

IBM, on the other hand, is still in kindergarten when it comes to user interfaces; the *Presentation Manager* just isn't ready for prime time. In its innocent attempt to improve on *Windows*, IBM made *Presentation Manager* more difficult to use and thereby slowed its potential adoption rate.

For instance, *Windows* is plagued with something called the MS-DOS Executive, which is simply the DOS command line implemented with windows, pull-down menus, and dialog boxes. It's bad enough that what's supposed to be an easy-to-use graphic interface lacks a desktop metaphor, one of the most basic elements of such an interface. (continues)

You thought you'd have it made in the shade when you bought into the 386SX™

You expected more.

You Get More With Harris' 80C286.

When you're looking for extra performance, ask for systems designed around our 80C286.

At 16 MHz our 80C286 can outperform the 80386SX by up to 20% when running 80286 code — the industry's largest base of installed software, DOS and OS/2 included.

At 20 MHz there's no comparison — because there's no 20 MHz 80386SX.

And 80C286 gives you a growth path for the future: a wide performance range. From 12.5 MHz to 16 to 20 and on to 25 MHz — so you can migrate simply and smoothly when you want added throughput.

Another measure of performance is durability — running faster longer. The 80C286's low-power

CMOS design assures reliable, long-term high-performance operation. With no overheating. No fans or heat sinks.

So hang on to your software investment. Send for our technical information kit. It outlines all the 80C286's performance advantages, along with benchmarks for several top 20 MHz PCs. For top performance and reduced system cost, look to the fastest 286 yet — the Harris 80C286.

Circle 176 on reader service card

What's worse is IBM's decision to *improve* on the DOS Executive by replacing it with three programs—Start Programs, Task Manager, and Filing System—each of which performs some group of tasks, the purpose of which isn't obvious. In short, IBM took a fairly simple file system and made it so complicated that even an experienced user like me has trouble figuring out what the pieces of it do. (That's only one of Presentation Manager's problems.)

After having OS/2 and Presentation Manager on my computer for a couple of months, I'm pulling them off. I'm going to write this column as if there were no software in the world except *Windows* software. What I will write about are *Windows* applications: how they work, how they feel, how they compare to other programs either in DOS or on the Macintosh. I'll try to point out the horrible gaffes *Windows* developers make as they learn to design graphic software, by Macintosh developers as they try to expand the market for their programs by rewriting them for *Windows*, and by new developers as they explore the bleeding edge of software design.

Taking the Windows Pledge

The premise of this new department is that I will use only *Windows* software on my PC. I won't quit *Windows* to accomplish something that *Windows* won't let me accomplish. And if *Windows* won't let me do it, then I won't do it. In my standard working day, I now swivel back (*continues*)

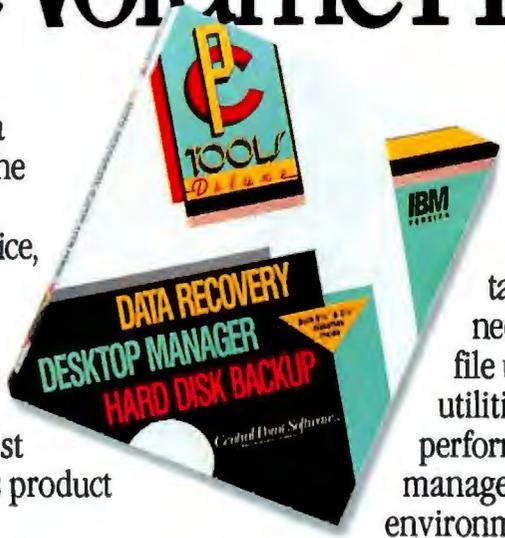

Why Buy A Library When A Single Volume Has It All?

You could spend close to a thousand dollars buying all the software pictured above.

Or, for a fraction of the price, you could get all of their best features in one easy-to-use utilities package: PC Tools® Deluxe.

PC Tools Deluxe is the most complete and capable utilities product available at any price.

It includes data recovery utilities for recovering accidentally deleted files or repairing corrupted disks. Its resident DOS shell allows you to view multiple directories simultaneously and copy or move files with just a click of a mouse. The hard disk backup program is fast,

has an adaptable data compression feature for cutting backup time by as much as 50 percent, and even tells you how long the backup will take and the number of disks you'll need before you start. There are file unfragmentation and disk-caching utilities for enhancing your system's performance. And PC Tools' desktop manager features a unique windowed environment, full mouse support, pull-down menus and context-sensitive help that make learning and using the product a breeze.

So before you invest in an entire library, check out PC Tools Deluxe. With more than a half million copies in use, it's on everybody's best sellers list.

Power Meeting.

Power up your presentations with a Proxima Data Display. It brings your computer on line to make meetings come alive.

You probably spend much of each day in meetings. How smart you look, and how effectively you make your point, can make or break a career. You need a Proxima™ Data Display, from Computer Accessories Corporation.

Proxima Data Displays plug into your computer's monitor port, alongside the monitor you're now using. Just set the Data Display

atop any conventional overhead projector to project precisely the image your computer generates.

POWER PRESENTATIONS

The Proxima family of Data Displays turn ordinary overhead projectors into power tools. They provide a real-time interface between your computer and the meeting room wall. Why, you can even change your

data as you present it, and respond to "What if..." questions on the spot. *That's* power.

Proxima Data Displays are perfect for sales presentations, training sessions, financial analysis — whenever you need to share your data.

Control your software and manage your presentation with a touch of the keyboard or, with the Data Display MultiMode™, a click of the

hands-free remote control.

Use the latest software to create attention-getting animated segments and slide-show like special effects. Reveal pie charts and other graphical presentations of data that drive your message home. Look smart. Feel smart. With Proxima, you're in control.

Small, light and portable, Proxima Data Displays travel with you.

Data Display Multi-Mode for VGA, EGA, CGA, PS/2, AT, XT, Mac and Mac II

Data Display 400 for EGA and CGA

Data Display 342 for Mac 512K, Plus and SE

Data Display 200 for CGA and Apple II

PROXIMA SETS THE STANDARD

Our new Data Display MultiMode sets the standard for projection panels with the highest resolution display available — 720 x 480 pixels — essential for displaying VGA text. It's compatible with a broad range of video standards — CGA, EGA and VGA — and systems — PS/2, AT, XT and compatibles, and Macintosh and Macintosh II. And only Proxima gives you OptiView™, so even complex color images from your computer screen are optimized for overhead projection.

For the full story on how Proxima Data Displays can give you presentation power, and the name of the dealer nearest you, call us — 800/582-2580, ext. 35 (in California, 800/582-0852).

It Shouldn't Take Forever to Learn Your Accounting Software

BusinessWorks PC makes it easy.

PC WORLD "BusinessWorks is a slick program that's easy to use ... powerful features and ease of use merits **PC World's Best Buy Award**" March 1989

SOFTWARE DIGEST "BusinessWorks is the best of the low cost accounting programs. Most users become productive using BusinessWorks within just a few days." **★★★★ Rating** August 1988

PERSONAL COMPUTING "The excellent interactive guidance ... made it the clear winner in Practicality." **No. 1-Overall Practicality** January 1989

INFOWORLD "Ease of learning is rated excellent. Ease of use is judged excellent." **Best in its Class** October 24, 1988

ACCOUNTING MADE EASY!

BusinessWorks PC's lets you dedicate your time to managing your business, not your books. Pull-down menus, built-in context-sensitive HELP, and pop-up show windows make setup and daily use amazingly simple. Plus, when you purchase BusinessWorks PC, you'll receive 90 days of toll-free support from the experts at Manzanita Software. With BusinessWorks PC you're never alone.

AS YOUR BUSINESS EXPANDS, LET BUSINESSWORKS PC FLEX ITS MUSCLE

System Manager. General Ledger. Accounts Payable. Accounts Receivable. Payroll. Everything you need to completely manage and control your business is at your fingertips. You can even use BusinessWorks PC with other popular MS-DOS spreadsheet, word processing and desktop publishing programs. Efficiency and performance have not been compromised for ease of use.

PERFORMANCE YOU CAN COUNT ON

With 11 years of experience producing and supporting quality accounting software, the staff at Manzanita Software Systems knows what it takes. Ask yourself, can your business afford to be without BusinessWorks PC? Then call us, toll-free at Manzanita Software.

We make accounting easy.

A Brand New Resolution The Handy Scanner HS-3000

Desktop publishing has never been easier! With the new Handy Scanner[®] 3000, you can easily add graphics to your documents. Additional software is also available for rapid text entry.

The Handy Scanner 3000 is the first hand-held scanner to offer four (100–400 dpi) resolutions for the IBM PC/XT/AT, PS/2 Models 25/30, 50/60, and their compatibles. You can scan images 4 1/8" wide and up to 20" long. The scanner has unique features such as 32 levels of grey resolution for crisp clear images, a fast 7-sec. speed for 10" scans at 300 dpi, and a yellow-green light that captures the reddish skin tones of your images (scanners with red lights just can't see the all-important skin tones). What's more, a real-time screen lets you instantly see your scanned images, so you can quickly make adjustments if needed.

With its accompanying software, you can quickly scan, bit-edit, crop, save and use the images in virtually all graphics packages, including PageMaker, Ventura, WordPerfect 5.0, PC Paintbrush+, First Publisher and Byline.

If you need a quick, easy way to enter text for word processing, you can use our optional OCR software. You can scan mono-spaced or typeset text from typewriters, dot matrix and laser printers and books. The trainable text reading software automatically and seamlessly merges two halves of a page together.

The Handy Scanner 3000 package includes the scanner, interface card, Scan software, and a leading paint program.

The Handy Scanner 3000 from DFI—call now for more information and literature.

Sales Grow Quickly

PCs Aimed at Home Offices Create Mass-Market Appeal

Resellers Claim Increased Support

Selling systems with a complete suite of hardware and software benefits consumers, says Amstrad's Vernon Moore.

Although the home-computer bust seemed to prove that you can't sell PCs like appliances or toys, last year 650,000 PCs moved through U.S. mass-merchandising channels, according to International Data Corporation estimates. "PCs are like VCRs now," says IDC analyst Bruce Stephen. "They've become a common piece of electronic equipment."

The number of PCs sold through department stores, camera shops, and electronics retailers remains slight compared to the 9.5 million units shipped overall. But mass-market unit sales swelled by 30 percent last year and should equal that growth in 1989, the Fra-

mingham, Massachusetts, research firm projects.

Retailers say they're being lured back into the PC market by consumer appetite for electronic typewriters, telephones, fax machines, and copiers—in short, for home office gear.

"We were in the computer business years ago," recalls Eugene Mondry, president and chief executive of Highland Superstores in Plymouth, Michigan. "We got out of that when the whole TV-game thing fell apart." But last November, Mondry's chain reentered the PC market. It now sells Amstrad, Blue Chip, Packard-Bell, and HeadStart computers alongside stereos, washers, and dryers in 84 retail outlets.

Predictions vary wildly on potential home business sales. John Rossi, president of Blue Chip International in Chandler, Arizona, cites estimates of 13 million full-time home-based businesses and insists that each could spend an average of \$5200 on computer products. However, New York-based researcher Link Resources counts only 3.7

million full-time home businesses and says that work-at-homers who buy PCs pay an average of \$2330 for hardware, software, and peripherals.

Traditionally, the only outlet for home-business sales was Radio Shack, says Vernon Moore, chief executive of Amstrad in Irving, Texas. "We've offered that customer an al-

(continues)

Pricing for Peripherals Reflects Industry Battles

"Irrational" Hard Drive Costs?

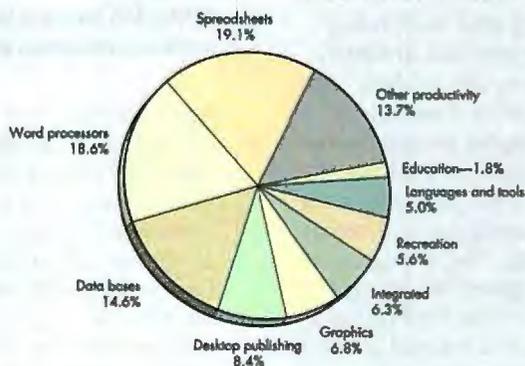

PCs steadily offer a 20 percent improvement in price/performance each year, but PC peripherals don't capitalize so directly on the furious onrush of silicon technology; peripherals often don't slide down such steep price/performance curves. In-

stead, prices tend to reflect the vagaries of fierce industry battles.

Hard disk drives, which for peripherals do show exceptional price/performance improvements, also illustrate how one or two leading vendors can set

(continued on page 58)

Application Software Sales

The Software Publishers Association estimates that roughly \$2.2 billion of PC software (at retail prices) was sold last year in North America, an increase of 44.5% over 1987. Spreadsheets clung to a narrow lead among applications.

Home Office

(continued)

ternative," Moore says. Sears recently joined the group of 1500 stores through which 100,000 Amstrad PCs move annually.

Mass-market buyers aren't shopping for cutting-edge technology. Until quite recently, when ATs and portables began to crop up, most big retailers offered only 8088- and 8086-based machines. Most home PCs are sold with 256K of memory and one or two floppy drives at around \$800 sans monitor. Color is popular, but other options generally are limited to more memory, another floppy, and perhaps a hard drive.

Operating system, applications, and accessories are typically bundled into a complete system. "We make all the buying decisions for the consumer, and we make them very well," Amstrad's Moore claims.

While hard data is nonexistent, anecdotal horror stories from the home-computer debacle abound. But savvy consumers can get decent value from mass-market retailers.

"These companies usually offer much better pricing than dedicated computer retailers," says Harvey Rosenfield, a Los Angeles attorney and co-founder of the Network Project, which helps consumers deal with technology. "You don't get much support. But my experience has been that support is minimal at best in any retail shop."

Generally, mass-merchandise support resembles that of mail order.

Most major vendors offer one-year warranties, bundled or optional on-site service, and telephone support.

You can buy Commodore Business Products' Colt PC in a Toys "R" Us outlet. But the West Chester, Pennsylvania, supplier requires home-office retailers to be able to sell their machines in-

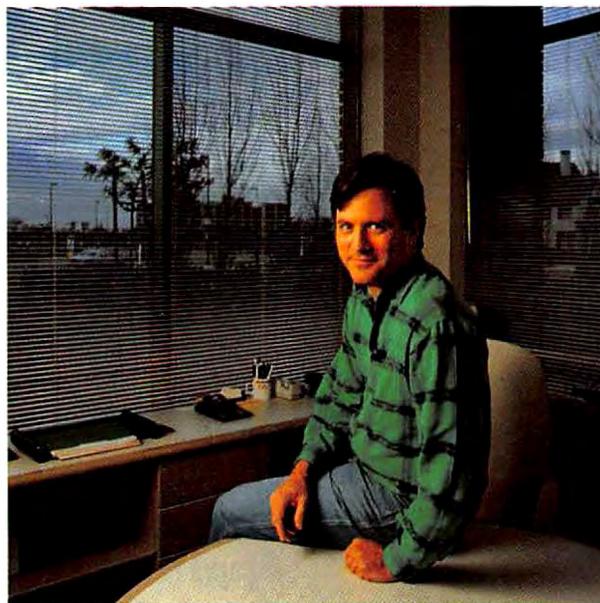

telligently, asserts Ken Weber, sales vice president. And Commodore prefers that its retailers sign a computer dealer contract for service and trained personnel.

Other vendors echo the shift toward support and service. Blue Chip, for example, offers a one-year on-site service policy as

a \$65 option. And while many mass marketers rely on vendor service and support, others are beefing up internal efforts. Some have computer dealers set up in-store PC centers. And Highland will hire a special computer staff in each of its electronics/appliance stores, Mondry says.
—Mark Henricks

Sun's TOPS-Up Strategy Adds Links to Other Nets

Pushing Ahead With Electronic Mail

TOPS's Rich Shapero insists that the need for easy-to-install-and-use work-group products will only increase.

You can share files between PCs and Macs on a TOPS network, and you don't need to be a rocket scientist to get it running. Leveraging these strengths, the net software has snared more than 600,000 users in less than three years. Now under the wing of workstation supplier Sun Microsystems, TOPS is gaining broad connections to oth-

er nets, and its electronic mail package is being groomed for a leading industry role.

Under an agreement inked last winter, Novell's popular *NetWare* software will incorporate support for both TOPS and UNIX net protocols. "You'll have transparent file access within the three environments," says Rich Sha-

pero, general manager of Sun's TOPS division in Alameda, California. Additionally, TOPS users can tap some of *NetWare*'s sophisticated network-management capabilities.

"It's a real coup for TOPS; Novell has solved the migration problem," says Nina Burns, vice president of Infonetics, a market research company in Santa Clara, California. Moreover, prospects look good for further Novell/TOPS cooperation on distributed applications, directory services, and global messaging.

David Marshak, senior analyst with Patty Seybold's Office Computing Group, also applauds the Novell deal. But he points out that TOPS capabilities remain basic, and upgrades come rather slowly. Only recently has the PC version gained support for ethernet, the NETBIOS application interface, and a minimal-memory setup.

Sun clearly plans to put more spin on TOPS. "We could see selling a million nodes for file sharing and disk sharing," Shapero says. "Another million or two could be sold where the key service is messaging." This summer, TOPS will bundle an update of

Look great without a lot of makeup.

Transforming a blank piece of paper into a document that's as appealing as this calls for plenty of page makeup.

But if you're like the rest of the world, you've barely got enough time to write, let alone struggle with formatting.

Well, now you don't have to. Because Ami is here. And it's about time.

Ami can save you about three quarters of the time you're currently spending on everything from simple letters and memos to presentations, reports and newsletters.

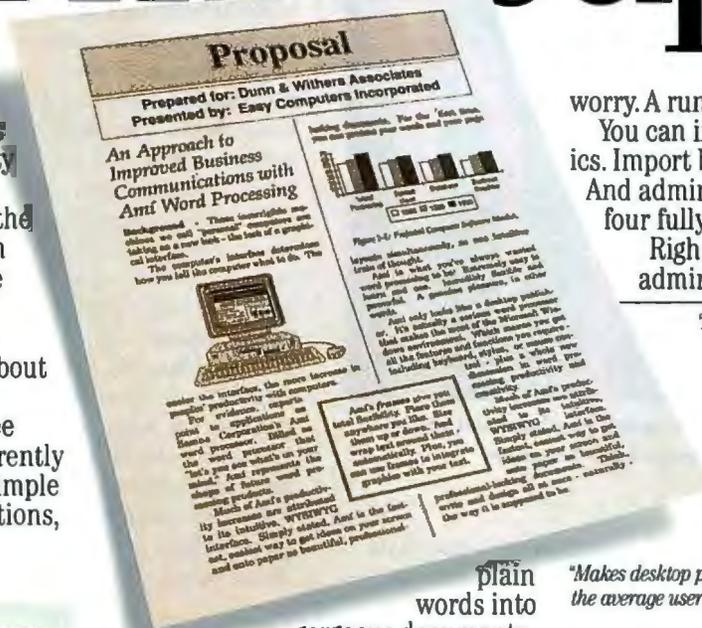

How?

By letting you write your words and make up your pages *at the same time*.

In fact, you don't have to do any makeup at all.

Because Ami gives you over two dozen pre-designed style sheets that let you instantaneously transform

worry. A runtime version is included.) You can integrate text and graphics. Import both from other programs. And admire your documents from four fully editable page views. Right now, we suggest you admire the \$199 price tag and

"A fast personal word processor... that makes it easier to produce great-looking reports, letters and memos than any other PC word processor."
PC/Computing

"Surprisingly sophisticated... quite simple to learn and use... among the most powerful of the executive word processors."
Michael J. Miller, in InfoWorld

"Makes desktop publishing class output a snap for the average user."
William Zachmann, in PC Week

plain words into gorgeous documents.

Ami looks a lot like a desktop publisher. And the documents you can create with it have desktop publishing written all over them.

But as you'll quickly discover, Ami is a serious word processor that makes the most of Microsoft® Windows.

Bitstream Carves Niche as Font Foundry for PCs

Embedding Fontware in Printers

As type fonts grow friendlier, many more users will actively exploit them, predicts Bitstream's Rob Friedman.

Type fonts, acknowledges Bitstream president Rob Friedman, don't top the typical PC user's list of concerns. But as users discover how the artful application of fonts can spiff up reports and presentations, font libraries are starting to expand far beyond their original niche in desktop publishing.

Bringing the latest font technology to the masses, Bitstream still upholds the ancient publishing tradition of independent type houses. Formed in 1981, the 200-employee Cambridge, Massachusetts, firm first concentrated on creating digital type for high-end publishing machines. Each font was designed pixel by pixel in all

permutations—size, style (such as bold), and output in various resolutions on various devices. Bitstream launched an aggressive effort to create master typeface outlines that could be scaled to any size.

As desktop publishing blossomed in the mid-1980s, an end-user market sprang into being. Bitstream began selling LaserJet typefaces in late 1986, but the big push with device-independent font libraries began a year later with the debut of *Fontware*.

Fontware comes in two parts: font outline libraries and an application-specific installation kit. The software modifies a given master font to create a downloadable bit-

mapped font that the application can drive. Bitstream sells more than 50 font libraries for PCs, each featuring four styles (typically roman, italic, bold, and bold italic) and selling for \$195. Headline packages with four faces in one style are also priced at \$195. Combos for newsletters, fliers, or books cost \$395.

End-user sales account for slightly less than half of Bitstream's revenues; the rest comes from sales to publishing equipment manufacturers and to service bureaus. "We really compete against two alliances," Friedman says. In the LaserJet-compatible arena, Hewlett-Packard teams up with Compu-graphic, a major publishing equipment supplier now promoting PC fonts. In the PostScript world, the allies are Adobe and Linotype—another large publishing veteran.

But the overall font battle boils down to PostScript versus all comers,

with Bitstream leading the attack in LaserJet fonts and providing key technology for PostScript-clone printers.

Bitstream's most visible strength is font choice. It offers more than 200 fonts for either LaserJets or PostScript devices. In contrast, Adobe markets only 80 PostScript fonts, although it's busy licensing hundreds more from other suppliers.

Fontware's greatest limitation is that it lacks PostScript's ease of use. For example: During installation, *Fontware* crunches away for half an hour while generating a font in an offbeat size.

However, the latest release performs such scaling more quickly, reduces storage requirements, and allows applications to share fonts. Moreover, Bitstream has demonstrated next-generation code that's smaller, much faster, and highly suited for incorporating into *(continues)*

TOPS

(continued)

its *Inbox* E-mail package in a plug-and-play solution. TOPS will offer *Inbox* on generous terms to current users and will help developers exploit its store-and-forward mechanisms in an effort to establish a broad standard.

But Marshak isn't sure that TOPS customers want to move beyond resource sharing. "Getting them to start cooperating using E-mail is a bigger leap; E-mail is usually imposed from the top down," Marshak says. "Logically,

this is the right step for TOPS. I'm just not sure it's going to work."

In any case, Burns expects TOPS' domination of low-end net sales to continue. She projects that its share of the PC/Mac net market will rise from 8 percent in 1987 to 11 percent in 1991. And TOPS will continue to push ease of use and installation, Shapero says. Citing predictions that 28 million workstations will be networked by 1993, he declares that such expansion just won't happen with techie-oriented nets—"We'd need four million system administrators." —E. B.

OS/2 NEWS

Volume 1, No. 4.

A continuing report on advanced software for personal computers.

Sophisticated reminder system helps you automate your processing tasks.

Enyart Development Corporation has started distributing Tickler/2™. This advanced automated reminder system lets the user create a series of reminders to occur before, during and/or after an event. Tickler/2 can even remind your computer when to perform certain tasks. Because it can be used in conjunction with your data base, spreadsheet, E-mail and project management software, it gives you amazing versatility. For example, you could set up Tickler/2 to take a previously generated sales forecast spreadsheet, update it daily, print a report and electronically mail it to another computer at the end of every week...all while you're on vacation. For more information on the advanced capabilities of Tickler/2 call 1 303 286-8686.

PC Paintbrush now available for Presentation Manager.

The OS/2™ version of PC Paintbrush® uses Presentation Manager™ to make creative expression fun, fast and easy. PC Paintbrush for OS/2 is a graphics creation package that includes all the features of the DOS-based version. It lets you create intricate free-hand graphics using the various brushes, lines, curves, colors and patterns. You can also use scores of drawing and text tools to create presentation-quality documents. For more information call ZSoft at 1 404 428-0008.

Word processing that goes beyond just words is introduced for OS/2.

DisplayWrite 5/2 Composer™ has been released by IBM. This advanced word processing software lets you scan photos and line art into your document, position them anywhere on the page, even make text flow around them...all without cutting or pasting. DisplayWrite 5/2 Composer capitalizes on the protected mode and multitasking capabilities of the IBM OS/2 environment so you can run it as a foreground or background operation. See your IBM Authorized Dealer or IBM marketing representative for complete information.

New relational data base system helps PC users handle large volumes of data.

R:BASE® is an easy-to-use OS/2 relational data base management system that features both menu and command-line interfaces. And because it includes LAN support for up to three simultaneous users (using the multitasking and networking support enhancements of OS/2), it's cost-effective as well. R:BASE also provides programming language support, and over 70 business and scientific functions are already integrated into the program. For more information on how R:BASE can help you manage large volumes of data call MICRORIM at 1 800 624-0810.

Symantec's Q&A provides powerful file management for OS/2.

Q&A™ is an integrated flat-file data base and word processor that offers OS/2 users a unique combination of power and simplicity. With Q&A you can take advantage of OS/2 benefits like multitasking and large memory. Q&A OS/2 also offers the ability to share data bases on a network with the DOS version of Q&A. Multifile lookup in Q&A means you can merge data from multiple Q&A data bases into customer-designed forms and reports. Q&A's executive word processor lets you create presentation-quality documents and easily perform mail merge with your data.

For more information on how Q&A can solve your data base and word processing needs call 1 408 253-9600.

OS/2-based Platinum provides true multitasking accounting packages.

The Platinum® Series of fifteen accounting modules from Advanced Business Microsystems is a business accounting tool so powerful that on a single computer you can print and post several hundred invoices and checks, run a reconciliation, generate consolidated financial statements—and enter new budget figures at the same time. Platinum also makes it easy for you to integrate your accounting data with data bases, spreadsheets, presentation graphics, word processing, desktop publishing and other applications. For more information on Platinum call 1 800 999-1809.

Free OS/2 Application Guide available.

You can receive a 340-page OS/2 Application Guide that lists and describes over 800 identified applications for the OS/2 operating system. For a free copy of this guide call 1 800 IBM-2468, ext. 120.

Microsoft®

IBM®

Pricing

(continued from page 53) pricing. This year, street prices for 20MB 5¼-inch drives slumped to around \$200 when market leader Seagate dumped large amounts of inventory. As Seagate and its peers turn to 20MB 3½-inch and 40MB 5¼-inch drives, the cost of those devices will sink to the same level, predicts IDC analyst David Vellante.

In the midrange, Vellante sees street prices of half-height 100MB drives, now around \$1000, dropping to \$800 by year-end. Full-height 85MB drives, currently under \$500, will stay near that price.

Generally, "the higher the capacity, the higher the chance for price to come down," notes Bob Katzive, vice president of Disk/Trend in Mountain View, California. But 380MB drives reflect "irrational" pricing, Vellante says, with some offered for little more than \$2000, so costs for these drives are unlikely to dip soon.

Large production volumes depress pricing, but only to a point. While around 2 million tape backup units will ship this year, according to Katzive, prices won't change much. Ditto for CD ROM players, whose unit shipments are about one-tenth those of the tape drives. Katzive predicts "a slow decay" in CD ROM costs, which now range from \$600 to \$1100. He doubts that vendors will slash costs before CD-based software arrives.

Monitor technology is now quite mature, but last year any price/performance gains were

wiped out by the dollar's fainting spells in the international currency markets. (Asian suppliers dominate monitor sales.) Still, competition should push prices down this year for VGA and multi-sync displays, predicts Joan-Carol Brigham, IDC's director of graphics

erine Dingman, marketing analyst at CAP International in Norwell, Massachusetts. She attributes this to the weak dollar and lack of room to trim manufacturing costs. Street pricing already reflects slim reseller margins, comments Jim Upham, director of Data-

and Macintosh research. EGA displays will remain about the same, and monochrome models probably have bottomed out, according to Brigham.

With display adapters, "we're in a transition period," Brigham says. In 1988 memory costs drove up VGA board prices, which should remain steady through year-end. The cost of EGA adapters may even rise this year as larger suppliers abandon the market.

Early next year, as higher-resolution devices begin to elbow VGA aside, VGA boards will drop to \$250 or less and monitors to \$300 or below, suggests Sohail Malik, an analyst with Dataquest in San Jose, California.

Street prices on Hewlett-Packard LaserJets and compatible page printers, now around \$2000 but sometimes dipping as low as \$1600, probably won't drop much until late 1990, says Cath-

erine Dingman, marketing analyst at CAP International in Norwell, Massachusetts. She attributes this to the weak dollar and lack of room to trim manufacturing costs. Street pricing already reflects slim reseller margins, comments Jim Upham, director of Data-

quest's electronic printers service. "Hewlett-Packard dealers are giving the printer away to sell the consumables."

Both Brigham and Upham expect this year's

Bitstream

(continued)

both printers and mainstream applications, Friedman says.

Bitstream fonts and typeface-scaling technology will be embedded in both LaserJet- and PostScript-compatible printers. While Friedman won't talk about LaserJet-compatibles suppliers, he asserts that Bitstream has "captured the vast majority of the PostScript-clone vendors." (Curiously, the PostScript "clones" may not run the original Adobe fonts—because their vendors have neither licensed nor

crop of PostScript-clone printers to nudge pricing down, but only slightly. "The low end will be around \$4000, no matter whose software is included," says Upham.

Similarly, pricing on 24-pin dot matrix printers should hold relatively steady this year, Upham predicts, with manufacturers focusing on adding functionality like better paper handling. By mid-1990, though, prices will erode almost to the level of 9-pin models.

Modems present a cheerful price picture for consumers; you now can buy 1200-bps models for as little as \$50, notes IDC analyst Josh Gonze. He predicts that 2400-bps units from market leader Hayes, with a current street price of \$445, will go for \$400 by early next year. And by year-end even 9600-bps devices will sell on average for below \$1000. —E. B.

duplicated Adobe's typeface-scaling technology.)

This year, spreadsheets and many additional word processors will support *Fontware*. Graphic operating environments will hasten the acceptance of font technology. And Bitstream will keep touting font freedom. "Different fonts give very different impressions, and we'll start explaining how you can give those impressions," explains Marketing Vice President Kelsey Selander. —E. B.

Unmatched power at your fingertips.

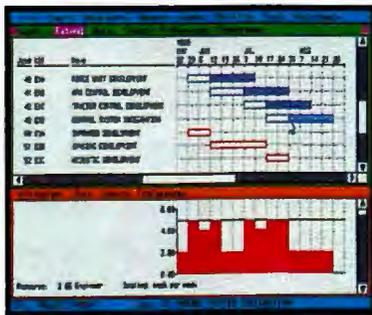

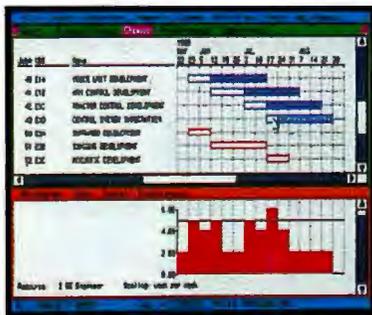

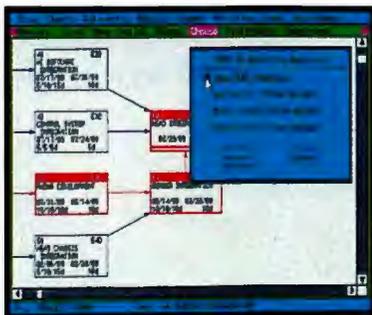

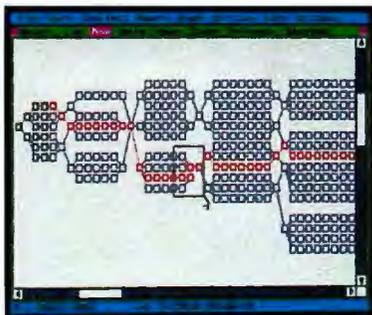

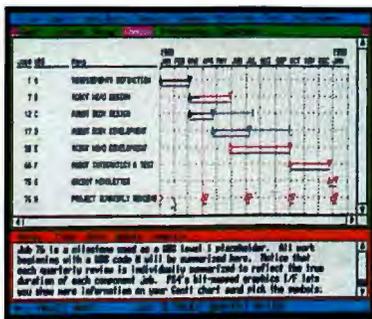

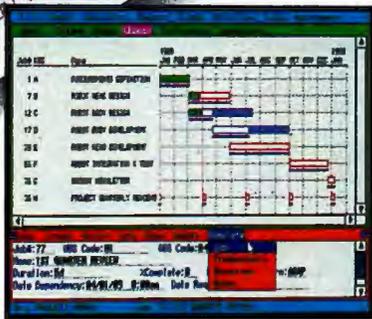

Project Scheduler 4 offers an impressive list of industry-leading power features. Projects are planned and tracked in a full graphics environment. You understand more because you see more on the screen. At last, PERT and Gantt charts make sense. Re-

sponsibilities, deadlines, and resource bottlenecks are spotted at a glance. You see more on paper, too. Beautiful, graphic reports print sideways, so you never have to cut and paste. They're instantly understandable. Not to mention simple to generate for impressive presentations.

Time-saving, world-class speed.

In benchmark tests, Project Scheduler 4 consistently outperforms all the competition as the fastest full-featured product in the industry — by a very wide margin. After all, what good are power features without the speed to make them useable. And the bigger your

project, the more speed counts. Even at the 1000-task level, Project Scheduler 4 takes only 1.5 seconds to perform schedule recalculation. When your time is on the line, your project scheduler should help you manage it, not waste it.

Project Scheduler 4 lets you view a Gantt chart in one window, while you enter or edit in another. Complete status information gives you a clear, precise overview of your entire project. You control exactly what time scale is displayed on the screen: minutes, hours, days, weeks, months, or years. Display preferences include alternate Gantt chart symbols, free and total float, baseline, WBS and OBS filters, and much more.

Four reduced network zoom levels let you view more or less detail, depending on what you need to see. Each level provides drawing tools for positioning tasks in the network and changing predecessor relationships. When working with PERT probability analysis, Project Scheduler 4 lets you control probability weights and specify alternative task duration times, while the program instantly recalculates the critical path.

In Gantt Histogram mode, a single mouse click quickly finds resource overloads and displays a list of problem tasks. To see the planned resource utilization for a task, point at it in the Gantt chart, and the corresponding area in the histogram is automatically shaded. Project Scheduler 4 lets you level resources interactively using Gantt chart Extend or Delay mode. In the example on the right, Extend mode is used to expand the duration of a task that shows free float — eliminating resource overload with a single click of the mouse.

Function	Project Scheduler 4	Time Line 3.0
Advanced graphical user interface	•

Time Line 3.0 is a registered trademark of Symantec Corp.

Exceptional ease and elegance.

Project Scheduler 4 offers sophistication that's simple to use. Its intuitive, graphic interface gives you a clear overview of the entire scheduling process — with no hard-to-remember commands or keystroke sequences. Ideal for both beginners and experts, Project Scheduler 4 is the future of advanced productivity tools.

Only Project Scheduler 4 offers the advanced graphics, high-speed performance, and ease of use you need to save time — and maximize productivity. For more information and a brochure, call or write:

Zenith, AST, and Everex Hit 33

Three 33-MHz machines move enough MIPS to scare a VAX—

and they're not from Compaq or IBM.

*Eric Knorr and
Mike Hogan*

A 33-MHz 80386 PC is like one of those stereo systems that can blow your living room apart. Who, you wonder, needs that much power?

Ah, but have you ever used *Windows*? Or—gasp—OS/2 with Presentation Manager? If these environments catch on, today's cutting-edge 80386 will become a ho-hum business machine. After all, a 33-MHz machine cranks through graphics-intensive applications about as fast as an AT runs character-based standbys.

Competition to bring out the first legitimate system with a 32 percent faster clock rate couldn't

PC World previews are informal assessments of products that at press time were still in the development stage. Complete reviews—including features evaluations and performance testing—will appear only after a product is officially released.

be hotter. At this writing, Zenith, AST, and Everex are three of the major players that may well beat Compaq to dealer shelves with an AT-compatible 33-MHz system using Intel-sanctioned 80386-33 chips. The Zenith Z-386/33 was scheduled to ship in April, while the AST Premium 386/33 should appear this

SNAPSHOT

Z-386/33

Zenith's large-footprint 33-MHz 386 entry features a small 16K static-RAM cache.

KEY FEATURES

- Up to 32MB of CPU-speed memory
- Memory cache and I/O bus controller are removable

AVAILABILITY

Scheduled for April

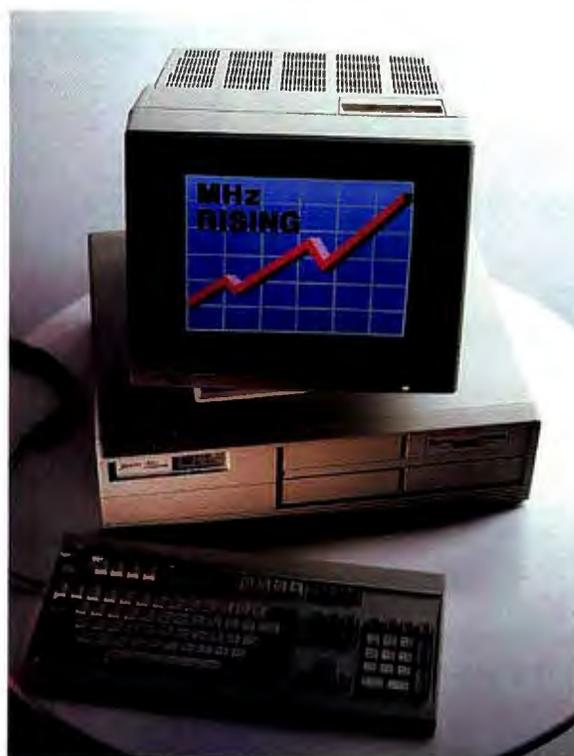

PRICING

\$7999 to \$13,499

Zenith Data Systems

1000 Milwaukee Ave.
Glenview, IL 60025
800/842-9000

Reader service no. 761

Priced at \$7999 in its base configuration, the blazing Zenith Z-386/33 features a removable memory cache and three 32-bit, CPU-speed memory slots.

month. Everex plans to release the Step 386/33 in April, but volume deliveries probably will start in midsummer.

Zenith Rises

The Z-386/33's architecture, like the Z-386/25's, is unusual. Though the CPU, coprocessor socket, and most support chips are on the motherboard,

PC World offers first
impressions of prerelease
hardware and software

the machine won't run without a 32-bit expansion board that controls the bus.

Like any machine that runs over 25 MHz, the Z-386/33 employs a very fast, very expensive cache of static RAM for no-wait-state operation. At 16K, the memory cache is smaller than most, thanks to a write-back scheme that eschews the Intel 82385 cache controller (now considered standard). Certain operations (like hosting multiple UNIX terminals) may benefit from a larger memory cache; the static RAM resides on a special removable board, offering the possibility of future upgrades.

The bigger-than-AT Zenith Z-386/33 offers external access to four half-height drives, with room for a fifth inside. It also provides space for 8MB in SIMMs on the motherboard, along with four 32/16-bit and three 8/16-bit slots. One of the 32/16-bit slots holds the bus controller board, but the remaining three can hold one 8MB board each, for an impressive capacity of 32MB of CPU-speed RAM.

With 2MB of RAM, a single floppy, an ESDI controller, and one parallel and one serial port, the Z-386/33 goes for \$7999. Add *Windows/386*, DOS 3.3, a 16-bit VGA board, and a 150MB ESDI hard disk, and you shell out

The sleek AST Premium 386/33 holds its CPU, cache controller, and memory cache on a removable board, while offering CPU-speed access to 36MB of 32-bit memory. The base configuration costs \$6965.

\$11,499. A 320MB ESDI hard disk version costs \$13,499.

AST's Challenge

Like its 25-MHz predecessor, the Premium 386/33 sports a modified passive backplane (which includes the BIOS). The only difference is faster main memory and a new CPU board, though end users can't perform the upgrade themselves.

AST has opted for conventional 82385-based memory caching with a 32K cache, both of which reside on the CPU board, along with Weitek and Intel math coprocessors and up to 4MB of memory.

The Premium 386/33 has the same smartly styled AT chassis as its 25-MHz sibling. There's

room for five half-height drives, three of which are externally accessible.

Without using a slot, you get one parallel and two serial ports, a floppy/tape controller, and an AT-style hard disk controller. Two 32/16-bit slots can be stuffed with memory cards holding up to 16MB of CPU-speed RAM each, for a total of 32MB on the memory bus. You also get three 8/16-bit slots (one of which must hold a controller if you opt for an ESDI hard disk).

A bare-bones Premium 386/33 with 2MB of RAM and a floppy drive sells for \$6965. Add a 110MB ESDI hard disk and it goes for \$8595, while a unit with a 320MB ESDI

drive costs \$11,295. AST bundles DOS 3.3 and disk caching software with every system.

Everex Steps Out

Ever since the Step 386/20, Everex has won praise for its scalable memory cache, expandable to 256K. The Step 386/33 enjoys the same feature, but the motherboard is substantially modified.

Due to timing constraints, turning up the clock meant getting rid of the Step's sole 32-bit slot, leaving space for only 8MB of 32-bit CPU-speed RAM—with conventional 1MB SIMMs. Everex took the unorthodox step of creating its own 4MB SIMMs, raising the memory bus capacity to a per-

The inside story on Diskaroos.™

If you take your diskettes home, or on the road, you need a place to carry them safely. You need a Diskaroo: the rugged, water-resistant, anti-static storage pack from Kao.

Inside every Diskaroo are ten 1 MB 3.5" Kao MicroDisks in five vibrant colors. Which will help you better organize your jobs. And find everything more quickly.

For High Density diskette users, there's the new Diskaroo HD: same great storage pack, containing ten 2 MB 3.5" grey Kao MicroDisks.

So whether you're a Macintosh, IBM® PS/2, or laptop user, there's a Kao Diskaroo to get you jumping for joy.

Every Kao diskette comes with a 100% lifetime guarantee. That means if it ever fails, we'll replace it. And best of all, Diskaroos cost about the same as other brands of diskettes in an ordinary box.

So what are you waiting for? Call Kao today at 1-800-443-0100 x947 for the Kao dealer nearest you. Because when you get inside information, you've got to act fast.

A HyperCard for the PC

Apple's HyperCard has been cloned for the PC in the form of HyperPAD.

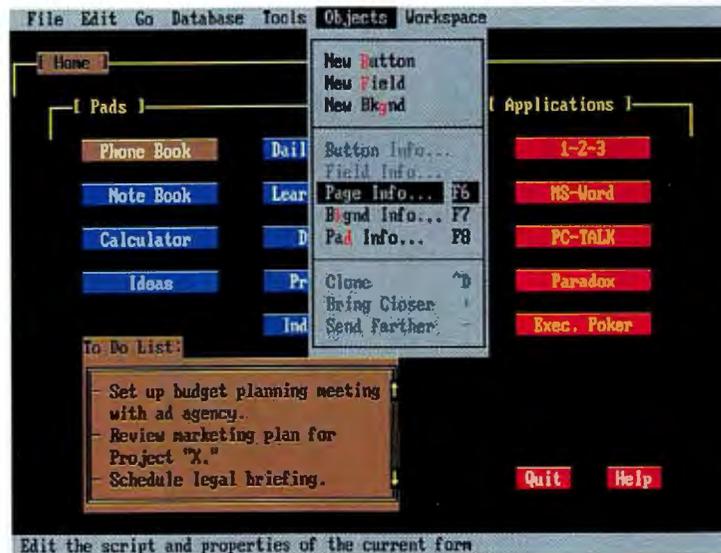

Is programming for the rest of us finally at hand?

Danny Goodman

In the sixties, the chant was "Power to the People!" Today it's "Power to the User!" And for good reason. As most PC veterans can attest, bending a general-purpose program like *dBASE* or *1-2-3* to their needs has meant long, frustrating hours of coding.

HyperPAD from Brightbill-Roberts may change all that. Like *HyperCard*, its Mac inspiration, *HyperPAD* (PAD stands for personal application designer) is a menu- and prompt-driven, object-oriented application environment that allows users to create custom programs without writing a ton of code. *HyperPAD* can't produce graphics—it's completely character-based—but it needs only 384K of RAM and runs quite nicely on a dual-floppy PC.

Building an application is like fitting Lincoln Logs together. In this case, the logs are *objects*—pre-

The HyperPAD Home Pad can be a central control panel linking other pads, external programs, and personal reminders.

defined, self-contained elements that can be used over and over again (see "The Object Is Software Design," Special Report: Languages, *PCW*, April 1989). *HyperPAD* comes with basic objects, such as scrolling fields, and buttons that can call on a comprehensive set of built-in flat-file management, math, and financial functions. Two dozen pre-fab applications (called *pads*) that you can end-

lessly modify will also be part of the deal.

Keep in mind that *HyperPAD* can't build a *PageMaker 4.0*. But it's perfect for whipping up simple accounts payable/receivable applications, electronic Rolodexes, to-do lists, calendars and schedules, time and billing programs, and custom DOS shells for launching applications. Better still,

because objects can be linked to anything—text, other objects, programs, or batch files—you can easily automate a mess of tasks. (One supplied pad, for example, tracks appointments, expenses, and reimbursements, then automatically bills clients and records payments.) Dip into *HyperPAD's* English-like script language and you can extend the actions of an object, create custom functions from scratch, and even

produce interactive, hypertext training programs. (*HyperPAD's* screen-capture function makes the latter especially easy.) If you want form-fit applications or push-button control of your PC, *HyperPAD* could be the answer.

Inside HyperPAD

HyperPAD's central metaphor is the pad, which consists of a data base of full-screen pages. An individual page can hold fields or buttons that trigger various actions. On an underlying master page, you can also specify objects that should appear on all pages. A simple *HyperPAD* phone book, for example, could include a master page displaying fields for name, address, and phone number, plus buttons that advance you to the next page or run an auto-dialer.

Most of *HyperPAD's* powers can be tapped from its pulldown menus, but creating an application that requires data validation, lookup tables, and similar functions means resorting to *HyperPAD's* PADtalk script language. If you've shied away from programming in the past, PADtalk may be your easiest introduction: A simple 5-line script tied to a button can accomplish a great deal for little effort. At the same time, the language offers powers lacking in *HyperCard's* HyperTalk

equivalent: CASE structures, Boolean operators, and several text conversion functions.

But you won't need PADtalk at first. *HyperPAD's* object orientation makes it easy to create your own applications by borrowing parts from existing pads. When you find a button that does what you want, you merely copy it into the pad you're designing. All properties of that button, including its border, colors, and script, tag along for the ride. If you create a button from scratch, *HyperPAD* lets you establish a link to any page in any pad. *HyperPAD* records the link in the button's script, which you can then edit.

Using pads takes some getting used to. You can't pop one up as you would *SideKick*. But you can create a centralized pad that lists other pads, spreadsheets, word processors, and other DOS programs and lets you launch them with the click of a button. When you quit the program, you return to the starting pad and page.

Pulling data out of *HyperPAD* is a snap. You can print tabular reports, labels, and cards. Data is easily exported in .DBF, ASCII, and .GX2 *Show Partner* formats.

No Graphics, No Big Deal

Part of *HyperCard's* appeal is its ability to create and incorporate *MacPaint*-like graphics. You don't have that luxury

with *HyperPAD*, which is both good and bad news.

The good news is that *HyperPAD* applications can run on any MS-DOS machine, because borders, shadows, and other effects are generated with the PC's speedily drawn character graphics. Brightbill-Roberts also includes a surprisingly capable draw program for dashing off snazzy-looking forms, buttons, and other objects.

The bad news? With screen resolution essentially limited to 25 lines by 80 characters, buttons, borders, and other elements will look rather chunky.

Budget Publishing

Like *HyperCard*, *HyperPAD* is a natural software publishing tool. Note that you can't compile a pad into a stand-alone application, so you must own a copy of *HyperPAD* (\$99.95) to actually run a pad. For \$495 you can get the program plus *HyperPAD Reader*, a run-time module that developers can distribute to 25 users. Brightbill-Roberts is working on a site-licensing plan and currently offers unlimited copying of the *Reader* for a mere \$3000.

HyperPAD is an important release in a new generation of object-oriented program generators that includes Maxem's *Cause* and Asymetrix's *Open Book*. *HyperPAD* isn't as

SNAPSHOT

HyperPAD

Brightbill-Roberts' *HyperCard* work-alike lets non-programmers create applications easily, but it can't handle graphics.

KEY FEATURES

- Object-oriented so programs can be built Tinkertoy style
- Creates DOS shells and interactive tutorials
- Over 20 sample applications
- Runs on 8088 machines with only 384K of RAM
- Imports/exports .DBF and ASCII files

AVAILABILITY

At press time release was scheduled for April 1989

PRICING

\$99.95; run-time and site licensing will be available

visually appealing (or as fun) as *HyperCard*, but PC managers, training directors, and the rest of us shouldn't be without it. ●

Danny Goodman is author of The Complete HyperCard Handbook (Bantam Books, New York, 1988). He also developed TENpointO's Focal Point series of HyperCard-based programs.

We make a super VGA monitor

NEC introduces the best VGA monitor you can buy. MultiSync® 2A.

The first monitor that takes our award-winning multiple frequency technology and cus-

tomizes it to the needs of the VGA user.

MultiSync 2A is both affordable and uncompromised. And completely compatible with all VGA modes. In short, it performs brilliantly. But what's equally important, it allows you to move effortlessly to the next major graphics standard: SuperVGA.

All this in a monitor that gives you a 14" non-glare screen on a tilt-swivel base, for nearly 30% more viewing area than standard 12" screens, and a new cabinet that's not only functional but is designed to look as good from the back as it does from the front.

MultiSync 2A. One super VGA monitor.

VGA mode shown at 320 x 200

that's also a SuperVGA monitor.

But that's only part of the story. NEC also introduces the best SuperVGA monitor you can buy. MultiSync® 2A.

The first monitor that takes our award-winning multiple frequency technology and customizes it to the needs of the SuperVGA user. MultiSync 2A senses the software you're using and makes the switch from a VGA monitor to SuperVGA, the new standard developed by NEC and recognized by VESA, the Video Electronics Standards Association. SuperVGA delivers a maximum resolution of 800 x 600, which is 56% higher than VGA.

And since you're most likely buying a board that goes beyond VGA, your monitor should too. For literature call 1-800-826-2255. For technical details call NEC Home Electronics (USA) Inc. at 1-800-FONE-NEC.

MultiSync is a registered trademark of NEC Home Electronics (USA) Inc.

PRODUCT OUTLOOK

INSIDE PRODUCT OUTLOOK

71 **Compaq 286e**

For no more dollars than their Deskpro 286 counterparts, Compaq 286e models give you expanded functionality and a neat new footprint.

71 **ALR VIP SX386**

Memory caching and the 386SX chip propel the shoe box-size VIP to the head of its class.

72 **Laserfold 240**

When the job requires legible output at warp speed, the Laserfold can churn out continuous laser printouts at 16 pages per minute.

72 **Kyocera A-800**

If you need top-of-the-line output, this 800-dpi scanner handles large artwork and can enlarge or reduce images.

74 **KX-P1124**

A 24-pin dot matrix printer that thinks it's letter quality, the KX-P1124 is loaded with features at a rock-bottom price.

76 **Fatcat**

For the compleat user, a tool bag of utilities for optimizing hard disks, recovering data, compressing files, and more.

76 **CrossView**

You don't have to be a programmer to analyze data—*CrossView* slices it five useful ways.

78 **TurboSearch**

An expert hard disk tracker of lost spreadsheet, word processing, and data base files, *TurboSearch* even employs Boolean logic and proximity searches.

78 **Equity Ie**

A PS/2 Model 30 clone, the Ie one-ups its role model with 10-MHz processing speed and an extra slot.

80 **CrossFile**

Tap into reams of data by capturing mainframe files from a printer and translating them into PC format.

UPDATE

80 **PlanPerfect 5.0**

The latest version flaunts expanded financial functions, complex hybrid graphs, and support for *WordPerfect's* new file and print skills.

80 **Professional Write 2.1**

No need to clutter your screen with typefaces and format control characters while editing—you can preview them at print time.

82 **Volkswriter 4**

Despite a \$96 price cut, *Volkswriter* has added a grammar and style checker to polish documents from the inside out.

82 **askSam 4N**

In its network incarnation, this text information manager permits multiple simultaneous queries of files and maintains its global scanning technique.

84 **RealWorld 5.0**

Accounting modules are more smoothly integrated, and you can opt for a windowed interface.

84 **Designer 2.0**

Geared for use with *Windows* or OS/2's PM, *Designer 2.0* sports a graphic user interface and an abundance of colors and Bezier curves.

Compaq 286e

A Penny-Wise and Smart-Looking Compaq Desktop

The next best thing to getting a budget price is getting more product for the same dollars. The new Compaq 286e models are priced like their Deskpro 286 counterparts but with goodies like VGA graphics, more standard memory, and greater expandability thrown in. With better value and a new compact design, the 286e makes sense for secretaries, casual users, word processing specialists, and others who formerly may have had to make do with lesser compatibles, or do without.

Then again, you may want that smaller footprint and smart new styling on your own desk, at home or at the office. You'll have the same switchable 8/12-MHz one-wait-state processor as the Deskpro 286, but

the smaller motherboard holds more—VGA graphics; hard and floppy controllers; and serial, parallel, and mouse ports. You also get 1MB of motherboard memory out of the box, 384K more than the Deskpro 286's 640K. You'd have to spend almost \$900 to bring the original Deskpro up to the same mark.

The 286e has the same 16-by-15-by-6-inch cabinet design as the Compaq 386/20e and the same high degree of integration on the system board. One of the 286e's five AT-compatible slots also runs its 16-bit memory at the processor's top speed of 12 MHz. You can use 1MB SIMMs for another 3MB of memory, or opt for the 4MB variety to pack up to 12MB on one board for a total system memory of

13MB. That's a sharp improvement over the Deskpro 286's 8MB limit.

The rest of the 286e is familiar: a standard 1.2MB or optional 3½-inch 1.44MB disk drive, a socket for a math coprocessor, and a 140-watt power supply. But the prices are pleasant surprises.

A floppy-only Model I sells for the same \$2699 as the Deskpro 286, while the midline Model 20 with

a 20MB drive runs \$3199, \$400 cheaper than a 20MB-equipped Deskpro 286. Finally, the 40MB 286e Model 40 is priced at \$3599, \$600 less than its Deskpro 286 counterpart. You can buy 110MB drives from Compaq, as well as a range of tape backup, graphics, and communications board options. A VGA color monitor is another \$599. Compaq Computer Corp., 20555 SH 249, Houston, TX 77070; 800/231-0900.

—Mark Henricks
Reader service no. 740

VIP SX386

ALR Systems Boast SX Appeal

Two of the most important price/performance boosters around are memory caching and the Intel 80386SX chip. Marry the two in an oversize shoe box, and you have Advanced Logic Research's VIP SX386 computer.

Although it operates at the same 16-MHz clock speed as other 386SX-based machines, the VIP SX386 outperforms its peers significantly by virtue of an 82385 cache controller, 16K of high-speed caching memory, and the ALR FlexCache architecture, claims the manufacturer. Another distinguishing feature: ALR has squeezed all of that into a box that measures only 15 by 7 by 4½ inches.

The VIP's small stature and big performance make it ideal for network or other workstation applications where you don't have room for one of

ALR's heftier 386 desktop models or don't need quite the horsepower. ALR saves space by using a passive backplane design with circuitry embedded for a serial port and floppy and hard disk controllers. The CPU resides on a card that fits into an 8/16-bit slot.

The VIP SX386 is less expandable than more conventional designs, containing only three other 8/16-bit slots and one 8-bit slot for modems, network cards, and other add-ins. On the plus side, the modular CPU design simplifies future upgrades to a 20-MHz 80386. There's no FlexCache down the 80386 upgrade path, though, because the CPU card can't accommodate a full 80386 processor in addition to Intel's cache controller.

(continues)

The new small-footprint Compaq 286e's higher level of system integration will save you at least \$900 over a similarly configured Deskpro 286.

ALR's VIP SX386 pairs memory caching with the Intel 80386SX chip in an oversize shoe box, bringing you high performance and 32-bit software compatibility at a budget price.

ALR VIP SX386

(continued)

The VIP SX386 comes with 512K of memory, which can be replaced with up to 8MB in 1-Mbit memory modules on the CPU card. An additional 8MB of memory can be added on a memory card, which is designed for an 8/16-bit expansion slot. If you go with a full-fledged 80386 CPU someday, you'll be able to install up to 10MB of 32-bit memory on ALR's RAM-PAK

daughtercard, which plugs into the modular CPU card. ALR claims that it all runs fine on a small-sounding 65-watt power supply.

A 1.44MB 3½-inch floppy is standard in the \$2395 model. A system equipped with a 28ms 40MB 3½-inch hard disk can be had for \$3695. A monitor and display cards are extra. Advanced Logic Research, 9401 Jeronimo, Irvine, CA 92718; 800/444-4ALR. —Mark Henricks

Laserfold 240

Near Laser Quality at Double Speed

When you need hard copy fast and you don't mind if it's not presentation-pretty, the Laserfold 240 continuous-form laser printer from Pentax Technologies provides a quick-but-not-too-dirty solution.

The Laserfold 240's tractor feed shoves fan-fold paper at 16 pages per minute through the desktop-size carriage, a rate twice as fast as most

laser printers can claim. That's the quick part.

Out the other side comes 240-dpi-resolution text—shy of most lasers' 300-dpi resolution but clean enough for departmental statements, invoices, and other in-house business, technical, and accounting documents. And if you've ever dropped a stack of alphabetically ordered letters

(continues)

Kyocera A-800

High-Resolution Scanning, Low Price Tag Double Play

With an 800-dpi enlarging/reducing scanner, you can scan and edit 8½-by-11-inch or larger art at high resolution, then shrink it to fit page layouts. Compacting the image this way before printing also improves the output from 300-dpi laser printers. But high-res scanners typically cost several thousand dollars, which brings us to Kyocera's A-800.

The A-800 would deserve a look if all it offered was up to 800-dpi resolution at a 300-dpi price. But it also has the power to enlarge images from 25 to 1067 percent or reduce them by up to 25 percent while scanning. You can enlarge them another 25 percent while printing.

Bundled *ImageDesk* application software handles the enlarging and re-

ducing chores and lets you select gray-scale or line-art scanning for up to three windows per page (many scanners support only one window). Otherwise, the A-800 is a fairly standard flatbed unit, scanning at 14 seconds per 8½-by-11-inch page and offering 16 levels of gray. At \$1895, the price tag fortunately hasn't been excessively enlarged. Another \$895 buys a document feeder you'll need to scan legal-size documents.

Kyocera ships the A-800 with a run-time version of *Windows*, an interface card, cable, and *ImageDesk* software. It requires 512K of memory. Kyocera Unison Inc., 1321 Harbor Bay, Alameda, CA 94501; 800/334-6506. —Mark Henricks

Reader service no. 743

Kyocera's A-800 scanner brings you 800-dpi scanning resolution at a 300-dpi price, plus the ability to enlarge images up to 1067 percent or reduce them by 25 percent while scanning.

KX-P1124

Panasonic Packs Features and NLQ Printhead in a 24-Pin Package

Your trusty 9-pin dot matrix printer is fine for simple drafts and an occasional interoffice memo, but obtaining letter-quality text usually means standing in line at the departmental printer station or tapping into a network printer queue. The Panasonic KX-P1124, a 24-pin dot matrix printer, offers an alternative by delivering near letter quality without stretching your pocketbook.

At \$529.95, the KX-P1124 is a bargain hunter's dream, with standard

features that usually cost several hundred dollars more—such as bottom and front paper feed, the ability to recall three print settings, quiet mode, and 360-dpi graphics resolution. The KX-P1124 prints text at a respectable 192 characters per second (cps) in 12-pitch draft and 63 cps in 12-pitch NLQ, and offers a mean time between failures of 4000 hours.

The KX-P1124 also boasts the paper-handling moxie to tackle any chore. The printer features a

Panasonic's KX-P1124 24-pin dot matrix brings near letter quality to your desktop, superb paper-handling, and 360-dpi graphics resolution.

push/pull tractor and several paper paths. You can use rear feed or bottom feed to load fanfold paper, labels, or four-part forms. A feature called P-Cut au-

tomatically advances the perforation on fanfold paper to the tear bar for easy separation and then repositions the next sheet for printing. Additionally, the KX-P1124 offers paper parking so you can print letterhead, envelopes, or cut sheets without removing tractor-fed paper. You can print single sheets by sliding them through a front slot or by feeding them through an optional cut-sheet feeder that holds an 80-page stack. There's no wide-carriage version of the KX-P1124, but the 11.7-inch-wide carriage accommodates single letter-size sheets in landscape mode.

Panasonic puts the KX-P1124's extensive features at your fingertips with a front control panel that includes buttons to select print modes, fonts, pitch, form length, margin settings, and printer default settings. You can also save up to three print settings in printer EPROM and activate them from the front panel.

The KX-P1124 packs the popular Epson LQ-2500 and IBM Pro-
(continues)

—and a lack of graphics capability—the printer is restricted to Bitstream's Letter Gothic font and won't accept paper wider than 9¼ inches.

However, its quiet 53db operation, small footprint (about 18 by 7 by 20 inches), and minimal service requirements make the Laserfold 240 ideal for any workplace that needs decent-looking, continuous-form hard copies in a hurry. Its toner cartridge is good for 4000 pages, while the engine is designed for a 600,000-page life.

At \$2995, the Laserfold 240 won't bust your budget either. It comes with serial and parallel ports for hookup to your PC. Pentax Technologies Inc., 880 Interlocken Pkwy., Broomfield, CO 80020; 303/460-1600. —Mark Henricks

Reader service no. 742

Laserfold 240

(continued)

printed on a sheet-feed machine, you'll appreciate the way continuous paper resists inadvertent reshuffles.

Pentax, a long-time supplier of laser engines, tweaked conventional electromechanical designs so its printer could use

continuous-form paper without creating a fire hazard. Special retractors prevent overlong contact between the fanfold paper and the heated fuser.

That's not the only thing that distinguishes the Laserfold 240 from desktop publishing machines printing on single sheets of paper. Besides having limited resolution

The Laserfold 240 pushes fanfold paper through its desktop-size carriage at 16 pages per minute with a respectable resolution of 240 dpi.

THE IDEAL PARTNER

CORELDRAW!

The World's Finest PC Illustration Package

■ Easy, Powerful User Interface

- Microsoft Windows, running on all ATs and 386s, with 640k RAM
- Simplified menu & toolbox design
- Macros enable repetitive operations to be easily accessible
- Hundreds of useful samples & dipart
- Thorough documentation & tutorial

■ Lightning Speed

- Superior architecture results in amazing speed even with large drawings

■ Superb Freehand Drawing

- Draw Bezier curves quickly and easily
- Fast & Powerful curve editing

■ Calligraphic Pen Shapes

- Gives your curves a human touch by allowing custom pen shapes & angles

■ Powerful Bitmap Support

- Rotate, skew, stretch, scale, crop, color & position any bitmap

■ Autotrace to Quickly Create Artwork

- Automatically traces bitmaps, including scanned images to easily create your own editable artwork

■ Over 50 Precision Fonts In Any Size

- COREL's top quality typefaces (including 35 that match those in PostScript printers) are included for both screen & printer. You see EXACTLY what you get, even when your text is skewed, rotated, or magnified
- Laserjet, Paintjet, & Postscript printers are fully supported
- Easy typeface selection with font shapes visible during font selection
- Full international character set

■ Interactive Kerning

- Characters can be dragged until you see the exact spacing you want
- Individual characters can have different attributes within a text string including typeface, point size, angle etc.

■ Fit Text to a Curve

- Text can easily be snapped to any curve including circles, rectangles, or even other text

■ Fit Text to a Space

- Interactive letter, word and line spacing

■ Edit Lettershapes

- Start with any font you want, then create your own custom lettering

■ Special Effects for Postscript Printers

- Over 50 stunning textures including Fractal and Escher effects for filling any object
- Linear or radial fountain fills for any object including text
- Extensive halftone screening for all objects including bitmaps & text

■ Excellent Connectivity

- Import Lotus PIC, PCX, TIFF, Illustrator, GDF, CGM
- Export displayable EPS, Windows Metafile for use in page layout software
- Use with all Windows supported input and output devices including slidemakers, tablets, monitors, Videoshow etc.

■ Dazzling, Low Cost Color Output

- With CORELDRAW and a \$1395 Hewlett Packard Paintjet printer, you can create inexpensive but impressive color presentations
- Full PANTONE®* and CMYK color support for color separations and color matched output devices

■ Unlimited HOTLINE Support

- COREL experts are keen to help!

CrossView

A New Take on Basic Data

Traditionally, we have relied on spreadsheet or data base programs as data analysis tools. But *CrossView* from DataEase is a free-form data analysis program that enables users without programming skills to analyze very large amounts of data quickly.

Whether you are trying to forecast sales trends or doing a little ad hoc market research for your company, the program can help you cross-tabulate ASCII data from any application. It does so by converting data into an array of unique values, identifying key patterns, and breaking data down into five views—cells, columns, rows, pages, and

hyperpages (attachments to a page).

Unlike a spreadsheet, which offers a fixed two-dimensional view of data, *CrossView* creates a multidimensional view that enables you to consider several variables at once. Unlike a data base, *CrossView* identifies key patterns in data without a predefined report.

In addition to the five data views, *CrossView* offers 31 mathematical and analytical functions via pop-up menus. Included among the functions are formulas for sums, averages, variances, medians, standard deviations, and percentages; and functions can be nested.

A single keystroke zaps data from a view into a

No spreadsheet or data base experience necessary; *CrossView* lets you perform free-form analysis on large amounts of data from a variety of applications.

.WK1 file format for "what if" analysis with spreadsheets such as *1-2-3*, *Quattro*, or *Excel*. *CrossView* also imports *DataEase* data base reports.

The single-user copy of *CrossView* retails for \$2000; copies for five addi-

tional users can be had for \$3000. The program requires DOS 3.0 or a later version, 640K of memory, and a hard disk. DataEase, 7 Cambridge Dr., Trumbull, CT 06611; 203/374-8000.

Fatcat

A Bundle of Utilities From SoftLogic—Disk and File Management Programs

Disk utility programs are a mixed bag. Some are known for their file-recovery abilities, others focus on disk management features, and still others have scored because of their versatility. SoftLogic Solutions, a software publisher with a broad line of stand-alone utilities, has mixed its own bag of programs and serves them up as *Fatcat*, a disk and file management system that promises to make your PC purr.

Fatcat is built around the Viewer, a shell-type

pull-down menu system that provides rapid access to all the program's features. The usual file copy, move, rename, and delete options work with single and multiple files, and you can edit files, password-protect them, change attributes, execute programs, and exit temporarily to DOS—all via point-and-shoot menus or keystroke combinations.

For each file, you can create a 35-character description that is retained in the Viewer. Be advised, though, that the descriptions are stored in a different FILE\$.DIR file

within each directory containing a described file. Delete a FILE\$.DIR, and you lose the descriptions for that directory.

The Viewer shines in its tie-in to SoftLogic's repertoire of disk optimization, data recovery, and file compression programs. Without leaving the Viewer, you can optimize hard or floppy disks through a complete version of SoftLogic's popular *Disk Optimizer*. If you want to delete files yet keep them stashed away on your hard disk "just in case," you can tell *Disk Optimizer's* Data Guardian function how many days—up to 255—you want to keep them around.

Only Microsoft Works can make a business this size look this big.

You're looking at the only integrated software program to give small and home businesses all the horsepower they need now. And all the growing power they'll need later. Microsoft® Works.

Fact is, only Microsoft Works gives you a complete set of computing tools to get you up and running in a minute—and keep you running for years.

That's because only Microsoft Works seamlessly integrates the perfect balance of tools and training for word processing, database, spreadsheet, graphics and communications. On a desktop or laptop, this means you can move data between all modules instantly. And work on any combination of tools at once.

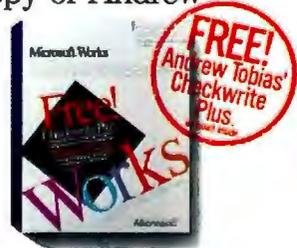

Only Microsoft Works has a built-in training system to guide you through every step,

of every command, of every program. And give quick, real-world lessons so you can be productive in your first five minutes.

Plus: For a limited time, when you buy Microsoft Works, you'll get a copy of Andrew Tobias' Checkwrite Plus™ right inside the box—free. A \$50 budgeting and checkwriting system that can do everything but sign your checks—now free.

Only with Microsoft Works. Look into it.

Because we realize that small businesses don't ever have to look small. Or stay small.

Microsoft
Making it all make sense.

Output printed with Microsoft Works using the Hewlett-Packard PaintJet and Laser Connection PS Jet+ printers. Checkwrite Plus offer good through August 31, 1989 while supplies last. TurboSearch

Needle-in-a-Haystack Searching Across Applications

Ashton-Tate can help you if you need to quickly track down wayward files lost on a crowded hard disk. *TurboSearch* probes your disk for word processing, data base, or spreadsheet files created by several popular applications including *dBASE*, *1-2-3*, *Framework*, *Word-*

Perfect, and *XyWrite III Plus*, automatically reading files in binary or ASCII format.

TurboSearch works by organizing your files into libraries that can mix and match files from different applications. You can have 3072 files per library and 500 libraries per sub-

directory. The program stores the contents of each file in an index, which it uses for the searches.

The program can find a file by name, date, or character string (up to eight words simultaneously). Additionally, the program supports Boolean logic and proximity ("sounds like") searches. Once you've made a "hit," you can browse the files, print them out, or use them with the original application. If your search

yields too many files, just a few keystrokes refine your criteria and initiate a secondary search to further narrow your hit list.

TurboSearch automatically creates an alphabetized dictionary of all the words in library files, and you can use the dictionary to build a keyword index for a manuscript.

The program requires DOS 2.1 or a later version, plus 512K of memory; a hard disk is recommended. The suggested price is \$179. Ashton-Tate, 20101 Hamilton Ave., Torrance, CA 90502-319, 213/329-8000.

Reader service no. 749

Equity Ie

A Model 30 Plus

Epson has introduced a clone of IBM's PS/2 Model 30 that sports a selectable 8/10-MHz 8086 processor and four 8-bit expansion slots—as compared to the Model 30's 8-MHz speed and three slots.

The small-footprint (14 by 16 by 4½ inches) Equity Ie includes an MCGA graphics adapter on the motherboard that is capable of 640-by-480-pixel resolution in two colors or

320 by 200 with 256 colors. It comes with 640K of memory; built-in serial, parallel, and mouse ports; an 8087 math coprocessor socket; and a 101-key keyboard.

The Ie's three configurations include a model with a single 3½-inch floppy drive for \$1149, a two-drive model for \$1349, and another with a floppy and a 20MB hard drive for \$1749. Epson America, Inc., 23530 Hawthorne Blvd., Torrance, CA 90505; 213/539-9140.

Reader service no. 751

Fatcat

(continued)

The files are unaffected by disk optimization and can be manually deleted if you decide not to wait out the protection period. They are recoverable through a directory-by-directory undelete program that can also reclaim just-erased files even if they weren't run through Data Guardian.

If you want to save disk space on active as well as guarded files, *Fatcat's* version of SoftLogic's *Cubit* compresses files for you manually or automatically. *Cubit* achieves average reductions of 70 percent on 1-2-3 worksheet files, 55 percent on word processing and text files, and 45 percent on data base files.

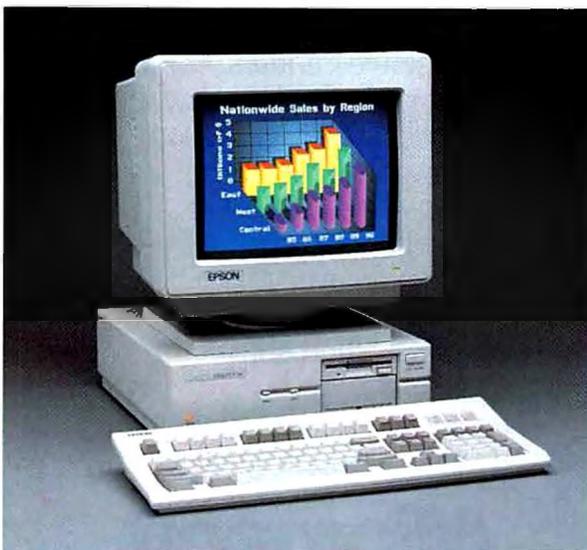

Another program "refreshes" your entire nonremovable hard disk (whether partitioned or not) by reading each track and writing it back. Done

periodically, this process reportedly makes all the tracks on your disk retain their magnetism at top strength, whether data is written to them regularly or not.

Fatcat also lets you incorporate files within "folders" à la Macintosh; point to the file on the Viewer, and it opens automatically within the application that created it. About the only thing *Fatcat* won't do is format a disk. It leaves that up to DOS or any other utility you might have floating around your hard disk. *Fatcat's* file-search feature will gladly help locate them.

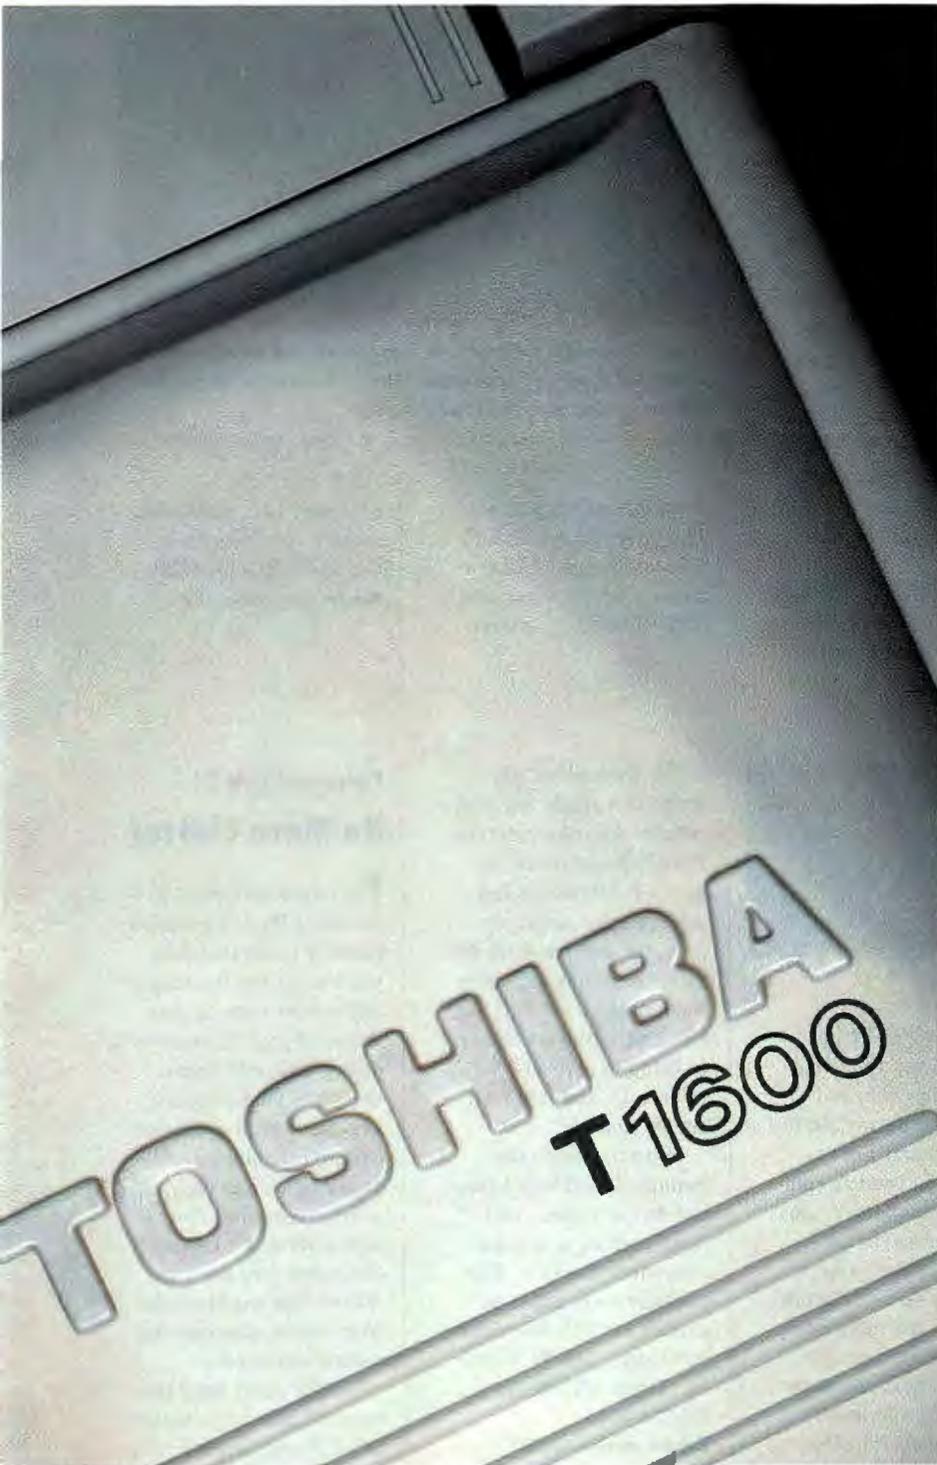

The \$139.95 *Fatcat* requires DOS 2.0 or a later version and 256K of memory. SoftLogic Solutions Inc., 1 Perimeter Rd., Manchester, NH 03103; 800/272-9900, 603/626-9900 in New Hampshire. —Glenn Grant

Reader service no. 745

Epson's new IBM PS/2 Model 30 clone, the Equity Ie, brings a 25 percent faster processor and an additional 8-bit expansion slot to the party. The small-footprint unit includes MCGA graphics on the motherboard.

Now there's a battery-powered 286 with the one feature you've been waiting for.

That little package you've been expecting from us has just arrived.

The new Toshiba T1600. The fastest battery-powered portable computer we've ever made.

It packs a powerful 12MHz 286 microprocessor. One full megabyte of RAM that's expandable to 5MB. Plus a fast 20MB hard disk.

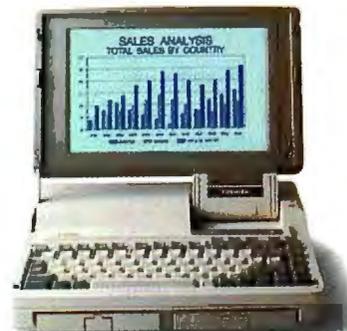

Equally impressive is its 144MB 3½ inch diskette drive, detachable, backlit EGA-compatible display and two expansion slots for access to an internal modem, LANs, mainframes and much more.

But at a total weight of under 12 pounds, the T1600 is bound to spend a lot of time *outside* the office. Which is why we added some other important features.

Like AutoResume, which lets you restart your work wherever you finished. And space for two removable, rechargeable battery packs no larger than the palm of your hand.

All of which makes one thing about the T1600 unmistakably clear.

It was definitely worth the wait.

T1600: Battery-powered 80C286/12MHz, 20MB hard disk at 27msec, 144MB 3½" diskette drive, 1MB RAM expandable to 5MB, detachable backlit EGA-compatible LCD, removable rechargeable battery pack, coprocessor socket, 7 standard interfaces, 2 expansion slots for general purpose options. For information call 1-800-457-7777. Toshiba PCs are backed by the Exceptional Care Program (enrollment required).

CrossFile

Tapping the Big Box

CrossFile from Saxon Systems automates the transfer of data between mainframes and popular PC applications or between PC programs.

Primarily for use in transferring output from mainframe software such as accounting programs, CrossFile captures structured report-layout data being sent to a printer and outputs that data as files in formatted ASCII, comma-delimited ASCII, 1-2-3, Symphony, DIF, dBASE, Excel, Quattro, and SuperCalc 4 formats.

To transfer accounting data, you simply capture the accounts receivable

program's printer output using Capture, a small memory-resident utility. Then CrossFile converts the data into the appropriate format. Since the program also filters data, you can be selective about the data your application gets. The program reads 1-2-3, dBASE, Excel, Quattro, and DIF files for conversion to any of the output formats. CrossFile's one restriction is that the data for translation must be arranged in tables, with vertical columns for fields and horizontal rows for records.

You can use CrossFile's menu system or program your data conversions

Move cursor to LAST COLUMN of FIELD to be transferred. Press ENTER. Press BACKSPACE if you do not want to select this field.

UPDATE

PlanPerfect 5.0

Future Perfect

PlanPerfect 5.0 provides expanded financial functions, including present and future value payment, 22 possible cases for amortization, and the ability to apply statistical functions against populations as well as samples. You can put variables inside formulas and link two open worksheets displayed on screen to an unlimited number of worksheets on disk, retrieving live data and formulas.

The PlanPerfect upgrade also lets you combine bar, line, pie, and area graph information in the same chart. For example, if you want to compare your company's sales in units versus dollars, you can combine graphs with the same or different scales. You can integrate logarithmic scaling with linear scaling at the same time on different axes.

In addition, PlanPerfect 5.0 supports the enhanced file and printing capabilities of WordPerfect 5.0, including 32 fonts and attributes such as

strike-through or subscript in a single cell and support for color printers. PlanPerfect 5.0 can import 1-2-3 formulas and cell macros (except for printing and graphing features) and then export them back to 1-2-3. It also has a bulk-convert feature to bring in several 1-2-3 release 1A and 2.01 files simultaneously.

You can choose the familiar WordPerfect function key interface, pull-down menus, or a slash-command interface. The package costs \$495; upgrades are \$75. WordPerfect Corp., 288 W. Center St., Orem UT 84057; 801/225-5000.

EVEN A HAYES MODEM IS ONLY AS GOOD AS ITS SOFTWARE.

If you made the finest modems in the world, would you trust their performance to someone else's software? Software you knew really couldn't deliver?

We couldn't. So we created the most advanced communications software possible for IBM® PCs and compatibles. Smartcom III.™

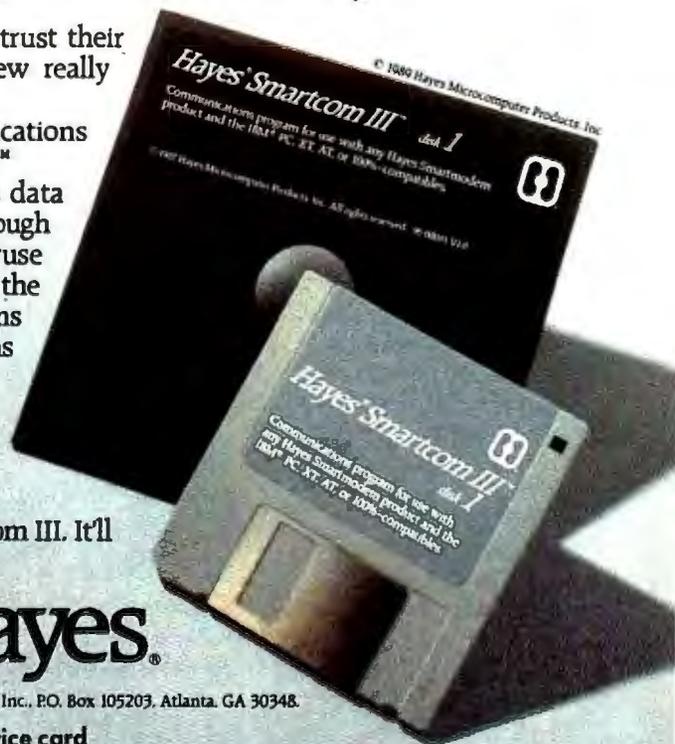

Smartcom III supports Hayes V-series™ features such as data compression and error-control as well as multiple sessions through both comports. It also incorporates a built-in text editor, a peruse buffer and a powerful scripting language called SCOPE.™ With the scripting capability of SCOPE, you can automate tedious functions and repetitive tasks as well as create custom communications solutions.

Yet with all its sophisticated offerings, Smartcom III's menu-driven interface makes it easy to use. And to make it easy for your company to buy, Hayes is now offering a Multi-Copy License that can cut costs by more than 35%.

So if you own a Hayes modem, it makes sense to get Smartcom III. It'll bring out the best in the best.

And if you happen to own a modem other than a Hayes, it still makes sense to get Smartcom III. Because it'll make the best of what you've got.

Volkswriter 4

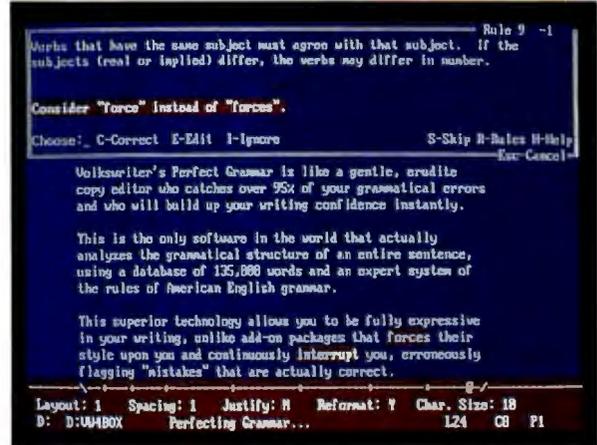

Popular Style

An update of the veteran *Volkswriter* adds a grammar and style checker and comes at a reduced cost. Lifetree claims that *Volkswriter 4's* Correct Grammar module, based on Houghton Mifflin's *CorrectText Grammar Correction System*, can detect and correct 95 percent of any document. The price reduction to \$199, \$96 less than *Volkswriter 3*, is meant to help *Volkswriter 4* compete with executive word processors such as Software Publishing's *Professional Write* and Symantec's *Q&A Write*.

Correct Grammar uses a data base of 135,000

words and more than 1000 rules of grammar. You can elect full grammar and spell checking or spell checking only. One keystroke activates the checker, which highlights errors in spelling, syntax, subject-verb agreement, pronoun case, plural and possessive forms, hyphenation, and punctuation. It also identifies stylistic fine points such as split infinitives, wordy prepositional phrases, and clichés. Once Correct Grammar flags an error, it suggests alternatives and lets you accept or reject them.

Additionally, *Volkswriter 4* offers a feature that automatically prints the address from inside a document onto an envelope. Other new features include point-and-pick file retrieval, a file directory display sorted by date, a

Volkswriter 4 gains a grammar and style checker and cuts its price.

word counter, and an undelete option.

With Correct Grammar, the program requires DOS 2.0 or a later version, 640K of memory, and a hard disk. Without Correct Grammar, the program requires 320K and no hard disk. An up-

grade from *Volkswriter 3*, including Correct Grammar, costs \$88; without Correct Grammar, the upgrade is \$39. Lifetree Software, 411 Pacific St., Monterey, CA 93940; 800/543-3873, 800/831-8733 California.

askSam 4N

The LANSam

The text-based information manager *askSam* is now available in a network version that runs on 3Com, Novell, Token-Ring, TOPS, Banyan Vines, Ungermann-Bass, and other NETBIOS networks.

askSam version 4N allows only one user at a time to update a file but permits multiple simultaneous queries of a file.

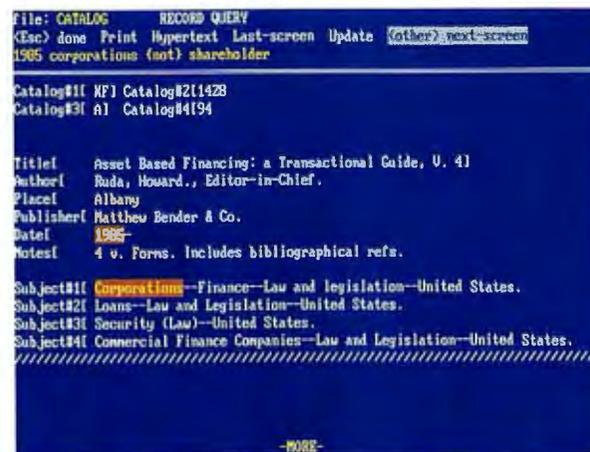

Like the stand-alone program, *askSam* version 4N features global scanning. *askSam* allows free-form entry of data, to which structure may or may not be added. It comes with a range of query and retrieval com-

mands and includes a full-screen text editor and report generator.

askSam version 4N is priced at \$895 for up to ten workstations running off one file server. Each additional set of ten users accessing the same server

costs \$500. The software requires DOS 2.0 or a later version and 256K of memory. askSam Systems, P.O. Box 1428, Perry, FL 32347; 800/327-5726.

Reader service no. 756

Running on 3Com, Novell, Token-Ring, TOPS, Banyan Vines, Ungermann-Bass, and other NetBIOS networks, askSam version 4N permits multiple simultaneous queries against a file.

Professional Write 2.1

(continued)

bring graphs from *Harvard Graphics* into the program.

Finally, *2.1* adds the ability to read and write *Microsoft Word 4.0*, *OfficeWriter 6.0*, and *WordPerfect 5.0* files and includes font support for IBM, Epson, Panasonic, and Okidata 24-pin dot matrix printers as well as lasers.

Professional Write, which still retails for \$229, requires DOS 2.0 or a later version and 512K of memory; a hard drive is recommended. Software Publishing, Inc., 1901 Landings Dr., Mountain View, CA 94039-7210; 415/962-8910.

Reader service no. 754

"FORGIVE ME, FOR I HAVE
LOST THE FILES. AGAIN."

The devil made you do it. That is, MS-DOS® made you do it. The commands were obscure. The file names made no sense. You couldn't even find the directory, much less the subdirectory. And so, another talk with the man upstairs.

SOFTBREEZE™ CHANGES THINGS FOR GOOD.

Introducing SoftBreeze,™ the fastest way to make your operating environment intelligible.

With SoftBreeze, you use on-screen menus and plain English language to manage your files and disk logically. So you don't have to memorize DOS commands.

And you can use 48 characters to name a file. So it's easy to sort, locate, retrieve, and view files. Not to mention copy, delete, back up, and print them.

SoftBreeze offers you multitasking and "cut and paste" features, too. Which means you can access all of your applications quickly. And transfer information efficiently.

System requirements:
IBM PC, XT, AT, PS/2 and compatibles, with
hard disk. At least 512K and MS-DOS 3.x.

AN ANSWER TO THE PC MANAGER'S PRAYERS.

For the PC manager, SoftBreeze is a breeze. Your users no longer must endure an eternity of training. And you don't have to answer endless calls for help.

The program also installs automatically, and is fully compatible within networked architectures, even LANs.

What's more, SoftBreeze uses less than 30K RAM, so it doesn't waste memory needed to run other programs. Which enhances the utility of your 512K-1MB PCs.

And finally, you can easily customize individual environments and use powerful diagnostic tools to find and solve problems quickly. Control at last.

Soft
Breeze™
User Interface

We put the *personal* back in PC.

ABSOLUTION ABSOLUTELY GUARANTEED.

For a limited time only, you can get SoftBreeze for just \$129 (\$169 after June 30). No other user interface offers so many features, uses such little memory, and is this affordable. In fact, you can try the package for 30 days. If you're not completely satisfied, your money will be refunded in full.

The option is yours. Pay MS-DOS penance forever, or pay for SoftBreeze today.

**Introductory
Offer**

RealWorld 5.0

A New World

Functional improvements and a rebuilt interface are the hallmarks of version 5.0 of the 11 *RealWorld* accounting packages. You now enjoy a choice of *RealWorld's* traditional menu structure or a new windowed interface with pulldown menus and the ability to define shortcuts for navigating among one or more *RealWorld* applications.

You'll can open more than one *RealWorld* accounting module at a time and switch back and forth between them, and build groups of modules that load and execute together at a single command. Additionally, *RealWorld* has streamlined the installation procedures and added predefined financial statement layouts, charts of accounts, and other aids to speed setup.

The company has expanded field amounts to 999 million and general ledger account numbers to 16 digits, and changed cash-flow statements to better meet government standards. The accounting suite includes general ledger, accounts receivable, accounts payable, professional invoicing, payroll, inventory control, order/entry billing, job cost, and purchase order—each priced at \$695 for single-user versions and \$795 for network versions. Single and multiuser sales analysis modules are \$350 and \$400, respectively, while the corresponding check reconciliation programs are \$230 and \$265.

Upgrades are available to registered users for \$295 per module for single-user versions or \$325 for network versions. *RealWorld* modules require DOS version 3.3 or a later version, 640K of memory, a hard drive, and a 132-column printer. *RealWorld* Corp., 282 Loudon Rd., Concord, NH 03302-2051; 800/255-1115.

Designer 2.0

Multitasking Designer

Micrografx's new version of *Designer* offers a graphic user interface compatible with OS/2 Presentation Manager's and includes enhanced color support and an auto-trace tool.

Designer 2.0 works under *Windows*, but you can obtain a special Presentation Manager version free with proof of purchase of OS/2 Standard or Extended Edition 1.1. This version takes full advantage of PM's multitasking, extended memory, and protected-mode capabilities.

Version 5.0 of *RealWorld* gives you the choice of its traditional menu structure or a new windowed interface with pulldown menus, plus shortcuts for navigating the commands in *RealWorld* applications.

Either version of *Designer 2.0* lets you mix up to 16 million colors, including all Pantone Matching System shades, and create gradient color fills. You also can produce spot or four-color separations.

Designer 2.0's auto-trace tool lets you trace any scanned image or part thereof to create resolution-independent, object-oriented outlines composed of editable Bezier curves. The new version of the freehand drawing tool also creates Bezier curves and smooths them dynamically, in addition to creating straight-line vectors as before.

Designer 2.0 has enhanced import/export

capabilities and comes bundled with *Windows* drivers for PostScript printers. Other enhancements include context-sensitive help, improved text handling with word wrap, and image mirroring.

Designer 2.0 requires DOS 3.1 or a later version, 640K of memory, and an 80286-based computer with at least 640K of memory, an EGA or better graphics adapter, mouse support, and a hard disk. It retails for \$695 but is free for subscribers to *Micrografx's* extended technical support service. Other registered users can upgrade for \$99. *Micrografx, Inc.*, 1303 Arapaho, Richardson, TX 75081; 214/234-1769.

Micrografx's latest *Designer* is compatible with OS/2 PM's graphic user interface and includes enhanced color support and an auto-trace tool.

OUR SILENTWRITER IS CREATING HEADLINES ON SEVERAL FRONTS.

Our Silentwriter™ LC890 is the first desktop publishing printer that gives you both popular standards for creating graphics and type: true Adobe PostScript® and LaserJet Plus emulation.

That alone would be enough to cause headlines. But we also added many more features to simplify desktop publishing. Like both Apple and IBM compatibility. *PC Week* stated, "the LC890 is actually better than having both an Apple LaserWriter Plus and an HP LaserJet Plus on your desk." Equally impressed, *PC Magazine* awarded it an "Editor's Choice." And cited it in their "Best of 1987" issue.

EDITOR'S CHOICE

PC Week

NEC's SilentWriter Printer Boasts PostScript, HP LaserJet Plus Emulation

The new NEC SilentWriter LC-890 laser printer breaks new ground on several fronts. Until now, buyers of laser printers have been faced with a fundamental choice between... support.

NEC's LC-890 printer, however, makes that issue a moot point—and adds new meaning to the term "full featured!" NEC combines... support of Adobe Systems... language with...

And because the Silentwriter has a simple, trouble-free printing mechanism, it will be creating headlines for years to come. In fact, it's twice as reliable as ordinary lasers, with an average life of 600,000 pages.

If you don't require the power of our LC890, consider the LC860 Plus for text and less complex graphics.

To start producing your own headlines, call 1-800-343-4418 (in MA 617-264-8635). We'll send you reprints of all the great reviews and the name of the NECIS dealer nearest you.

NEC PRINTERS. THEY ONLY STOP WHEN YOU WANT THEM TO.

The new COMPAQ DESKPRO 286e.
Further proof that what's on the outside,

says a lot about what's on the inside.

Compaq has earned a reputation for building the most powerful and reliable personal computers in the world.

In doing this, we've always given users the best combination of features needed to do their jobs.

We've also never given up the belief that even the most basic needs deserve more than just basic solutions.

As further proof, we offer the COMPAQ DESKPRO 286e Personal Computer.

It brings together a 12-MHz 286 microprocessor and a long list of integrated features. All in a compact package that runs the latest applications, without

Five expansion slots give you room to grow: one for high-speed memory, and four for thousands of industry-standard add-ins.

taking up more desk space.

Your users will find everything they need in a stand-alone

PC, perfect for their growing business productivity applications.

You'll also find a PC that's been rigorously tested with a wide range of network products, so it's compatible in virtually any network environment.

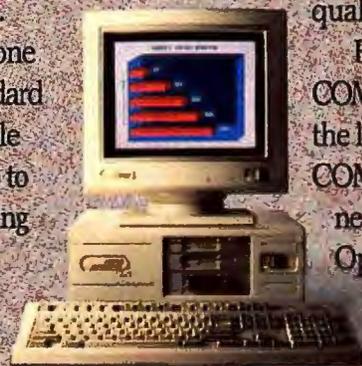

Now for an inside look. High-performance VGA graphics are built right on the system board. So your users

Built-in interfaces mean you can connect a mouse, printer, modem or other tools without taking up a slot.

can have displays that are easier to read. You, in turn, will have compatibility with all your EGA- and CGA-specific software plus performance that's up to 50% faster than other VGA controllers.

In memory, one megabyte is standard and is expandable in increments up to 13 megabytes using a separate high-speed memory expansion slot.

This leaves four industry-standard expansion slots open for LAN cards, mainframe links, etc. to customize the COMPAQ DESKPRO 286e to your users' needs.

You can take customization a step further. The COMPAQ

You'll get the flexibility to use both 5 1/4- and 3 1/2-inch diskette drives, along with a wide variety of fixed disk drives and tape drives.

DESKPRO 286e can be configured with up to four internal storage devices. Choose fast 110-, 40- and 20-MB fixed disk drives; both 5 1/4- and 3 1/2-inch diskette drives; even tape drives.

As you can see, the new COMPAQ DESKPRO 286e offers the same attention to detail that has made the COMPAQ name unmatched for performance, quality and reliability.

For a free brochure on the COMPAQ DESKPRO 286e and the location of an Authorized COMPAQ Computer Dealer near you, call 1-800-231-0900, Operator 92. In Canada, just call 1-800-263-5868, Operator 92.

COMPAQ

It simply works better.

Seven Top LANs: A Hard Look at Ease of Use

Network operating systems all claim to be faster, safer, and more feature-packed, but which are really easiest to install, administer, and use?

When you're serious about networking an office full of PCs, chances are you have more in mind than sharing printers, sending E-mail, and exchanging files. That's because the mother lode of productivity lies in consolidating data with a multiuser application, usually a data base. And like it or not, multiuser software means buying a server plus a high-end, server-based network operating system (NOS) to match.

This roundup examines seven of the leading server-based NOS's. Two of these, 3Com's *3 + Share* and Datapoint's *DataLAN*, run on top of good old DOS, while three new products—3Com's *3 + Open*, IBM's *LAN Server*, and Torus's *Tapestry II*—run under OS/2. The two best packages, Novell's *Advanced NetWare 286* and Banyan's *Vines/386*, have proprietary operating systems.

The OS/2 NOS's are especially interesting. All three readily support DOS workstations and use the much-heralded Microsoft *LAN Manager* as their operating kernel. The packages reviewed here are interim products, but in the long run, *LAN Manager's* concurrent processing and multithreaded code should bring major performance im-

provements (see "OS/2 in Transition," *PCW*, May 1988). *LAN Manager* also provides a platform for distributed applications (such as Microsoft/Ashton-Tate's forthcoming *SQL Server*) that speed work throughput by letting the server's CPU handle some critical computing tasks. Whether based on DOS, OS/2, or a proprietary operating system, the NOS's reviewed here all perform the same basic functions. They enable administrators to guard security by controlling user access to applications, data files, and network resources (printers, modems, and remote sub-directories). They run multiuser applications. And, with one exception, they work with the three major types of network boards: Ethernet, Token-Ring, and Arcnet.

Fundamentals aside, you'll find crucial differences, especially in ease of installation and administration. If you're smart, you'll leave installation to an outside expert in almost every case, but such tasks as adding users and changing access rights can be done by an in-house network administrator.

Administration ranges from straightforward to nightmarish. The acid test is wheth-

**Robert
Lauriston**

er or not a NOS enables administrators to assign access rights to network resources in user groups. If it does, a group member has a specific, predefined set of resource privileges once he or she logs on; the administrator changes rights merely by reassigning users to various groups. If it doesn't, users may have to enter a different password for each resource, and the administrator must change access rights user by user, resource by resource.

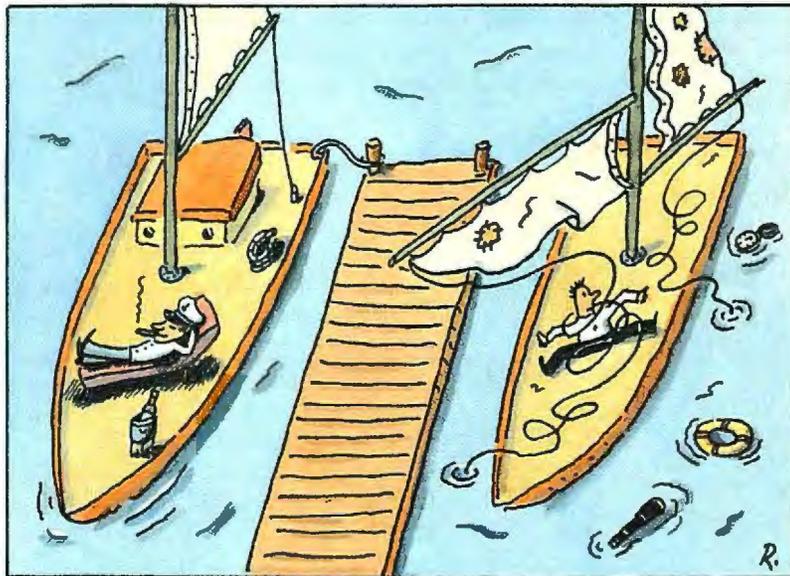

Performance is the most obvious selection criterion and the most overrated one. Server muscle and the amount of cache memory have a much bigger impact on network performance than which NOS you select. Nonetheless, under heavy network traffic, significant differences surface. National Software Testing Laboratories (NSTL) benchmarks, performed on a ten-node test bed, spotlight *3 + Open*, *NetWare*, and *Vines* as the big speed winners.

To provide meaningful cost comparisons, all the NOS's are priced in the standard *PC World* configuration, which includes server software and software for ten workstations. If E-mail isn't available from the vendor, the cost of a third-party package (\$695 for the popular *cc:Mail*) has been added.

Novell Advanced NetWare 286

Think networks and you probably think *NetWare*, for a number of good reasons. One of the fastest NOS's tested, *Advanced NetWare 286* offers excellent security features, Mac and OS/2 connectivity, and a reasonable price (\$3690 with *cc:Mail* in the *PC World* configuration), making it the system of choice for all but the largest LANs.

NetWare speeds work for both users and the administrator. It lets you run applications, send messages, and access resources, either from the DOS prompt or via a logical menu system. Most network options—

including setting access rights by user group—are set with the easy-to-use SYS-CON menu.

A generous 525K of usable workstation RAM remains after DOS 3.31 and *NetWare* are loaded—the most free RAM in the roundup. *NetWare*'s proprietary operating system, which runs the CPU in protected mode, provides automatic disk caching. On-line help is available throughout, though it's quite difficult to use.

Several unusual features ensure data integrity. Hot Fix reads all data written to disk; if the disk data seems questionable, Hot Fix rewrites the original data to another location, tests the disk sector, and permanently locks the sector out if it doesn't pass. Support for disk mirroring (where a second hard disk acts as a continuous backup for the first) and other fault-tolerant features are available at extra cost.

In NSTL testing, *NetWare* took top place in every transaction-processing test, reflecting performance under heavy traffic from many users. It did quite well in the other tests too.

Dozens of handy network utilities ease such tasks as setting and tracking security,

FEATURES EVALUATION

NetWare and Vines: Top Picks for Administrators

NetWare's rich administrative features and remarkable ease of use add up to the best single-server network operating system in the roundup. Vines/386 runs a close second in administrative ease, and its distributed name service makes it a better choice for multiserver LANs.

⁵ No E-mail included; depends on third-party E-mail package.

⁶ Only if node is active when message is sent.

⁷ DOS stations can only receive.

⁸ OS/2 workstations only.

⁹ Full server backup requires Banyan tape drive.

EXECUTIVE SUMMARY

Novell Advanced NetWare 286

LAN operating system

Strong performance and low price—plus Mac, mainframe, and OS/2 connectivity—keep this industry leader at the head of the class. Administrative and security features are also top-notch. Ideally suited for single-server networks.

	POOR	FAIR	GOOD	EXCELLENT
Installation				●
Resource sharing				●
Administration				●
Performance				●
Overall value				●

Reader service no. 622

managing different versions of DOS, troubleshooting disk problems, handling print spooling, and so on. The security capabilities are unusually sophisticated; you can even specify when a user can log on and from which terminals, and the maximum amount of server disk space each user can have. The downside to all this power is intricate administration, especially when you have to depart from the SYSCON menu.

Installing *NetWare* is fairly tedious. For one thing, an exhaustive disk-testing program must run overnight (or longer). For another, the installation program actually compiles a customized operating system for your server, which contributes to the superior performance. Most people prefer to hire a specialist to install *NetWare*, but if you decide to do it yourself, you'll find the documentation excellent.

NetWare has stood the test of time, and its large installed base means that third-party service and experienced administrators are easy to find. And *NetWare SQL*, Novell's *NetWare*-compatible distributed multiuser data manager, gives users one less reason to switch to OS/2. With innovation like this, *NetWare* is likely to stay at the top of its class.

Banyan Vines/386

Banyan's up-and-coming *Vines/386* is a top performer that's surprisingly easy to install and configure. At \$5990 (with its own add-on E-mail package), it's also the most expensive NOS in the roundup, but powerful administrative tools make it well worth the money for large, multiple-server networks. Aside from expense, the only significant drawback is lack of connectivity to Mac and OS/2 workstations.

Working with *Vines/386* is straightforward. An easy-to-use menu of network commands is provided, but most commands can be entered from the DOS prompt. Once loaded, *Vines/386* leaves a fair-to-middling 481K of usable RAM for workstations. On-line help is available at the touch of a function key, and it's good enough that you may never need to crack the clear, well-organized manual.

Vines/386 is the only NOS in the roundup that specifically exploits the 80386 chip's superior memory management. That's undoubtedly one reason why NSTL testing shows *Vines/386* to be one of the fastest NOS's around. Under heavy traffic it won three out of eight tests (not all shown on accompanying NSTL Test Report) and came close to *NetWare* on the rest.

EXECUTIVE SUMMARY

Banyan Vines/386

LAN operating system

Powerful, elegant, and expensive, *Vines/386*'s top performance and flexible addressing scheme suit it ideally to large, multiple-server networks. Easy installation and strong security features are added attractions; connectivity to non-DOS workstations is the only missing piece.

NSTL TEST REPORT

For Speed and Ease of Use, Novell's NetWare and Banyan's Vines/386 Are Top LANs

Novell's NetWare takes top performance honors, especially in tests with heavy network traffic—and offers strong security and administration, too. Banyan's Vines/386 boasts easy installation and performs very well overall, particularly in the transaction processing benchmarks showing performance of a multiuser data base under heavy usage. 3Com's 3+Open is fastest by far in the XCOPY tests and will be a serious contender once it adds a full feature set under OS/2.

¹ On some of the 10-station tests, some workstations running IBM's LAN Server and 3+Share hung up or lost their network connection.

Methodology

The purpose of these tests was to compare the speed of network operating systems (NOS's) under varying traffic conditions. Performance was measured via a series of application tests run with and without network traffic, and transaction processing tests run first on 5 stations and then on 10 stations. Comparing "with traffic" versus "without traffic" values and 5-station versus 10-station values indicates how performance degrades as network use and size increase.

IBM's Token-Ring was chosen for NSTL's test LAN, as only Token-Ring hardware is supported by all seven systems. The server was a Compaq Deskpro 386/20 with a 130MB ESDI hard disk, 5MB RAM, an IBM Token-Ring Adapter II, and a Hewlett-Packard LaserJet Series II. The workstation used for the tests was a Compaq Deskpro 386/25 with a 130MB ESDI hard disk, 5MB RAM, and an IBM Token-Ring Adapter. Ten additional workstations were 12-MHz Deskpro 286s with 20MB hard disks, 1MB RAM, IBM Token-Ring Adapters, and DOS 3.31. Each NOS was adjusted for best performance on the test LAN according to manufacturer's instructions. (Since IBM's LAN Server doesn't run on an AT server, it was tested on an IBM Model 70-121 with 6MB RAM and a Token-Ring Adapter/A. For comparison, 3+Open was tested on both servers; the only significant difference in results was that on the Model 70 it failed the spool and print tests.)

Heavy network traffic for the spool and print tests was simulated by 5 workstations running *Foxbase+/LAN*. Every 2 seconds each workstation performed a transaction consisting of finding a record by indexed search in each of three files (10K, 100K, and 5MB), locking them, updating them, and unlocking them. No log or history files were written.

Spool and Print

DOS COPY was used to send a 1.2MB, 300-dpi *Ventura Publisher* "print to disk" file to LPT1, which was rerouted to the server's print queue. Timing of both spool and print tests started when the COPY command was entered. Spool timing ended when the workstation returned a DOS prompt; print timing ended when the last page dropped into the printer tray. (*Data-LAN* does not support printers attached to its dedicated server, so LPT1 was rerouted to another workstation's print queue.) This test was run with and without network traffic.

XCOPY

One hundred fifty-five files totaling 12.9MB of data in 10 directories were copied from the workstation to the server using the DOS XCOPY command. This test was run without network traffic and represents a best-case file-transfer scenario.

Transaction processing

Foxbase+/LAN was used to run a modified version of TP1, a standard test based on a retail banking system comprising 10 million accounts, 10,000 tellers, and 1,000 branches. The standard unit of transaction selected was debit/credit. Test files on the server were Accounts (50,000 100-byte records), Teller (1,000 100-byte records), Branch (100 100-byte records), Transaction (1,000 25-byte records), and History (0 records for unindexed tests; 10,000 75-byte records for indexed tests).

For each of 500 transactions, a record was read from the Transaction file; located and locked in Accounts, Teller, and Branch; and added to History; then all records were updated and unlocked. Tests were done with 5 and 10 workstations (500 and 50 transactions per station, respectively) and were run with and without four indexes on the history file. (Indexing is more disk intensive and requires more files to be open.) The rate of transaction processing in these tests represents unusually heavy workstation activity.

Data based on tests designed and conducted by National Software Testing Laboratories (NSTL). All rights reserved.

Unlike *NetWare*, which lacks E-mail entirely, *Vines/386* comes with an excellent, menu-driven E-mail package that enables you to set up folders for storing mail. You also get a decent text editor and the ability to attach up to ten files to a single message.

Administration is relatively straightforward, and *Vines'* log-in security options are second only to *NetWare's*. Best of all, *Vines/386* includes StreetTalk, a distributed-resource manager that's a must-have for multiple-server LANs. StreetTalk tracks network users by name, enabling you to reshuffle resources without having to specify which server holds a given user's log-in data, security rights, personal directories, and so on.

Installation is completely automated and very easy. Aside from telling *Vines/386* what boards are in the server and what time zone you're in, there's nothing to do but swap disks when prompted. A hardware key (Banyan's annoying form of copy protection) must be attached to the LPT1 port; the key passes data through so you don't lose a printer port.

Vines/386 is pricey, and the missing link to Mac and OS/2 workstations may be frustrating. Your reward for living with these flaws is speed, easy installation, painless administration, a powerful feature set, and the convenience of StreetTalk. *NetWare* is still a better option for single-server networks, but in a large, multiple-server setting with only DOS workstations, *Vines/386* is the ideal choice.

NSTL BENCHMARK TESTING

The exclusive test facility for PC World, National Software Testing Laboratories (NSTL), is an independent organization that specializes in evaluating personal computer hardware and software. A recognized pioneer in state-of-the-art test design, NSTL believes that the most useful benchmark tests measure how well products perform when executing typical business tasks. NSTL testers follow detailed test plans that simulate normal operating conditions. A controlled testing methodology ensures objective, accurate, and consistent results and gives consumers a sound basis for making purchase decisions. NSTL publishes its test results in *Software Digest Ratings Report*® and *PC Digest*.™ Neither publication accepts advertising. NSTL is located in Philadelphia, Pennsylvania.

3Com 3 + Share

3 + Share is one of the lowest priced full-featured LANs available (\$3090 with its optional E-mail). Designed to handle large, multiple-server networks, it permits connectivity with Macs, mainframes, UNIX nodes, and OS/2 workstations. And although it's an add-on, *3 + Mail* is one of the best E-mail packages available. Unfortunately, *3 + Share* itself is sadly out of date. Performance is poor, and installation and administration are maddeningly difficult.

Even end users may find *3 + Share* taxing. As with any other NOS, running remote applications is transparent, but using network resources is another story. *3 + Share's* command classifications—3F (file tasks), 3P (print), 3M (mail), and so on—are arbitrary and confusing, and on-line help is available for only one group of commands at a time. Administrators are advised to exploit *3 + Share's* menu generator, which, although difficult to use, produces menus that protect end users from the bewildering command shuffle.

With DOS loaded, *3 + Share* leaves only 448K of usable workstation RAM, tying with *3 + Open* for lowest count in the roundup. On the server side, the DOS 640K limit means you must choose between installing 3Com's E-mail option and allocating enough RAM for tuning network performance. Fortunately, 3Com's new 80386-based dedicated server, the 3S/400, solves the RAM allocation problem by exploiting extended memory. Optional fault-tolerant disk management software (much like *NetWare's*) runs on both dedicated and nondedicated servers.

3 + Share showed surprisingly poor performance on a ten-node network. It crashed on four NSTL tests (not all shown). On the tests it didn't flunk, its performance was generally below average.

One of *3 + Share's* strongest suits is its powerful distributed-resource manager, Name Service. Similar to *Vines/386's* Street-Talk, Name Service greatly eases switching to and maintaining a multiserver network. The \$595 *3 + Mail* is also a big plus, offering an excellent text editor and an interface so easy the manual becomes superfluous. An-

other add-on, *3 + Route* (\$1500), provides transparent communications with other 3Com LANs.

3 + Share's security features are limited, and its administrative features, although comprehensive, are exasperating to use. For example, to install a server-based multiuser application, you must log on and off several times under two different administrator names. Worst of all, *3 + Share* does not enable you to assign access rights to user groups, making efficient security management impossible.

If administration is frustrating, installation is downright infuriating. *3 + Share* includes a menu-driven installation program, but configuration and debugging must be done manually—and the documentation is both misleading and inaccurate. If you must install *3 + Share* yourself, plan to spend hours on the phone with 3Com's technical support.

Sluggish performance and painful administration clearly indicate that *3 + Share's* time has come and gone. If you need speed, wide connectivity, distributed resource management, and the right tools for a large, multiple-server LAN, consider *Vines/386*—and read on to find out about *3 + Open*.

EXECUTIVE SUMMARY

3Com 3 + Share

LAN operating system

Despite low cost, an outstanding (optional) E-mail package, and the ability to connect with Macs and OS/2 workstations, *3 + Share* misses the mark. The sore points are poor performance, painful installation, and difficult administration.

3Com 3 + Open

3Com helped develop *LAN Manager*, so it's no surprise that *3 + Open* is the best of the three OS/2 products reviewed. One of the fastest NOS's tested—blazingly fast in some tests—*3 + Open* provides a set of administrative tools that are powerful, flexible, and easy to use. What's more, at \$3690, *3 + Open* (with *cc:Mail*) matches *NetWare*'s price exactly.

3Com clearly intends *3 + Open* to do everything *3 + Share* does and more, including running *SQL Server*. But at this writing, the company has not yet transferred all of *3 + Share*'s features (Name Service, *3 + Mail*, *3 + Route*, Mac connectivity, fault tolerance, and so on) to *3 + Open*, which means installing a second server running *3 + Share* to get a complete package. And while 3Com claims that *3 + Open* will have all these features by the time you read this, be forewarned that the current version harbors a number of minor but annoying bugs.

3 + Open has the best-designed user interface in the roundup, with a look and feel just like that of DOS 4.0's DOS Shell. Users employ a mouse to navigate a series of handy, customizable, pulldown menus that integrate network resources, applications, and file management; context-sensitive help screens guide you throughout. You can get a DOS prompt if you want one, and all network commands have command-line equivalents. Unfortunately, *3 + Open* still leaves only 448K at the workstation.

One of the top three performers on NSTL's tests, *3 + Open* took the gold on the no-traffic benchmarks (not all shown) but slowed down significantly under heavy network traffic. This may have been due to OS/2's hefty RAM requirements, which left less RAM than other NOS's did for disk caching on the 5MB-equipped test server (not all tests are shown).

Administration relies on a user interface as logical and attractive as that enjoyed by end users. *3 + Open* offers the best and most flexible security features in the roundup, including a flexible method of assigning access rights to user groups. Troubleshooting utilities still need work, however; trying to get an on-screen explanation of certain error

EXECUTIVE SUMMARY

3Com 3 + Open

LAN operating system

It's fast, it has a great user interface, it provides the best security around, and it even has a low price. The only problem with this *LAN Manager*-based product is that it's not quite ready for prime time and requires a second server running *3 + Share* to provide full services. 3Com says these features will be built in by the time you read this.

codes caused the administrative program to crash. The program also occasionally registered false log-ons.

Like *3 + Share*, *3 + Open* has an awful installation utility, and the manual is only slightly better than *3 + Share*'s. Vendor or other outside-expert installation is a must.

The jury is still out on *3 + Open*. Its performance is impressive, and its administrative tools set a new standard for versatility and ease of use, but bugs in release software are always disturbing, and we have to take on faith 3Com's promise to swiftly incorporate such missing pieces as Mac connectivity. By the time you read this, other NOS's based on *LAN Manager* may already be giving *3 + Open* serious competition.

IBM LAN Server

LAN Server is unlikely to win converts to the IBM fold. Overpriced and underpowered, this *LAN Manager*-based product runs only on IBM PS/2 Models 50 through 80 and is compatible only with Token-Ring boards. Performance is mediocre, and at \$4685 (in the standard *PC World* configuration) the package costs significantly more than *NetWare* or *3 + Open*. One of its few pluses is

leaving workstations more than 500K of usable RAM.

Workstations linked by *LAN Server* must run either IBM OS/2 Extended Edition 1.1, or DOS 3.3 with IBM's *PC LAN 1.3* (which requires one copy per workstation). Extended Edition 1.1 incorporates the Presentation Manager, and the LAN features are well integrated into the user interface; by contrast, *PC LAN*'s interface is inconsistent and key-stroke hungry. Worse, although adding applications to *PC LAN*'s menu is easy, you can do so only if the program files are on the server.

One of *LAN Server*'s biggest problems is bugginess. Following instructions to set up user accounts for DOS workstations can result in unusable log-ons. The system constantly loses track of log-ons and gives false 'you are already logged on' messages. In addition, several of the program's on-line tutorials crashed.

In NSTL tests, *3 + Open* consistently outperformed *LAN Server*. Moreover, *LAN Server* froze during the toughest multiuser test.

LAN Server falls far short of *3 + Open* in administrative and security features. Access restrictions are limited and do not extend to individual files, as with *3 + Open*.

Installation on the server is monotonous, requiring a lot of Extended Edition groundwork before you even begin to install *LAN Server*. And of course, you must run either the Extended Edition or the *PC LAN* installation routine on every workstation you add.

LAN Server is clunky, buggy, finicky, and feature poor. *3 + Open*, with the same *LAN Manager* core, does more, works better and faster, and costs less. The only people who will buy *LAN Server* are those who are married to IBM for better or worse.

Torus Tapestry II

Like *3 + Open*, *Tapestry II* is an OS/2 NOS in transition. By itself, this new *LAN Manager*-based product is pretty bare-bones; to get E-mail, a group scheduler, and many other useful features, you need a second server running the DOS version of *Tapestry*. In a single-server configuration, performance is generally below average, and the \$4180 price is \$490 more than *NetWare*'s.

Tapestry's well-deserved reputation for ease of use lies in its unique, character-based graphic interface. With its icon-based menu, it smoothly integrates network commands, E-mail, scheduling, user applications, and file management tasks. You navigate by mouse, cursor, or first letter of the icon name. A good on-line help system is available at all times, and the system leaves you a moderate 472K of usable RAM.

Despite OS/2, *Tapestry II*'s performance on the NSTL benchmarks was unimpressive. *3 + Open* was significantly faster across the board, and on many tests *Tapestry II* was surpassed by *3 + Share* and *DataLAN*.

The consistent interface helps to keep training costs down, but woe to those who have an application for which *Tapestry II* lacks an icon; getting to the DOS prompt is not particularly intuitive. Another annoyance: The E-mail package lets you attach only one file to each message. Other features are handier, including the ability to lock your terminal (with password protection) via the touch of a function key.

The two-server installation can complicate managing security and backup. *Tapestry II*'s security features are first-rate; the DOS version's, however, are not so hot. The killer,

EXECUTIVE SUMMARY

IBM LAN Server

LAN operating system

Expensive, sluggish, and buggy, IBM's adaptation of *LAN Manager* will appeal only to those who follow the Big Blue road wherever it leads. As if by accident, it needs a PS/2 Model 50 or better as a server and works only with Token-Ring network boards.

EXECUTIVE SUMMARY

Torus Tapestry II

LAN operating system

Tapestry II's unique, icon-based interface is easy to learn and use, but overall this pricey LAN Manager variation is disappointing. As with 3+ Open, you need a second server running the DOS version to get all the features, a condition Torus says will be remedied soon.

	POOR	Fair	GOOD	EXCELLENT

once again, is lack of support for user groups. Likewise, installing the OS/2 package is far simpler than setting up the program on a DOS server. Difficulties inherent in the DOS version's copy protection scheme, and disorganized installation instructions in an otherwise worthy manual, add to the hassle.

Tapestry II's shell, which insulates users from the operating system, has considerable charm. However, the program itself is still incomplete. Like 3Com, Torus avers that the OS/2 version will soon have all the features of its DOS predecessor. Users might also ask for better performance, a lower price, and a bit more sophistication.

Datapoint DataLAN

DataLAN claims to be suitable for large networks. It's tough to see what's behind that assertion, though, because this DOS-based package both performs slowly on NSTL's high-traffic tests and lacks a distributed name service for multiple servers. And with DataLAN's \$5185 price tag, only Vines/386 is more expensive.

DataLAN is pretty easy on end users but short on features overall. Users access network resources either by entering commands at the DOS prompt or by using a menu; un-

fortunately, administrators can't install applications as menu options. The on-line help doesn't add much to what you see on the menus.

After DOS and the networking software are installed, you're left with a healthy 512K of usable RAM. Disk mirroring software and a special backup package are available at extra cost.

DataLAN's performance is unimpressive, especially considering the system's price. Although it did better than some systems (which crashed under NSTL's heaviest traffic tests), overall DataLAN was significantly slower than NetWare, Vines, and 3+ Open.

Administrative tools are limited. The lack of user groups means each user's security rights must be assigned separately. Sub-directory security options don't go beyond read, write, and create; and no individual file restrictions are available.

The installation program leaves several crucial tasks undone, and the manual is unreadable and unindexed. In an apparent attempt to compensate, a blurry videotape walks you through a simulated (and confusing) installation process. Technically, DataLAN supports only Token-Ring and its own Arcnet boards, but the company claims it will run on any board that supports NetBIOS, including an Ethernet board.

Even on a small network, you can do better than DataLAN. It's more expensive than

EXECUTIVE SUMMARY

Datapoint DataLAN

LAN operating system

This system is easy to use, but its performance holds up only if LAN traffic is light. More to the point, high price, installation problems, and lack of support for group-based access rights make it an inferior choice.

	POOR	Fair	GOOD	EXCELLENT
Installation			●	
Resource sharing				●
Administration		●		
Performance			●	
Overall value		●		

Reader service no. 623

NetWare, which performs better, installs easier, and provides much stronger security and administrative tools. It's hard to see a situation in which *DataLAN* would be a smart buy.

LANs for All Seasons

If you plan to stick with a single-server configuration, you can't do better than *NetWare*. Top-notch security, powerful administrative features, and the cutting-edge advantage of *NetWare SQL* justify this proven performer's excellent reputation. A soon-to-be released upgrade, *NetWare/386* (which taps the special memory management power of the 80386), promises to boost this already speedy NOS to even greater heights.

Vines/386 is the NOS of choice for large, multiple-server LANs, provided the environment is limited to DOS workstations. In fact, *Vines/386's* speed, elegant addressing

scheme, and easy installation and administration make it a tempting candidate for smaller LANs as well.

S + Open may soon be hard to beat in both single- and multiple-server classes, provided it successfully incorporates *S + Share's* power features. It's only a matter of time before *S + Share* is obsolete. However, the current interim version of *S + Open* is too buggy and incomplete to earn a recommendation.

Network software is changing fast, and the multiprocessing possibilities of OS/2-based NOSs are intriguing. But until those products give you something that *NetWare* and *Vines/386* lack, stick with the tried and true. ●

Robert Lauriston is a San Francisco-based computer consultant specializing in LAN installations and WordPerfect.

With CompuServe, you can fax from your computer without a fax board.

Now there's a faster, easier way to send letters, contracts, orders, or any kind of text directly from your computer to any fax machine in the world. Without adding an expensive fax board to your computer and sacrificing an expansion slot.

CompuServe has added the speed and convenience of fax to its long list of business-building services. And the price of faxing on

CompuServe makes good business sense, even before you consider all the other benefits.

For example, when you're away from your office, you can fax from your laptop or another computer. Composing and sending from your keyboard gives your recipient a sharper, cleaner fax. And CompuServe sends you a confirmation of every fax you send.

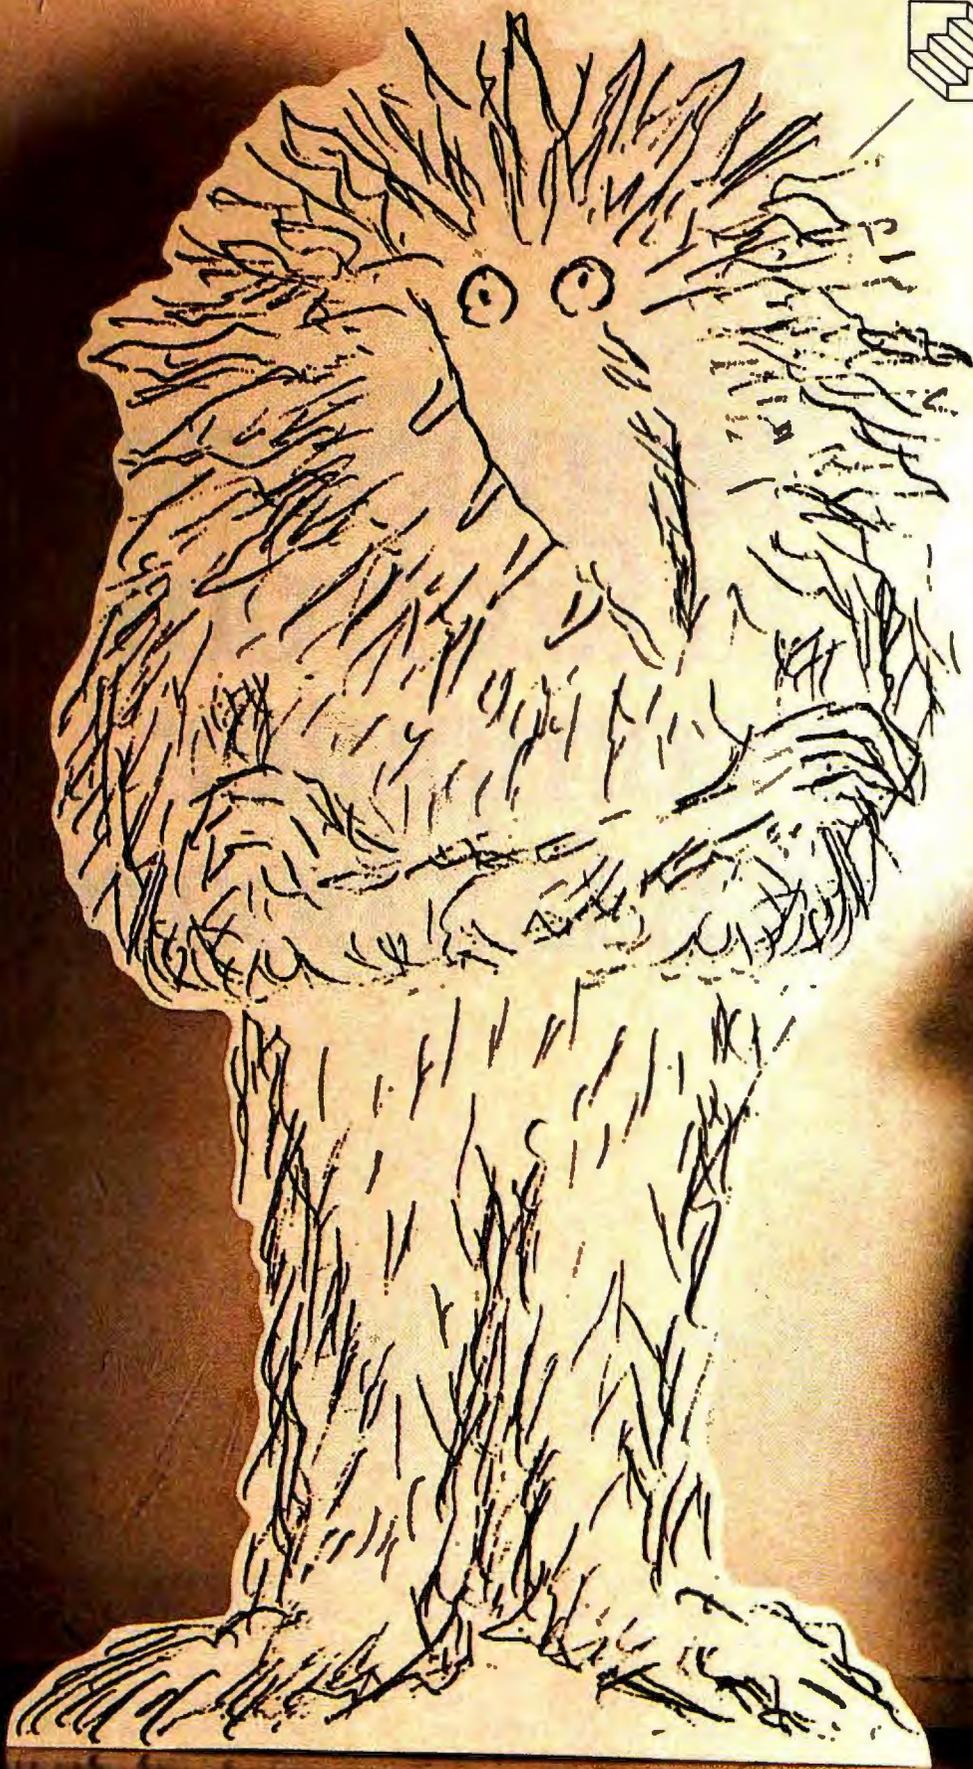

To fax from your computer, all you need is a personal computer with a modem and a CompuServe membership. To join, call 800 848-8199, or see your local computer dealer. If you're already a CompuServe member, type GO FAX at any ! prompt.

25-MHz Speedsters— A Buyer's Market

The 25-MHz era is in full swing.

**We run seven cutting-edge
systems through DOS, OS/2,
and server benchmarks—**

**only to discover that
performance isn't everything.**

Buy one of the fastest and most expensive systems available, and you'd be crazy to waste it on an easy job. That's why this roundup of seven 25-MHz 80386 PCs focuses on two of today's toughest tasks: serving a network and running OS/2 applications.

National Software Testing Laboratories (NSTL) ran three suites of application-based benchmarks: a new battery of file server tests, a revised set of OS/2 tests, and the usual DOS benchmarks. As you scan the scores, what pops out at you is how close the systems are in performance. In the nonindexed server transaction test, for example, the speeds of all the systems were essentially the same—for an interesting reason. By the time all that data reached the workstations, the speed of the network was more of a limiting factor than server performance was.

Another reason for the photo finish is the zero-wait-state, static-RAM memory cache that all these systems include. In the processing-only *1-2-3* benchmark, the speed difference between the slowest and fastest system was less than 8 percent. That gives much of the performance edge to the systems with the fastest hard disks and disk-caching software.

With performance so close, price looms large as a purchase criterion, along with warranty, service agreement, and company reputability. If you're looking for a file server, finding one with room for a clutch of expansion boards and two full-height drives may be the most important consideration.

To help you compare prices, we've standardized the configuration for these systems, including memory and mass storage befitting high performance: 4MB RAM and an ESDI hard disk that's as close to 100MB as possible (variations in hard disk size are noted in individual reviews). Also factored in are a 1.2MB floppy drive, a VGA board and a VGA color monitor, one parallel and one serial port, and a 101-key keyboard.

Acer 1100/25

At \$9673 in our standard configuration, the Acer 1100/25 is a moderately priced unit with excellent DOS performance. The machine provides ample room for drives, expansion boards, and especially memory and comes with a respectable bundle of software. The downside is a question mark for OS/2 performance and a short-lived on-site service agreement.

TJ Byers

On the network server tests the 1100/25's speed is satisfactory, but it slips slightly on the OS/2 benchmarks. Part of the blame probably lies in the fact that Acer was unable to provide its own working version of OS/2. The unit was tested with Compaq's OS/2 1.0B.

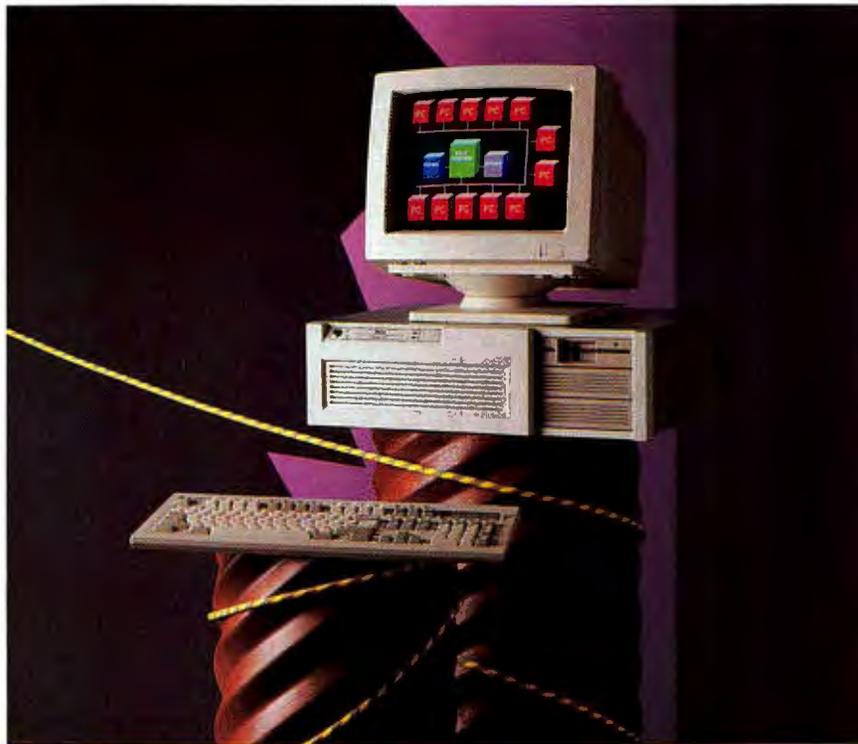

The 1100/25's motherboard holds up to 8MB of RAM in 512K SIMMs (Single In-Line Memory Modules). Two 32-bit slots accommodate a 16MB memory board each, for a humongous 40MB memory bus capacity. However, current versions of the expansion board stand their SIMMs upright, leaving too little room for a second board. The company says a skinnier board is coming soon.

The drive accommodations are classic for an AT-type chassis. There are two internal and three externally accessible half-height bays; as with almost all systems, you can configure any adjoining pair of half-height bays to hold a full-height drive. However, you get one less than the typical two 8-bit slots, and if you install two 32-bit memory boards, you lose one of the six 8/16-bit slots. One parallel and one serial port are built into the motherboard, leaving the 8-bit slot and four 8/16-bit slots open in this roundup's standard configuration.

Like all the systems in the roundup except the Micro Express ME 386-25, the 1100/25 comes with an on-site warranty. However, it's limited to four months; the remaining eight months cover depot repair. With the exception of Hewlett-Packard and Micro Express, the other vendors include a full year's on-site service.

The 1100/25's generous software bundle includes DOS 3.3, GW BASIC, *Windows/386*, EMS 4.0 emulation, and disk caching. Like all the machines in the roundup, the 1100/25 offers ROM-based setup; unlike with some systems, DIP switches and jumpers may need attention during configuration.

As a network server, the 1100/25 would benefit from better controller throughput and a longer on-site repair agreement. And the jury's out on OS/2 performance, since no

With the System 325, Dell strikes again by offering a low price and solid performance, with a year's on-site service thrown in.

The second-fastest system in the roundup, the Micro Express ME 386-25 goes for an incredibly low \$6325—with 4MB RAM, 150MB ESDI hard disk, and monitor, no less.

EXECUTIVE SUMMARY

Acer 1100/25

25-MHz 80386-based computer

A moderately priced system that supports an amazing 40MB of CPU-speed RAM, the Acer 1100/25 is a blazing DOS machine, but it falters with OS/2. Another drawback is the relatively short on-site service agreement.

	POOR	FAIR	GOOD	EXCELLENT
Memory bus capacity				●
Expandability			●	
Ergonomic design		●		
Performance			●	
Overall value			●	

Reader service no. 680

Acer OS/2 was obtainable. Nonetheless, a reasonable price, blazing DOS performance, and large CPU-speed RAM capacity make the 1100/25 a good choice as a souped-up DOS workstation, especially for processing-intensive tasks.

Dell System 325

The System 325 sounds too good to be true—especially with Dell's recent price cuts. Its performance is nearly identical to that of the Compaq Deskpro 386/25, but at \$8099 it's over \$5000 cheaper (in the roundup's standard configuration but with a 150MB hard disk). Add excellent expandability, switchless installation, and a year's free on-site service, and you've got a *PC World Best Buy*.

The System 325 does well on the network server tests, though it's a bit slower than the Acer 1100/25 on the DOS benchmarks. On the OS/2 tests, the System 325 falls squarely in the middle of the pack running Dell's own version of OS/2.

You can expand the System 325's motherboard RAM to 8MB. If you're aiming higher, you can bring CPU-speed RAM to 16MB by filling the sole 32-bit slot with an 8MB board. Both the drive capacity and the number of industry-standard slots conform to the AT

paradigm. All five half-height bays are externally accessible, providing numerous removable-media possibilities. In addition, you get an extra free slot, because one serial and one parallel port are built into the motherboard. In our standard configuration, both 8-bit slots and four 8/16-bit slots are open.

Compared with systems like the Acer 1100/25 that throw in *Windows/386* at no extra cost, the System 325 software package is underwhelming. The machine comes with diagnostics and today's leading disk-caching program, *Super PC-Kwik*. The ROM-based setup routine enables you to configure the system without jumpers or DIP switches.

The System 325 costs about \$1600 less than the Acer 1100/25 and offers comparable speed. It also delivers a little more expandability, more hard disk space, and eight months' extra on-site service. And network administrators will love the fact that a system with a monster 322MB hard disk is only \$900 more than the \$8099 configuration reviewed here. Dell's machine isn't the fastest PC in the roundup, but in this crowd, a little slower than number one is nothing to sneeze at. This is a nice chunk of computing for the money.

EXECUTIVE SUMMARY

Dell System 325

25-MHz 80386-based computer

This inexpensive system produced solid scores on the DOS, OS/2, and network server tests. Add plenty of room for boards, drives, and RAM—plus a year's free on-site service—and you

have an outstanding value.

¹ Price is based on the standard PC World configuration for 25-MHz 80386 systems, which includes 4MB RAM, a 100MB ESDI hard disk, a 1.2MB floppy drive, a VGA board and VGA color monitor, one parallel and one serial port, and a 101-key keyboard. Hard disk variations from 100MB are noted.

² With a 150MB ESDI hard disk.

³ With a 110MB ESDI hard disk.

⁴ With a 120MB ESDI hard disk.

⁵ Includes motherboard memory and RAM installable in proprietary 32-bit slots accessed at full CPU speed.

⁶ If no 32-bit memory boards are present, you can also use the two 32-bit slots as 8/16-bit slots and still have room for 8MB on the motherboard.

⁷ One 16-bit and two 16/32-bit MCA slots.

⁸ If no 32-bit memory board is present, you can use the single 32-bit slot as an 8-bit slot and still have room for 8MB on the motherboard.

⁹ In most cases, two half-height bays can be converted into one full-height bay, and vice versa.

¹⁰ Consists of two 3½-inch floppy drive bays and one 3½-inch hard disk bay.

Everex Step 386/25

The fastest system in the roundup, the Everex Step 386/25 weighs in with a mondo memory cache, a sizzling hard disk, and a roomy interior. At \$9347 in the roundup's

standard configuration (but with a 150MB hard disk), the system offers top performance at a price under the Acer 1100/25's.

As with the 1100/25, the Step 386/25's speed fell sharply on the OS/2 tests. When

NSTL TEST REPORT

25 MHz: Speed to Spare for Business Applications

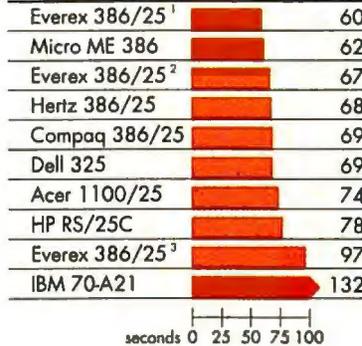

At 25 MHz, performance differences get a little academic, but the Everex Step 386/25 ended up the fastest system overall. The only system available with a variable-size memory cache, the Step 386/25 was subjected to the OS/2 benchmarks first with 64K, then with 256K of cache memory. Our tests prove that under OS/2, the size of the memory cache does make a difference; with 256K, the Step 386/25 improved by about 8 percent.

OS/2 Single-Tasking

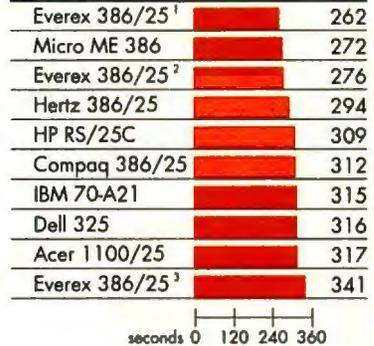

DisplayWrite 4/2

R:base for OS/2

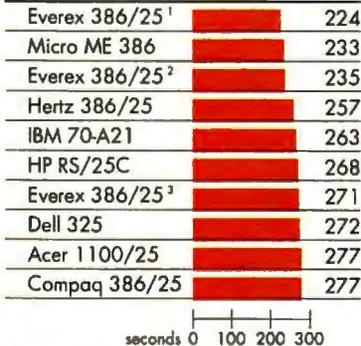

IBM C/2

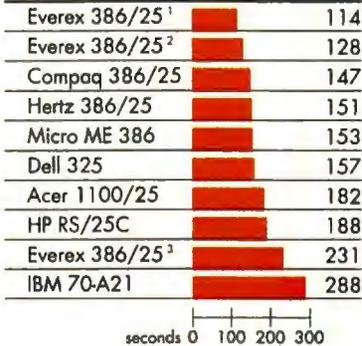

OS/2 Multitasking

Test 1

Test 2

¹ 256K cache memory, Compaq OS/2.
² 64K cache memory, Compaq OS/2.
³ 64K cache memory, Everex OS/2.

Methodology

All machines were tested with 4MB of RAM, an ESDI hard disk and controller, a coprocessor, and a 256K disk cache in extended memory for all tests except the 1-2-3 benchmark.

DisplayWrite 4/2

Although the hard disk access rate plays a small part in this benchmark, processing and memory access speeds are the most significant factors. Memory architecture affects memory access speed: Systems that require additional memory in standard expansion slots to run OS/2 exhibit below-average performance.

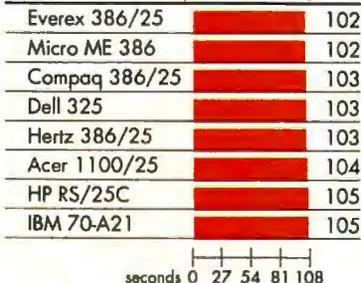

While *DisplayWrite 4/2* is loading, the keystrokes to start a *DisplayWrite* macro are entered. The macro loads a 35-page, 140-paragraph document, replaces each occurrence of the word *today* with *tomorrow*, uses the built-in spelling checker to look for any incorrectly spelled words (there are none), paginates the document, prints the first page to an IBM Proprinter II, and exits *DisplayWrite*.

R:base for OS/2

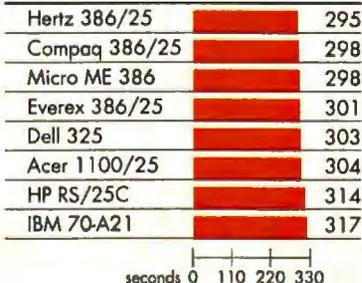

Processing and hard disk random access speeds are the most significant factors in this benchmark. Disk caching dramatically improves apparent disk access speed. This benchmark measures the time it takes to produce a report based on a three-file join, select, and sort.

IBM C/2

In this benchmark, processing and hard disk sequential access speeds are the most important factors. The benchmark measures the time required to compile the 25 source code files that make up XUSP, a public-domain USP interpreter.

OS/2 multitasking test 1

In two sessions, IBM C/2 compiles the 25 C source code files that make up XUSP. The results of this benchmark are determined by calculating the difference between the first session's starting time and the second session's ending time.

OS/2 multitasking test 2

This test includes the single-tasking R:base for OS/2 benchmark along with two sessions of Paradox for OS/2. All sessions are run in the background. The two Paradox for OS/2 sessions are started first, while the R:base session automatically starts 15 seconds later. The results of this benchmark are determined by calculating the difference between the starting and ending times for the R:base for OS/2 benchmark.

File server tests

Each of the systems was set up as a server running Novell's Netware/286 2.15 with the Transaction Tracking System installed. The network had five Compaq Deskpro 286 Model 40 workstations with 1MB of memory each; all workstations ran under Compaq DOS 3.31. The workstations used IBM Token-Ring Adapters, while the server used an IBM Token-Ring Adapter II. The drivers for the Token-Ring Adapters were from IBM's LAN Support Program version 1.01 and Netware/286.

Foxbase+/LAN (unindexed)

This transaction processing benchmark is run using Foxbase+/LAN version 2. The following files are used: Accounts (100 bytes per record, 50,000 records); Teller (100 bytes per record, 1000 records); Branch (100 bytes per record, 100 records); Transaction (25 bytes per record, 1000 records);

Hertz 386/25	238
HP RS/25C	239

and History (75 bytes per record, 0 to 10,500 records).

The benchmark uses no index. First, a record is read from the Transaction file. The record is located and locked in the Accounts, Teller, and Branch files. A record is then added to the History file and locked. All locked records are updated, and finally, all records are unlocked. Altogether, 500 transactions are processed in the test (100 per workstation).

Foxbase+/LAN (indexed)

The previous Foxbase+/LAN test is rerun with four indexes on the History file. The tests with indexes entail more disk activity and require more files to be open. The scores represent the average time it takes each workstation to complete the test.

Microsoft Word 4.0

A Microsoft Word macro loads a 35-page, 140-paragraph document and performs search-and-replace and spell-checking operations. The first page of the document is then printed. Although the results of the benchmark depend primarily on processor and memory access speeds, display adapter and hard disk speeds are also contributing factors.

1-2-3 2.01

In this benchmark, a 1-2-3 macro executes a series of recalculations using five different formulas within a 75-by-75-cell matrix. Because there are few screen updates and no disk access is required, the results depend almost entirely on processing and memory access speeds.

AutoCAD 9

In this benchmark, a three-dimensional sample drawing is retrieved and displayed using AutoCAD's EGA driver. The zoom function is used to display the drawing from various perspectives; then the full drawing is printed. The results of the benchmark depend primarily on the speeds at which the processor and coprocessor operate and at which memory is accessed. The performance of the display adapter and the hard disk also have some effect.

AutoCAD

Compaq 386/25	44
Micro ME 386	44
Everex 386/25	45

HP RS/25C	47
IBM 70-A21	48

dBASE III Plus 1.1

The dBASE III Plus test measures the time required to prepare and print a report of past-due invoices. The report includes calculated fields and is based on three files: a 500-record customer file, a 1000-record invoice file, and a 2000-record item file. When disk caching is not used, the random access speed of the hard disk is, after processor speed, the most significant factor in this benchmark. With disk caching, sequential read performance becomes more important than random access.

Microsoft C 5.0

The Microsoft C benchmark measures the time required to compile and link XUSP. The most important factors in this benchmark are processor and memory access speeds. The performance of the hard disk is also a factor; generally, disk caching has little effect.

Data based on tests designed and conducted by National Software Testing Laboratories (NSTL). All rights reserved.

With trademark LED readout aglow, the Everex Step 386/25 zips ahead of the pack. Recent price reductions and a large memory cache make it a very attractive buy.

we retested it with Compaq OS/2 1.0B rather than Everex OS/2 1.0, it ran the OS/2 benchmarks faster than any other system in the roundup. (To avoid potential compatibility problems, we don't advise using any system with a version of OS/2 not specifically supported by the vendor.)

The basic Step 386/25 configuration includes 2MB RAM in 512K SIMMs and 64K of cache memory. Depending on the type of SIMM you buy, with all eight motherboard SIMM sockets occupied, you get a 128K cache and 2MB, 4MB, or 8MB of main memory. A memory expansion board with the same capacity as the motherboard fits in the sole 32-bit slot, bringing the memory bus maximum to 16MB.

To determine the advantage of a larger cache, we tested the Step 386/25 under OS/2 with 4MB RAM and a 64K memory cache, then with 4MB and a 256K cache. The Step 386/25's performance—already the best in the roundup—climbed by an average of 5 percent with the larger cache. Compaq's OS/2 was used in both configurations.

The Step 386/25's housing is identical to the Step 386/20's (see "Surprise Values at 20 MHz," *PCW*, December 1988). Inside the chassis resides an AT-like mix of slots—if you count the 8-bit one that serves as part of the 32-bit memory slot. In our standard configuration, one 8-bit and four 8/16-bit slots are left open. You can run the expansion bus at both 8 and 12.5 MHz; I/O-intensive operations run slightly faster at the higher speed, but some boards can't handle the speed and may cause a system crash.

The only software you get with the Step 386/25 is MS-DOS 3.3 and a disk-caching utility. However, you also get ROM-based switchless setup—a definite improvement over the Step 386/20, which has a couple of vestigial switches and jumpers.

The Step 386/25's speed is dazzling, and extras like modifiable cache memory, an LED readout, and switchable I/O bus speed are welcome. If performance is your foremost concern, this machine is hard to beat—just wait for a version of Everex's OS/2 that works as well as Compaq's.

Hertz 386/25

Spotty performance at a modest price sums up the Hertz 386/25. It brought up the rear in the DOS tests, but its speedy hard disk propelled it to first place in the more strenu-

EXECUTIVE SUMMARY

Everex Step 386/25

25-MHz 80386-based computer

Breakneck speed plus a large memory cache adds up to the fastest system in the roundup. In addition, useful front-mounted controls put the Step 386/25 a cut above the average box. However, Everex OS/2 could use some work.

EXECUTIVE SUMMARY

Hertz 386/25

25-MHz 80386-based computer

The Hertz 386/25's fast hard disk placed it first in the network server tests, but the Intel motherboard makes for lackluster 25-MHz performance. Even with recent price cuts, the budget conscious can do better.

	POOR	FAIR	GOOD	EXCELLENT
Memory bus capacity				●
Expandability			●	
Ergonomic design		●		
Performance		●		
Overall value		●		

Reader service no. 683

ous file server test. The Hertz 386/25 costs more than the Dell System 325 (\$9053 with a 160MB hard disk), but you get 10MB more disk space.

We selected the Hertz 386/25 for this roundup because its Intel motherboard is popular among clone makers. In other words, if you're considering a clone that's not reviewed here but has the same motherboard, our processing-intensive tests should give you at least some idea of what to expect. The prognosis is not so good: In the processing-only 1-2-3 benchmark, the Hertz 386/25 came in dead last.

The Hertz 386/25's motherboard holds 8MB without using a slot. Two 32-bit slots can hold one 8MB memory expansion board each, for a healthy memory bus maximum of 24MB. Free of memory boards, the 32-bit slots can be used as 8/16-bit slots, yielding slots for seven 16-bit boards and one 8-bit board. Hertz has built one serial and one parallel port into the motherboard, so our standard configuration leaves open the 8-bit slot and five 8/16-bit slots.

You'll find five half-height drive bays, three of which you can reach from the outside. The hard disk you choose comes formatted to your specifications with MS-DOS 3.3. Curiously, although they're free, you get DOS manuals only if you ask for them; the same

goes for the *Super PC-Kwik* disk-caching program.

Problematic motherboard aside, the Hertz 386/25's hard disk equals one fast network server. But other systems in the roundup deliver better all-around performance for less.

HP Vectra RS/25C

Hewlett-Packard's Vectra RS/25C tower provides good drive capacity plus an under-the-desk footprint, both welcome features in a file server. Unfortunately, the \$14,705 RS/25C is also the slowest and most expensive system in the roundup.

Ruggedness is the watchword here. This 70-pound unit has steel plating thick enough to withstand a bomb blast. Inside, a removable CPU board sits at the bottom of the tower and holds up to 16MB of 1MB SIMMs. This construction means you can replace the CPU board with an upgrade.

The slot count is AT-like—six 8/16-bit and two 8-bit—less than you'd expect from this behemoth. In this roundup's standard configuration, all but one 8-bit and two 8/16-bit slots are open. A Human Interface Link (HIL) port—designed for an HP touch screen, mouse, or printer—is built into the motherboard.

You can run the I/O bus at 8 MHz or 10 MHz, which may improve throughput with

EXECUTIVE SUMMARY

Hewlett-Packard Vectra RS/25C

25-MHz 80386-based computer

The Vectra RS/25C provides the lowest performance at the highest price. Its redeeming feature is a bulletproof tower chassis that supports more drives than any other system reviewed.

	POOR	FAIR	GOOD	EXCELLENT
Memory bus capacity				●
Expandability				●
Ergonomic design			●	
Performance		●		
Overall value		●		

Reader service no. 684

less risk than the Everex Step 386/25's 12.5-MHz option. And with room for two half-height and two full-height drives, you're one half-height bay ahead of any other system in the roundup.

The RS/25C's software bundle includes a micro-to-mainframe program, EMS 4.0 emulation, and a hard disk manager. HP Vectra DOS is extra and incorporates a handy DOS shell. HP OS/2 is available, but as with the Everex Step 386/25, performance under Compaq OS/2 was better.

Setup is ROM-based but not switchless. An unusual warranty lets you choose between one year of depot repair and three months of on-site service. Additional service contracts are available at extra cost.

The RS/25C is bulletproof in more ways than one: Its chassis is indestructible, and the unit is backed by one of the most reputable companies in the business. Nonetheless, this reinforced tower is overpriced for its performance and warranty.

IBM PS/2 Model 70-A21

All workstations should look this good. Sporting a petite, stylish Model 50 chassis, the Model 70-A21 looks and feels like the PC of the future—until you check the benchmarks. Scoring in the bottom third in all three test suites, the 70-A21 is encumbered

by a painfully slow hard disk. And its \$13,505 price tag in our standard configuration (but with a 120MB hard disk) is downright scary.

Still, more manufacturers should mimic PS/2 features like tool-less disassembly and motherboard integration of VGA, mouse port, disk controller, and I/O ports. The 70-A21 also benefits from IBM's worldwide service network; on-site service is now priced at a paltry \$25 for the first year.

The problems begin with specs. You can fit only 8MB of RAM on the memory bus—half the capacity offered by most competing systems. One 16-bit and two 32-bit Micro Channel slots are free in our standard configuration, but they all run at 10 MHz; any memory you install there will be accessed at less than half of CPU speed.

A worse constraint is limited options. For example, the 70-A21 comes with the slow 120MB hard disk, like it or not. Upgrading requires that you simply discard the sluggish unit, even if you buy the replacement from IBM. And of course, the number and variety of Micro Channel boards pale in comparison with the glut of AT boards.

It's unfair to judge a small machine like the 70-A21 as a server, but even as a workstation, space for devices is tight. Two external bays are dedicated to 3½-inch floppy or tape drives, while a single internal 3½-inch bay holds whichever IBM hard disk you choose. Sooner or later, IBM is bound to come out with a 25-MHz version of the Model 80 tower, which will be more suitable as a server.

The IBM Reference Diskette's setup, configuration, and tutorial routines still constitute the classiest system software act around. And of course, Programmable Option Select lets you plug in Micro Channel expansion boards and configure them without touching a switch or a jumper.

The 70-A21 is IBM's fastest machine, but its hard disk doesn't do it justice. Like most IBM drives, this one shines only on sequential disk reads—and that's probably due to IBM's fancy caching algorithms. This failing, aggravated by limited options and an exorbitant price, proves that looks aren't everything.

EXECUTIVE SUMMARY

IBM PS/2 Model 70-A21

25-MHz 80386-based computer

The small expansion capacity of this expensive system eliminates it from consideration as a server, and as a workstation it's a mediocre performer for its class. Classy configuration and a small footprint are its high points.

	POOR	Fair	GOOD	EXCELLENT
Memory bus capacity			●	
Expandability			●

Reader service no. 685

Micro Express ME 386-25

If you're looking for a rock-bottom price and can live without on-site service, the Micro Express ME 386-25 is the system for you. Checking in at a low, low \$6324 in our standard configuration, but with a 150MB hard disk, the ME 386-25 is far and away the cheapest system in this roundup and the second-fastest performer overall.

We chose to include the ME 386-25 for the same reason we looked at the Hertz 386/25—its ubiquitous motherboard. In fact, the ME 386-25's American Megatrends motherboard may end up in more systems than Intel's, and for good reason. In the processing-intensive 1-2-3 test, the ME 386-25 actually matched the top-rated Everex Step 386/25.

The ME 386-25 holds up to 8MB of RAM on the motherboard. You can expand CPU-speed memory to 16MB by installing an 8MB memory expansion board in the motherboard's sole 32-bit slot. One of the two 8-bit slots and two of the six 8/16-bit slots are filled in our standard roundup configuration. Five half-height bays are included.

The ME 386-25 comes with no software, not even disk caching. (NSTL tested the unit

EXECUTIVE SUMMARY

Micro Express ME 386-25

25-MHz 80386-based computer

A very low price and impressive speed are the Micro Express ME 386-25's trademarks. Although it lacks an on-site warranty, it's the perfect answer for anyone looking for cheap 25-

MHz performance.

Hertz Computer Corp.
325 Fifth Ave.
New York, NY 10016
212/684-4141
LIST PRICE: with 2MB RAM, 20MB hard disk, (continues)

Because Micro Express only sells direct, the lack of on-site service, even as an extra, is a severe stumbling block. Cost-effective independent service contracts are tough to come by, so you'll probably have to rely on the company's standard parts-and-labor warranty. The other side of that trade-off is a machine faster than the Dell System 325 for \$2000 less.

A Pack of Winners

Which of the two Best Buys should you choose? The ME 386-25 and the Dell System 325 offer comparable performance, and both have serverlike expansion capacity. Saving \$2000 and going with the lesser-known Micro Express makes perfect sense, but if something goes wrong, be prepared to ship your system back instead of having it serviced on site.

The two other obvious winners in this roundup are the Everex Step 386/25 and the

Acer 1100/25. These systems are more expensive than the Best Buys, but they're sold through dealers rather than through the mail, making substantial discounts possible.

The Step 386/25 is for users who need performance above all, particularly those with an eye toward an OS/2 future (and a better version of Everex OS/2).

OS/2 aside, high-end PCs are becoming more and more alike, and not just in performance. CPU-speed access to 16MB of RAM—OS/2's maximum—is now the rule rather than the exception. And while free on-site service, ROM-based setup, and bundled disk-caching software used to be rare, they're commonplace for these contenders. Choosing between the top systems is getting harder, but luckily, it's also tougher to make a big mistake. ●

TJ Byers is a contributing editor for PC World.

Solid Bargains in Personal Printers

Looking for an inexpensive printer to get you through the business day?

PC World rounds up seven 9-pin printers and finds exceptional value.

Not long ago, the 9-pin dot matrix printer was the Sancho Panza of the desktop, diligently tackling output chores with competence, if not grace. Then 24-pin output captured the public's eye, and the faithful 9-pin was relegated to back rooms.

However, shoppers who downplay these printers may overlook some genuine bargains. For less than \$500 you can find 9-pin dot matrix printers with the fonts, type styles, and paper-handling features commonly associated with higher-priced devices.

For this review, *PC World* tracked down seven narrow-carriage 9-pin dot matrix printers: the Epson LX-800, Facit B1100, Mannesmann Tally MT85, Okidata Microline (ML) 320, Seikosha SP-1600AI, Star Micro-nics NX-1000 Multi-Font, and Tandy DMP-132.

How to Pick a 9-pin

For less than \$500, a printer isn't going to be all things to all people. The trade-off usually occurs between print speed, print quality, and extras. Of the printers tested, only the Okidata ML 320 proved itself superior in all these respects.

Speed is probably a 9-pin printer's most important attribute. For this review, National Software Testing Laboratories (NSTL)

ran benchmark speed comparisons using draft and letter quality text files and 1-2-3 bar charts. The fastest printer by far was the Okidata ML 320.

Another feature to look for is crisp output. All the printers produced legible text and graphics—though they occasionally sacrificed speed in the process. For example, the Facit B1100 generated terrific-looking draft text, yet was one of the slowest at printing drafts.

Paper-handling flexibility is a real plus in an inexpensive printer. Pull tractors are standard on every printer except the Star and the Okidata, both of which use push tractors. However, only the Okidata offers an optional bottom-load tractor for jam-free handling of labels and multipart forms. And just two printers—the Okidata and the Star—boast forms parking. Unfortunately, envelope printing is not a strong point for 9-pin printers; only the Epson and the Okidata print them well. But each printer handles multipart forms, accommodating at least one original and two copies.

Other important features to consider are emulations and typographic prowess. For the broadest possible software compatibility, a 9-pin printer should have either Epson or IBM printer emulation; the Okidata, Seikosha, Star, and Mannesmann Tally offer both.

Paul Meyers

The Epson doesn't offer IBM emulation; however, it successfully completed NSTL's IBM speed tests. The Tandy, likewise, has no Epson emulation but completed three out of four Epson tests via its IBM emulation. None of the printers provide many typefaces: The Star has four, while most of the other printers are limited to two. The Mannesmann Tally is the only unit that accepts font cartridges. All the printers offer some combination of typographic styles such as italics, elite and pica pitches, condensed printing, and proportional spacing.

Finally, typographic features aren't worth much if they're difficult to select. Ideally, you should be able to choose them directly from the front panel, though many printers require you to fiddle with DIP switches or software settings.

Okidata Microline 320

Blazing speed, top-notch output, and precise paper handling put the Okidata in a class by itself. The ML 320 won the speed contest hands down and also produced the best-quality graphics. With comprehensive panel

FEATURES EVALUATION

Two Printers Sweep the 9-Pin Stakes

The Okidata ML 320 and the Seikosha SP-1600AI combine fast print speeds and top-notch output with the best features for the buck.

¹ Optional.

² Supports Tandy computers only.

³ Parallel cable required for use with IBM compatibles.

⁴ Requires bottom feed option.

⁵ All controls are front-panel-mounted unless otherwise indicated.

⁶ DIP switch control.

⁷ Draft characters only.

controls, an extensive printable selection menu, and low noise levels, the Okidata rates a Best Buy at \$499.

Foremost among the ML 320's array of features is its paper-handling ability, which includes forms parking, forward and reverse microline feed, and a top-of-form control. The Okidata is also the only printer to accept five-part forms and offer an optional bottom-feed pull tractor. Front panel control is excellent.

Two crisp typefaces (Courier and Sans Serif) are available in three text modes—

EXECUTIVE SUMMARY

Okidata Microline 320

Nine-pin dot matrix printer

Far and away the fastest printer tested, the ML 320 also possesses bountiful features and superior paper handling. Good print quality and the highest graphics resolution of the units

reviewed help make this printer a Best Buy.

	POOR	FIR	GOOD	EXCELLENT
Speed				●

Reader service no. 693

high-speed draft, enhanced draft, and near letter quality. The ML 320's 288-by-288-dot-per-inch (dpi) graphics resolution is the best of the bunch.

The ML 320 clearly ranks as a superior printer and a superior value, despite its relatively high price. With its speed, generous features, and competent paper handling, this is the best all-around printer reviewed.

Star Micronics NX-1000 Multi-Font

The \$299 NX-1000 Multi-Font upholds Star Micronics' reputation for packing features into low-priced machines. The Star's print

quality and speed are about average for the printers in this review. But with four resident typefaces and terrific front panel controls, the printer is still a good buy.

The Star offers a push-tractor feed; other paper-handling features include microline feed, automatic paper loading, and forms parking.

The Star's forte is its superior printer controls. Four easy-to-use membrane buttons provide dedicated pitch and type style controls for four serviceable built-in typefaces (Courier, Sans Serif, Orator, and Small Caps

The blazing speed and ample features of the Okidata ML 320 (left) and the impressive speed and sharp NLQ text of the Seikosha SP1600-A1 earn them Best Buy honors.

EXECUTIVE SUMMARY

Star Micronics NX-1000

Multi-Font

Nine-pin dot matrix printer

Loaded with extensive controls and a slew of paper-handling features, the NX-1000 proved just average in print quality and speed among the printers reviewed. Still, the Star is a good value for the price.

¹ The Epson LX-800 has Epson emulation only.
² The Facit B1100 has IBM Proprinter emulation only.
³ The Tandy DMP-132 has IBM Graphics printer emulation only.

Methodology

All tests were conducted using a 12-MHz Compaq Deskpro 286 Model 20 equipped with a VGA monitor and 1.2MB of RAM. The output from the various application programs was captured using a file capture program, and during the actual test the output files were copied to the computer's parallel port from a RAM disk using the DOS COPY command. The results are faster than could be expected printing directly from an application program because the overhead from the application program has been eliminated.

Plain draft text

This benchmark times the printing of plain text in draft mode. The test file contained 20 pages of text without enhancements; it was printed with Microsoft Word using the ITY driver.

Plain letter quality text

This benchmark times the printing of plain text in letter quality mode. The same procedure used for the plain draft text benchmark was used for this benchmark, except that the printers were set to letter quality mode.

Enhanced letter quality text

This benchmark times the printing of enhanced text, such as boldfacing, underlining, superscripts, and italics, in letter quality mode.

Bar chart

This benchmark measures the time required to print a stacked bar chart created in 1-2-3, with the program set for high-density printing. Different hatch patterns were used within each bar, and legends and titles were added to the graph. The printers were tested in their IBM emulation modes (using the program's IBM Proprinter driver) and in their Epson modes (using Lotus's Epson FX-80 driver).

Data based on tests designed and conducted by National Software Testing Laboratories (NSTL). All rights reserved.

EXECUTIVE SUMMARY

Seikosha SP-1600AI

Nine-pin dot matrix printer

The SP-1600AI recorded the second fastest overall speed and produced great-looking output. Add a simple, easy-to-use design, and you've got a Best Buy in this printer's price range.

	POOR	FAIR	GOOD	EXCELLENT
Speed			●	
Print quality			●

Reader service no. 694

Orator). If print features and smart design interest you more than speed, the NX-1000 Multi-Font is worth checking out.

Seikosha SP-1600AI

Seikosha, traditionally a printer OEM, offers a choice 9-pin market entry. The \$329 SP-1600AI clocks the second fastest overall print speed, produces sharp NLQ text and high-density graphics, and is the only printer to offer a two-year parts and labor warranty. The Seikosha's speed and easy-to-use print controls rate it a Best Buy for its price class.

Compact and low-slung, the Seikosha handles paper dependably. A pull tractor for fan-fold paper and an automatic paper feed come standard. The SP-1600AI offers an optional cut-sheet feeder, but it has no forms parking, and you must remove the tractor mechanism for single-sheet printing.

The Seikosha's biggest limitation is its dearth of typefaces—only draft Sans Serif and NLQ Serif are available. Also, its draft output is fuzzy compared with other printers'. However, if you're looking for a basic 9-pin printer with speed, ease of use, and superior high-density printing, the Seikosha is an excellent choice.

Mannesmann Tally MT85

Although known for its high-quality printers, Mannesmann Tally put more sizzle than steak in the MT85. While its high-density graphics output is adequate, graphics printing speed is snail-like. The MT85 is the only printer tested that accepts font cartridges, but with minimal paper-handling abilities and an obtuse printer control menu, the \$499 MT85 is no bargain.

The MT85 arrives with an internal pull tractor and a wire paper guide—nothing more. It offers no automatic paper feed or optional cut-sheet feeder, so single sheets must be rolled in by hand. The printer has two built-in typefaces, draft Prestige Elite and NLQ Sans Serif, and supports two additional font cartridges. Although the MT85 provides the standard print styles, not all of them work in all modes.

Clean in silhouette, the MT85 is awkward in design. The rear-mounted cables block the paper path, and access to all paper-handling levers requires removal of the printer cover. While the MT85 prints well, you can get more for your money elsewhere.

Facit B1100

The Facit B1100 provides good print quality—excellent in draft mode—but has little

EXECUTIVE SUMMARY

Mannesmann-Tally MT85

Nine-pin dot matrix printer

The MT85 compromises reasonable speed, acceptable output, and cartridge font support with hard-to-use features and limited paper-handling capabilities. For its relatively high price, it's not a bargain.

	POOR	FAIR	GOOD	EXCELLENT

EXECUTIVE SUMMARY

Facit B1100

Nine-pin dot matrix printer

Terrific-looking output but slow throughput characterize this printer. Meager paper-handling features and limited emulations also reduce the B1100's overall value.

	POOR	FIR	GOOD	EXCELLENT
Speed			●	
Print quality				●
Paper handling			●	
Printer control			●

Reader service no. 691

else to recommend it. At \$325, it can claim few of the features of the similarly priced Star or Seikosha.

The B1100 has minimal paper handling and awkward panel controls. The Facit offers only a pull-tractor feed and a wire paper separator. No cut-sheet feeder is available, and as with the Mannesmann Tally, single sheets must be hand-fed.

The B1100 offers only a single Sans Serif typeface and IBM Proprinter emulation. However, draft and NLQ text are exceptionally clear and legible. Graphics print well but lose some detail at high density. Unfortunately, total throughput is the second slowest of the printers reviewed.

The B1100 prints well in its one font, but lack of speed and meager paper-handling features undermine this printer's value.

Tandy DMP-132

The Tandy DMP-132 bears a striking physical resemblance to the Seikosha SP-1600AI. However, the \$379.95 DMP-132 costs more than the Seikosha, has fewer features, and is substantially slower. In fact, the Tandy has the slowest throughput of all the printers in IBM emulation tests. Additionally, the DMP-132 requires a special Tandy parallel cable (\$34.95) to work with IBM-compatible computers and operates only in Tandy mode or by emulating an IBM Graphics Printer.

Like the Seikosha, the Tandy's paper-handling skills are good, though limited. The Tandy has automatic paper feed, but for single-sheet operation you must remove the fanfold paper.

The DMP-132's typographic features are adequate for light-duty tasks. It provides two typefaces—a draft and NLQ Sans Serif—and a full complement of print styles. NLQ and high-density graphics output looks fine, but draft modes lack clarity.

If you require a Tandy-compatible printer, the DMP-132 fills the bill. Otherwise, for the \$400-plus you'll shell out for the DMP-132 and cable, you can find a better deal.

EXECUTIVE SUMMARY

Tandy DMP-132

Nine-pin dot matrix printer

The DMP-132 is relatively slow and requires special cabling to work with non-Tandy computers. Despite its good output and paper handling, you can find better deals for the money.

Reader service no. 690

but it lacks the variety of features and the overall speed to make it a real star.

Nine-Pins, No Waiting

Judging the seven 9-pin dot matrix printers—first on speed and print quality and

then on paper handling, printer control, and extras—produced clear winners and losers. The Okidata Microline 320 tops every category. Second place goes to the Seikosha SP-1600AI, which offers the second-best speed and an abundance of controls and features at a low price. Both printers earn our Best Buy.

The Star Micronics NX-1000 Multi-Font and the Epson LX-800 are dependable performers and good overall values. The Epson LX-800 offers adequate speed and just enough features to balance out its ho-hum print quality. Despite relatively slow print throughput, the Star's comprehensive panel controls and four fonts make it a safe buy.

The Mannesmann Tally MT85, the Facit B1100, and the Tandy DMP-132 are at best fair values. The B1100's best feature is its print quality, but throughput is too slow. The high-priced and awkward MT85 and the limited DMP-132 are not recommended. ●

Paul Meyers is a San Francisco-based video producer who specializes in high-technology subjects.

Ramses II was not one to mince words. When it came to getting a point across, he was very direct — what was written was in fact etched in stone.

If he ruled today — in this exciting *Information Age* — he'd feel compelled to update his method to input and retrieve information. Being the meticulous type, Ramses would choose page recognition software that was accurate, fast and above all, flexible. Ramses would definitely choose *OmniPage*® when doing page recognition with his 286 or 386 computer.

Let's face it, some scribes have less than perfect "chipmanship." Ramses would require the most versatile page recognition software — one that could scan any font or font size, even multiple columns of text — no matter which scribe created it. There's nothing more frustrating than a misplaced hieroglyph. He'd definitely want it to support the most powerful word processors available in the known world. When it comes to page recognition software, he'd want the very best product at the best possible price.

He'd want *OmniPage*! And who would argue with the Pharaoh?

Can you really blame him? There's just no substitute for a powerful, full-featured page recognition package. Can you afford to make a mistake when your entire "dynasty" depends on it?

So It Is Written... So It Shall Be.

Means that *OmniPage/386* can read virtually any font, in sizes that range from 8 pt. to 72 pt.

This unique landscape feature means that spreadsheets and financial documents are only a scan away. A great addition to your royal granary if storing and accessing numerical data really counts!

With *OmniPage/386* all that is required is the software — no add-on boards — this translates into recognition power at a fraction of the price.

Transitional Editor™ lets you edit scanned text — without leaving the program — before exporting it to a file. Cut, copy, paste, insert and delete text — or take advantage of the powerful search and replace tools which allow you to modify a page.

Reads and outputs underlines, bold faces and italics.

Supports the most popular word processing, spreadsheet and data base programs.

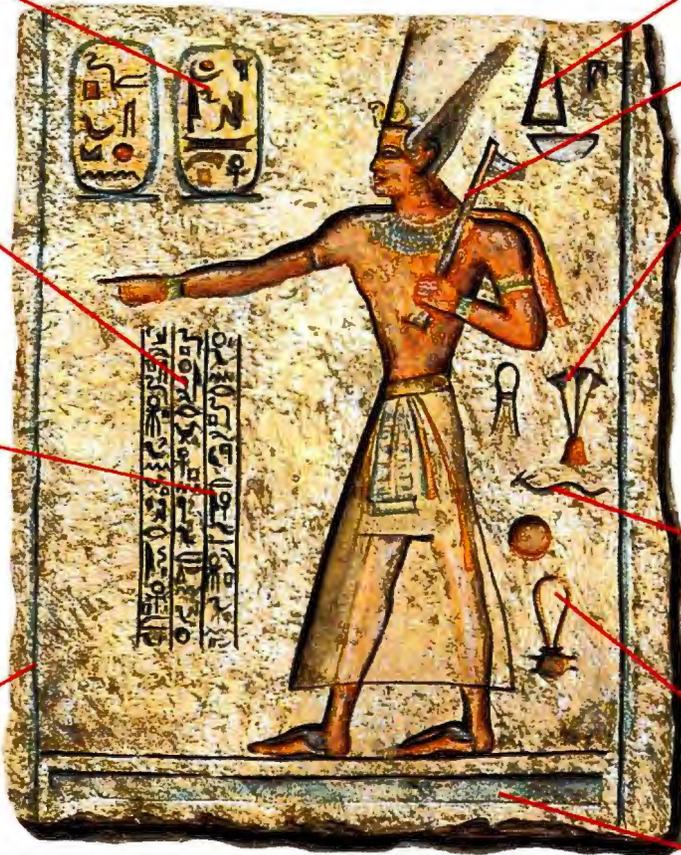

Supports 11 of your favorite Indo-European languages, including French, German and Spanish.

WYSIScan™ interface takes full advantage of the *Windows* environment — an excellent compliment to any AT or 386 machine.

OmniPage/386 has even more features than ever before — which translates into the most comprehensive page recognition software available — anywhere — for any dynasty — at any price.

Partial Page allows you to scan only that text which is relevant to your business needs.

The bottom line in page recognition software — eliminating excessive key strokes* for all time.

Now... *OmniPage/386* software only!

*Egyptian scribes had a real time of it when it came to excessive key strokes. Each letter, or hieroglyph, had to be individually etched into stone. And we complain today about writer's cramp?

INSIDE THE HARDWARE SHELF

126 **NEC PowerMate SX**

This 16-MHz 80386SX system may not usher you into the next generation, but if you need a compact, affordable, entry-level system with great graphics, it's a solid bet.

128 **Vendex HeadStart III**

A keep-it-simple 12-MHz AT compatible combines effort-less setup with a stunning assortment of extras, including a menu-driven DOS shell.

132 **Panasonic LF-5000**

Add Corel's interface kit to this fast, sturdy WORM drive, and you've got a good deal that's easy to set up and use.

132 **Storage Dimensions LaserStor LS800AT-E**

Speedy performance and economical storage make this WORM drive alluring, but managing the system can be a bear.

132 **IBM 3363**

It's got some things going for it—relatively painless installation, low-overhead WORM storage, and competent menu-driven utilities. But it's slow and expensive.

NEC's compact PowerMate SX offers 80386 power (plus outstanding graphics options) at about \$1000 less than an SX-based Compaq—but runs more slowly.

NEC PowerMate SX

16-MHz 80386SX computer

PROS: Moderate price, small footprint, superior graphics options

CONS: Unimpressive speed, limited device capacity

Slowly but surely 80386SX PCs are replacing 16-MHz 80386 machines as *the* entry-level 80386. Why? Because SX systems perform nearly as well, they're cheaper to make, and as they say, those cost savings are passed on to you.

If you choose NEC's PowerMate SX over the original SX machine, Compaq's Deskpro 386S, you'll save even more. At \$5940 with 2MB of RAM, a 40MB hard disk, and VGA graphics, the PowerMate SX is about \$1000 cheaper than a similarly equipped Deskpro 386S; and unlike Compaq, NEC throws in DOS 3.3, *GW BASIC 3.2*, and *Windows/386*. Another plus is that the standard VGA setup is NEC's own VGB and MultiSync II, a board/monitor combo that enables you to display 800 by 600 graphics.

The catch is that the PowerMate SX is slower than the Deskpro 386S. In the processing-intensive *I-2-3* test, it missed by less than 4 percent; in the disk-intensive *Microsoft C* benchmark, however, unimpressive hard disk performance kept the PowerMate SX about 20 percentage points behind its rival.

The PowerMate SX has the same small chassis as NEC's 80286 systems. The similarity doesn't stop there: As with any SX system, the 80386SX CPU accesses memory 16 bits at a time, just like an 80286. The advantage of having an SX machine instead of an equally fast 80286 system is that you can run such 80386-specific packages as *Paradox/386*, *Foxbase/386*, and of course *Windows/386*.

Windows/386 requires at least 2MB of RAM, which is undoubtedly one reason the PowerMate comes standard with 2MB on the motherboard. In addition, the system offers a special CPU-speed memory slot. For \$1295, you can fill the slot with a proprietary

board holding 2MB; a 4MB version costs \$2995. A snap-on 4MB expansion module (\$2795) brings the board to 8MB, yielding a memory bus capacity of 10MB, compared to the Deskpro 386S's 13MB fast-RAM potential.

The PowerMate SX also has a bit less room for drives. It provides three externally accessible bays: one 3½-inch and two half-height 5¼-inch. The Deskpro 386S has three 5¼-inch bays (one half-height and two third-height) open to the outside world and one internal 3½-inch bay. Compaq's arrangement lets you install two types of floppy drives, even if you plan on installing a tape backup.

With one 8-bit and five 8/16-bit slots, the PowerMate SX holds an impressive number of boards for a small-footprint machine. Fill the unit with a hard/floppy disk controller and NEC's VGB board, and you still have four slots open (one parallel and one serial port are built into the motherboard). However, even though the Deskpro 386S motherboard has only four 8/16-bit slots, they're all free; Compaq integrates not only the ports but also the hard/floppy controller, a VGA board, and a mouse port.

Where NEC shines brightest is in graphics. The NEC VGB comes with special drivers that enable you to display *GEM*, *AutoCAD*, *1-2-3*, *Symphony*, *Cadvice*, *Ventura Publisher*, *Framework II*, and (naturally) *Windows* at 800 by 600 resolution. And the MultiSync II monitor is compatible with both analog VGA and digital (EGA, CGA, and so on) boards.

The system software for the PowerMate SX includes a disk-based system-setup routine and complete diagnostics, both of which are menu-driven. There are no DIP switches or jumpers to set during configuration.

The PowerMate SX's excellent graphics options aside, the Deskpro 386S is a better system, with more speed, slightly larger drive and CPU-speed RAM capacities, and a somewhat smaller footprint. But are these advantages worth \$1000, especially when you consider the PowerMate SX's generous soft-

FEATURES EVALUATION

Two New Systems: Low Prices and Strong Features

NEC's PowerMate SX lacks the Compaq 386S's integrated motherboard but boasts a lower price. Vendex's compact HeadStart III is almost \$2000 cheaper than Compaq's Deskpro 286 and offers higher memory bus capacity.

Reader service no. 670

Vendex HeadStart III

12-MHz AT-compatible system

PROS: Compact, goof-proof setup routine and operating environment, generous software package, on-site warranty

CONS: Limited expandability

Like its corporate spokesman, King Kong Bundy, Vendex's HeadStart III is an eye-catching contradiction in terms. The 450-

pound pro wrestler is reportedly articulate and soft-spoken; the system, which enters the rough-and-tumble arena of bare-bones clones, comes with setup and configuration software that verges on the eloquent. You also get a heavyweight package of add-ons: a Logitech mouse, a game port, 18 months of on-site warranty service, and an amazing software bundle that includes a menu-driven DOS shell. Moreover, the 12-MHz, one-wait-state system is compact, well designed, and more than acceptably fast.

The HeadStart III runs nearly \$2000 less than a similarly configured Compaq Deskpro 286 but about \$700 more than a low-end mail-order clone. For \$3690 you get 1MB of RAM, a 28ms 32MB hard drive, one 1.44MB 3½-inch and one 1.2MB 5¼-inch floppy drive, a 16-bit VGA board, a 13-inch VGA color monitor, a 101-key keyboard, one parallel and two serial ports, a game port, a Logitech bus mouse, a mouse port, and DOS 3.3. You can save \$446 by choosing a 13-inch paper-white monitor in place of the VGA.

In NSTL performance tests, the HeadStart III held its own against a 12-MHz, one-wait-state Compaq Deskpro 286, virtually matching the Deskpro in four out of five applications. Only in the disk-intensive *dBASE* benchmark did the HeadStart fall slightly behind its higher-priced rival. NSTL's Crash Test failed to turn up any incompatibilities.

As with most compact systems, you'll pay a price in expandability. True, the slot count (six 8/16-bit slots) is fairly good, and while three slots are occupied (by a video board, a hard disk controller, and a mouse board), the floppy controller and I/O ports are built into the motherboard, so all three remaining slots are available. But device expansion is more problematic. Two half-height floppy drives and a half-height internal hard disk fill every available bay. CPU-speed RAM is limited to 3MB, socketed on the motherboard; additional memory must be installed via one of the precious 8/16-bit slots and will run only at expansion bus speed (8 MHz).

The HeadStart III gets high marks for ergonomics. The power switch is on the front panel, as is the reset switch. The Fujitsu keyboard is a bit stiff but offers good tactile

Solutions For Your Growing Business Come with One Name. . . *DacEasy*™!

"The Breakthru 286 achieved the best performance results of the caching boards tested."
Ted Mirecki,
PC  Journal
(Rated #1)

8MHz \$395
12MHz \$595

Breakthru 286™

New by DacEasy is the Breakthru 286 speedup board, the most advanced turbo board for your business dollar. Available in two clock speeds (8MHz and 12MHz), and providing the most cost-effective way to convert your PC (most clones and Compaq portables) so that it's faster than an AT without the expense. Simple 1-2-3 installation of a half card and there's no software required! Software compatibility is universal so all system RAM, hardware, and peripheral cards can be used without modification. Breakthru works with LAN and mainframe communication products and conforms to the Lotus/Intel/Microsoft Expanded Memory Specification (EMS). And included with your board, is DacEasy Lightning, a disk-caching program (*PC Magazine's* 1986 Editor's Best) that retails at \$69.95, yours absolutely **FREE**.

\$69.95

DacEasy Light™

A great way to do personal and business finances without being an accounting expert. For the home, you'll be able to track your financials, reconcile bank statements, and budget your cash flow for the year. Don't worry if you don't know a debit from a credit, because with Light, all you see are familiar formats such as checks and credit card slips! If you're a sole proprietor or if your business doesn't require extensive accounting capabilities, Light performs multi-level, double-entry accounting behind the screen so you can easily track customers, vendors, sales and expenses. With Light you can easily generate invoices, statements and the option to enter manual checks or use preprinted checks. And forecasting a 12-month budget is a snap. Fast becoming the people's choice for home/office in IBM and Macintosh environments.

\$99.95

Lucid 3-D™

All new, by DacEasy, version 2.0, the most incredible spreadsheet value. Simple to use (even for beginners!), yet remarkable for its three dimensional capacity and beautiful graphics. Transport accounting data into Lucid for budgets and proposals without ever re-keying. Winner of the coveted *PC Magazine's* Technical Excellence Award (1987) and *Home Office Computing* Editors' Pick (1988).

Rolodex® Live!

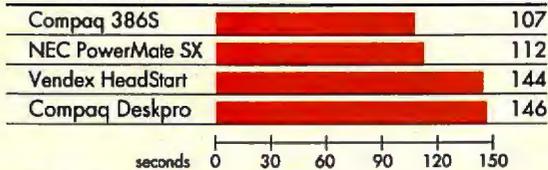

DacEasy's newest way to save time and keep track of people, places and events at the touch of a key. For any home or office, there's never been an easier, more organized way to create, update and print Rolodex cards, custom labels and envelopes. Instant lookup (pops up over any other software) for tip of the tongue information. Bring your Rolodex cards to life!

NSTL TEST REPORT

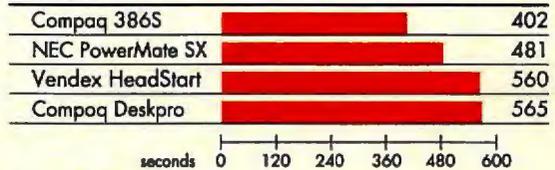

Impressive Price/Performance Value from NEC PowerMate SX, Vendex HeadStart III

NEC's PowerMate SX performs nearly as well as the far more expensive Compaq 386S but is a bit less expandable. Vendex's 12-MHz 286 HeadStart performs on a par with the Compaq Deskpro and offers an outstanding software bundle—for nearly \$2000 less.

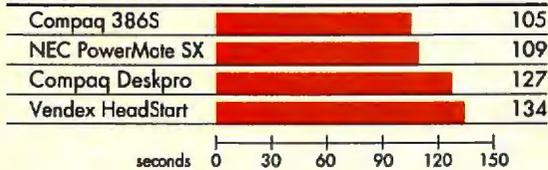

Microsoft Word

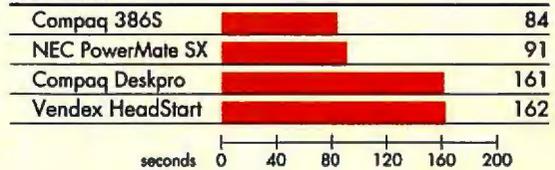

Microsoft C

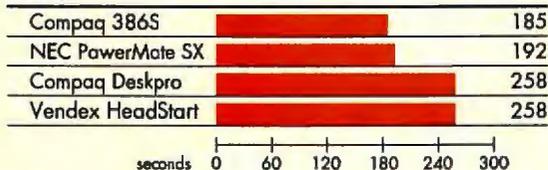

dBASE III Plus

AutoCAD

1-2-3

Methodology

All machines were tested with a coprocessor and a 256K extended memory disk cache, except in the 1-2-3 benchmark. The 16-MHz NEC PowerMate SX was configured with a 45MB hard disk and 1MB of RAM. The 16-MHz Compaq Deskpro 386S was configured with a 40MB hard disk and 1MB of RAM. The 12-MHz Vendex HeadStart III was configured with a 32MB hard disk and 1MB of RAM. The 12-MHz Compaq Deskpro 286 was configured with a 42MB hard disk and 2.1MB of RAM.

Microsoft Word 4.0

A Microsoft Word macro loads a 35-page, 140-paragraph document and performs search-and-replace and spell-checking operations. The first page of the document is then printed. Although the results of the benchmark depend primarily on processor and memory access speeds, display adapter and hard disk speeds are also contributing factors.

dBASE III Plus 1.1

The dBASE III Plus test measures the time required to prepare and print a report of past-due invoices. The report includes calculated fields and is based on three files: a 500-record customer file, a 1000-record invoice file, and a 2000-record item file. When disk caching is not used, the random access speed of the hard disk is, after processor speed, the most significant factor in this benchmark. With disk caching, sequential read performance becomes more important than random access.

1-2-3 2.01

In this benchmark, a 1-2-3 macro executes a series of recalculations using five different formulas within a 75-by-75-cell matrix. Because there are few screen updates and no screen access is required, the results depend almost entirely on processing and memory access speeds.

Microsoft C 5.0

The Microsoft C benchmark measures the time required to compile and link XLISP, a public-domain program composed of 25 C source code files. The most important factors in this benchmark are processor and memory access speeds. The performance of the hard disk is also a factor; generally, disk caching has little effect.

AutoCAD 9

In this benchmark, a three-dimensional sample drawing is retrieved and displayed using AutoCAD's EGA driver. The zoom function is used to display the drawing from various perspectives; then the full drawing is printed. The results of the benchmark depend primarily on the speeds at which the processor and coprocessor operate and at which memory is accessed. The performance of the display adapter and the hard disk also have some effect.

Data based on tests designed and conducted by National Software Testing Laboratories (NSTL). All rights reserved.

feedback. And the 13-inch tilt-and-swivel color monitor that came with the review unit produced a sharp, clear image.

It's the remarkably friendly menu-driven setup routine that sets the HeadStart III

apart from the competition. It formats the hard disk; installs the system files, the utilities, and the bundled applications; creates a directory structure; and builds a mouse-

MICROCOMPUTER MARKETING COUNCIL
of the CW Marketing Association, Inc.

powered menu shell to run applications and DOS utilities.

What's more, a hefty software bundle covers virtually every conceivable application: Ashton-Tate's *Framework II* offers word processing, a spreadsheet, and a data base; *Publish-It* covers basic DTP; and *Splash* and *Perspective 3d Graphics* take care of drawing and charting. *Xtree 3.0* handles file management chores, and there's even a collection of desktop accessories.

Is the HeadStart III right for you? If you're a sophisticated PC user who needs maximum headroom for device and RAM expansion, probably not. But for the small-business or home user who doesn't care to go ten rounds with DOS and appreciates a keep-it-simple design and operating environment—plus a fabulous software bundle—it's hard to imagine a better choice. Add the fact that Vendex, a humongous European corporation, is likely to be around for a while, and this looks even more like a knockout. —*Ed Bott*

WHERE TO BUY

Vendex HeadStart III

Vendex Technologies Inc.
40 Cutter Mill Rd. #438
Great Neck, NY 11021

LIST PRICE: with 1MB RAM, 1.44MB floppy drive, 1.2MB floppy drive, 32MB hard disk, VGA card, one parallel and two serial ports, game port, mouse port and Logitech mouse, 101-key keyboard, DOS 3.3, HeadStart Advanced Environment, bundled software \$2995

ACCESSORIES: 13-inch VGA analog white monochrome monitor \$249, 13-inch VGA color monitor \$695

WARRANTY: 18 months on-site service

EXTENDED WARRANTY: none

TECHNICAL SUPPORT: toll-free number, M-F 9-8

OTHER SUPPORT: none

Reader service no. 671

Panasonic LF-5000

Write-once optical disk drive

PROS: Fast, easiest to install and use, excellent Corel interface kit

CONS: No security features, manual lacks some examples

Storage Dimensions LaserStor LS800AT-E

Write-once optical disk drive

PROS: Fast, cheapest cost per byte stored

CONS: Tricky to manage, drivers soak up hard disk and RAM space, no security features

IBM 3363

Write-once optical disk drive

PROS: Easy to set up and run, user manual lucid

CONS: Slow, expensive, sold with single-sided cartridges, no security features

The benefits of write once, read many (WORM) optical disk drives have been known for years. WORM drives use rugged, removable cartridges that can hold hundreds of megabytes of tamperproof data. And in the last year, WORM drive performance has improved, storage has jumped to as much as 1 gigabyte per cartridge, while prices for 200MB units have dipped to under \$2000.

Just keep in mind that WORM drives aren't hard disk replacements; data is literally burned into a disk and is thus immutable. Worse, media isn't interchangeable among different vendors' drives, most units are fragile, and a significant amount of storage space can be eaten up by WORM overhead. Nor are many WORM drives plug-and-play devices. Physically installing a WORM drive is relatively simple, but in most cases using one means fussing with a confusing array of drivers and "mounting" drive volumes before DOS can recognize them.

All three external 5¼-inch units reviewed here can be treated like ordinary hard drives, are compatible with most DOS commands and applications, and allow disk volumes to exceed DOS's 32MB limit. Two come with backup programs, and all three include trace programs that locate and reactivate "deleted" and "overwritten" files.

⁷ Hard-disk-based cache.

Panasonic LF-5000

On the basis of ease of use, cost, and performance, Panasonic's LF-5000 is clearly the drive to buy. (However, unlike with the other units reviewed, you must buy the \$399 Corel Optical Disk Interface kit separately, which raises the price from \$2599 to \$2998.) Panasonic's unit is sturdy, gives you a choice between two reasonably priced cartridges (200MB and 400MB), comes in first or second on each NSTL speed test, and is fairly easy to set up and use, thanks to the Corel kit.

All three drives limit you to one disk volume. But Corel's drivers take just 40K of RAM, and the WORM overhead is acceptable: only 22MB to store 20MB of files.

Although setup and configuration aren't menu-driven, they're still quite easy because Corel relies on simple DOS-like commands. Corel's trace program is flexible but difficult to use because the otherwise-lucid user manual lacks pertinent examples. But it's the only trace program that lets you attach

Tandy® Computers: The broadest line of PCs in America.

The Tandy 5000 MC

Our most
powerful 386™
based computer
...made in America.

The remarkable Tandy 5000 MC Professional System is pure performance, from the Intel® 80386 processor operating at 20 MHz to the high-speed memory with cache controller that provides RAM-fast access to your data.

With the 5000 MC, you have the high-performance platform needed to take full advantage of industry-standard MS-DOS® applications, powerful new MS® OS/2 programs or multiuser SCO™ XENIX® software.

Operating at 20 MHz, the 5000 MC cuts through the big jobs like database management, large spreadsheets and sophisticated graphics. And with its IBM® MicroChannel™ compatible architecture, the 5000 MC is the ideal high-end PC workstation.

The system architecture also provides high performance in data-transfer rates when the 5000 MC is configured within a 3Com® workgroup or a XENIX multiuser environment.

The Tandy 5000 MC is the new alternative in personal computing.

NSTL TEST REPORT

WORM Drives—Approaching Hard Disk Speed

The fastest WORM drives like the LaserStor can almost match a 65ms hard disk's speed—for a while. But performance can plummet when the same files are saved twice.

**Methodology**

All the WORM drive tests were conducted using a Compaq Deskpro 386/20 Model 130 with a 130MB hard disk and an ESDI hard disk controller. Compaq MS-DOS 3.31 was installed on the hard disk in its own directory, and the benchmark files were stored in the first two partitions (both 20MB) on the hard disk. Compaq DOS was updated with a patch called BIGSECTR to allow device drivers that modify DOS to use sectors larger than 512 bytes. Without the patch from Compaq, some of the device drivers do not function properly with Compaq MS-DOS 3.31.

The test WORM drive was connected to the Deskpro 386/20 using the controller board provided by the manufacturer; its controller was configured according to the manufacturer's instructions to provide optimum performance in the Compaq. The drive was configured to use an entire cartridge as one large partition. The benchmarks were executed using batch files and timed using the DOS time function.

To determine how performance was affected when existing files were replaced, the benchmarks were repeated using the same cartridge. The difference between the first and second passes varies considerably from drive to drive, and sometimes from test to test.

XCOPY 20MB

This test measured the time required to copy 20MB of files from the computer's hard disk to the optical drive using the DOS XCOPY command. The data copied consisted of 840 files in 38 subdirectories; file size ranged from less than 512K to over 1MB. The test is analogous to using the optical drive as a backup device.

Modify data base records

This test measured the time required to modify 40 records in a *dBASE III Plus* data base file stored on the optical drive. The test is analogous to updating an inventory data base.

Append data base records

This test measured the time required to append 40 records to a *dBASE III Plus* file stored on the optical drive. The test is analogous to updating an accounting system in which batches of transactions are added to the transaction file each day.

Data based on tests designed and conducted by National Software Testing Laboratories (NSTL). All rights reserved.

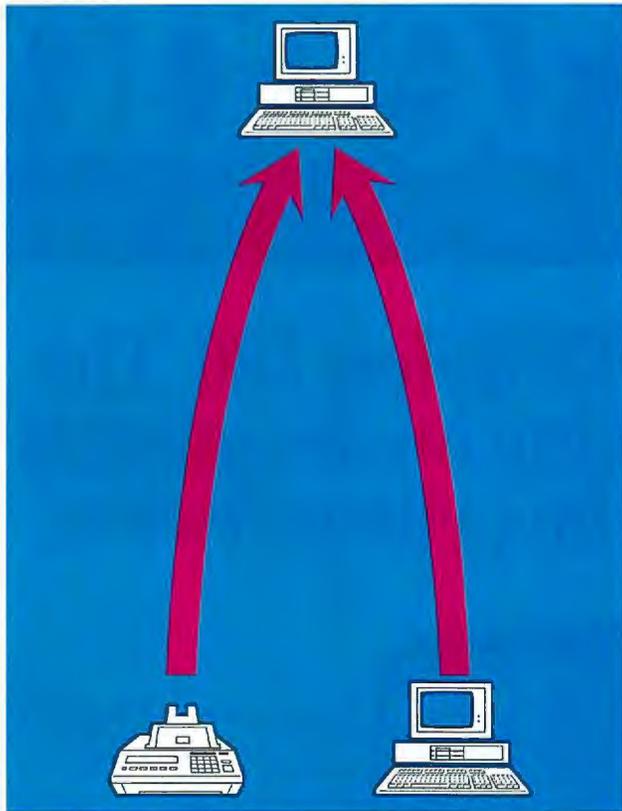

markers to individual deleted files. If you need to find a file later, you simply scan a list of markers instead of the entire disk. Corel's prompt-driven hard disk backup and restore programs are simple, fast, and complete.

Alas, security features such as password protection for volumes and cartridges are absent, and there's no disk caching program. (The other two drives offer very limited caching.) If you can live without these features, however, the LF-5000/Corel combination is a good deal that presents minimal headaches.

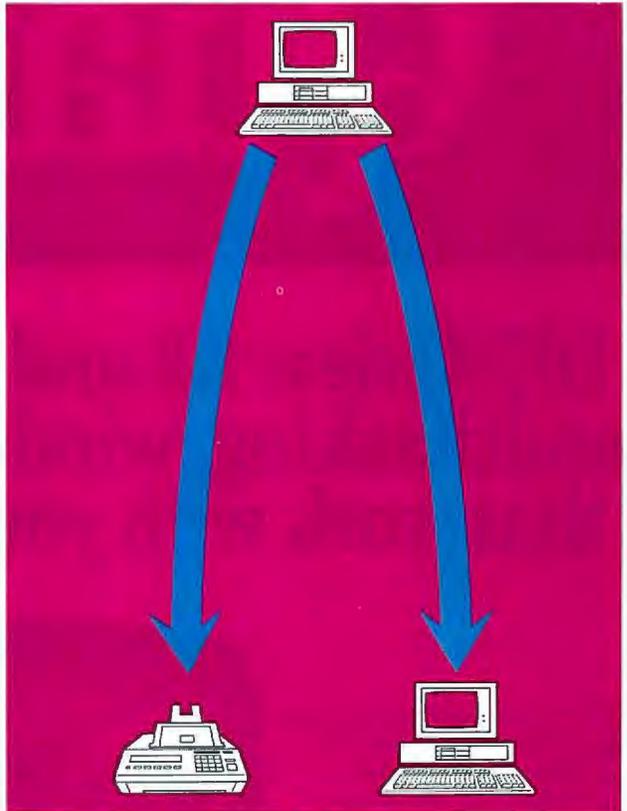

Storage Dimensions LaserStor**LS800AT-E**

If performance and cost per byte are your alpha and omega, Storage Dimensions' LaserStor is the WORM drive for you. As NSTL tests show, this drive is generally the speediest, and at \$4495 for 786MB of on-line storage, it's a good price/performance bargain. If ease of setup and use are paramount, however, think twice.

Easy come.

Easy go.

Life is hard. And then you get a Connection CoProcessor™ board. It's Intel's way of letting you communicate almost effortlessly, using your PC. And for other PCs and FAX machines to send messages to your PC with the same ridiculous ease.

True, you do have to press a few keys on your PC. But you don't have to set any protocols, wait for a printer to do its thing, or stand in line at a FAX machine.

The real labor saver here is CAS. CAS is a software link which allows you to send information directly from applications like Lotus® 1-2-3 rel. 2, WordPerfect™ 5.0, Q&A™ 3.0 and Sidekick® Plus. You can now send documents simply by indicating what you want to

send and who you want to send it to.

And our Connection CoProcessor won't waste your valuable PC time while it's communicating. You can continue to work while it sends programs, data and text, across the street or across the globe.

Because the Connection CoProcessor uses its own microprocessor and memory to take on the time-consuming job of sending and receiving information in the background.

All this, and Intel's toll-free technical support and a five-year warranty. Call us at 1-800-538-3373 to find out how Connection CoProcessor beats the way you're communicating today. Coming and going.

The Intel logo, consisting of the word "intel" in a lowercase, sans-serif font with a registered trademark symbol (®) to the upper right.

Quarterdeck

DESQview 2.2 and DESQview 386. The multitasking, windowing environments that work with your favorite software.

DESQview™ is the operating environment that brings OS/2™ power to DOS. And it lets you, with your trusty 8088, 8086, 80286, or 80386 PC, leap into the next generation in PC productivity. For not much money. And without throwing away your favorite software.

Introducing DESQview 2.2

And now, DESQview 2.2 adds capabilities, performance, and compatibility enhancements you've been asking for.

Like being able to fine tune DESQview performance "on the fly." Run Lotus Express and Metro. And the Intel Connection CoProcessor. Even use the DOS 4.0 shell with DESQview. Have DESQview automatically install Quattro, Sprint, Aldus PageMaker, Microsoft Excel, Word Perfect, Dataease and as many as 80 other programs. And using the DESQview API, be able to dynamically link them.

More bang; less bytes

While other programs get bigger, we've worked to make DESQview smaller. And we've succeeded in a big way on PCs and PS/2's with extended, EMS 3.2 (AboveBoard), EEMS and EMS 4.0 memory—as well as on 386 PCs and

DESQview lets you run your favorite programs in windows side-by-side.

PS/2s. For example, DESQview overhead on EMS 4.0 and 386 PCs can be as low as 10K on EGA/VGA PCs. And DESQview actually *increases* memory 30K on CGA PCs; 20K on monochrome and Hercules PCs. That's good news for users of big desktop publishing, CAD and database programs.

Introducing DESQview 386

For users of 80386 PCs and PS/2s (or PCs with 80386 add-in boards, such as the Intel Inboard 386), there's DESQview 386 (a combination of DESQview 2.2 and the new QEMM-386

Quarterdeck Expanded Memory Manager, version 4.2).

DESQview 386 gives you extraordinary power. Run text, CGA, EGA, VGA, and Hercules programs in windows and in the

background. Run 32-bit 386 programs, like Paradox 386, and IBM Interleaf simultaneously with your favorite DOS programs. All with the speed and performance you expect out of your 386. And with protection against 'misbehaved' programs.

Promise and performance

And, of course, both DESQviews have all the features that made prior versions the popular choice in operating environments. The ability to multitask in 640K and beyond. View programs in windows or full screen. Transfer data. Access DOS via menus. Dial your phone. And create key-stroke macros within and between programs.

Our story gets better and better

If there's any doubt about our commitment to your PC and PS/2 productivity, just look at our accomplishments over the years. We think you will understand why GE, Ford, Aetna, Monsanto, and so many other major corporations use DESQview.

And why PC Magazine twice gave DESQview its Editor's Choice Award for "The Best Alternative to OS/2," why readers of InfoWorld voted DESQview "Product of the Year" three times. Why, by popular vote at Comdex Fall for two years in a row, DESQview was chosen "Best PC Environment" in PC Tech Journal's Systems Builder Contest, and just won their "Professional Solutions" Award.

DESQview lets you have it all now.

Quarterdeck Delivers.

QEMM. Break the 640K barrier for \$59.95

Your 80386 PC, IBM Personal System/2 Model 80, PC or AT with 80386 add-in board, as well as your IBM Personal System/2 Models 50 or 60 can all break through the DOS 640K barrier. Now you can have maximum use of your memory—whether you have one megabyte or 32—with the Quarterdeck Expanded Memory Manager. All without having to purchase special expanded memory boards.

QEMM uses hidden features within your existing memory to make it compatible with the Lotus-Intel-Microsoft Expanded Memory Specification (EMS) version 4.0.

Now you can run colossal spreadsheets, databases, and CAD models designed for expanded memory, using Lotus 1-2-3, Symphony Framework, Paradox, AutoCAD, Excel and more.

And if you'd like to use these programs all together—multitasking beyond 640K—QEMM works with our popular DESQview multitasking environment.

If you are one of the 12 million or so 8088, 8086 or 80286 PC users who feel left out, don't despair. We have options that let you keep your computer and favorite programs and give you today what the newest PCs and operating systems are promising for the future.

Visit your dealer for more information on barrier-breaking Quarterdeck products.

DESQview API Toolkit. New C and Pascal Libraries, Debugger, Panel Designer. And more.

**DESQview API
Conference '89**
Coming in August
Write for details

API Reference Manual

The key to the power of the DESQview API, our Reference Manual contains all you need to know to write Assembly Language programs that take full advantage of DESQview's capabilities. And there's an 'include' file with symbols and macros to aid you in development.

API C Library

Here are C language interfaces for the entire set of API functions. It supports the Lattice™ C, Metaware™ C, Microsoft® C, and Turbo C compilers for all memory models. Included with the C Library package is the API Reference Manual and source code for the library.

API Pascal Library **NEW!**

The Pascal library provides interfaces for the entire set of API functions. It supports Turbo Pascal V4.0 and V5.0 compilers. Included are the API Reference Manual, source code for the library, and example programs.

API Debugger

The DESQview API Debugger is an interactive tool enabling the API programmer to trace and single step through API calls from several concurrently running DESQview-specific programs. Trace information is reported sym-

bolically along with the program counter, registers, and stack at the time of the call. Trace conditions can be specified so that only calls of interest are reported.

API Panel Designer

This interactive tool helps you design windows, menus, help screens, error messages, and forms. It includes an editor that lets you construct an image of your panel using simple commands to enter, edit, copy, and move text, as well as draw lines and boxes. You can then define the characteristics of the window that will contain the panel, such as its position, size, and title. Finally, you can specify the locations and types of fields in the panel.

The Panel Designer automatically generates all the DESQview API data streams necessary to display and take input from your panel. These data streams may be grouped into panel libraries and stored on disk or as part of your program.

More Tools are Coming

Quarterdeck is committed to adding tools as needed by our users. To that end we have been working with Ashton Tate and Buzzwords International on dBASE III and dBASEIV translators. And in the works, we have BASIC and DOS Extender libraries.

Quarterdeck

Quarterdeck Office Systems, 150 Pico Blvd., Santa Monica, CA 90405 (213) 392-9851
FAX: (213) 399-3802

Installation is relatively straightforward. The menu-driven software creates a special data cache on your hard disk—which is the secret to the LaserStor's speed. The cache holds data temporarily; then at the end of a session, you can specify what data you want saved to the slower WORM drive.

Sound good? Unfortunately, managing the system is a bear. Before you change cartridges, you must transfer the data from the hard disk cache to the WORM drive, issue the Dismount command, and physically eject the cartridge. If you forget any one of these steps, the WORM drive can't read the data later.

IBM 3363

IBM continues its tradition of being a step behind the competition by selling a 200MB WORM drive for \$3095, when \$2998 buys a 400MB unit from Panasonic. Although not quite as easy to install and run as the Panasonic, the 3363 is still relatively painless. WORM storage overhead is a mere 2 percent, and the unit comes with competent menu-driven format, backup, and restore programs. IBM's documentation is also the most lucid of the lot.

As NSTL's tests show, however, the 3363 is a foot-dragger. Furthermore, device drivers take up about 130K of RAM, more than any other unit reviewed.

Configuring the 3363 is pretty straightforward, thanks to IBM's fill-in-the-blanks, menu-driven approach, and the file management program makes restoring old files particularly easy. Backup and restore utilities are slow and not as easy to master as Corel's, but you can run a mirror backup, back up files by date or as specified in a list, and store data in compressed format.

IBM deserves kudos for making a somewhat manageable WORM drive. But unless you like paying more for less, pass this drive by.

In fact, waiting out the optical market may be your best bet. If you're a specialized user who must archive warehouses of data, pick the Panasonic LF-5000. But if you can sit out this dance, wait for affordable erasable alternatives. —Robert Luhn

WHERE TO BUY

Panasonic LF-5000

Panasonic
2 Panasonic Way
Secaucus, NJ 07094
201/348-7000
LIST PRICE: \$2998, including Corel's Optical Disk Interface kit 3.21
REQUIREMENTS: 256K RAM, DOS 3.1 through 3.31
ACCESSORIES: 200MB cartridge \$65, 400MB cartridge \$115

Either Way You Look at It, Peachtree Accounting Saves You Money.

PEACHTREE'S DOUBLE BONUS BUNDLE

Includes Peachtree Complete II
plus
Peachtree Data Query II

JUST
\$298

SAVE \$100

With PDQ II Enhanced You Can:

- Create on-screen inquiries to display data
 - Present data in line or bar graphs
- Use any of over 20 pre-defined reports
- Modify pre-defined reports and save the formats
- Create your own reports and save the formats
- Transfer accounting information to spreadsheet and database programs like dBASE III® and Lotus 1-2-3®

And More!

A Recent Survey by the American Institute of CPAs Reports More Accountants Use and Recommend Peachtree Than Any Other Accounting System!

When it comes to accounting software, no one offers you more for your money than Peachtree. Now we're offering you two ways to buy our best-selling accounting software — and two great ways to save.

Peachtree Complete™ II is our premier business accounting system. Designed and sold as a \$5,000 accounting system, the latest version of Complete II represents a vastly expanded and greatly improved package that sells for an unbelievably low \$199. Find out what over 250,000 satisfied users already know — no other accounting system offers so much for so little.

And now, for businesses who want to make the most of their accounting information, Peachtree's Double Bonus Bundle gives you Peachtree Complete II Accounting plus its own custom reporting tool, Peachtree Data Query II™ Enhanced. The Double Bonus Bundle includes both systems — regularly priced at \$199 each — for just \$298. That's

a savings of \$100! Either way, Peachtree offers you the most accounting you can get for your software dollar.

Peachtree Complete II is a comprehensive accounting system developed to meet the needs of small- to medium-size businesses. It comes with eight high-power modules that may be used individually, or fully integrated for maximum accounting efficiency:

- General Ledger
- Accounts Payable
- Inventory
- Fixed Assets
- Accounts Receivable
- Invoicing
- Job Cost
- Payroll

And Peachtree Complete II is designed using the latest software innovations, like full-color scrolling reference tables, pop-up windows, and short-cut keyed menus. We've expanded to allow an unlimited number of companies, added service invoicing, range printing, and more.

Peachtree Complete II's error handling is quick and easy, with plain English messages and suggestions. Context-sensitive Smart HELP is on-line, all the time. And as always, Complete II comes with the most thorough documentation — a separate quick-start Installation Guide, Accounting Primer, seven-volume Reference Library, and extensive on-line tutorials on each module — all at no extra charge.

Now you can extend the power of your Peachtree accounting to include custom reporting and analysis, and save even more money! Order the Double Bonus Bundle and you'll get Peachtree Complete II, plus Peachtree Data Query II Enhanced, for just \$298.

PDQ lets you turn raw figures into highly sophisticated reports, allowing you safe, easy access to valuable information from all eight Peachtree Complete II modules. PDQ's simple, clear approach gives you maximum control and flexibility. You tell PDQ what information you need, and PDQ looks through your accounting files, finds it, and presents it to you any way you want it — on screen or printed, as a graph, in report form, or ready for export to another software package.

You can begin creating reports in just minutes, thanks to all new user instructions and on-line practice sessions that lead you through the system and build confidence as you go. With Peachtree's Double Bonus Bundle, accounting and custom reporting go hand-in-hand, and that makes good business sense.

MONEY BACK GUARANTEE. We stand behind Peachtree Complete II and PDQ II with a toll-free hotline for technical support (\$1 per minute, \$20 minimum on your credit card) and a 30-day money-back guarantee when you buy directly from Peachtree. If for any reason you're not satisfied, you can return your package within 30 days for a prompt refund. That's the Peachtree Software promise. A \$25 restocking fee applies to all returns.

Peachtree Complete II: the Business Accounting System for just \$199, and Peachtree's Double Bonus Bundle for just \$298. Either way you look at it, Peachtree Software saves you money. Order today!

HARDWARE SPECIFICATIONS: Requires PC/MS-DOS version 2.0 or higher with 384K of usable memory (512K required with DOS 3.3) and a minimum 10 MB hard disk. For use with the IBM® PC, PC XT, FX AT, Personal System/2™ and compatibles. 3 1/2" media optionally available. Not copy protected.

PC Change.

A kinder and gentler mutation.

Spring is a time of transformation here in the mutable metropolis of Marlow, NH (pop.558). First our snow- and ice-covered back roads turn into treacherous trails of mud, virtually overnight. Next, the local teenagers begin walking around with suspicious looks on their faces. But you really know that spring has sprung when our spritely mascots take off their down-filled parkas, flannel shirts, and countless layers of thermal underwear and begin to romp with reckless abandon in the sunlight. Look out!

Go with the flow.

(Or, why the water's no longer over the dam.)

A lot's changed around here since we first began selling products for the PC in 1982. Back then, our warehouse was in a closet, orders were filled by hand, and the dam on the nearby Ashuelot River was badly in need of repair. But even though we now have a much larger warehouse, the most sophisticated order processing system in micro

mail order, and one of the most solid dams in New Hampshire, we're still country boys, girls, (and animals) at heart.

In spite of all our technological prowess, the parking lot still isn't paved, we're still surrounded by acres of forest, and our idea of a power lunch is using the microwave to heat up soup. Which means that the people you talk to when you call us tend to be a little friendlier, a little more laid back, and a little more patient than your average bear.

Get in your licks!

The most magnificent Marlow miracle of all is still the annual metamorphosis of maple sap into maple syrup—a change that can make everybody's life a whole lot sweeter. A pint of this famous nectar, featuring the mascot who never waffles, is yours free with any order of \$500 or more between now and May 31st.

Just call 1-800/243-8088 or 1-603/446-3383, M-F 9:00 to 9:00; Saturday to 5:30. If you're planning to visit, please call ahead.

The pot is definitely sweeter with a pint of our pure New Hampshire maple syrup. Offer not available to accounts on net terms. One per customer.

*DEFECTIVE SOFTWARE REPLACED IMMEDIATELY. DEFECTIVE HARDWARE REPLACED OR REPAIRED AT OUR DISCRETION

INSIDE THE SOFTWARE SHELF

148 **ViewLink 1.0**

A brand-new kind of file manager, *ViewLink* groups files and cuts and pastes across applications. But for now it's a diamond in the rough.

149 **Crosstalk XVI 3.7**

In a long-awaited upgrade, *Crosstalk* polishes its communications act and moves to the background.

152 **QuickC 2.0**

The best C compiler available for one bill. It has a solid source-level debugger, supports most memory models, and compiles and links incrementally.

156 **Lucid 3-D 2.0**

From a lightweight pop-up spreadsheet, *Lucid* has matured into a Best Buy capable of hot-linking multiple worksheets and creating clever macros.

158 **Project Workbench Advanced 3.0**

Workbench excels at juggling resources for numerous projects, with enough flexibility to accommodate the unexpected.

ViewLink 1.0

File manager

PROS: Combines file management with search and retrieve and cut and paste across applications

CONS: Slow file search and display, requires repeated loading and exiting of applications

The first time you run Traveling Software's *ViewLink*, you'll wonder why it took so long for someone to think of it. A DOS shell gone to college, *ViewLink* searches a disk for files with common text strings or other shared attributes, links the resulting file groups so you can easily scan their contents, and enables you to cut and paste ASCII text between linked files. Anybody with a hard disk and two files to rub together will want to try it.

But if *ViewLink* is a great program that's been waiting to happen, the wait should have been a few months longer. In the rush to beat Lotus's *Magellan* (see *Preview, PCW*, March 1989), Traveling Software has released a version that doesn't live up to the product's potential. The company claims that a free upgrade scheduled for release in July will correct *ViewLink*'s initial shortcomings.

At first glance, *ViewLink* looks like a simple, clean-cut file manager. When you install it, the program automatically reads the data files on your disk and displays the directory names in a window on the left dubbed "views." As you scroll through the list of views, a list of "items"—the files contained in the individual views—appears in a window on the right.

As with other file managers, you can tag, copy, move, or delete files—but the comparison ends there. *ViewLink* begins to strut its stuff when you decide to create new views, rounding up files that share a common text string, date, or file name. Want to find all files that mention IBM? A few keystrokes produce an ad hoc subdirectory of the appropriate files, including not only your corre-

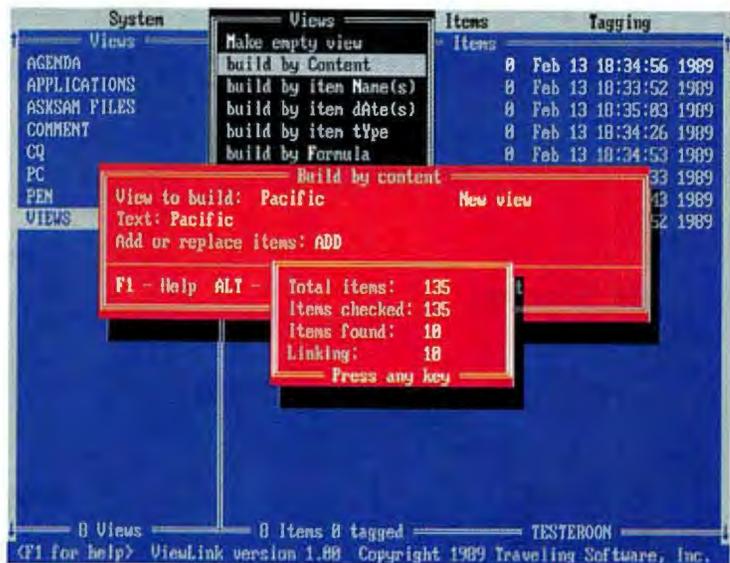

spondence with Big Blue and the 1-2-3 worksheet that tracks your IBM stock, but also any data base, graphics, or even project management file that contains the string *IBM*. Move the highlight to the name of the file you want to look at, press <Enter>, and *View-Link* loads the proper application and then the file.

But *ViewLink*'s file-grabbing feature has some unfortunate limitations. For one thing, it's quite slow: On an AT running at 12 MHz, the program took a minute and a half to search through 170 files totaling about 3MB of data. And while search terms can be 52 characters long, you can't use logical operators; you can combine search terms only by wrestling with *ViewLink*'s awkward command language.

A particularly annoying problem is *View-Link*'s insistence on loading the relevant application every time you select a file. Even if all the files you need are, say, *WordPerfect* documents, you're left staring helplessly at the screen while *ViewLink* repeatedly quits *WordPerfect*, only to load it again for the next file. As a partial work-around, the program includes an option that lets you peek into a file without launching the application. But anyone who uses a utility like Executive Systems' zippy *Xtree Pro* will find *View-Link*'s file-peeker very slow. And you can't edit the file or cut and paste.

You're also limited in how you can link files. You can link in series—A to B to C—but then you can't go from item C back to item A. Or you can link many to one—B and C both linked to A—but then you can't go from B to C. It would be a lot simpler if you could link all items in a "pool," so you could move between any two files.

Basically, *ViewLink 1.0* is a terrific idea that hasn't been fully implemented. Traveling Software claims that version 1.1 will run faster, let users inspect and cut and paste files without opening them, link files in a pool, and offer expanded and extended memory, plus mouse support. If *ViewLink 1.1* can plug the gaps in version 1.0, your hard disk files may never look the same. —Patrick Marshall

Crosstalk XVI 3.7

Communications program

PROS: Background operation, fast file transfers, good tech support

CONS: Limited selection of error-checking protocols

When it comes to delivering great value to users, upgrades of popular products don't necessarily hold an advantage over upstart competitors. Version 3.7 of the venerable *Crosstalk XVI* is a bit faster than its predecessor and adds several features the communications program has long lacked: background operation, full path support, and a

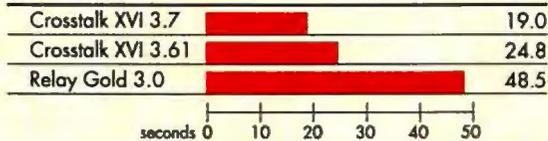

ViewLink groups files into "views," displayed on the left, and displays their contents as "items," shown on the right. You can create new views by searching for a text string, creation date, or other file attribute.

NSTL TEST REPORT

Crosstalk XVI 3.7: New Life in an Old Favorite

In version 3.7, file transfers are faster than before, especially with the Kermit protocol.

No Protocol

Protocol

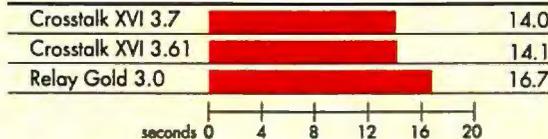

Proprietary

Kermit

Checksum XMODEM

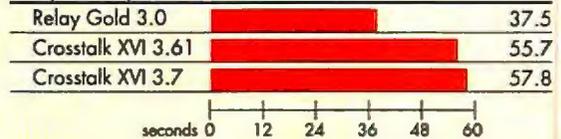

Methodology

All tests were performed on a pair of IBM PC XT's connected by null modem cables to an IBM AT running Combench, a transmission emulation program. Tests consisted of the transmission of a 10K file at 9600 bps. Prior to testing, each hard disk was formatted and DOS 3.2 was installed in its own directory. A CONFIG.SYS file was then created in the root directory, specifying FILES=20 and BUFFERS=25. Finally, the communications program was installed in its own directory according to the manufacturer's instructions. The identical program and version number were used on each computer, but to maintain the integrity of our tests, the program serial numbers were different. In tests using protocols, each program was run with Kermit and Checksum XMODEM. Although these protocols are not universal standards, most communications programs support them. The proprietary protocol included with each program was also tested.

Protocol/error

Proprietary

Protocol/delay

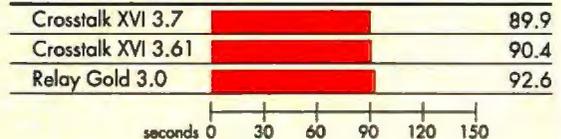

Proprietary

Kermit

Checksum XMODEM

No Protocol

The program was set to display each character as it was echoed from the host (remote echo).

Protocol

The program transmitted a 10K text file of 9600 bps with Checksum XMODEM and Kermit.

Protocol/error

A 10K text file was transmitted, and errors were inserted in the transfer at the rate of 1 character dropout and 1 changed byte per 1500 characters.

Protocol/delay

For this test, characters were delayed approximately .5 second between computers.

Data based on tests designed and conducted by National Software Testing Laboratories (NSTL). All rights reserved.

new call-logging feature. But while version 3.7 is a worthwhile upgrade, at \$195 it won't lure new buyers who can get a package like Datastorm's popular *ProComm Plus* for \$89.

Version 3.7's most noteworthy enhancement is the addition of a background-operation mode. While *Crosstalk XVI* is chugging away on a file transfer, you can tabulate 1-2-3 worksheets, reorganize *Reflex* data

bases, edit *WordPerfect* documents, or execute DOS commands without any noticeable slowdown in the foreground application. *Crosstalk XVI* uses 64K of memory when it works in the background but can be set to require as little as 32K with the */Bxx* command-line option.

HOW DO YOU FIT THE BROOKLYN BRIDGE INTO YOUR OFFICE?

It's easy because The Brooklyn Bridge™ is the world's leading file transfer, file access and file management utility, and here's why: **IMPROVES PRODUCTIVITY & EFFICIENCY**

The Brooklyn Bridge is the fastest and easiest file transfer and printer sharing program. The Brooklyn Bridge works between any two IBM compatible desktop, laptop or PS/2 microcomputers with any size floppy or hard disk. The Brooklyn Bridge even gives you a sophisticated file manager and powerful DOS utilities. Whether you're a beginner or more experienced user The Brooklyn Bridge is tailored to your needs.

With The Brooklyn Bridge you have more benefits than

file transfer, without the headaches network problems cause.

FAST, EASY, ACCURATE AND INEXPENSIVE FILE TRANSFER

You can transfer an entire hard disk in just minutes while maintaining your hard disk integrity. And you can transfer specific directories and sub-directories or files. Now you can choose between our Serial and Parallel Versions. Our Serial Version gives you a transfer rate of 115,200 BAUD 10K bytes/sec at distances exceeding 50 feet. The Parallel Version gives you a transfer rate of up to 50K bytes/sec, equivalent to 500,000 BAUD at distances up to 15 feet. Both versions insure transfer accuracy with a full 16-bit CRC error check.

Most networks can even be accessed so you can transfer files from a network to a remote PC. **CONVENIENT PERIPHERAL SHARING**

Keeping files current between your desktop and laptop computers is just one benefit of The Brooklyn Bridge. You can also access any remote printer or peripheral devices such as plotters, Bemouilli Boxes, tape back-up systems, optical disks and more. One printer can now efficiently work for two people.

EASY DISK ORGANIZATION

The Brooklyn Bridge file manager is so comprehensive it rivals stand-alone products. It has over 150 point-and-shoot operations for organizing files on your disk including file viewing, tagging, and sorting of directories and files. Files can be viewed from local and remote computers in a full-

screen, dual directory display, in directories, sub-directories, or in a visual tree. The Brooklyn Bridge gives you optimum disk navigation so you'll never misplace a file!

POWERFUL DOS PROCESSING

Because The Brooklyn Bridge

provides you with innovative utilities like BK (back-up), RM (Remove), MV (Move), and CP (Copy), DOS processing becomes faster and more efficient. The Brooklyn Bridge can double your

processing power with the RUN utility. It lets you run applications on your remote computer from your master computer.

THE BROOKLYN BRIDGE

THE SMALLEST RESIDENT RAM REQUIREMENTS

While other link-up programs require 140K of resident RAM, The Brooklyn Bridge requires less than 5K! The Brooklyn Bridge works in the background and cannot interfere with your other applications.

Most importantly, The Brooklyn Bridge comes with everything you need. You receive both 5.25 and 3.5 inch diskettes, a complete reference manual, and either a Serial or Parallel Cable. Specify Serial Version for the 8-foot Universal Cable or Parallel Version for the 6-foot Parallel Cable. Your choice for only **\$139.95!**

A "Desktop-to-Desktop," 50-foot Universal Serial Cable is available so you can connect computers in separate offices for only **\$30.00.**

Order The Brooklyn Bridge from your local dealers or call White Crane Systems at **(404) 446-0660.**

WHITE CRANE SYSTEMS, INC.

6400 Atlantic Boulevard

Suite 180

Norcross, GA 30071

(404) 446-0660

Circle 47 on reader service card

If you're frustrated with *Crosstalk XVI's* antiquated command-line interface, you'll appreciate the new editing keys that let you jump the cursor around and delete and insert characters. Full path support is another notable, if overdue, addition; in the previous version of *Crosstalk XVI*, you had to use the DIR command to change the directory that files were uploaded or downloaded into. Finally, version 3.7 now logs the date, time, and length of modem calls.

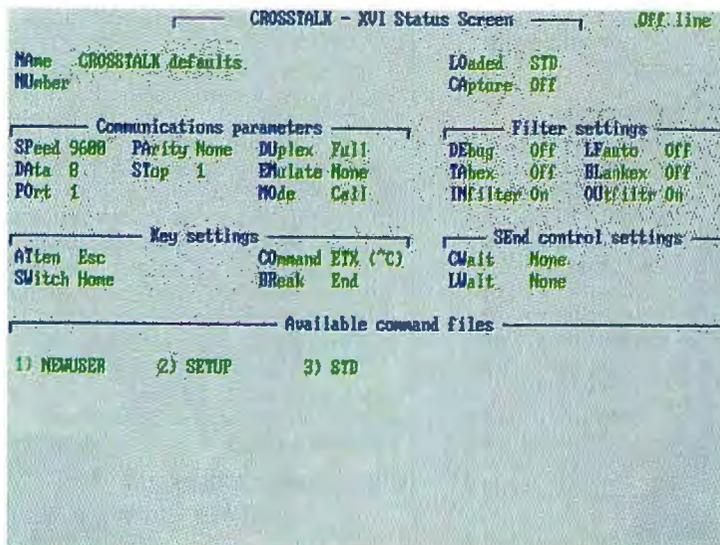

Version 3.7 is a tad faster than its predecessor at file transfers, and the addition of extended packet size and sliding windows has considerably boosted the speed of the Kermit protocol. The biggest disappointment in this new version is that *Crosstalk XVI's* menu of error-checking protocols hasn't been expanded.

DCA/Crosstalk has added a few enhancements to *Crosstalk XVI's* script language, none of them major. For example, a troubleshooting enhancement lets you run scripts one line at a time for debugging.

Though it may look old-fashioned to menu mavens, *Crosstalk XVI* is still a very good package, and version 3.7 will please its many loyal fans. The package's file transfers are swift, and its script language sound. But until *Crosstalk XVI* offers something to distinguish itself from every other communications software package, new buyers will prefer lower-cost, more modern competitors.

—Judy Getts

Familiar to legions of communicators, *Crosstalk XVI's* data-rich command-line interface is largely unchanged in version 3.7.

QuickC 2.0

C compiler

PROS: Improved source-level debugger, incremental compiling and linking, built-in assembler for in-line assembly code, supports most memory models

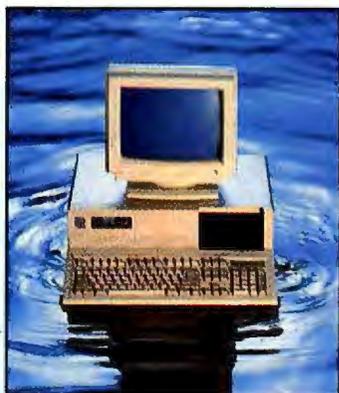

CONS: No longer compiles and links to memory, doesn't support the "tiny" memory model

Simply put, Microsoft's new version of *QuickC* is your best buy in a C compiler for the PC. *QuickC 2.0* offers incremental compiling and linking, excellent graphics support, an improved debugger, and support for all except the "tiny" memory model. Its source-level debugger now lets you inspect CPU registers and formatted variables, including arrays and structures, and even execute your program backward if you want. *QuickC 2.0* is slower than Borland's *Turbo C*, but at \$99, costs \$50 less (see *The Software Shelf*, PCW, May 1989).

In version 2.0, each element of the *QuickC* programming environment has been enhanced. For instance, you can now customize the editor to mimic your favorite program editor more closely. *WordStar* conventions are the default, but you can add features of editors such as *Brief* and *Epsilon*. Unlike *Turbo C*, *QuickC 2.0* lets you use a mouse within the programming environment.

QuickC 2.0's debugger is slightly better than *Turbo C's*. It displays the CPU registers and the contents of structures and arrays, and you get a full view of code or data that would normally fall beyond the edge of the watch window.

NSTL TEST REPORT

QuickC 2.0: Classy Compiler

QuickC 2.0 runs a bit slower than Turbo C 2.0, but a bargain price, mouse support, and mixed-memory models make it the better choice.

.EXE Performance**Scroll text****Search and replace****Cut and paste**

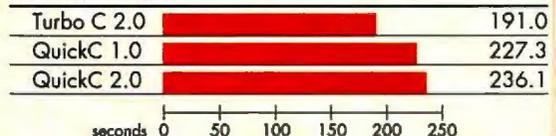

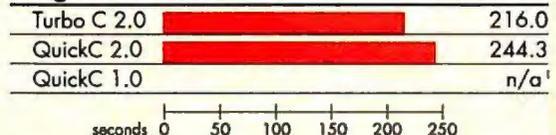

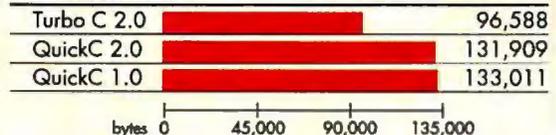

¹ QuickC 1.0 allows the use of the Medium library only in the integrated environment; EMACS requires the Large library.

Methodology

All tests were performed on a 12-MHz Compaq Deskpro 286 with a 20MB hard disk and 1.1MB of RAM. MicroEMACS 3.9, a public domain text editor written in C, was used to test the C compilers. The execution speed of a set of MicroEMACS's macros was used to compare the quality of code generated by the compilers. Compilations were optimized for speed. There was no significant difference between the source code used for the compilers.

.EXE Performance

Three macros were used to test the execution speed of each compiler's resultant .EXE (executable) file. The first macro, Scroll text, loaded MicroEMACS's 1472-line source code file (MAIN.C) and scrolled from the top line down to

Compile Time**Command line****Integrated environment****Size of .EXE**

the end of the file. Explicit calls to the "update-screen" macro command were made to reflect each scrolling operation on the screen. The second macro, Search and replace, replaced all occurrences of *if* with *nsl*. Screen I/O was minimized for this test. The last macro, Cut and paste, performed several "kill-region" operations; kill-region deleted a block of text while copying the block to the scrap buffer.

Compile Time

The amount of time that it took to compile MicroEMACS from the command line and from within the integrated environment.

Size of .EXE

The size of the executable file produced by a compiler.

Data based on tests designed and conducted by National Software Testing Laboratories (NSTL). All rights reserved.

Compiling and linking from within the programming environment works differently in this version. You can no longer compile and link to memory; all compiling and linking is done to disk. The biggest benefit of this change is that you no longer have to bother with preparing "quick libraries" if you want to call library functions that aren't included in *QuickC's* in-memory library; nor do the library functions have to fit in active memory. *QuickC* now works transparently with the entire *Microsoft C* run-time library, and you

can specify from within the programming environment the path names of any additional libraries you want to use.

Although compiling and linking to disk is generally an improvement, it's not without some cost. First, you need enough disk space to store the .OBJ and .EXE files, plus several additional files that are generated if you select incremental compiling and linking. Second, so much disk access is required that

Good News For People Who've Always Wanted A TARGA 16...

Now less gets you even more!

**The NEW Improved
TARGA 16 is only
\$1995!**

When we redesigned the industry-standard for high color resolution videographics, we incorporated the latest technological advances. The result is a TARGA 16 with improved video quality, built-in overscan, simultaneous RGB and composite video output and more.

And TIPS™ is only \$795!

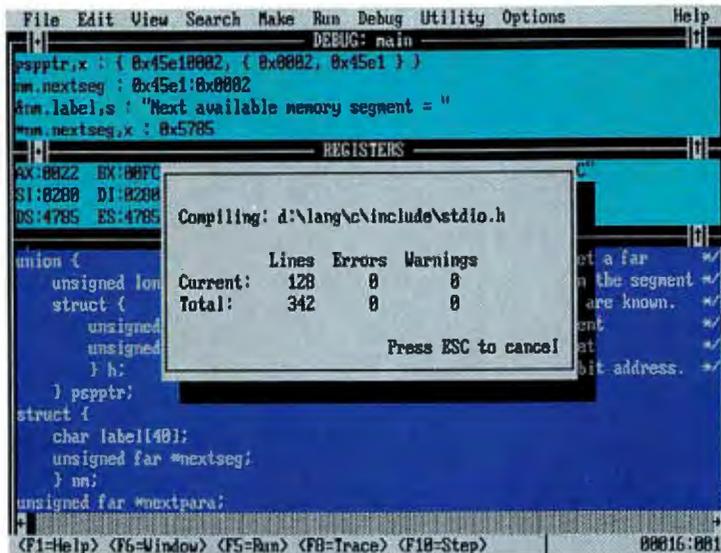

Since we lowered the price on our popular TARGA 16, we decided to reduce the cost of its companion, TIPS Imaging Software. The TARGA 16 version is now only \$795, a savings of \$455. This latest release of the award-winning IBM PC-based paint program lets you create new graphics or enhance images captured by the TARGA 16. So contact your nearest Authorized Truevision Reseller, or call 800/858-TRUE and see how less can become even more.

Prices quoted are US Domestic suggested retail prices.

When QuickC's interactive compiler generates an error or a warning, it opens a special window to display an error message and can place the cursor on the line of source code where the first error occurred.

the compile-and-link process is considerably slower than with QuickC version 1.0, even though the 2.0 compiler itself is about 30 percent faster.

QuickC 2.0 supports all memory models except the "tiny" model (in which both executable code and data fit within one 64K segment), as well as mixed-memory models, which Turbo C doesn't. Version 2.0 also supports in-line assembly code, something entirely new in a Microsoft product. This means the critical procedures you code in assembly language are assembled directly by QuickC. Turbo C also debugs in-line assembly at the source-code level, but only if you buy Borland's \$150 Turbo Assembler and Turbo Debugger.

QuickC 2.0 comes with the full Microsoft C 5.1 run-time library, plus a special library of graphics functions that let you easily create charts and graphs and use Windows-compatible fonts in your programs. To top it off, a hypertext-based help system will have many people writing programs without ever cracking a manual. So unless you absolutely crave Turbo C's raw speed, QuickC 2.0 is simply the best there is. —Dennis Dykstra

Lucid 3-D 2.0

Memory-resident spreadsheet

PROS: Adroitly manipulates multiple worksheets, large maximum file size, excellent macro features

CONS: Poor graphics, limited data base tools

Buying Lucid 3-D 2.0 takes pioneering spirit, but the venture is worthwhile. This speedy, memory-resident spreadsheet easily juggles hot links between multiple worksheets and offers a powerful macro generator, a mouse interface, and expanded memory support. When you hit the Lucid trail, you leave data base tools and 1-2-3's familiar menu interface behind, but for \$99, who's complaining?

Personal Computer Support Group's original Lucid 3-D was a brave try at a pop-up spreadsheet but was faulted for its 64K file-size limit, imperfect cut-and-paste feature, and lack of graphics (see "Spreadsheet Add-Ins," PCW, July 1988). So PCSG teamed with Dac Software to revamp the program completely, increasing maximum file size considerably and adding graphics, range linking, and greater file compatibility. The result is a creditable, low-cost alternative to 1-2-3, Excel, and VP-Planner Plus.

As before, Lucid 3-D offers both minimal and background recalculation, a worksheet matrix of 254 columns by 9999 rows, and nine data formats. But its 50 built-in mathematical functions pale beside Excel's 132 and 1-2-3's 90, and Lucid 3-D's data base commands are limited to Sort and Find.

Besides graphics, other new features abound in version 2.0. You can now link ranges between worksheets and automatically display up to nine worksheets from a linked series in windows. Lucid 3-D now reads and writes .WKS, dBASE, and Dac-Easy Accounting files. It supports up to

~5MHz Shipping In Quantity
33MHz Available NOW

Powerup with Micronics' 386

Micronics, one of the largest manufacturers of motherboards in the United States, brings both speed and power to our third generation product line.

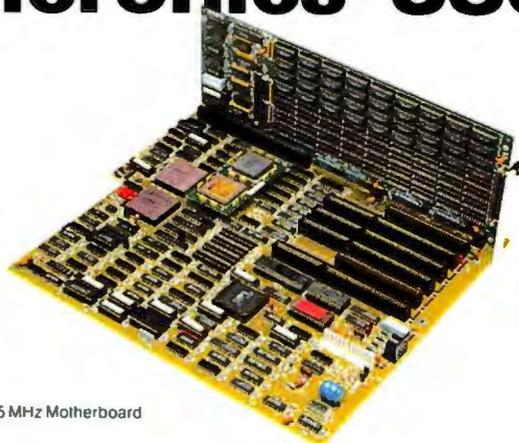

Applications that demand speed such as: CAD/CAM, advanced databases and spreadsheets, artificial intelligence, graphics, engineering, image processing and desktop publishing are ideal. Multiuser environments are also prime targets for the blazing speed of our 25 MHz boards, especially as LAN servers.

Our boards are in great demand for software development as well. Developers tell us that every time they eliminate even a second from compile-and-link time, productivity increases while programmer burnout decreases.

Micronics motherboards are available in 25, 20 and 16 MHz in full size and babyboard models. All support 387 math coprocessors. Our 20 MHz boards support Weitek and come with or without cache memory. Our 25 MHz boards support Weitek and come with cache memory only.

Unlike its clones, Micronics boards run all major operating systems and offer true 32 bit memory expansion with 0 wait states. And, it is compatible with UNIX and XENIX software.

All in all, Micronics gives you what you need most: more speed, more power and incredible performance. And all at extremely affordable prices.

Circle 198 on reader service card

8MB of expanded memory, and its files are limited only by available RAM.

Lucid 3-D 2.0 can cut and paste data and ASCII text between co-resident applications via its easy-to-use Clipboard commands. It worked well with a variety of applications, including *SideKick*.

Though it uses pulldown horizontal menus instead of a standard 1-2-3 command menu, *Lucid 3-D's* interface is generally intuitive.

In linking data between worksheets, *Lucid 3-D* takes a simple but powerful approach: It addresses a target worksheet by its DOS directory path and file name, plus a specific cell or range reference. The beauty of this scheme is that secondary files need not be in memory, just in the specified directory.

Where such 3-D spreadsheets as *Surpass* and *VP-Planner Plus* have a one-to-many relationship with other worksheets, *Lucid 3-D's* is one to one. This means that you can't directly address a range of cells layered through a hierarchy of worksheets; but you can pluck ranges from any individual worksheet, as well as create a staging area (in the primary worksheet or in a secondary one) for your own multiple-range, multiple-worksheet references. What's more, *Lucid 3-D* can display an audit trail of all such references.

Lucid 3-D's smoothly integrated notepad lets you merge note files, attach up to 14K of text to a cell, and append larger disk-based text files. The program also deserves praise for its range-color option. Besides the obvious benefit of setting off ranges, it gives you a way to create snazzy-looking templates.

Graphics are such a welcome addition to version 2.0, it's a pity they're relatively lackluster. You get 13 kinds of charts, including 3-D bar charts, but no control over type styles and sizes, data labels, range scaling, default color, or shading. Moreover, you can't create a .PIC file or enhance the charts in another software package.

Still, release 2.0 clearly propels *Lucid 3-D* from spreadsheet lightweight to serious contender at a very affordable price. If you're willing to overlook weak graphics and paltry data base talents, *Lucid 3-D* offers speed,

capacity, and an elegant approach to linking worksheets. In cutting *Lucid 3-D's* price from \$150 to \$99.95, PCSG and Dac Software have launched one of the true spreadsheet bargains. —Alan Southerton

Project Workbench Advanced 3.0

Project management program

PROS: Excellent at resource management, handles multiple projects well

CONS: Crowded, text-based screens; limited tabular reports; can't calculate negative float

Project Workbench Advanced 3.0 from Applied Business Technology (ABT) combines a midrange price (\$1275) with high-end capabilities found in more expensive project managers like Primavera's *Primavera Project Planner* and CAM's *Viewpoint*. With a network version that supports up to 40 users simultaneously, *Project Workbench* is ideal for managers who plan many small projects in a dynamic environment with a large staff.

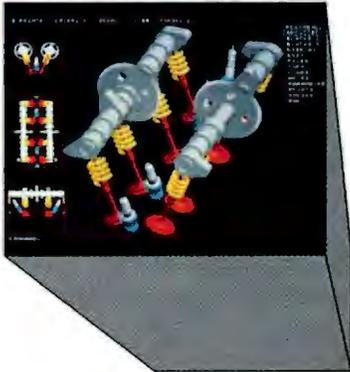

Project Workbench isn't for rookies, however. Even with its new context-sensitive help and rewritten documentation, the program takes getting used to, as do its crowded screen graphics and eccentric reports.

Many of the improvements in version 3.0 involve resource management. Calendars for each resource are new, as are flexible histograms, resource leveling across multiple projects, and a jump in the number of resources per task from 6 to 200. Alas, ABT

Aw...What the Heck!

EXTREMELY POWERFUL

DesignCAD 3-D version 2.0 is as powerful as most CAD systems costing \$5000-\$10,000! Features like: Complex Extrusions-linear, scalar, and circular, Blending of Surfaces, Shading, Cross Sectioning, Complex Sweeps and Translations, and Boolean operations make DesignCAD 3-D one of the most powerful 3-D CAD systems available... at any price! Engineers, Architects and Consultants constantly tell us that they use CAD systems costing thousands of dollars which are not as powerful as DesignCAD 3-D.

VERY EASY TO USE

Just because DesignCAD 3-D is powerful doesn't mean it is difficult to use. Single keystroke commands and side-bar menus which give short directions on how to proceed make DesignCAD 3-D a snap to use! While not required, DesignCAD 3-D supports all popular digitizers and mice.

Many of the older, more cumbersome CAD systems require weeks of training before a user can be productive. DesignCAD 3-D users find they can be producing useful drawings in a matter of minutes! In a recent CAD contest only one contestant was able to match our drawing time. The package sold for \$3000.00. The other CAD packages took up to twice as long to perform the same drawing and cost up to \$5000.00!

Still don't believe us? The goblet pictured below required only 16 keystrokes and 3 commands to create! The top, front, side, and isometric views were created simultaneously... in less than one minute!

DesignCAD 3-D only \$399!

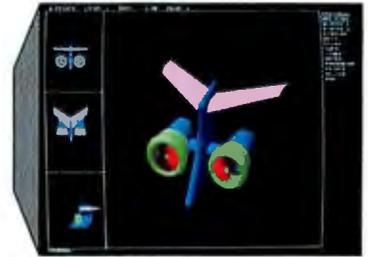

VERY LOW PRICED

The first question asked by many people is, "Why is DesignCAD 3-D priced so low?" The answer? After developing DesignCAD 3-D version 2.0, we were unable to decide how the product should be priced. We consulted experts. We used the finest spreadsheets on the market. We took employee polls. Finally, in the great American Tradition, we said, "Aw... What the Heck! Let's see the other guys beat this price!" DesignCAD 3-D version 2.0 sells for \$399.

WHY BUY THIS ONE?

There is a very important reason to buy DesignCAD 3-D. PERFORMANCE. No other CAD system can match our price/performance ratio. Many people make the serious mistake of thinking that it is necessary to spend thousands of dollars to obtain "a good 3-D CAD system." This is not true! We talk to people everyday that are sadly disappointed with their "expensive" CAD systems. Don't be one of them! Call us and we will send you a complete set of literature and a free slide show demo disk. Once you compare DesignCAD 3-D version 2.0 with other CAD systems we know you will choose DesignCAD 3-D.

DON'T TAKE OUR WORD FOR IT

Here is what other people have to say about DesignCAD 3-D:

"After you've worked with DesignCAD, the single keystroke commands are simple to remember and it becomes easy to "flick one key" to execute a command. An extremely ergonomically designed program."

HENRY LEVET, Levett & Daigle Architects - New Orleans, LA
Designed a 65,000 sq. ft. nursing home using DesignCAD

"Recently I worked with a firm that builds decks. They purchased your product on my recommendation. I sat down with them and in two hours they were very proficient in DesignCAD. Now they are more effective; and we can communicate... it's wonderful to be able to do a block repeat 42 times and there are 42 2x4's to make the deck!"

J. TURNER, Architect, TAO Ltd. - The Woodlands, Texas

"Allows scientists and engineers to expend minimum time learning and using CAD software so that their time can be expended on the project at hand. It also allows scientists and engineers to quickly present to management all views of a subject (3-D)."

DR. STEVENS, NASA Space Scientist/Engineer

HOW DO I GET ONE?

DesignCAD 3-D version 2.0 is available from most retail computer stores, or you may order directly from us. DesignCAD 3-D is available in a number of foreign languages from distributors throughout the world. All you need to run DesignCAD 3-D is an IBM PC Compatible and 640K RAM. DesignCAD 3-D supports most graphics cards, printers, plotters and digitizers. Free information and a demo diskette are available by contacting us at:

It doesn't take a computer to figure out the difference.

The difference between the GEnie™ service and CompuServe® could make a big difference to you. Here's why. GEnie's rate for 1200 baud access is just \$6 per non-prime hour.* There's more than twice as much. Which means that with GEnie you can stay online longer for a whole lot less.

And that means more time to enjoy more of GEnie's services. Like valuable computer RoundTables.

Exciting multi-player games. Useful financial information and much more. All at hourly rates designed to allow you to spend more time online. Not more money.

And with GEnie signing up is as easy as one, two, three.

- (1) Set your modem for local echo (half duplex), 300 or 1200 baud.
- (2) Dial 1-800-638-8369. When connected, you just enter HHH.
- (3) At the U#= prompt simply enter

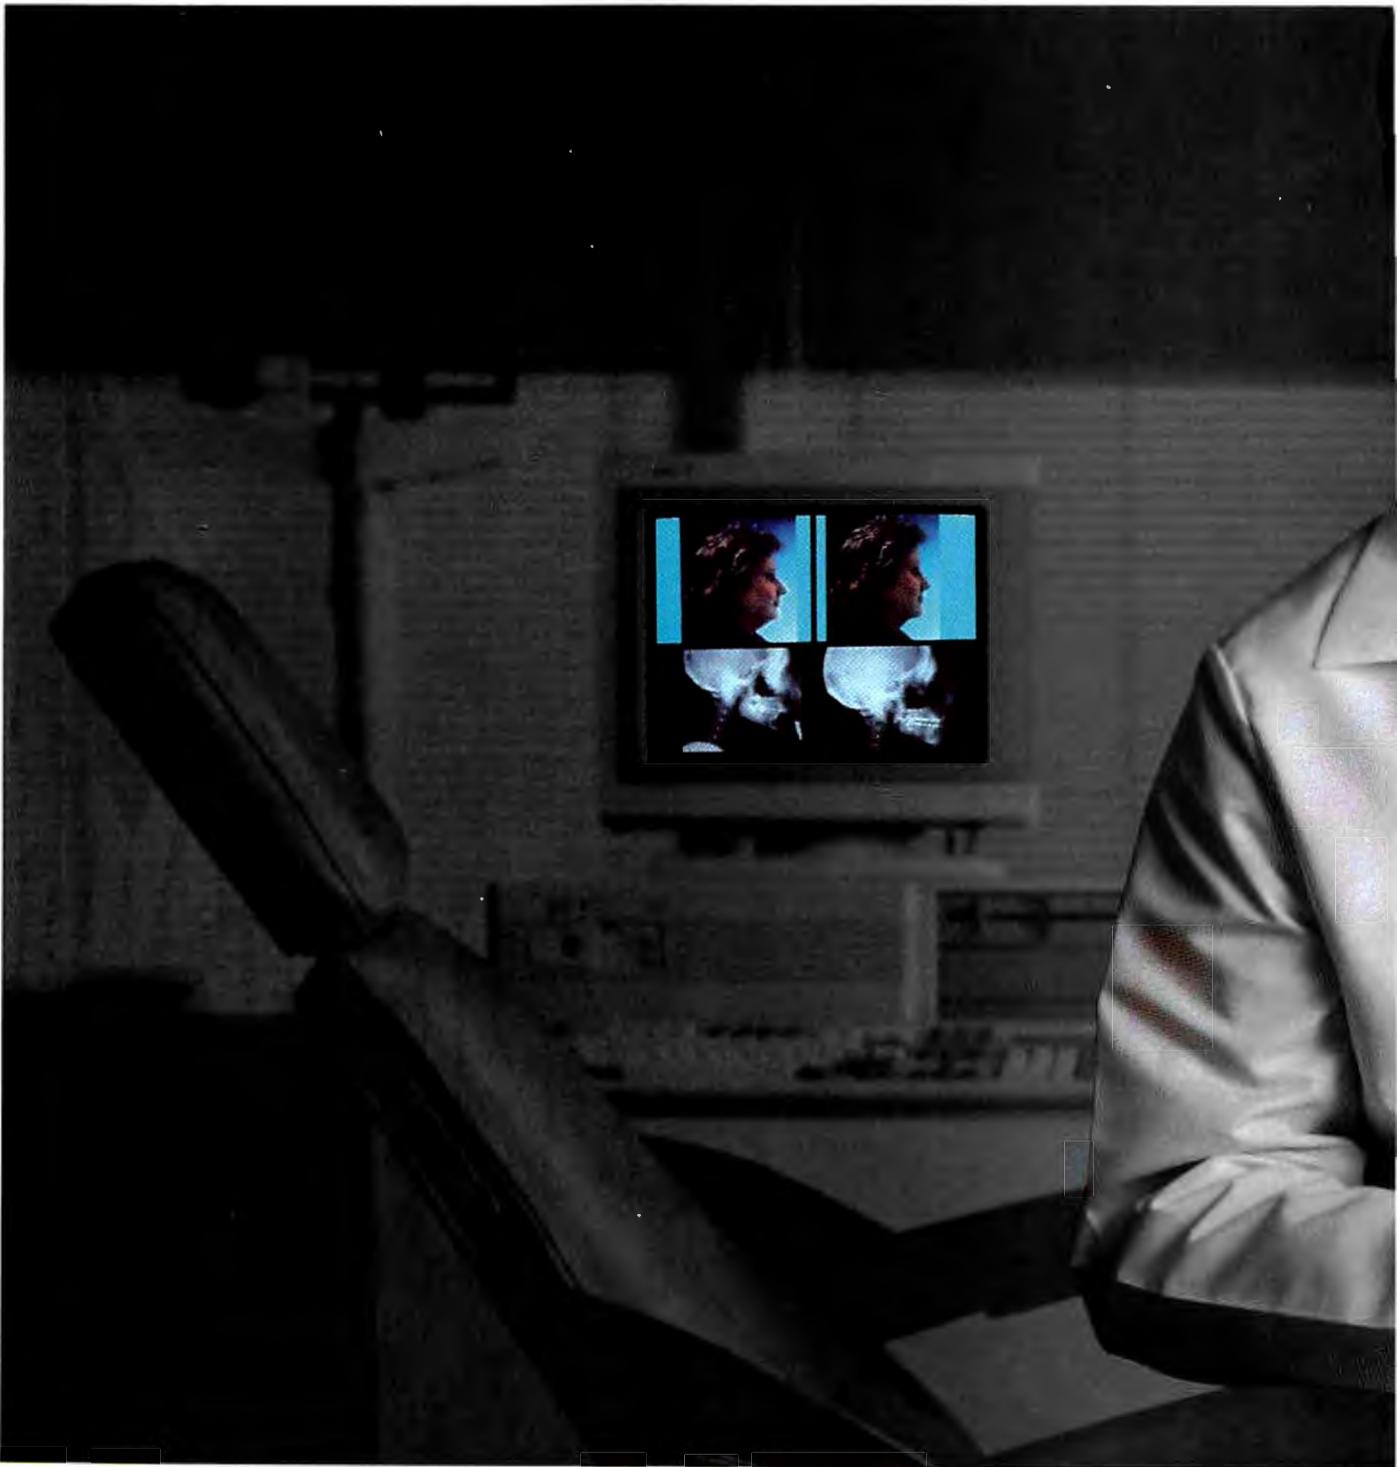

XTX99685, GEnie then RETURN. And have a major credit card or your checking account number ready. For information in the U.S. or Canada, call 1-800-638-9636. Or write GE Information Services, 401 North Washington, Rockville, MD 20850.

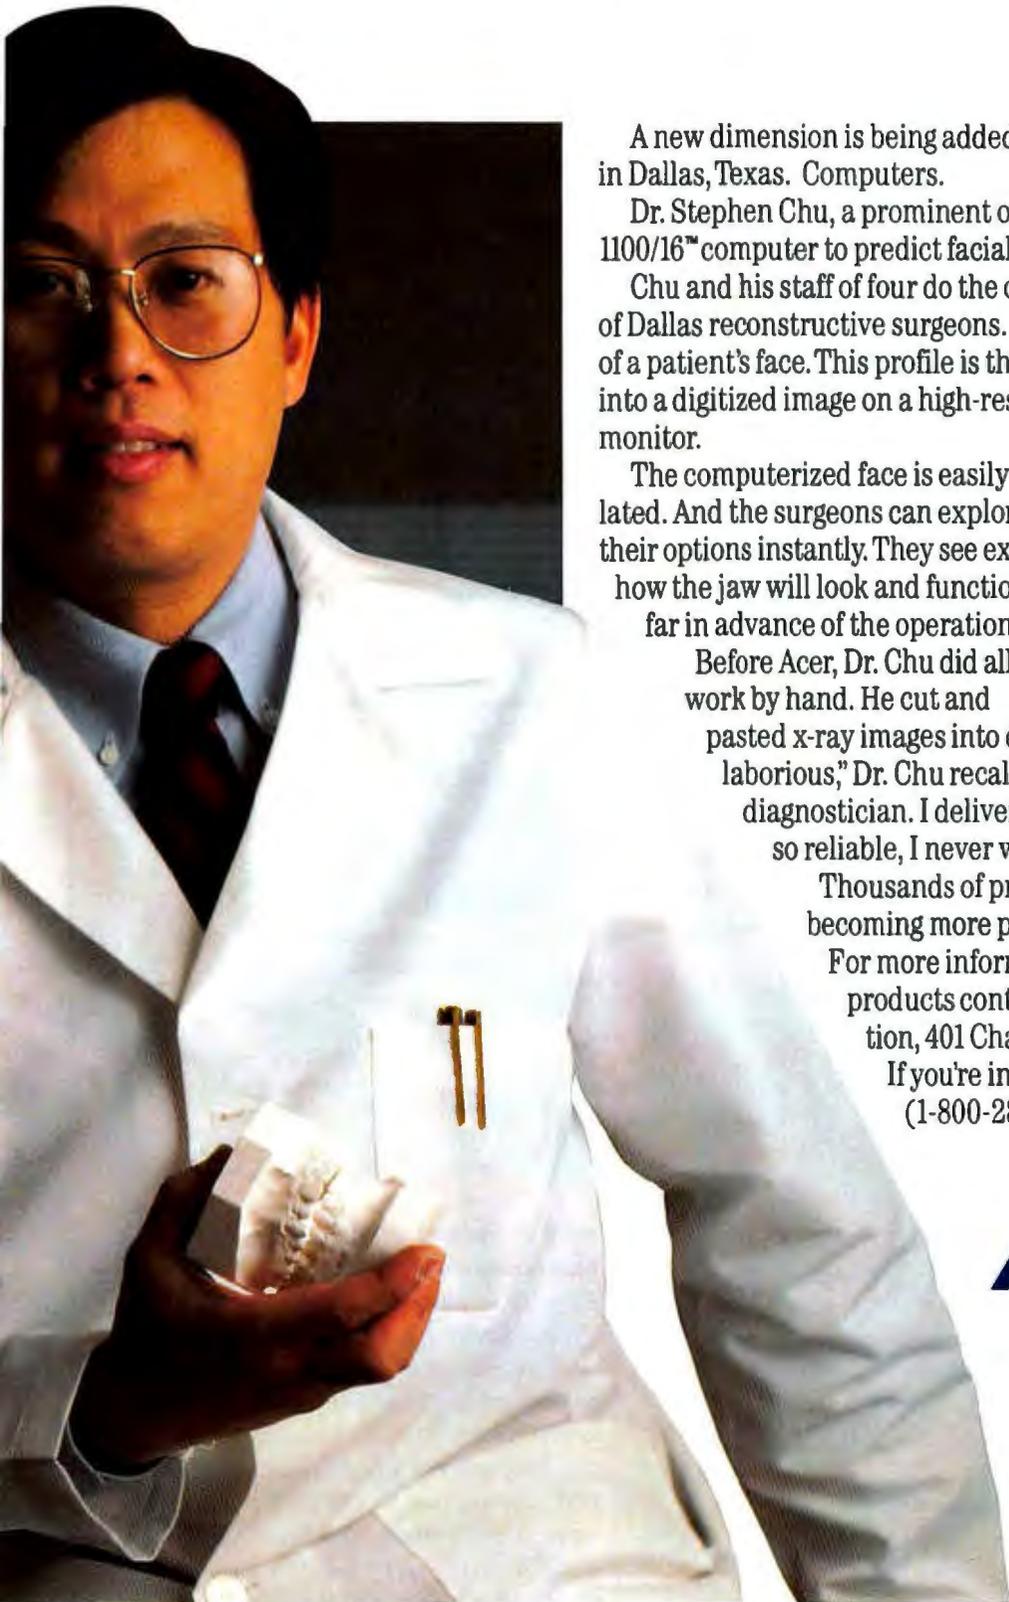

We bring good things to life.

Acer and Dr. Chu. The hottest

Dr. Stephen Chu, Dallas orthodontist, and his staff use an Acer computer to predict reconstructive surgery results.

reconstructive team in Texas.

A new dimension is being added to reconstructive surgery in Dallas, Texas. Computers.

Dr. Stephen Chu, a prominent orthodontist, is using an Acer 1100/16™ computer to predict facial surgery results ahead of time.

Chu and his staff of four do the critical advance work for a team of Dallas reconstructive surgeons. X-rays and videos are taken of a patient's face. This profile is then turned into a digitized image on a high-resolution monitor.

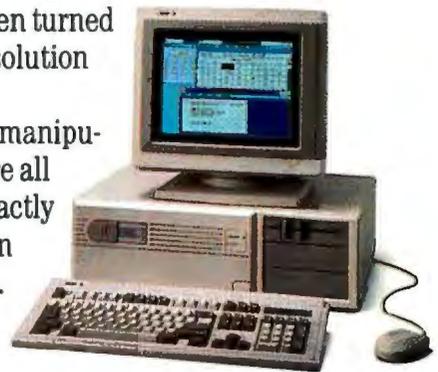

The computerized face is easily manipulated. And the surgeons can explore all their options instantly. They see exactly how the jaw will look and function far in advance of the operation.

Before Acer, Dr. Chu did all work by hand. He cut and pasted x-ray images into different combinations. "It was laborious," Dr. Chu recalls. "With Acer, I'm a better diagnostician. I deliver what I promise. And my Acer's so reliable, I never worry about downtime."

Thousands of professionals worldwide are becoming more productive using Acer computers.

For more information on the full line of Acer products contact: Acer Technologies Corporation, 401 Charcot Avenue, San Jose, CA 95131.

If you're in a hurry, call **1-800-ATC-ACER** (1-800-282-2237).

Second Look

Tape Drives—A Closer Finish

PC World backs up for a moment

—new test figures shed a different light on tape performance.

In the February 1989 review "Tape Backup on a Budget," *PC World* evaluated five QIC-40-format, internal tape drives. We considered a variety of factors, chief among them price, performance, data security, and the usability of backup and restore options. Secondary factors included warranty and support.

Based on all these factors, *PC World* declared the ArchiveXL 5540 a Best Buy. We ranked the remaining drives in descending

EXECUTIVE SUMMARY

ArchiveXL 5540

Overall value				●

Reader service no. 701

order of preference: Tallgrass TG-1140, Franklin Jumbo, Mountain TD4440, and Alloy Retriever/40.

Unfortunately, errors in two performance tests, selective file backup and selective file restore, made all the reviewed drives except for the ArchiveXL 5540 look much slower than they actually are. A second round of NSTL testing (see the NSTL Test Report) corrects those errors. The ArchiveXL 5540 is still fastest—but by a much narrower margin than reported in February.

EXECUTIVE SUMMARY

Tallgrass TG-1140

Tape drive

	POOR	FAIR	GOOD	EXCELLENT
Performance				●
Security				●
Backup/restore capabilities			●	
Overall value				●

Reader service no. 702

If you factor the new test results into the review's Executive Summary performance ratings, Tallgrass, Franklin, and Mountain all move up a notch from Good to Excellent, while Alloy climbs two notches from Poor to Good. Looking at the bottom line—overall value—both Tallgrass and Franklin drives deserve an Excellent rating. Mountain and Alloy rank as Good overall values.

The ArchiveXL 5540's low price, velocity, and top-notch features still earn it Best Buy distinction. However, the Archive drive now shares this honor with the Franklin Jumbo. Both these drives give you polished features and performance at list prices under \$450. *PC World* sincerely regrets the errors. ●

Scott Spanbauer is an assistant editor for *PC World*.

Methodology

All tape backup units were tested on an IBM PC AT Model 339 equipped with a 32MB, type 20 hard disk.

Selective file backup

This test measured the time required by each system to back up only those files that were modified or newly created since the last backup; it includes the time to rewind the tape to the beginning.

Selective file restore

This test measured the time required by each system to restore a specific set of files after a group of files was deleted, simulating a situation where a subset of files becomes unintentionally deleted. The test includes the time to rewind the tape to the beginning.

Data based on tests designed and conducted by National Software Testing Laboratories (NSTL). All rights reserved.

THE E-MAIL ROUTE TO

FAX

PAIRING FAX AND ELECTRONIC MAIL
EXTENDS THE REACH OF YOUR
E-MAIL MESSAGES. HERE'S HOW FIVE
E-MAIL SERVICES DO IT.

DANIEL J. ROSENBAUM

At this very minute, some 5 million facsimile machines worldwide are busily shuffling pieces of paper. How can PC users exploit this vast fax infrastructure? Most people believe that unless you line up at the office fax machine, the only entrée into the facsimile world is to spend \$400 plus for a fax board (see "Fax Times Seven," *PCW*, October 1988). Fortunately, there's an alternative route: your tried-and-true electronic mail service.

This article looks at fax services available now from AT&T, CompuServe, MCI, and Western Union, and soon from The Source. The five services basically work the same way: You access fax through an on-line menu, and you're limited to sending text. You can't receive faxes, nor can you transmit graphics. But the cost—and difficulty—of sending a message varies widely from service to service.

Fax charges are tacked on to your E-mail rates. The accompanying table shows the fax surcharges for two sample messages to destinations in the United States, the United Kingdom, and Japan. Beware, though: The figures can be deceptive. MCI bills by the number of lines, for example, so a double-spaced letter will cost a lot more than the chart suggests. As with telephone service, check your bills to get an accurate picture.

The high cost of E-mail fax makes it suitable for occasional use only. Those who send faxes daily will find a fax board (or simply enough fax machines to handle the workload) more economical; for sending *and* receiving faxes or transmitting graphics, a board or machine is a must. But if you fax once in a while—especially if your service treats a fax machine like any other E-mail address, enabling you to include fax numbers in E-mail broadcasts—E-mail faxing could be your most convenient, cost-effective solution.

AT&T Mail

AT&T Mail's fax service automatically creates a cover sheet with the service's logo, the name of the sender, the name and number of the addressee, and the number of pages in the transmission. If the transmission fails for some reason, AT&T will advise you by E-mail.

AT&T Mail treats a fax address like any other address, so it's easy to send the same message to several fax machines, a couple of telex addresses, and a bunch of AT&T Mail addresses at the same time. In our informal test, a sample fax showed up about a minute after being posted; the print quality was quite good, with large print in a highly readable serif typeface.

CompuServe

Using CompuServe's fax service is fairly straightforward, and the printed results are handsome. CompuServe's E-mail and fax charges are steep, however, so the total cost for a fax is very high. Moreover, you can send a message to only one addressee at a time.

Our test fax appeared about 15 minutes after it was sent. The system generates a cover sheet and places an identifying footer at the bottom of each page.

MCI Mail

Using MCI Mail for fax is a bit unwieldy, but it can be done. First, you must tell MCI that you're sending the message to an EMS—Electronic Mail Service. You then go through a finicky procedure to tell the system the phone number and how long to keep trying if the destination fax machine happens to be busy. If you make a mistake entering any of this data, the fax won't go out.

MCI Mail automatically provides a glitzy cover sheet, sends you a delivery receipt, and provides a detailed error report if the transmission fails. You can send the same message to several fax machines and mailboxes simultaneously. Our test fax took about 15 minutes to arrive, and its print quality was marginal, with poorly formed, sans serif type.

Western Union

Alone among the systems here, Western Union's EasyLink lets you send legal-size and wide (132-column) documents, but you have to wrestle with its cryptic user interface. You may send the same message to multiple fax machines, EasyLink mailboxes, and Telex machines simultaneously.

EasyLink doesn't send a cover sheet as such, but it lets you specify hard page breaks so you can create your own. The system also lets you suppress header information, if you wish. If the receiving fax machine doesn't support wide paper, EasyLink will send compressed text. Print quality is good in normal mode but a bit cramped in compressed.

**If you
send faxes
only once
in a while,
E-mail fax
can be very
convenient.**

Fax Charges: All Over the Map

On fax fees alone, AT&T and MCI Mail charge a lot less than CompuServe, but no two services bill the same way. E-mail charges are extra.

3K fax message ¹	AT&T Mail	CompuServe	MCI Mail	Western Union
Within U.S.	\$1.00	\$1.25	\$0.80	\$1.25
To U.K.	\$2.65	\$5.30	\$2.90	\$3.44
To Japan	\$4.90	\$9.60	\$5.10	\$6.38

10K fax message	AT&T Mail	CompuServe	MCI Mail	Western Union
Within U.S.	\$3.25	\$3.00	\$1.70	\$3.00
To U.K.	\$6.40	\$12.30	\$7.30	\$6.89
To Japan	\$9.90	\$18.00	\$8.40	\$11.13

¹ Figures are calculated according to the services' billing strategies, which vary widely. Most charge by half-page blocks, ranging from MCI's 28 lines to Western Union's 1250 characters. (When The Source's fax service goes public, it will charge by connect time.) International fax rates are typically higher than domestic.

The Source

Still under development at press time, The Source's fax service is scheduled to be running by the time this article appears. Fax is separate from SourceMail; you access it by typing *fax* at the command-level prompt.

To send messages to both fax and E-mail numbers, you must recompose or reload the text file. The service generates a cover sheet with addressee, sender, subject, and reference numbers to identify the transmission. Beta service delivery times were running 45 minutes but should drop to about 15. Though the typeface in our test fax was somewhat small, print quality and readability were excellent.

FACING FAX

These days law firms are using fax to exchange documents, radio stations to take requests, and purchasing agents to issue orders. If using electronic mail makes you feel connected with some people but isolated from many others, try E-mail fax. It's a fast, easy way to spread the word. ●

If you're looking to add hard disc storage to your new or existing personal computer, CMS has a drive for you.

Since inventing the 5.25" hard disc drive in 1980, Seagate*, a CMS Enhancements premier supplier, has manufactured more small disc drives for PCs than any other company in the world.

So, with many different 5.25" and 3.5" models to choose from, there's a Seagate drive that's right for your capacity and performance needs.

Seagate & CMS ensure the quality and reliability of their drives by designing and manufacturing many of the drive's major components, including disc media, linear voice-coil actuators and stepper motors. CMS also carries Seagate's own line of disc controllers, which optimize the drive's performance in a wide variety of computer systems.

No matter which disc drives or controller you choose, you'll find the same high quality workmanship that has made CMS and Seagate

the two companies the leaders recognize for storage solutions. You should too. Contact CMS Enhancements today for the name and phone number of the CMS dealership nearest you.

THE SIVA 386 20MHZ SYSTEM

delivering superior Quality, Performance & Value!

VNS includes many important options as standard: **\$1995**
40MB Hard Disk, 1MB Memory and more! Priced at

Meet us at

June 20-22, '89
Booth 2028

All Systems include DOS 3.3
for \$35 additional

Complete System Features:

- 32-bit Intel 80386-20 CPU
- 1MB of 32-bit RAM on board expandable to 16MB
- 16/20 MHz keyboard selectable
- ST-251-1 Seagate 40MB formatted 28ms high speed, with ultra high speed controller 1:1 interleave
- 1.2MB high capacity floppy drive
- Super deluxe heavy duty tower case with 7 half-height drive bays
- High-resolution 12" non-glare amber display; Tilt and swivel base, Hercules-compatible Adapter
- 101 key enhanced keyboard; pleasant "Tactile-Click" feel
- 80287/387 math co-processors optional
- Fully compatible with virtually all XT/AT and 386 software

System Upgrades:

- VGA color upgrade — add only \$495
- EGA upgrade — add only \$395
- 80 MB — \$395
- Call for all other options and upgrades

NEW 20MHZ SIVA 286 SYSTEM

*delivering superior Quality,
Performance and Value!*

VNS introduces this new system which includes many important options as standard: 40MB Hard Disk, 1MB Memory and more! Priced at **\$1595**

Complete System Features:

- CPU 80C286 running at 16/20MHZ
- 0/1/0.5 Wait State selectable
- High speed RAM 1MB expandable to 4MB on board (16MB total) memory above 640K is configurable
- Award BIOS with built-in setup
- 40MB hard drive ST251-1, 28ms access time
- 1.2MB floppy drive
- Ultra high speed floppy/hard disk controller 1:1 interleave, 800KB/sec
- High resolution 12" monochrome monitor with tilt and swivel base
- Real time clock calendar with battery back-up
- On board 80287 co-processor socket
- 4-16 bit and 1-8 bit expansion slots available
- 2-Serial, 1-Parallel and 1-Game port
- 101 keyboard fully AT-compatible
- DOS, OS/2, XENIX-compatible

System Upgrades

- 20MHZ CPU upgrade — \$99 only
- Additional 1MB memory — \$199
- Additional 3MB memory — \$599
- EGA upgrade — \$395
- VGA upgrade — \$495
- Upgrade to 86MB hard drive — \$395

Thank You!

SAFE POWER FOR PCs

Power fluctuations and blackouts can seriously damage your hardware—or send vital information to data heaven. The solution? Try an uninterruptible power supply.

MATT LAKE

In the PC world, power not only corrupts—it can fry your machine. Power spikes, sags, surges, brownouts, and blackouts caused by everything from lightning to plugging a laser printer into your PC's power strip can not only garble data, they can wreck hard disks, monitors, and other circuitry.

Many PC users can make do with cheap surge suppressors or somewhat more expensive line

conditioners. But for systems where a power glitch could be fatal—such as the PC that stores the company accounts, a pricey data base server at the hub of a local area network, or the LAN itself—you'll need an uninterruptible power supply (UPS). A UPS not only provides surge suppression and line conditioning, it can power your system through blackouts and brownouts. Some even close applications properly when the UPS's batteries run low, reopening

them when normal power resumes. Just note that the price for such omnibus protection typically starts at more than \$1000. The UPSs listed here provide between 1 and 2 kilovolt-amps (kva) of power—enough for three or more PCs and a file server. They all provide sine-wave or quasi-sine-wave output—changing voltage gradually and thus minimizing wear on print-heads, transformers, and other sensitive components. Cheaper

square-wave devices are not included.

UPS's come in different flavors, so check these features before you buy:

On-line versus off-line. As the name implies, an on-line UPS constantly filters power and can immediately respond to a power outage. Off-line UPSs, which kick in standby power a few milliseconds after a blackout, typically cost less but offer minimal line conditioning.

Standby power duration. When the power dies, how long will your UPS keep things going? It depends on what systems and peripherals are attached. A UPS that supports intense data base

searches on a network for 5 minutes could support data entry on two PCs for 20 minutes. When in doubt, ask the UPS vendor for the unit's standby power at maximum output.

Surge suppression and line conditioning. Any UPS should dissipate surges, dampen line noise, and compensate for brownouts. Most of the listed units cover the waterfront, but it's worth checking just how big a surge a UPS can handle (measured in joules) and how much noise it suppresses (in decibels). Protection against prolonged undervoltages is also a must. (Note: All the listed units protect the UPS circuitry itself from surges.)

Peace of mind. Is your UPS safe? And does it flag you when it's running out of gas? Look for a UPS that offers outage alarms, shutdown warnings, and the ability to close files automatically. An Underwriters Laboratories certification, although not required by law, verifies safe construction. If a unit passes the FCC's 15J tests, its RF emissions are within acceptable limits for commercial use; a Class B rating is even more stringent and means the unit is recommended for home use (see *Consumer Watch, PCW*, March 1989). ●

*Matt Lake is PC World's Andrew Fluegelman intern.

The Seventh Annual PC EXPO in New York, June 20-22

at the Jacob Javits Center, is simply your best opportunity of the year to stay in touch with a new era in computing, to see thousands of new products reflecting the latest technology and current state of the art.

And of course you won't want to miss the renowned PC EXPO Seminar Series, highlighted by **Connections 89** and a new Mac Track exploring today's business challenges concerning the Macintosh. For six years, the show has helped computer professionals like you make your most important computer purchasing plans—from evaluating platform systems to reviewing operating systems to selecting communications standards. With major decisions like these to be made, why wait in line?

SEMINAR SERIES

Keynote: David L. House, Senior Vice President, Intel Corporation 9:15 a.m. Tuesday

Tuesday, June 20

1. Computers on Wall Street
2. Introduction and Overview of Distributed Databases
3. Software 1990
4. OSI Standards
5. Macintosh as a Workstation
6. CASE Tools and Micro/Network Systems Development
7. Desktop Publishing from Soup to Nuts
8. OS/2: 10 Reasons to Switch, 10 Reasons Not To
9. A LAN Primer
10. Operating Systems: Beyond Multi-Finder
11. Alternate Bus Routes: A Discussion of Bus Options
12. Network Design
13. Mission-Critical Applications
14. Introduction to Telecom and Wide Area Networks
15. Installing, Training and Support for the Macintosh

Wednesday, June 21

16. Resource Sharing without Local Area Networks
17. The '486 Shockwave: What the Future Holds
18. Supporting Multiple Environments
19. Making Connections with LAN Bridges and Gateways
20. Application Development for the Macintosh
21. Manufacturers' Dealer Incentives Programs
22. Alternatives to Portions of OS/2 EE
23. Softline: Candid Comments from Industry Leaders
24. Workgroup Software: Are We There Yet?
25. Making Mac Connection in Corporate Environments
26. OS/2 Contenders: A Look at Other Operating Systems
27. Migrating Applications: Downsizing and Upsizing
28. Keeping Up with End-User Computing Demands
29. Making Connections with Micros and Minis
30. Desktop Publishing: DOS and Mac-Based Systems
31. Expert Systems: Tools and Applications
32. Project Management

33. Will dBase IV Revive the dBase Standard?
34. Network Management
35. Hypercard and the Macintosh: Fact or Fancy

Thursday, June 22

36. EISA Implementation: What It Will and Won't Do
37. Document Processing Instead of Desktop Publishing
38. PC Security: Protecting Real Assets
39. Making Connections from Micros to Mainframes
40. Macintosh Presentation Technology
41. The Proper Role of Systems Integrators
42. Wide Area Spreadsheets
43. Computer Languages and Utilities
44. OS/2 and Networking
45. Optical Storage: Available, Affordable and Erasable
46. Taking Graphics for Granted
47. Managing Software Development Products
48. Network Diagnostics—Tools and Techniques

WHY WAIT IN LINE? REGISTER TODAY!

7th Annual PC EXPO in New York June 20-22, 1989 Jacob Javits Convention Center

Fill out this form completely and mail before May 26 to avoid on-site lines.

BADGE FEES Check One:

- 1 Day Exhibits \$30 (Circle day: Tues., Wed., Thur.)
 2 or 3 Day Exhibits \$60
 Seminars \$95 (Good for all 3 days of seminars and exhibits)

Note: This form must be used in advance. It may not be used on-site.

Circle appropriate seminar numbers you wish to attend. All sessions are first-come, first-seated.

(Use one form per person; photocopy if necessary)

By attending PC EXPO, I consent to the use of photographs of me in any promotional materials related to the show and/or events.

Signed _____ Date _____

BADGE ORDERS FOR PC EXPO received by May 30 will be mailed by June 13. Late orders will be processed and held for arrival at the "Pre-Registered Attendee Counter" in the registration area. All registrations will be confirmed by PC EXPO. Registration fees must be in U.S. funds. Foreign mail orders (except Canada) must be received no later than May 23 and will be held at the "Pre-Registered Attendee Counter" for pick-up upon arrival. All registrations are non-refundable.

MAKE CHECKS PAYABLE TO PC EXPO and mail with completed registration form to: PC EXPO, P.O. Box 1026, Englewood Cliffs, NJ 07632. Credit cards and vouchers are not acceptable for advanced registration. Government and State Agency Purchase Orders will be accepted with completed registration form. Payments for purchase orders is due upon receipt of PC EXPO invoice.

Incomplete or improperly completed forms will be returned. Minors under the age of 18 may not register.

Spreadsheet Traps and How to Avoid Them

Spreadsheets

Sometimes the most obvious mistakes are the easiest to make. Two spreadsheet experts point out common pitfalls and suggest detours.

Doug Cobb and Steve Cobb

194 **User Group Tips**

- Use COPY Carefully With Damaged Disks
- Changing Case in Paradox Fields
- Changing WordPerfect Paired Codes Via Macros

Today's electronic spreadsheets are powerful tools, but they harbor traps that can nab the unsuspecting user. In this article, we present four traps common to *1-2-3*, *Quattro*, and *Excel* and show you how to beat them.

Trap #1: Moving Entries Into Referenced Cells

Moving an entry from one cell to another is a routine task, but problems arise when you move an entry into a cell that is referenced by a formula or function. *1-2-3* and *Quattro* replace references to that cell with ERR; *Excel* replaces them with #REF!.

Here's why. *1-2-3*'s /Move command, *Quattro*'s /Block Move command, and *Excel*'s Cut and

Paste commands don't just move the contents and formats of a cell—they move the cell itself. Consequently, references to the destination cell become invalid.

Fortunately, there's an easy way around this problem. Copy the entry instead of moving it, then erase the source cell. In *1-2-3* use the /Copy command; in *Quattro* use the /Block Copy command; in *Excel* use Edit Copy and Edit Paste. Unlike moving an entry, copying it doesn't replace the destination cell; it simply replaces the cell's contents and format. Any formulas or functions that reference that cell remain valid.

One important note: Copying formulas and functions alters any relative references. To prevent this, just convert the formula or

function into a label before you copy it; then remove the label prefix.

Trap #2: Extracting Records From a Data Base

1-2-3, *Quattro*, and *Excel* all can extract criterion-matching records from a data base. Before you use a data extract command, you can specify either a single-row or a multiple-row output range.

But there's a hidden hazard. Before the programs copy the records to the output range, they erase all the cells in that range, except the row of field names at the top. If you specify a multiple-row output range, *1-2-3*, *Quattro*, and *Excel* erase only the cells within that defined range. If you specify the single row of field names, however, the programs erase all the cells below that row—all the way to the bottom of the worksheet.

There are two ways to avoid accidental erasures. If you specify a single-row output range, make sure that all the cells below the row you specify are blank. Alternatively, you can specify a multiple-row range. Just make sure the range is large enough to accommodate all the criterion-matching records in the data base. Otherwise, the programs will warn you with a beep and a message and then perform an incomplete extraction.

Trap #3: Incorrect Averaging

1-2-3 and *Quattro's* @AVG function and *Excel's* AVERAGE() function calculate the mean of the values in a range. But unlike most other functions, averaging

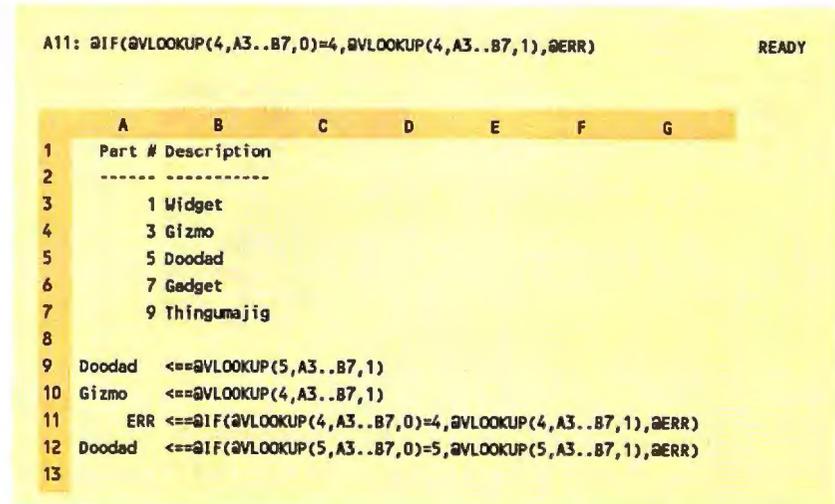

FIGURE 1: 1-2-3's lookup functions don't always return an exact match. But the function shown here corrects this problem. In cell A11, it returns a value of ERR because none of the values in the lookup table match 4, the key entry.

differentiates between blank cells and cells that contain the value 0.

If you average five cells that contain the values 1, 2, 3, 4, and a blank, the spreadsheet divides by 4, and the result is 2.5. If the blank cell contains a 0 instead, the spreadsheet divides by 5 and returns the value 2. So when you want to include a value of 0 in an average, you must use that value—don't leave the cell blank.

Trap #4: Inexact Matches With Lookup Functions

Most spreadsheets feature functions that look up text or values, such as an inventory number, in vertical or horizontal tables and then return results, such as a corresponding price. But those functions don't always give you an exact match. The @VLOOKUP and @HLOOKUP functions in *1-2-3* and *Quattro*, and

VLOOKUP() and HLOOKUP() in *Excel*, won't produce an exact match when the lookup entry (the entry specified by the first argument of the function) is a value.

Instead, vertical lookup functions search down the far left column of the lookup table (or, in the case of the @HLOOKUP and HLOOKUP(), across the top row of the table) for the first value that meets or exceeds the key value. If they find a value that meets the key value before they find one that exceeds it, then they "match" on that value. Otherwise, when they find a value that exceeds the key value, they back up and match on the value that's closest to, but not greater than, the key value.

Here's a solution that allows you to make *1-2-3's*, *Quattro's*, and *Excel's* lookup functions match values exactly. For vertical lookups in *1-2-3* or *Quattro*,

use `@IF(@VLOOKUP(key, table,0)=key,@VLOOKUP(key,table,n),@ERR)` where *key* is the value you want to look up, *table* is the lookup table, and *n* is the position of the column that contains the result (see **FIGURE 1**). In *Excel*, use `=IF(VLOOKUP(key,table,1)=key,VLOOKUP(key,table,n),NA())` instead.

The IF statement checks whether the far left column of the lookup table contains an exact match for the key value. If it does, the functions return an entry that corresponds to that value. If it doesn't, *1-2-3* and *Quattro* return the value ERR; *Excel* returns the value #N/A!

So there you have it. Sometimes a little attention to spreadsheet perils can help shake out a mistake before it happens. ●

Doug Cobb is president of The Cobb Group, a publisher of books and journals about business software. Steve Cobb is a senior author at The Cobb Group who writes extensively about spreadsheets.

POWER TIP NO. 54

Smartcom's Bookmarks

Smartcom III's edit buffer holds up to 100K of data; that's a lot, so sometimes you might want to mark your place when you're examining a lengthy file. Just press <F9> to set a bookmark. To quickly return to that spot, press <F10>.

TIPS & TECHNIQUES

Communications

An Insider's Guide to MCI Mail

A telecommunications guru shares some guidelines for cutting costs and increasing productivity on MCI Mail.

What you need: an MCI Mail subscription

Nothing beats electronic mail as a money and time saver. E-mail is nearly as fast as a phone call, banishes the telephone tag demon, and lets you keep a record of your correspondence. And since MCI Mail has over 100,000 subscribers, chances are the computer literates you need to contact are among them. The challenge is making the most of MCI without dropping a bundle.

This article assembles some of my favorite tips and commands for saving time and money on MCI Mail, plus a few advanced features you may not be aware of.

Pick the Best Pricing Scheme

Last February, MCI Mail introduced Preferred Pricing, a discount rate no doubt intended to lure new users to the service.

Under Preferred Pricing, MCI waives its annual \$25 fee and charges a flat monthly rate of \$10 for the first 40 messages (up to 7500 characters per message) or fax pages—a substantial discount. Starting with the 41st message, standard rates apply: 45 cents for the first 500 characters, 75 cents for 501 to 2500 characters, \$1 for 2501 to 7500 characters, and \$1 for each additional 7500 characters.

Naturally, MCI is hoping you'll send more than 40 messages a month. But a little arithmetic shows that if you send at least one short MCI message a day, Preferred Pricing can save you money. If you find you're sending less, switch your account to the other scheme with a quick call to MCI Mail customer service at 800/444-MAIL.

Dial Smart...

Until last February, you had to access MCI via a network of local toll numbers or Tymnet. However, three new nationwide 800 numbers now make MCI connect time absolutely free. For 300- and 1200-bps access, dial 800/234-MAIL; for 2400-bps access, dial 800/456-MAIL; and *Lctus Express*, *Desktop Express*, and *ProComm Plus* users dialing at any rate up to 2400 bps should call 800/825-1515. (With *ProComm Plus*, set parameters to E-7-1, rather than the usual N-8-1.)

...Log On Smart

Most communications programs include a script language for automating communications tasks,

Make expert business forecasts in minutes— with Lotus® and TrendSetter Expert™.

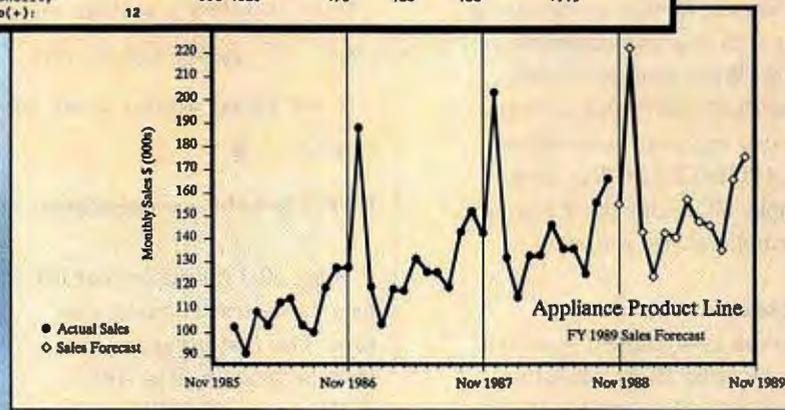

Business forecasts drive business decisions. Better forecasts mean better decisions.

How many units will be sold? How many parts to order? How many assemblies to manufacture? How high will expenses be? How many students will register? How many rooms will be rented? How much cash will be needed? How do you know?

You can *hire* a forecasting expert. A statistician who may use Auto-correlation, Brown's Double Exponential Smoothing, and Linear Regression Analysis. And then apply experience and judgment to arrive at your forecast. In a day, or maybe a week. For \$100 an hour.

Or you can *buy* a forecasting expert. The TrendSetter Expert. It does the same thing. In minutes. For \$149. Period.

Series Type:	Monthly	Date	Forecast	Upper	Lower	S Factor
First Actual:	1	Nov 1988	158	158	153	1.03
Confidence Level:	88.0%	Dec 1988	221	225	217	1.46
Interval:	3	Jan 1989	143	148	139	0.95
Mean:	129	Feb 1989	124	130	118	0.82
Std Deviation:	24	Mar 1989	143	149	137	0.94
Minimum:	91	Apr 1989	141	148	135	0.92

Auto(+):	12	Oct 1989	178	185	168	1.10

Make expert business forecasts. Verify forecasts made by others. In four easy steps.

Start with history data, such as monthly sales for the last two years, on a Lotus 1-2-3® or Symphony® worksheet. Then invoke the TrendSetter Add-in, and:

- 1 Show TrendSetter where your data is,
- 2 Tell it how far in the future to forecast,
- 3 Show it where to put the results, and
- 4 "Go".

TrendSetter puts results directly on your worksheet, showing upper and lower bounds for the forecast plus other measures of statistical accuracy. The manual explains what they mean. You can easily modify forecasts with Lotus to reflect your own judgment. TrendSetter even writes Lotus macros so you can graph your forecasts at the press of a key.

That's it! With Add-in convenience.

TrendSetter Expert makes consistently better forecasts. Here's how.

TrendSetter Expert uses time-series extrapolation techniques to forecast future values based on the past. Proprietary expert-systems logic examines the history data and combines several sophisticated statistical analysis techniques to produce the forecast. TrendSetter Expert even allows for seasonality to accommodate, for example, yearly holiday sales peaks.

Just how good are TrendSetter Expert forecasts? Superlative! In a widely respected forecasting competition, 24 different forecasting methods were pitted against 111 sets of diverse real-world data. Using the same data, TrendSetter produces more accurate forecasts for 88% of the test cases, and better than the average for the rest! (Details available on request.)

Satisfaction guaranteed, or your money back!*

Don't misunderstand. No forecasting method is perfect. But TrendSetter Expert will help you make better forecasts than you do today. Guaranteed. Or your money back.*

So don't wait! Make an expert business decision right now. So you can make expert business forecasts in the future. Buy TrendSetter Expert.

Only \$149!

To order, or for more information and the name of the dealer nearest you, call:

800-325-9035

In Mass., call 508-366-1122.

*If you aren't satisfied for any reason, return TrendSetter for a refund (if purchased directly from Concentric or an Authorized Reseller). TrendSetter Expert works as an Add-in with 1-2-3 Releases 2 and 2.01, and with Symphony Releases 1.1 and 2.0 on IBM® PCs and compatibles with PC-DOS 2.1 or later and a hard disk. 5.25" and 3.5" diskettes included.

Another timesaving tool from the authors of R&R Relational Report Writer® for dBASE® and R&R Worksheet Report Writer™ for Lotus.

TrendSetter EXPERT

Concentric Data Systems, Inc.
18 Lyman Street, Westboro, MA 01581

and a little-known, free MCI bulletin board supplies setup information and scripts tailored to many popular packages. Type VIEW, followed at the next prompt by PC GUIDELINES. To view script selections, type SCAN.

You can further accelerate logons with this undocumented trick: When prompted, enter your user name followed by two slashes and your password—JSMITH//XERFGTIQ, for example. MCI skips the 'Password:' prompt and logs you on.

Abbreviate Commands

You can save yourself some typing by using MCI's two-letter command abbreviations. For example, use SC instead of SCAN, and DE instead of DESK. To accelerate multistep operations, type command sequences on a single line. SC DE FR JSMITH AF MAR 01, for example, lists all messages received from JSMITH after March 1.

Transfer Binary Files

MCI Mail wasn't designed for binary file transfers, but two techniques let you send .COM, .EXE, and non-ASCII data files through the system. The first transforms the binary file into hexadecimal text format using a conversion program such as HC.COM, obtainable through a user group or on-line resource like CompuServe.

The second technique requires that each party have a copy of Lotus Express, CMSLink, or some other program that supports the X.PC or MCI Mail Link protocols. This method is preferable to the conversion-program technique because the protocols correct any transmission errors automatically.

```

FIGURE 1: On the left, a properly addressed MCI Mail fax; on the right, a telex address.

Since MCI calculates your bill on a per-character basis, compress files first using a shareware program such as ARC-EXE or a similar utility.

Fax It

MCI Mail was one of the first E-mail vendors to offer PC-to-fax service. Faxing via MCI Mail has some advantages over dedicated fax hardware—and some drawbacks. You can fax messages right from your desk, bypassing your printer and the nosy fax machine operator. But you can fax only ASCII text, and of course, you can't receive faxes. For MCI fax instructions, type HELP FAX SEND, and see FIGURE 1.

Lotus Express users fax the following way: After typing the addressee's name at Express's 'To:' prompt—but before pressing <Enter>—press <F9>, then select the REMS option. The rest of the procedure is identical to MCI's.

Telex or TWX It

MCI also lets you correspond with over 1.8 million telex and TWX machines worldwide. All you need to know is the recipient's telex or TWX number, and the carrier or network group.

(Canada-bound telexes require your answerback number as well.) Telex messages are limited to 100,000 characters, with no more than 69 characters per line.

To send a telex, type the recipient's name at the 'To:' prompt, followed by a space and (TELEX) (see FIGURE 1). At the 'Country:' prompt, enter the country name (or number, if you know it), or press <Enter> for the United States. For U.S. telexes, MCI asks for the correspondent's carrier and presents a list of choices. (If you don't know the carrier, MCI Mail customer service can deduce it from the target telex/TWX number.) Finally, MCI asks for the telex number itself and prefaces it with the carrier/country code you've already supplied.

You can receive telexes (unlike faxes) through MCI Mail. Your telex number is simply 650 followed by your MCI Mail account number; the answerback is your telex number followed by MCI UW. MCI transmits this information with telexes, so your correspondents will know how to reply.

With us, VGA stands for Very Good Alternative.

You don't have to pay top dollar to get VGA color technology in a monitor.

Not when there's an alternative with the world class quality of Samtron.

Our monitors are made in Korea, by Samsung Electron

Products Refined For
The International Market

Devices. One of the largest monitor manufacturers in the world. But, while we make monitors in volume, we don't make them in every possible model.

Just the most popular ones, refined for the international market. Like the 14" Samtron VGA color monitor you see on the right.

That keeps the production runs high, the costs low.

It's how we've been the money-saving alternative for smart monitor buyers in the U.S. and around the world since 1978. (Our service is also worldwide.)

And it's why choosing a Samtron VGA monitor is as brilliant as the 256 colors you'll get.

—Alfred Glossbrenner

Desktop Publishing

Scanner ABCs

A desktop publishing graphics expert covers the ground rules

What you need: a scanner, scanning software

Scanned images can look great, amateurish, or dreadful, depending on a combination of factors, including the quality of the source material and the versatility of the scanning software. This article presents tips on how to get better results when scanning black-and-white line art, such as drawings, charts, logos, or any graphic that consists of lines and shapes but lacks the continuous tones characteristic of photographs. A tutorial on more advanced scanning techniques, including working with gray-scale images, will appear in an upcoming *Tips & Techniques*.

The illustrations in this article were produced using a Hewlett-Packard ScanJet and Z-Soft's *Publisher's Paintbrush*. However, most of the tips also apply to other scanners and scanner software.

Prepare the Original

Even using the best software, fixing up a scanned image electronically can take hours—or you can save time by cleaning up the original material the old-fashioned way. Use a pen or pencil to repair broken lines, and blot out unwanted spots with correction fluid.

If you can't edit the original, try working on a photocopy, or better, a Photostat. Scanning a copy rather than the original gives you additional control over image size and density. Although most scanning software lets you adjust image size and contrast, closely matching the size of the original to that of the final illustration produces the best results. For instance, if you scan the company logo on a sheet of business stationery and then enlarge it in a program like *Publisher's Paintbrush*, the resulting image may contain gaps and glitches you'll have to correct pixel by pixel. Try retouching an enlarged photocopy with a pen first.

Watch Your Alignment

If your original material contains any horizontal or vertical lines, the slightest misalignment will produce ragged, stepped results called jaggies. With a flatbed scanner like the HP ScanJet, alignment problems are easy to avoid: Simply tape the original to the glass platen. Test scan the image, then adjust the material as necessary to obtain the proper alignment. The problem is harder to correct with scanners that pull the original through with rollers. If the original is small, mount it on a larger sheet of paper; if it's fragile, tape it inside a clear acetate page protector.

Choose the Right Scanning Mode

Virtually all scanners offer at least two modes of operation: line art and halftone. The line art option is usually best for material that contains just two colors; the halftone option is best for material that contains more than two colors or shades of gray, such as a photograph.

Even when scanning line art, however, selecting the line art option isn't always the best way to go (see **FIGURE 1**). If the contrast of the original material is too high, you may find that one of the dithering patterns offered by your software's halftone feature produces more detail and a softer tone.

Dithering groups the black-and-white dots that make up a scanned image into patterns that simulate shades of gray. Because most scanning software provides several dithering patterns—Press, Bayer, Spiral, and Fattening are common choices—you may need to test a few before you find the best setting.

A word of caution about halftones: You may encounter interference patterns when you resize a dithered image in a page make-up program. You can overcome the effects of interference by adjusting scanned image size slightly until the patterns disappear. But the best way to avoid the problem is to scan the image at the size you want and maintain that size when you use the image in other programs.

Choose the Right Resolution

Most scanner software gives you a choice of resolution settings, typically ranging from 75 to 300 dots per inch. The best setting

Our accounting software is so good, it will even help you count sheep.

With the One-Write Plus Accounting System, your business' accounting will be one less thing for you to worry about at night. Why? Because One-Write Plus was designed specifically to meet the needs of small businesses.

Rest assured—we're recommended by experts.

You won't have to worry because One-Write Plus is highly rated by accounting and software experts (*PC World* gave us a "Best Buy" award). You won't have to worry because One-Write Plus is very easy to use (*Software Digest Ratings Report* gave us four stars for ease-of-use). You won't have to worry about adapting the program to your business, because we've designed it to easily be tailored to virtually *any* small business. You won't even have to worry about getting started, because installation is so easy, you could do it in your sleep.

With One-Write Plus, running your business is a dream.

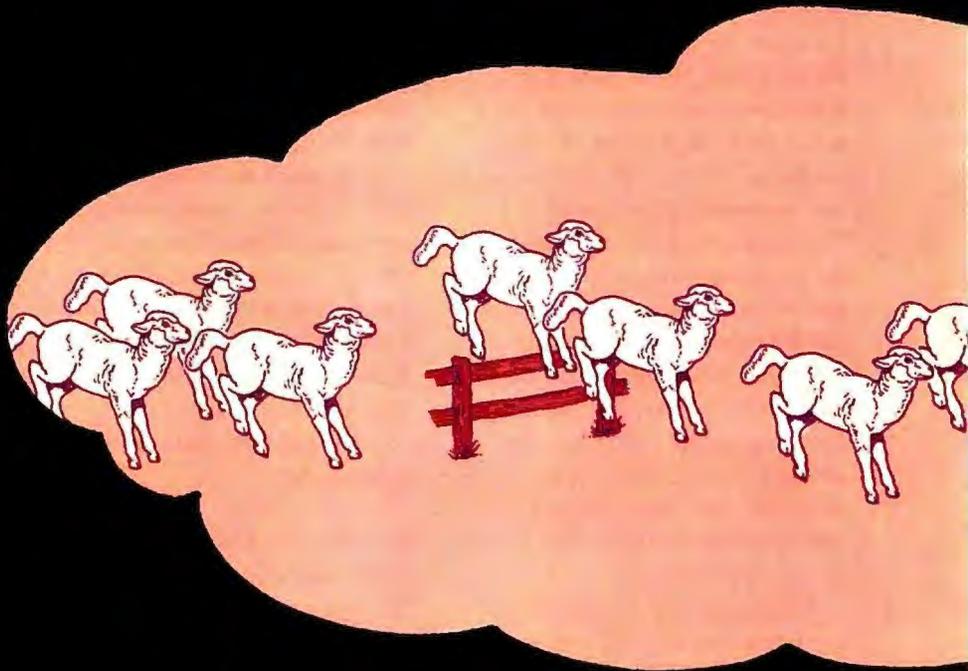

Best of all, with the One-Write Plus Accounting System, you can improve your cash flow and generate the kind of information you need to make important management decisions. And you get all of this for just \$299.

We can't promise that the One-Write Plus Accounting System will eliminate all of the problems of running a small business. But we can say you'll spend less time worrying about your accounting. And that will give you more time to count a few sheep.

**one-write

BEST BUY

Circle 94 on reader service card

depends on a number of factors, including the type of printer you expect to use, the amount of available memory and storage space, the type of image you're scanning, and how you plan to use the image in a document.

As a general rule, you should set the scanner resolution to match your printer's. With a 120-dpi color ink jet printer like the Xerox 4020, a scanning resolution of 150 dpi will yield about the same results as 300 dpi—and use up a lot less storage space. Of course, with laser printers you should match the 300-dpi output resolution.

Scanning at 300 dpi can be hardware intensive. To scan an entire 300-dpi, 8½-by-11-inch image with *Publisher's Paintbrush*, you need at least 1MB of expanded memory and an equal amount of free disk space. And printing may take a few minutes; if you resize the image, it will take even longer.

Some publications, such as in-house newsletters, may not warrant the additional memory and print time 300-dpi im-

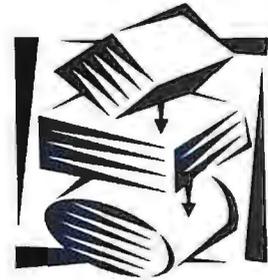

ages require, even when laser printed. And high-contrast material that's not too detailed often looks fine at settings of less than 300 dpi. In addition, scanning an image at the highest possible resolution is unnecessary if you plan to reduce it later. At 200 dpi, an image reduced to half its original size has virtually the same apparent resolution as the full-size, 300-dpi image—and a 200-dpi image uses half the memory and disk space, and prints faster.

Use Preview Scans

Some scanner programs, like HP's *Scanning Gallery*, provide a handy preview mode for quickly scanning and displaying a low-resolution likeness of the image. A quick-and-dirty 150-dpi scan allows you to select the portion of the image you want in the final higher-resolution scan and to check such basics as alignment, margin settings, and contrast. *Publisher's Paintbrush* and some other scanning programs don't provide a preview mode, but you can obtain the

same effect manually merely by reducing the resolution setting. After you're satisfied with all the basic settings, switch the resolution to 300 dpi and scan away.

—Richard Jantz

Programming

Create Smaller, Smarter QuickBASIC Programs

PC World's programming whiz and editor of Star-Dot-Star demonstrates some state-of-the-art tricks with QuickBASIC.

What you need: QuickBASIC 4.5

PC users have long relied on BASIC's straightforward syntax to obtain quick results. But basic BASIC is short on structured programming capabilities, which can conserve memory and make program logic easy to follow. Enter Microsoft *QuickBASIC 4.5*.

QuickBASIC's structured programming aids and built-in intelligence form a software development tool that rivals the powers of C and Pascal. To highlight some of these new abilities, let's explore a sample utility that reformats text into newsletter-style columns.

Text In, Software Out

First, enter COLUMNS.BAS (see LISTING 1) into *QuickBASIC's* syntax-checking editor. As you

FIGURE 1: The orangutan on the left was scanned using the *Publisher's Paintbrush* line art option; the one on the right, using the halftone option.

A family Tree with impressive roots.

Now there's an XTree product for everyone.

In 1985, XTree disk management software unveiled a simple, yet powerful idea: a tree-like directory that displays the entire disk organization at a glance.

Suddenly, even beginners could manage disk files like seasoned professionals.

That's why more than a million copies of XTree and XTreePro are in use today. XTree has twice been named *PC Magazine* product of the year...XTreePro named *Infoworld* Editor's Choice in 1988. And that's why so many well-known software developers are imitating our famous tree-structure.

But while they were copying our previous release, we were writing our next. And created XTreePro for more speed and greater capacity; XTreeNet to manage disk drives across an entire Novell® network; XTreeMac to make the Macintosh® more powerful and flexible. And more branches for our family Tree are on the way.

Call 800/634-5545, (800/551-5353 or 805/541-0604 in CA) for the authorized XTree reseller nearest you.

Because whatever computer system you use, there's an XTree disk management product that can make your life easier.

The world leader
in disk management.

Circle 340 on reader service card

type in the function and sub-modules, *QuickBASIC* automatically opens a new window and generates the DECLARE statements at the top of the program listing, so you can skip typing them in. Press <F2> to move between program modules.

Next, compile the program using the Run menu's Make EXE File command, exit *QuickBASIC*, then run the program from the DOS prompt. Or, simply run the program from within *QuickBASIC* by pressing <Shift>-<F5>. Once running, COLUMNS prompts you to enter the name of a text file to process (for the purposes of this tutorial, an unformatted ASCII file of several 20-character lines is best). At the subsequent prompts, press <Enter> to display output on the screen, then specify 3 columns, 15 lines per column, 25 characters per column, and 4 blank lines between pages. You should see your formatted text zip by at breakneck speed. To save the output to disk, rerun COLUMNS and supply an output file name (or LPT1:, to print the listing) at the second prompt.

COLUMNS.BAS imposes no limits on file length, number of columns, or spacing. Be prepared to experiment, though, as some values can produce strange results. For example, a column width narrower than the longest text-file line creates gibberish. To be safe, always keep a backup copy of your original text.

Inside COLUMNS.BAS

COLUMNS.BAS exploits four advanced *QuickBASIC* features: the CALL statement used with SUB procedures, structured DO loops, local variables, and FUNCTION procedures.

```

DECLARE SUB ReadLines (MaxLines%, NumLines%)
DECLARE SUB WriteLines (NumLines%)
DECLARE FUNCTION GetOptions% ( )
DECLARE SUB OpenFiles ( )

COMMON SHARED NumColumns AS INTEGER
COMMON SHARED LinesPerColumn AS INTEGER
COMMON SHARED ColumnWidth AS INTEGER
COMMON SHARED BlankLines AS INTEGER

CALL OpenFiles
MaxLines% = GetOptions%

DIM SHARED TextLines$(1 TO MaxLines%)

DO UNTIL EOF(1)
    CALL ReadLines(MaxLines%, NumLines%)
    CALL WriteLines(NumLines%)
LOOP

CLOSE #1      ' Close input file
CLOSE #2      ' Close output file
END           ' End of main module

FUNCTION GetOptions%
    INPUT "Number of columns"; NumColumns
    INPUT "Number of lines per column"; LinesPerColumn
    INPUT "Number of characters per column"; ColumnWidth
    INPUT "Number of blank lines between pages"; BlankLines
    GetOptions% = NumColumns * LinesPerColumn
END FUNCTION

SUB OpenFiles
    INPUT "Read from what file"; InFileName$
    IF InFileName$ = "" THEN END
    OPEN InFileName$ FOR INPUT AS #1
    INPUT "Write to what file (Enter=screen)"; OutFileName$
    IF OutFileName$ = "" THEN OutFileName$ = "scrn:"
    OPEN OutFileName$ FOR OUTPUT AS #2
END SUB

SUB ReadLines (MaxLines%, NumLines%)
' Read up to MaxLines strings or to end of file
    NumLines% = 0
    DO UNTIL EOF(1) OR NumLines% = MaxLines%
        NumLines% = NumLines% + 1
        LINE INPUT #1, TextLines$(NumLines%)
    
```

(continues)

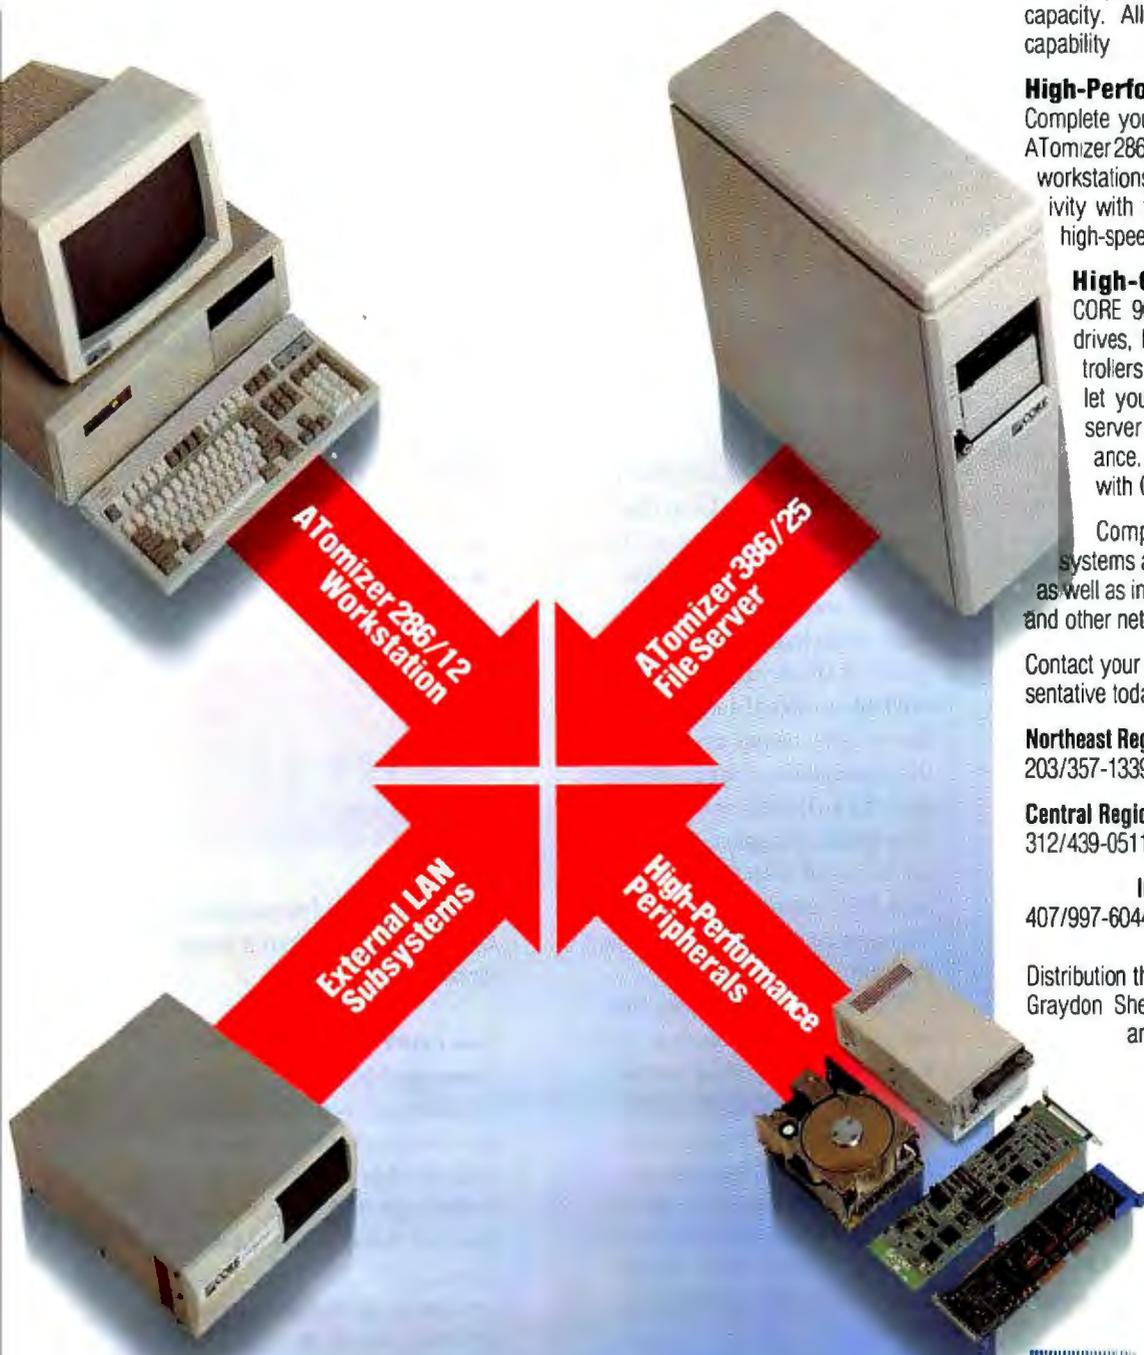

LISTING 1: COLUMNS.BAS, a text-formatting utility, demonstrates many structured programming techniques now available to QuickBASIC programmers.

The program's 18-line main module (from the first DECLARE SUB statement to the 'End of main module' comment) contains CALLs to three subprograms—OpenFiles, ReadLines, and WriteLines. CALL statements transfer control to subprograms, optionally passing parameter values (in parentheses,

as shown in the calls to ReadLines and WriteLines). This ability to pass variables to subprograms is one reason for *QuickBASIC*'s newfound popularity among developers.

Structured loops make program logic easier to understand

The Network Hardware Solution.

Famous CORE Reliability. CORE file servers, workstations, subsystems and peripherals give you the reliability needed to protect your network investment.

Powerful File Servers. The ATomizer 386/20 and 386/25 floor-standing file servers provide mini-computer performance with five full-height or ten half-height drive slots and up to 2.8 gigabytes of capacity.

The ATomizer 386/20 desktop file server (not shown) provides up to 1.4 gigabytes of capacity. All offer uncompromised growth capability.

High-Performance Workstations. Complete your network configuration with ATomizer 286/12 full-size and small footprint workstations. Both increase user productivity with fast system performance and high-speed network throughput.

High-Capacity Peripherals. CORE 90 to 700MB, 9 to 16ms disk drives, high-speed 10 or 15MHz controllers and external LAN subsystems let you upgrade a system to a file server without sacrificing performance. Protect your valuable data with COREtape backup units.

Compatible with such operating systems as Novell, Star LAN and 3Com, as well as industry-standard cabling, cards and other network components.

Contact your nearest dealer or CORE representative today.

```

LOOP
' Erase any left over strings in TextLines$()
FOR i% = NumLines% + 1 TO MaxLines%
    TextLines$(i%) = ""
NEXT i%
END SUB

SUB WriteLines (NumLines%)
' Write multiple-column text
FOR i% = 1 TO LinesPerColumn
    FOR j% = 0 TO NumColumns - 1
        s$ = TextLines$(i% + j% * LinesPerColumn)
        PRINT #2, s$;
        IF j% < NumColumns - 1 THEN
            PRINT #2, SPC(ColumnWidth - LEN(s$));
        END IF
    NEXT j%
    PRINT #2, ' Start new output line
NEXT i%
' Add blank lines between pages
FOR i% = 1 TO BlankLines
    PRINT #2,
NEXT i%
END SUB
    
```

LISTING 1: (continued)

by moving the bulk of the code into subprograms. For instance, the DO loop in the main module repeatedly calls ReadLines and WriteLines until it reaches the end of the input text file. The DO loop in ReadLines loads up to the specified maximum number of strings (MaxLines%) into an array. Such statements are far simpler to understand than non-structured, GOTO-ridden BASIC code.

QuickBASIC's use of local variables helps eliminate bugs, including those caused by variable-name conflict, a common logic error. Because local variables are "visible" only to statements within the subprogram where the variables are defined, conflicts with identically named variables elsewhere can't occur. And local variables conserve memory because values in multiple modules can share the same RAM locations.

The variables i% and j% in WriteLines are local and therefore invisible to the rest of COLUMNNS.BAS. Similarly, MaxLines% and NumLines% are local to the main module. The values of these variables are available to ReadLines because the variable names are passed to the submodule as parameters by the CALL ReadLines statement. Only global variables, which are declared with COMMON SHARED statements, are visible to every program module and function.

FUNCTION procedures are subprograms that return a value when called; they work similarly to the way variables do in BASIC expressions. For example, the GetOptions% function returns the number of strings required for one output page, a value the program's main module uses to dimension string array TextLines\$.

Of course, there's more to QuickBASIC than one article

can cover. But even a few highlights should convince anyone who wants quick, clean code to give QuickBASIC a closer look. —Tom Swan

USER GROUP TIPS

Helpful hints from members of the nation's user groups

Use COPY Carefully With Damaged Disks

If you try to copy files from one drive to another containing a disk that has problems or is write-protected, DOS displays an error message like 'Abort, Retry, Fail?'. The worst thing you can do at this time is put a different disk in the target drive and hit R for Retry. When DOS

OUR COMMITMENT TO FLOPPIES IS UNFLAPPABLE.

WHEN WE DESIGNED OUR NEW FD235 SERIES, 3½" MICRO FLOPPY DISK DRIVES, WE ALSO DEVELOPED A UNIQUE MANUFACTURING PROCESS TO BUILD THEM. THE RESULT IS A VERSATILE AND COST-EFFECTIVE PRODUCTION SYSTEM THAT CAN DELIVER HIGH VOLUME WHILE RETAINING OUR HIGH QUALITY STANDARDS.

AVAILABLE IN 1MB OR 2MB MODELS WITH EITHER TTL OR CMOS INTERFACES.

prepares to copy one or more files, it first reads the directory from the target disk into memory. If you switch disks, it will write the disk directory that's in memory onto the new target disk. The new disk will have the wrong directory listing—and no corresponding files. And any files that were on it will no longer be accessible.

The safest response to the DOS error message is pressing A to abort the copy, rectifying the problem with the target disk, and starting over. The Retry option should be reserved for safe operations like DIR that do not move data from one disk to another.

Changing Case in Paradox Fields

Paradox has no problem reading records that mix capital and lowercase letters, but what if you inherit a data base file that's been entered in all uppercase letters? Having a client's name in capital letters isn't ideal for sales reports and other documents. Luckily, *Paradox's* application language has a FORMAT command that can convert this kind of record so only the initial letter is capped.

The following routine, Names.sc, does exactly that for the LastName field in a file called Persnl:
;Names.sc, Change all UPPER-CASE names to Initial Capitals
EDIT "Persnl"
SCAN FOR NOT ISBLANK

```
((LastName))
[LastName] = FORMAT("cc",
  LOWER([LastName]))
ENDSCAN
DO_IT!
```

The EDIT command and the file name following it tell *Paradox* which file to edit. SCAN tells the software to read and process every record except those with a blank LastName field. The FORMAT command line first converts every entry in the LastName field to lowercase characters, then capitalizes the initial letter of each group of letters.

Names.sc will correctly capitalize most names, even irregular ones such as Guillam-Jones or O'Brien. However, a few names such as MacDonald or de la Costa will require manual adjustment. You can also use the script to modify first name, city name, and street name fields.

Changing WordPerfect Paired Codes Via Macros

If you produce a *WordPerfect 5.0* report that contains italicized text and then decide that underlining would look better, you're faced with a time-consuming search-and-replace task. *WordPerfect* requires two codes—one at the beginning and one at the end of a text block—to toggle enhancements; for example, [ITALC] and [italc] produce italicized text. You can see these codes by pressing <Alt>-<F3> (Reveal Codes), but search and replace can find only one format code at a time. Here's a macro that will find and replace both codes. (Note that the macro won't work correctly if you're in Reveal Codes mode.)

This example produces a macro called Ital that searches for italics codes and replaces them with underline codes. You can modify the macro to change any pair of *WordPerfect* codes.

1. Position the cursor at the top of a document, press <Ctrl>-<F10> to record a macro, name the macro Ital and enter a description.
2. Now press <F2> (Search) to begin a search. Press <Ctrl>-<F8> AI to select italics, then hit <F2> to search for the first italics code, [ITALC].
3. Press <Alt>-<F4> (Block) to turn on the block function and <F2> to begin a search for the second code.
4. Press <Ctrl>-<F8> AI twice. This displays a message 'Srhc: [ITALC][italc]' at the bottom left corner of the screen. Press <Cursor Left> <Backspace> to delete the [ITALC] code, leaving [italc] in place. Now press <F2> to search for the [italc] code. At this point the text you want to change will be highlighted.
5. Press <F8> (Underline) to underline the block, then press <Cursor Left> <Backspace> Y to delete the [italc] code. Finally, press <Cursor Right> to move past the underline code, and end the macro by pressing <Ctrl>-<F10>.

Dear Colleague:

Over the past six years, Trillian has served thousands of customers worldwide, including many of the Fortune 500, universities, government agencies and defense contractors.

I am confident you will find that Trillian's 20 and 25 MHz 386 computers offer the highest quality and the most competitive price/performance package. This package includes:

- American-made systems with comparable performance to the Compaq 386 -- at one-third the price.
- Fast delivery times -- generally within 10 days of your order.
- A full One-Year Warranty on every computer we ship and a 30-day Guarantee.
- Expert technical support if you have a question or problem.
- Many options including the 80387 math coprocessor and up to 1,500 MB of hard disk storage.
- Our commitment to prompt Advance Replacement of system components.

So in spite of our ridiculously low prices, rest assured that you can count on Trillian for value, quality, support and service. We look forward to serving you.

Sincerely,
Peter M. Redford
Peter M. Redford

ONE HOT DEAL.

20 MHz 386 for \$1,795.

STANDARD FEATURES

System Unit: True 20 MHz 80386, 0 wait states. 25 MHz with Turbo upgrade. Floor-standing Upright™ case with 200 Watt power supply, 7 drive bays. Eight expansion slots (one 32-bit, five 16-bit, two 8-bit), IBM-AT compatible, battery-backed clock/calendar.

32-bit Memory: 1 MB expandable to 16 MB.

Math Co-processor: 80387 and 80287 sockets.

I/O Ports: 1 parallel and 2 serial ports (on board).

Disk Controller: Combined two-hard, two-floppy.

Floppy Drive: 1.2 MB (also reads/writes 360KB disks).

Keyboard: 101-key enhanced AT-style.

Software: Setup utilities. Models 40 & 70 include MS-DOS® operating system and Directory Assistance™ file/directory management software.

386/20 Uprights	Model 10 Basic Unit, 3:1 disk controller.	Model 40 43MB (28ms) hard disk, 3:1 disk controller, MS-DOS.	Model 70 65MB (28ms) hard disk, 1:1 disk controller, MS-DOS.
Basic No monitor. No video adaptor.	\$1,795 or \$64.89/month	\$2,395 or \$88.58/month	\$2,595 or \$93.82/month
Mono Mono monitor*, Mono/graphics adaptor*, 720x348.	\$1,995 or \$72.12/month	\$2,595 or \$93.82/month	\$2,795 or \$101.05/month
VGA VGA monitor*, VGA adaptor, 640x480 by 16 colors.	\$2,495 or \$90.20/month	\$3,095 or \$111.89/month	\$3,295 or \$119.12/month
VGA-Plus VGA monitor*, VGA adaptor, 800x600 by 16 colors.	\$2,595 or \$93.82/month	\$3,195 or \$115.51/month	\$3,395 or \$122.74/month

*Monitors are 14" diagonal. VGA monitor is IBM VGA compatible; VGA-Plus monitor is NEC Multisync-compatible. *Mono/graphics adaptor is Hercules-compatible and includes one parallel printer port. *Hard disks have high-speed voice-coil actuators and auto-park heads.

Options	Price

The 386 Outfitters™ to Corporate America.

GIVE US HALF AN HOUR AND \$399 AND WE'LL GUARANTEE YOU A FULL FEATURED NETWORK.

THAT'S ALL it takes to turn two IBM or compatible PC's into a true network. Half an hour or less to install MainLan and \$399 for MainLan's complete starter pack.

And if you want to add 1, 2 or more, it's just a matter of \$199 for each additional computer

An inexpensive way to turn your fragmented, unsociable collection of computers into a fully functioning network, sharing printers, making files, data and hard disks available to anyone who needs them, giving you electronic mail and the comfort of security.

The MainLan Starter Pack—everything you need to connect two computers, including two network boards, software, documentation, and one 165' shielded cable with terminating plugs. The Extension Pack contains the network board, and one cable and plug set.

FRIENDLY LAN

MainLan's menu system lets you spend your time working instead of learning how to make it work. To transfer or manipulate files, redirect printer output, or send E-mail, just press the appropriate key. You can be a full-fledged member of the network while using as little as 50k. All this at a transmission rate of 4 Mbps.

LAUDABLE LAN

Don't just take our word on it. "PC WORLD" in England says "MainLan is a revolutionary way of operating in a multiple machine environment without having to make all of the usual sacrifices. It has the potential to be the low-cost networking standard of the future." The kind of features that earned

MainLan the PC MAGAZINE EDITOR'S AWARD at the 1988 British Personal Computer Awards. That's MainLan.

COMPATIBLE LAN

Because MainLan is NETBIOS compatible, you can run most of the popular multiuser NETBIOS compatible applications programs without modifications. Supports file and record locking.

THRIFTY LAN

MainLan is easy on your pocket-book, too. Our unique hardware design costs less to produce—and you enjoy the savings. You'll also enjoy not having to have an expensive network server.

THE FEATURES

- ▶ NETBIOS compatible
- ▶ 4 Megabits per second transmission rate
- ▶ Needs as little as 50k RAM
- ▶ Printer Sharing
- ▶ Hard Disk Sharing (Virtual Drive)
- ▶ 90 days free support

THE GUARANTEE

It's simple. Try MainLan at our special introductory offer of \$399 for the 2-PC Starter Pack and if it's not what you want in a LAN, return it within 30 days and we'll return your money. The MainLan Extension Pack for one PC is \$199. Limit of one Starter Pack per customer site, please.

Yes, I want to see what MainLan's full-featured LAN will do for me. I understand that I may return it anytime within 30 days, for a full refund if I am not completely satisfied.

1 Starter Pack.....\$399.00 + \$10 Shipping & Handling*
 ___ Extension Pack(s).....\$199.00 + \$10 Each Shipping & Handling*
 TOTAL**.....\$

*Shipping via UPS Blue. **Florida residents add 6% sales tax.

CONSUMER WATCH

Advice and information for the computer consumer

What do you do when a business refuses to resolve a complaint? This user's guide to small claims court describes when to sue—and when not to bother.

Anita Amirrezvani

Having Your Day in Court

If you need a quick, effective method for resolving a dispute about a computer purchase of a few thousand dollars or less, small claims court may be the answer.

Intended to provide direct access to the judicial system, the small claims process makes it possible for an individual to bring a monetary dispute to court without a lawyer.

The maximum amount you can sue for varies by state and aver-

ages only about \$2000. However, the small claims process is quick, cheap, and equitable. "The wonderful thing about it is that both sides stand on equal footing," says Ralph Warner, a lawyer and the author of *Everybody's Guide to Small Claims Court* (Nolo Press, Berkeley, California, 1988). "You can sue a big corporation that, in regular court, would hire lawyers to wear you down before you actually got to the substance of the case."

But court should always be seen as a last resort. Before filing a claim, try to resolve the dispute directly. Apply pressure by sending a documented complaint to the business itself, the Better Business Bureau, the state attorney general, and local consumer affairs groups and action lines. Some of these organizations, including *Consumer Watch*, will attempt to mediate the dispute.

If that doesn't work, a small claims suit may be in order. The first task is to gauge your chances of collecting the money if the judge rules in your favor. "People get frustrated when they win a small claims suit but they don't get paid," says Warner. "They think the court is going to collect the money for them." In fact, collecting the cash is up to the claimant.

"Presumably, a reputable business will pay its bills," Warner says. "If the business doesn't pay, you can get a judgment called a *till tap*—a sheriff will go and collect the money right out

of their cash register. But if a business is about to file for bankruptcy or has already gone belly up, you're not going to be able to collect."

As a result, small claims court is ineffective against scams or fly-by-night companies. Moreover, since most states require that you file the complaint in a court that's local to the business in question, it's difficult and often uneconomical to sue distant firms—such as mail-order companies.

Filing a claim is generally a straightforward process, although procedures vary by state. You fill out a complaint form stating the problem and the amount you feel is due; you also pay a small filing fee. It may be important to research the legal business name of the company you're suing since many businesses use a different name on their storefront than on legal documents.

Another point to check is whether the statute of limitations has run out on the claim. Allen Wilkinson, an attorney and coauthor of *Everybody's Guide to the Law* (Harper & Row, New York, 1987), says the statute of limitations varies according to the type of case but usually lasts at least a year.

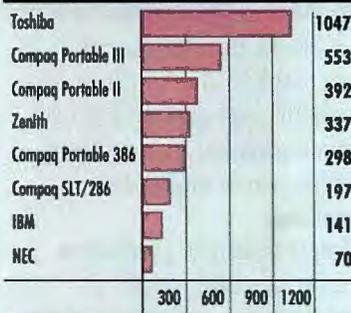

Once the papers are filed, many small claims courts will serve the papers on the business (*continues*)

RATE YOUR SATISFACTION: Portables

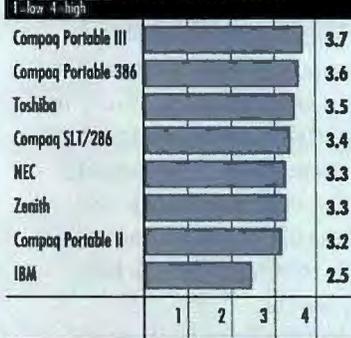

In this look at luggables and laptops, Compaq and Toshiba lead the market, according to a survey of large PC sites. Both companies also get high marks for user satisfaction. IBM, on the other hand, gets low marks.

Although NEC ranks relatively low in installed base and user satisfaction, more than one-third of survey participants plan to buy NEC portables. No paradox here: NEC has a flashy new offering in its notebook-size UltraLite.

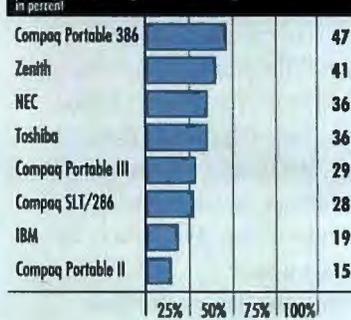

Installed base at survey sites

Users rate their satisfaction

What users plan to buy

Source: International Data Corporation. From a survey conducted in December 1988 of 180 sites, each with at least 50 PCs.

by registered mail. Otherwise, you can hire a law enforcement officer or any person over 18 to serve the papers.

The court sets a trial date for the case, at which time you can expect to present your side of the dispute. In some states you can have an attorney present at the hearing, although that's not necessary. You can also request advice on the best way to present a case from local legal clinics or from small claims court advisers. "I strongly suggest that people make liberal use of the clerks at the small claims court—these people are usually very willing to help," says Wilkinson.

One of the advantages of small claims court over regular hearings is that you can bring in all kinds of evidence to support your case. "None of the formal rules of evidence are followed," says Warner. For example, "you can bring written evidence that supports your claim instead of having a witness testify in person." Consumer affairs experts suggest that you present anything that bolsters your case—a broken keyboard, for example.

Small claims hearings are informal and move quickly. According to Jeanne Stott, small claims legal adviser for the San Francisco Municipal Court, "an average trial in California lasts about 8 minutes." That's why it's important to be well organized and brief during the hearing. Stott recommends advance preparation: "Outline your case, organize your evidence and witnesses, practice your presentation, and leave your Perry Mason

imitation at home." And sit in on a small claims trial so that the process is familiar when it's your turn.

Judgments on small claims cases are usually made in writing in a matter of days. Generally, if you're the plaintiff and you lose, you can't appeal the claim. But if you've got a good case and present it well, small claims court can provide quick, effective access to justice.

SHOP TALK

In May *Consumer Watch* reported that we had received seven complaints about Micro 1, a company in San Francisco that makes systems, and that all the complaints had been resolved. Since then we've received many more heated complaints. Although *Consumer Watch* has forwarded these complaints to Micro 1 and repeatedly left phone messages, we have not had our messages returned. We feel it's only fair to warn readers about these latest problems.

Bad News From Stanford

After reading a favorable review in your magazine in the July 1988 *Hardware Shelf*, I purchased an AT from Stanford Systems [also known as 786 Computer Company]. The machine had several problems in the first few weeks that required three trips to the factory. The amount of memory I ordered wasn't installed; a card had to be replaced; the red light stayed on all the time; the tape backup wouldn't work; and finally the motherboard and BIOS had to be replaced! The PC still has a problem (the internal clock doesn't work), but when I (continues)

Finally, the individual investor has direct access to the easiest and most statistically proven method to increase wealth!

Introducing *WealthBuilder™* by *Money Magazine*, software that turns your computer into your own personal financial assistant.

It's Like Having an All-Star Team of Financial Advisors in Your Home!

Imagine having a private financial planner on-call twenty-four hours a day, helping you achieve both your long- and short-term goals, including:

- Retirement
- College Education
- Home Ownership
- Insurance
- Savings
- Tax Planning

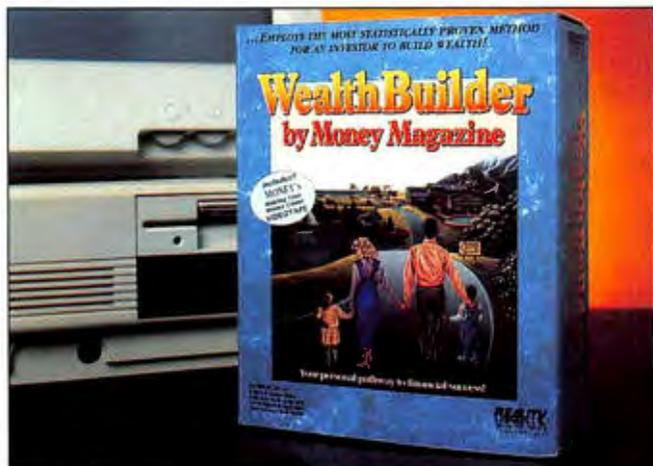

Match Your Financial Goals to Real Investment Products.

Taking into account your goals, your profile and your own tolerance for risk, *WealthBuilder by Money Magazine* automatically searches for the best investment products available that will allow you to fulfill your objectives. Then, you print out an action plan that provides instructions on how to obtain those products.

See How Today's Transactions Impact Your Tomorrow.

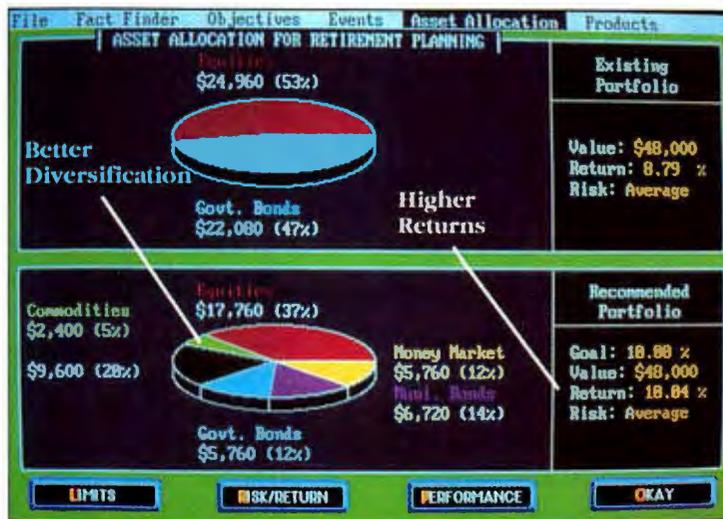

What if you rent a house for the next few years instead of buying one? What if you purchase that new sports car? How will such actions affect your retirement planning? The program allows you to view how your everyday decisions impact your long-term financial picture.

WealthBuilder by Money Magazine operates on IBM PC/XT/AT, PS/2 and compatibles with DOS 2.0 or higher, at least 512K RAM and a hard disk. The Apple Macintosh version requires minimum 512K RAM and a hard disk.

WealthBuilder™ is a trademark of WealthBuilder\$ Inc. licensed to Reality Technologies, Inc. MONEY is a trademark of The Time Inc. Magazine Company.

phoned the company in December I found out the phones had been disconnected. I thought you'd want to know what happened to a computer rated "sizzling" just six months ago.

*Bernard Hilberman
Santa Cruz, California*

Editor's note: A PC World representative checked Stanford Systems' offices and found no sign of life.

Is What You See What You Get?

After reading a NEC brochure, I purchased a NEC PowerMate Portable from a mail-order company. The brochure shows a picture of the LCD screen with a 3-D bar graph depicted in two shades of blue.

After I received the computer I discovered that it wouldn't display any shading. This limitation means that a bar graph appears as a uniform blue blob.

NEC ships the PowerMate with a display enhancement utility. But when installed, the utility prevents *PFS: Professional Plan* from functioning—the program loads and runs, but there is no display at all.

As a result, I returned the system to the mail-order company and was credited the purchase price less \$79—the shipping and handling charge. I paid \$19 to return the PC, so I'm out almost \$100 with nothing to show for it.

*Maj. Leon A. Goldstein
MacDill AFB, Florida*

NEC Information Systems responds: The PowerMate Portable performs as stated in the brochure. The photograph is not retouched; the graphic displayed

on the screen was created using a popular software package, Three D Graphics' *Perspective*. Other vendors use the same package in their advertisements.

While the product does not support the shading capability for *PFS: Professional Plan*, Maj. Goldstein's complaint of deceptive advertising is completely inaccurate.

NEC has recently completed an aggressive program to reauthorize our resellers in order to ensure that only firms that adequately support our products are authorized to sell them. In our opinion, mail-order companies do not meet those qualifications.

*Richard Bochenek
Vice President of Marketing*

SOS 707

707 Computer Wholesalers advertised an Everex 386/20 in your January 1989 issue. I ordered it, only to receive a Club AT 386/20. I assumed it was a shipping error, so I called 707. The person I spoke with claimed that the Club AT and the Everex are the same computer.

I contacted Club AT and asked them if Everex manufactures Club AT's 386/20; the company stated that it purchases some parts from Everex but manufactures its own system. I then contacted Everex, which confirmed that the Club AT is not an Everex.

I contacted 707 again to arrange for a refund, and I was told I would be required to pay a 20 percent restocking fee.

*Richard Suriani
Westfield, New Jersey*

707 Computer Wholesalers responds: Mr. Suriani's credit card account has been credited. Although I was not a member of this company during the mishan-

dling of Mr. Suriani's refund request, I would be remiss were I not to offer my personal apology to him on behalf of 707 Computer Wholesalers.

*Alan J. Huard
President*

An Unsupportable Problem

After reading *PC World's* review of Quarterdeck Office Systems' *Desqview* ["Multitasking Without OS/2," November 1988], I decided to try it as a multitasking environment. But I have been unable to make it work with my existing applications. It is hard to believe that you would recommend a program from a company that has such shoddy service.

*Richard Gebhart
Omaha, Nebraska*

Quarterdeck Office Systems responds: Recently, we've had a number of complaints about the quality of service we have been providing. These problems are not the result of indifference. We are trying to provide a high degree of service and support while growing at a pace that takes our breath away.

As for Mr. Gebhart, four of our employees told him that his computer was incompatible with *Desqview*. We did fall down in responding to his request for a refund; his letter was misdirected. Since then we have contacted him and will be issuing him a refund.

*Therese E. Myers
President*

Management Reading List: Wall Street Journal, Fortune and PC WORLD.

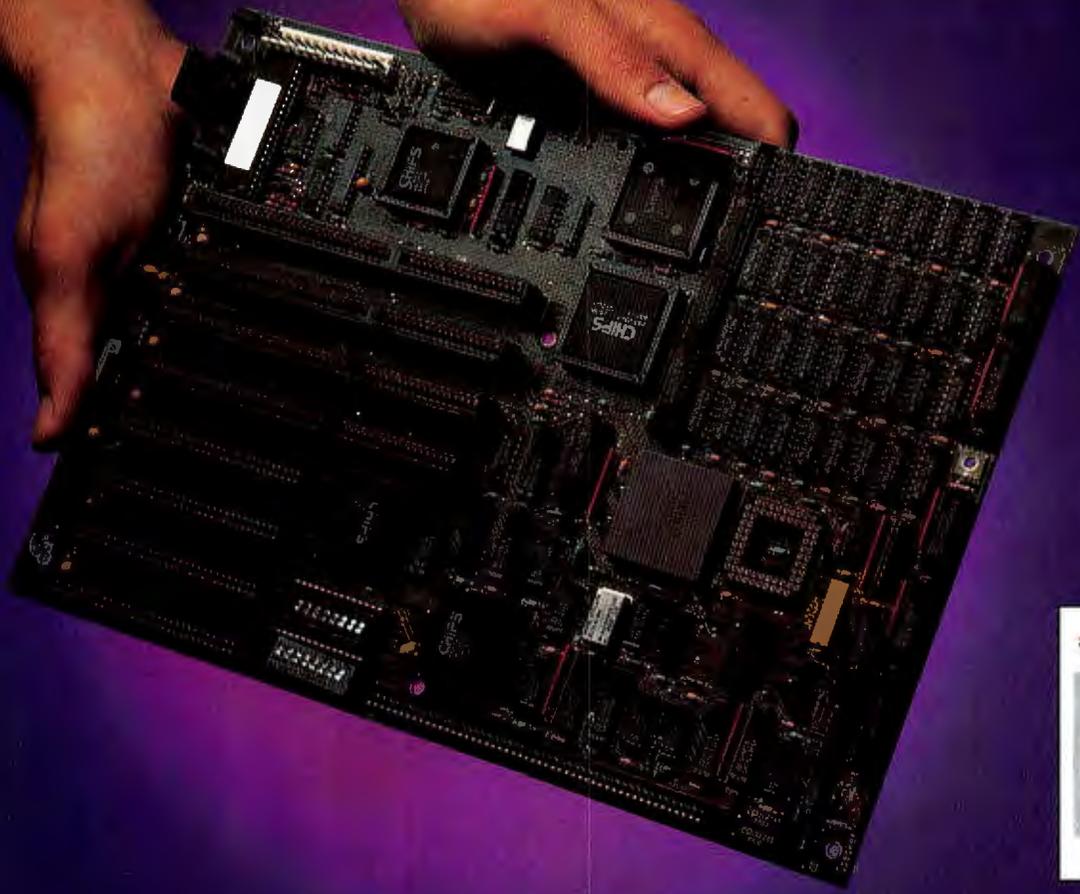

Not *everyone* reads PC WORLD. But, an unusually high concentration of “fast track” business managers do. (The fact is, 86% of PC WORLD’s subscribers hold professional or managerial positions!)

Why PC WORLD? Of all the PC publications, *only* PC WORLD’s editorial is designed *specifically* for business managers who purchase PC products for their company. They count on PC WORLD’s *Buy Smart, Use Smart* format for reliable, time-saving buying help *and* for applications advice they can use and pass on to their workgroup.

Call your PC WORLD account manager today and get your advertising on the right “track.”
PC WORLD—quality readership. . .with *clout!*

PC WORLD

CONVERT YOUR PC, XT OR AT INTO A HIGHER FORM OF LIFE!

Don't let your PC give up the ghost — Hauppauge has arrived with a new spark of life: the 386 MotherBoard™. Far more advanced than an accelerator card, our line of MotherBoards grace your PC, PC/XT, PC/AT or compatible with speeds equal to the IBM PS2 Model 80. And faster. Because we've built in 1 Megabyte of high speed RAM and a 387 math coprocessor socket for speeds that will make your PC glad to be alive!

UNIX/386 and OS/2 Compatible. To ensure a long, fruitful life, our 386 MotherBoards are compatible with the PC/AT (BIOS and I/O) — so you can run the new generation of DOS, OS/2. Our Boards also run Windows/386, UNIX V, PC-MOS/386, and XENIX/386. For *more* power, you'll find 16-bit expansion slots that accommodate the latest I/O expansion cards. Plus, we can add up to 15 Megabytes of 32-bit extended memory. No 386 accelerator card can give you so much versatility. **Only our 386 MotherBoards give your PCs an unlimited future!**

The Critics Applaud! *PC Magazine* awarded our Board "The Editor's Choice" for 386 Replacement Boards. *PC World* called it "the Upgrade Product of the Year." And *PC Computing* said: "The 386 MotherBoard is exceptionally compatible with existing IBM applications and peripherals — it will even run IBM's own version of OS/2."

- Technical Features** ■ SX, 16, 20, 25, and 33MHz 80386
- from 1 to 15 Mbyte of high speed 32-bit 4-way interleaved RAM
 - PC/AT compatible BIOS and I/O system for support of OS/2 and UNIX
 - 64K of 30 nsec static RAM cache on 25MHz and 33MHz boards
 - Six 8-bit expansion slots and two 16-bit expansion slots (four on 386 MotherBoard for AT)
 - One 32-bit expansion slot for up to 15 Megabytes of high speed memory.

386 MotherBoard for the PC, XT, AT and Compaq portable	. \$1595
386 MotherBoard 20, 25 and 33MHz for the PC/AT	.. from \$1995
386 MotherBoard/SX for the mini chassis \$1295
32-bit RAM Boards from \$ 195
387 and Weitek coprocessors from \$ 500
16-bit combination hard disk/floppy disk controller \$ 175
<small>Prices subject to change.</small>

THE UPGRADE PATH

Hands-on advice for upgrading PCs, compatibles, and peripherals

Faster graphics and more fonts for
the LaserJet, and new life for old
keyboards

Edited by Robert Luhn

LaserMasterful LaserJet

Intel's Visual Edge board for the LaserJet Series II grabbed the headlines recently and for good reason. That clever controller lets a Series II print high-resolution gray-scale images at warp speed (see "The LaserJet's Sharper Image," *PCW*, February 1989). But it's not much help if you own a LaserJet Plus—or if you need not only lightning-fast 300-dot-per-inch graphics output, but a passel of scalable fonts and PostScript-like typographic effects such as rotated text. If

you do, LaserMaster's LC2 Controller, which packs a dedicated graphics processor and as much as 2MB of RAM, is the ticket.

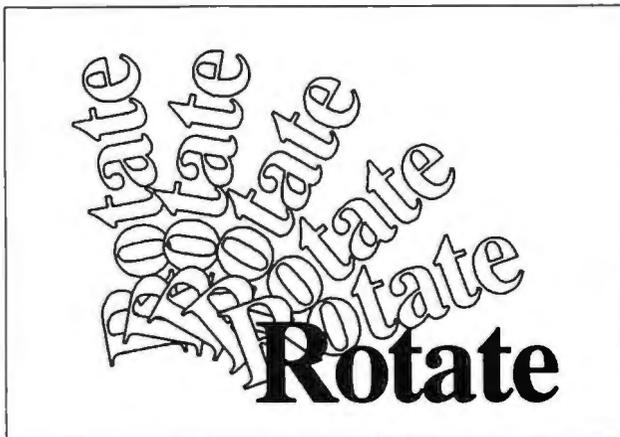

Like the Visual Edge, the LC2 speeds output only for supported applications, among them *Microsoft Word*, *Ventura Publisher*, *PageMaker*, *AutoCAD*, *VersaCAD*, *Microsoft Chart*, and applications written for *Microsoft Windows* and *GEM 3.0*. But unlike Intel's board, getting the LC2 up and running takes an experienced, patient hand.

Hardware installation is mercifully simple: Slip a tiny interface board into the Optional I/O slot at the rear of the Series II, pop the LC2 into a free slot in your PC, and connect the printer and the board with a supplied twisted-pair cable. (The Series II hookup is standard; interfaces for the LaserJet Plus, QMS Kiss, and other Canon CX-based

printers that lack an external video connector cost \$100 more.) If the LC2 conflicts with other boards in the PC, you'll have to reset the LC2's jumpers, but chances are the default settings will suffice.

Don't bother installing the LC2 if you only have a megabyte or two of hard disk space free—it takes that much just to store frequently used fonts, plus drivers and other files required for a given application, such as *Ventura Publisher*. If you go whole hog and install all the available Bitstream fonts (as many as 35, ranging from Times Roman to Century Schoolbook), you'll need at least 6.5MB.

Keep in mind that using fonts involves more than just copying the necessary files to your hard disk. The typefaces are actually stored as outlines and must be "compiled" using a modified version of Bitstream's *Fontware* into
(continues)

The LaserMaster not only speeds printing but gives the LaserJet PostScript powers. You can rotate and overlay text...

...stretch and skew text, and generate shadows at different point sizes.

a specific bit-mapped font in the size and style (such as 24-point bold) you desire. LaserMaster provides precompiled fonts of all the typeface outlines—but only in a narrow range of 6- to 12-point sizes. If you want 36-point ITC Bookman, prepare to wend your way through *Fontware's* labyrinth.

Setting up your type collection means setting aside several hours for the task. For starters, you must run an install program that copies drivers and precompiled fonts to your hard disk and compiles any fonts you choose. Compiling a single font generally takes a few minutes; some sets, however, can take half an hour, and the precompiled fonts must also be liberated from their compressed file format—a 25-minute job. You then run another utility that loads LaserMaster's memory-resident driver, which allows the LC2 controller to act as LPT1, LPT2, or LPT3. Finally, you run your application, install the font from the appropriate menu, and choose the LC2 as the output device.

Be prepared for occasional detours because the user manual

and install programs don't always match. For example, the manual tells you to verify that the LC2 is installed properly by selecting Load DoubleJet from the Setup menu; in fact, you should select DoubleJet Setup, which reveals an undocumented set of submenus, and then select Load DoubleJet.

Such minor glitches won't bring installation to a grinding halt—but running out of disk space will. Make sure you have enough room set aside, and install only the fonts you're likely to use frequently. If a current project calls for different fonts, you can generate them on the fly for a given session. They're not as sharp as compiled fonts and printing slows to a crawl, but they don't eat up precious disk real estate.

Once the LC2 is purring away, supported applications will not only print three to four times faster, they'll also be able to tap PostScript-like powers. In addition to rotating any font in 1-degree increments, you can create hollow or filled text with 41

patterns, add shadows to text, create opaque and transparent overlays, and scale fonts beyond the point size limits of an application.

If you only occasionally produce graphics-packed documents, the LC2 clearly isn't for you. But if you frequently generate reports, technical manuals, newsletters, and catalogs laden with drawings, scanned images, and other heavy-duty graphics, the LC2 is one way to go.

—Daniel Miles Kehoe

WHERE TO BUY

LaserMaster LC2 Controller

LaserMaster Corp.
7156 Shady Oak Rd.
Eden Prairie, MN 55344
612/944-6069

LIST PRICE: LC2 Standard controller (1.5MB, no font scaling) \$1490; LC2 Enhanced controller (2MB, font scaling, 13 compatible fonts) \$1985; LC2 Enhanced Plus controller (2MB, 35 fonts) \$2285
REQUIREMENTS: 640K RAM, DOS 3.0 or later version

WARRANTY: one year parts and labor
EXTENDED WARRANTY: none
TECHNICAL SUPPORT: unlimited for registered users, no toll-free number, M-F 8-6

OTHER SUPPORT: company BBS
Reader service no. 630

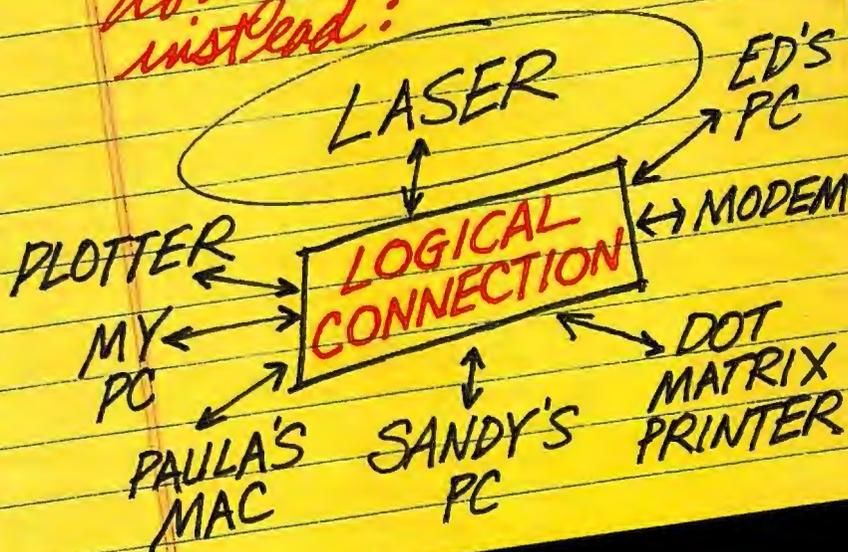

Old Keyboards for New Systems

Compaq and IBM will never win Best Buys for their keyboards. Since the dawn of the original Portable in 1983, Compaq has been rightly faulted for supplying mushy, unresponsive keyboards with its systems; IBM's scrambled, post-AT layout hasn't won many converts, either. Until recently, the solution was simple: Toss the keyboard and plug in someone else's.

Unfortunately, PS/2s and the Compaq Deskpro 386/20e and (*continues*)

Don,
Per your question
about getting a LAN

instead:

1 MB Buffer
Now Available!

Network without a network.

Before buying a LAN, take a hard look at your company's needs. Then take a look at the Logical Connection.

It could be all the network you need. A peripheral sharing device. Simple and affordable. No cards. No file server. No node disks. Just your equipment, logically connected for economy and ease of use.

Connect up to six PCs on each Logical Connection. To lasers. Printers. Plotters. Modems. Switch from one device to another from any connected PC. Pop up the on-screen menu, and it's done.

Link as many as 45 Logical Connections to really expand your connectivity power. Up to 225 users sharing

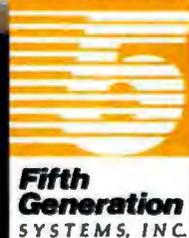

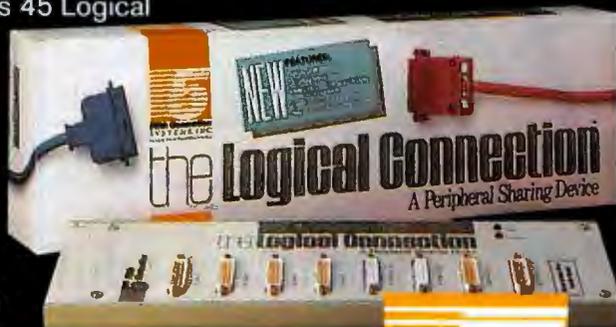

those costly peripherals.

Make the logical choice. Network without a network. For as little as \$700.

From the makers of Fastback Plus.

All the network most users need.

Call for details on our Corporate/Dealer Evaluation Program

Circle 71 on reader service card

386S use a smaller, 6-pin DIN connector, which obviously can't accommodate the 5-pin plug used by your classic keyboard. But fear not—a solution is at hand, and from Key Tronic, no less.

Send Key Tronic \$7.95 and by return mail you'll receive the PS/2 Cable Adapter—a 6-inch cable with a 6-pin connector on one end and a 5-pin on the other. Making the upgrade is child's play: Turn off the Deskpro or PS/2, unplug the system's keyboard and chuck it in the closet, plug the Key Tronic adapter into the system's keyboard socket, and plug the other end into your old, faithful keyboard. Turn on the system and you're ready to go.

Note: If you want to hook up Key Tronic's KB 5151 or 5153 keyboard to a PS/2 Model 25 or

30, you must replace a PROM chip in the keyboard. Fortunately, the operation is pretty painless. Unplug the keyboard, flip it upside down, remove the six Phillips screws on the underside, pull out the PROM chip that's front and center, and plug the new one in. Additional cost: \$7.95. For \$15 Key Tronic offers a PROM Kit for the PC AT and PS/2 Models 50, 60, and 80.

Although Key Tronic only warrants the PS/2 Cable Adapter for Key Tronic-PS/2 matings, the adapter works just dandy with the Compaq and third-party keyboards from Northgate, DataDesk, and others.

If you love your old keyboard—and you hate the Compaq's mushy feel or the PS/2's layout—this is one upgrade you can't pass up. —R. L.

Turn a task into child's play.

PROBAS™ Basic Programming Library

Announcing **PROBAS** Version 3.0, now with over 365 assembly routines to really kick QuickBASIC and BASCOM into high gear. BYTE magazine calls **PROBAS** a "Super-charger for QuickBASIC". Thousands of programmers rely on **PROBAS** to make their life easier and to enhance their programs with features like:

- A 1,000 page 2 volume manual
- Full-featured windowing
- Screen snapshots (Text & Graphics)
- String, array, and pointer sorts
- Lightning-fast file I/O
- Full mouse support

Create dazzling screens in text mode, CGA, EGA, VGA or Hercules graphic modes. Save and restore screen snapshots to arrays, EMS memory or files. Full featured windowing to meet the most demanding jobs. The **PROBAS** system of virtual screens allows you to draw full or partial screens to memory, and then snap them on in an eyblink. You can even create virtual screens far larger than the display screen.

Sick of running out of string space? Store hundreds of K in numeric arrays or megabytes in extended or expanded memory. Tired of using a kludgy SHELL to DIR to read a directory or archive files? Scan sub-directories or .ARC files using wild-cards and store thousands of file names, dates, and times. Wish you could drag a window containing text or a menu around the screen with a mouse? It's easy!

PROBAS gives you a complete set of blazingly-fast file routines. Read or write huge chunks of data at a clip, with file locking and error handling so that you can even use them in subprograms. You'll never want to use BASIC's file I/O again! Sort data with lightning fast array and pointer sorts. Search files or arrays at assembly speeds. **PROBAS** also has over 200 other essential services including handy string, date, time, directory and array manipulation, string, screen and data compression, full mouse support, valuable equipment and input routines and faster replacements for most BASIC commands.

Whether you are a professional or a novice, **PROBAS** will boost your BASIC in ways you never dreamt possible. **PROBAS** allows professionals to save time and work and lets novices write professional-quality programs quickly and easily. After all, how much is a few hundred hours of your time really worth?

For all versions of QuickBASIC and BASCOM including BASCOM 6.0 for OS/2. **Just \$135.00!**

PROREF™ On-Line Help For PROBAS

PROREF provides pop-up help for the routines in **PROBAS** and is an extension of the QuickBASIC programming environment. Find help on any routine with a few keystrokes or mouse clicks. Pop-up an ASCII chart, calculator, scan code module, box diagram, your own help information or almost any DOS program via a hot-key. **Just \$50.00!**

PROSCREEN™ Screen Management

PROSCREEN is a full-featured screen generator/editor that will save you more design and coding time than you ever thought possible. **PROSCREEN** treats screens like a word processor treats text to provide complete control over characters, colors, and placement. Design input screens with up to 130 fields and 19 pre-defined and 2 user-defined masks. Use **PROBAS** or the included BASIC/Assembler subroutines to access the screens. No kludgy code generators here! Comes with subroutine source, extensive on-line help, and a 285 page manual. **Just \$99.00!**

PROMATH™ Mathematics Library

PROMATH is a collection of over 150 high-level routines that provide mathematical functions and operations for programmers who often work in mathematics, science, or engineering. Complex variables, real and complex matrices, real and complex trigonometric and hyperbolic functions and their inverses, solution of linear equations, integration, differential equations, Fast Fourier transforms, graphics support, and many other useful routines are provided.

For years Fortran has been the language of choice for scientific and engineering applications, but it lacks many of the useful features of QuickBASIC. **PROMATH** contains most of the Fortran mathematical and numeric functions and allows you to easily translate Fortran code to BASIC or write new programs in BASIC while retaining Fortran's numerical prowess.

The **PROMATH** manual is over 200 pages and provides a complete description of each routine, including any algorithm and the mathematical formula the routine uses, shown in standard notation. For QuickBASIC 4 and BASCOM 6 only. **Just \$99.00!**

PROBAS™ TOOLKIT

The **TOOLKIT** is a collection of assembly and BASIC modules that use the **PROBAS** library to save you even more hours of grunt work. Why spend hundreds of hours re-inventing the wheel when you can just plug in **TOOLKIT** modules like:

- Menu Generators
- Fast B-tree indexing
- Mini-editor with word-wrap
- Patch .EXE files
- Protected storage areas
- Julian date routines

The **TOOLKIT** also includes clock, calendar, windowing, BCD math routines and much more, complete with BASIC source code and a comprehensive manual. The **PROBAS TOOLKIT** adds capabilities and helps conserve your most valuable asset of all—time! Requires **PROBAS**. **Just \$99.00!**

PROBAS™ TELECOMM TOOLKIT

The **PROBAS TELECOMM TOOLKIT** is a collection of high-level communications modules that you plug into your code to provide popular file transfer protocols, terminal emulations, login scripts and baud rates up to 115,200 baud. You get:

- Xmodem/Modem7/Xmodem-1k
- Ymodem (single and batch)
- CRC-16 and Checksum
- VT52, VT100, ANSI BBS etc.
- Auto Dialer & data base
- Documented BASIC source

Why use clumsy SHELLs to complex terminal programs when you can plug just the communications routines you need into your code? Implement just the features and commands you want. Requires **PROBAS**. **Just \$75.00!**

Our thirty day, money-back guarantee assures you the highest quality and our technical support staff is always ready to help.

- Automatic sales tax calculation
- Optional user-defined message on invoices
- Automatic backordering (w/Inventory module)
- Service and Product invoices

Fixed Assets Depreciation

- schedules, acquisition and disposition
- Address Prints lists, labels or index cards

PROFITWISE Basic Accounting must be installed prior to these add-on modules:

■ PROFITWISE INVENTORY & JOB COSTING \$229.00

Job Costing

- Automatic Interface with Payroll and Accounts Payable modules reduces data entry
- Tracks jobs from bidding through completion

Inventory

- Automatically updates general ledger for COGS
- Automatically updated (by invoicing module)
- Average, standard or user specified cost methods

■ PROFITWISE REPORT & GRAPH DESIGNER \$229.00

Output

- Automatic formatted reports on screen or printer
- User formatted reports with multiple level subtotal breaks and grand totals
- Transfer of information to Lotus worksheets

Hardware Requirements: All IBM PC/XT, AT, PS/2, Compaq and 100% compatible PCs, PC-DOS or MS-DOS 3.1 or higher, 640K RAM, minimum 10 megabytes hard disk storage, printer capable of printing 132 columns (normal or condensed).

30 DAY MONEY BACK GUARANTEE* *if purchased from TLB INC

EASY TO USE . . .

The PROFITWISE system features:

- Computer based tutorial that guides you through installation
- On-line help "at your fingertips"
- Extensive password protection ability
- Thorough audit trail of all transactions
- Full integration between modules to reduce data entry
- Reports can be output to screen or spreadsheet/word processor
- Comprehensive User Reference manual

STAR-DOT-STAR *.*

A global exchange of personal computer discoveries

Stop your NEC laptop from rudely interrupting 1-2-3, combine spreadsheet formulas with ease, put call waiting on hold, get fine print from dBASE, stay on schedule with Word macros, shape up WordPerfect text, and make even lazier formfeeds.

Edited by Tom Swan

Rude Interruptions

I'm pleased with my NEC Multi-Speed HD, except for one problem I encountered when using 1-2-3. The NEC setup utility, stored in the laptop's nonvolatile RAM, uses the Floppy Disk Controller (FDC) option to shut off power to the disk drives when they're not being accessed.

Although this feature prolongs battery life, it causes 1-2-3 to

sporadically exit to DOS, an event that occurs anywhere from a few seconds to 30 minutes after loading. The DOS prompt would suddenly appear in the middle of a worksheet session, and I would lose any changes made since the last save.

Luckily, NEC's warranty technicians solved the problem by turning off the FDC option—something users can do themselves. I hope my experience will save others from losing files and spare them the inconvenience of leaving their laptop in the shop for two weeks as I did.

*Richard Hull
Stayton, Oregon*

Editor's note: To disable the FDC battery-saving function on your NEC MultiSpeed HD, press the <Pop Up> key in the lower left corner of the MultiSpeed keyboard to activate the resident utility software. Next, move the menu cursor to the Setup command, press <Enter>, then press F to select the FDC option. Type N at the next prompt, then select the Exit command. (Don't use the Quit command—it terminates Setup without recording your changes.)

Round Up 1-2-3 Formulas

I work on 1-2-3 worksheets that contain lengthy single-cell formulas composed of nested @ functions. These formulas must also be combined in one cell, a feat

requiring considerable attention to syntax. After a few frustrating sessions spent typing in the combined formulas and hunting down typos, I devised the following technique for entering such complex formulas bug-free.

First, convert each individual formula to a label by highlighting it and pressing <F2> <Home> <Enter> [don't omit the apostrophe between <Home> and <Enter>]. Then copy the labels into separate temporary cells in a single column, in the sequence in which you plan to combine them. Give the group of temporary cells a macro name—\b for example—using Range Name Create. Next, move the cursor to the target cell where the combined formula will be stored, and execute the macro. 1-2-3 automatically combines the formulas as it "types" the macro. After editing the result to perfection, press <Enter> to convert it back to a formula.

*Steven E. Huelskoetter
Collinsville, Illinois*

Hold All Call Waiting

In "AT Command Survival Kit" [*Tips & Techniques, PCW, January 1989*], Judy Getts tells how to prevent the phone company's call waiting service from corrupting data being sent via modem. Here's a simpler method for avoiding such data interruption (*continues*)

tions: Just preface the phone numbers stored in your communications program with *70.

For example, you might use a dialing command like this: ATDT *70,3125551212. The *70 disables call waiting, and the comma inserts a brief pause (to wait for the dial tone) before the program dials the rest of the number. You won't miss important calls, because call waiting reactivates automatically when the modem hangs up.

*Phil Raso
Des Plaines, Illinois*

*Editor's note: Unfortunately, this useful tip doesn't work everywhere in the country, or even throughout a single area code. Check with your local telephone company's repair service to see if a similar method for disabling call waiting is available in your area. Also, not all companies use the same code to put call waiting on hold—some use *71 or *73—so don't try *70 without verifying the correct code for your exchange.*

dBASE Fine Print

I'm a photographer, and I keep a *dBASE III* data base of slide information, which I print out on small labels using an Epson printer. To accomplish this printing task, I select compressed output and set line spacing to 1/8 inch in my .PRG program, using these commands:
SET PRINT ON
?CHR(15)
?CHR(27)+CHR(48)
SET PRINT ON prepares *dBASE* to send instructions to the printer. ?CHR (15) turns on

compressed character mode, and ?CHR(27)+CHR(48) sends an ASCII escape code and a number to set line spacing to 1/8 inch. You can also enter these printer codes at the dot prompt (before issuing a LIST TO PRINT command, for example) to squeeze more fields onto each report line and more lines onto each page.

To create reports that print selected fields in italics, I insert CHR(27)+CHR(52)+*fieldname* (without the question mark) into the field column of the report generator (MODIFY REPORT). I then use CHR(27)+CHR(53) in the next field column to turn off italics. Check your printer

manual for other CHR() control codes to select various print enhancements.

*Jon Mark Stewart
Palm Desert, California*

Scheduling With Word

I use several *Microsoft Word* macros to create a daily scheduler. It serves me better than commercial memory-resident calendar programs in two ways. First, my scheduler takes up no additional memory. Second, I can use familiar *Word* commands to edit my schedules.

DEVELOPER'S TOOLBOX

Sailing Out to C

Like boats at a show, C programming tools range from the merely sleek to the sublime. The number of choices can be overwhelming, especially if you're just learning to sail around in C. Which compiler should you buy? Do you need a debugger? What add-on tool kits provide the most value?

Choosing a C compiler is the hardest of those decisions—and the most important. The safest bet is to pick one of the current top sellers: Borland's *Turbo C* or Microsoft's *QuickC*. *Turbo C* offers speedy compilation, and command keys designed for touch-typists. *QuickC* has excellent on-line and printed tutorials and supports a mouse. Both are superb products that run quickly, generate tight code, and have built-in debuggers.

Alternatively, you might opt for *Power C*, which goes for the rock-bottom price of \$19.95 plus \$10 for the run-time library sources. A separate debugger costs \$19.95. At these prices, *Power C* is perfect for students and dabblers on slim budgets. However, beware of a few

barnacles below the waterline. For example, I couldn't get graphics routines to work with my Vega Deluxe EGA card. You'll also need a separate text editor to enter programs. But if you're short on cash, *Power C* is an unbeatable bargain.

After selecting a compiler, you need to provision your ship's store with a few C utilities. Dozens of good packages are available, but I've found three that are exceptional.

For organizing source code, *C:LINES/C:TREE* prints listings with line numbers and code structures clearly outlined. It processes #include files, generates symbol cross-references, and prints a tree diagram that shows function relationships. C is a difficult language to read, and a good program lister like *C:LINES/C:TREE* is a must for documenting large projects.

To help prevent bugs, I've been using *PC-Lint* to identify potentially buggy code that C compilers typically ignore. *(continues)*

GE RENTS BIG BLUE FOR A LITTLE GREEN.

APPLE[®] MACINTOSH[™] AND COMPAQ, TOO.

Short-term projects can be long on problems if you don't have the computer equipment you need. That's why renting PCs and peripherals from GE for presentations, trade shows, training sessions or seasonal expansion makes so much sense. Our vast inventory of IBM, Compaq, Apple, quality compatibles and related equipment is ready for fast overnight shipment. Plus, we guarantee the equipment you rent works when it arrives. So, from a sea of Blue to a bushel of Apples, one phone call is all it takes. Call 1-800-GE-RENTS, Dept. J.

Get This Special Offer, Too!

Call today and get your FREE catalog of GE Rental/Lease products and services. Ask for your copy when you place your order, or call our special information number—1-800-345-2451.

To Order, Call 1-800-GE-RENTS, Dept. J.
For Information, Call 1-800-345-2451.
Or Mail This Coupon.

- Yes! I need to rent PCs and peripherals ASAP. Please have a representative call me immediately!
- Please send me your FREE catalog of GE Rental/Lease products and services.

Circle 184 on reader service card

I create a subdirectory on my hard drive with the command MD C:\X89 to hold my daily schedules. The file name for each day's schedule follows the format *Xmm-dd.DOC*, where *mm* is the month and *dd* the day. Be sure to type a zero before single digits. I then create a *Word* autoexec macro that opens the first such file (a macro named autoexec in the NORMAL.GLY glossary runs automatically when *Word* loads):

```
<Ctrl>-<Esc>to\x89
<Enter><Esc>tlx
```

```
<F1><Enter>.
```

This file is always the current day's schedule because at day's end I use another macro to re-name it.

```
To move from the daily sched-
ule into a regular document, I
run another macro named
XTransfer^<Ctrl>-XT:
<Ctrl>-<Esc>wsh<3>
<Enter><Esc>to
```

This leaves the day's schedule in a pencil-thin window at the top of the screen. Since the schedule's file name in the bottom right corner of the window contains the date, you won't use

the wrong schedule. The macro ends with a prompt for a new directory path.

```
To review the daily schedule,
I expand its window with the
XView^<Ctrl>-XV macro:
<Ctrl>-<Esc>to\x89
<Enter><Esc>wml<Tab>
20<Enter><F1>
```

I can then add to or edit any text in the schedule.

Instead of just deleting entries for tasks I've completed, I move them to the right side of the window with my XCompleted (*continues*)

DEVELOPER'S TOOLBOX

(continued)

PC-Lint locates misplaced else clauses, checks constant and variable initializations, and skips over compiler-specific constructions such as embedded assembly language statements. Needing only 135K of RAM to scan a 15,000-line program, *PC-Lint* is fast, smart, and essential for serious C programming.

As good as *PC-Lint* is at preventing syntactical errors, it still can't eliminate logical errors. (A classic example of a logical error is to confuse a person's

age and weight in a data base.) Nabbing such mistakes means hunting for clues left by errant statements and wayward pointers. For this, a trained gumshoe like *Sherlock C Programming Tool* is invaluable.

Sherlock lets you add printf() and similar debugging statements to the source code to display critical variables during program execution. By embedding such statements inside *Sherlock's* ingenious macros, you can remove debugging statements from the compiled

.EXE file just by setting the macros to null. The debugging text remains in the source code, ready for action if a problem develops later. *Sherlock* is an unequalled C sleuth.

In future columns, I'll cover add-on tool kits that give C windowing and data base capabilities. Feel free to write to me about these or any other subjects. My MCI Mail and BIX handle is TSWAN; my CompuServe ID is 73627,3241. —Tom Swan

WHERE TO BUY

C:LINES/C:TREE 2.06

SoftRex
4807 Bethesda Ave.
#287
Bethesda, MD 20814
301/881-8274

LAN Operating Systems

Which one is right for your organization... and which could cause you serious problems?

Today, business after business is upgrading to a network environment, and is faced with many difficult and complex choices. So complex, that they challenge even the experts.

To maximize productivity and avoid costly delays, several departments and individuals need to share the same resources. This includes simultaneous access to critical data and the ability to run multiple functions concurrently.

But the options are still potentially confusing. How many users will the network support? How quickly can transactions be processed? How easily can it be installed? Is the documentation decipherable? What topologies and network adapters are supported?

Now there's a way to know - quickly & easily

The answers are in one place: *Software Digest's* authoritative report on LAN Operating Systems. It's just off the press. *With concrete recommendations based on objective laboratory tests of eight operating systems, including: Vines/386, DataLAN, SFT Netware, 3 + Share, Tapestry II, IBM LAN Server, 10NetPlus, and 3 + Open.*

Our technical staff evaluated each program for ease of learning, ease of use, performance, versatility, and error handling. We put each system through a series of grueling real-life exercises measuring important elements such as installation, documentation, and security administration.

In *Software Digest's* new LAN Operating Systems report, you'll also find an *in-depth tutorial* covering all aspects of network technology (including system configuration, connectivity, and performance monitoring)...*comprehensive two-page analysis* on each system, giving you detailed ratings, strengths and limitations, specifications, and prices...*22 performance results...210 verified versatility items...*and the *Master Ratings Chart* comparing all the programs at a glance, and rating each system from best to worst.

The single most trusted software evaluation service

Nothing else can match the systematic method of comparative ratings pioneered by Software Digest. Published by National Software Testing Laboratories, it's been hailed as "The Consumer Reports" of software. Instead of the usual product "reviews", we perform rigorous, scientifically controlled benchmark tests — using realistic business tasks.

We're fiercely independent and impartial. We pull no punches. We refuse any offer that could compromise our editorial integrity.

Not surprisingly, *Software Digest is the single most trusted resource* for evaluations of IBM-compatible PC business software.

Special offer to qualified computer professionals

Software Digest's report covering eight LAN Operating Systems normally sells for \$50. But as part of a campaign to identify DP/MIS professionals and PC coordinators, we are offering it for just \$25.

There are some reasonable conditions to this offer. To demonstrate that you qualify, *you must include your business card or letterhead with the coupon below.* If you phone in your order, the operator will ask for your company, title, and department. At this low price, we cannot bill. Check or credit card are accepted. If you're dissatisfied for any reason, we'll refund your payment.

LAN technology will maximize productivity throughout your business. Can you afford to ignore it? Here is the *best, fastest, and easiest* way to get on top of this emerging technology, and make the *right* decisions with confidence.

Want a fast date?

You could spend days trying to calculate your ideal project schedule. Or, you could let Project Workbench® Release 3.0 do it for you in seconds.

Offering much more than lightning-fast speed, the Project Workbench system is a complete project management toolkit that takes you from preliminary plan through management reports. . . and beyond.

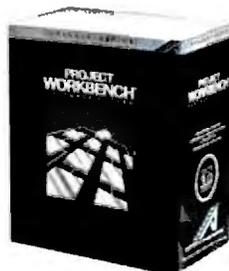

Whether you are responsible for one project or an entire department, this micro-based system will revolutionize the way you manage people, time and money in 1989!

Fast, full-featured and easy to use, InfoWorld rated our speed and documentation "Excellent." They applauded features like interactive resource histograms and calendars, online actuals capture worksheet and context-sensitive Help.

Spaced Out, Perfectly

When justifying text in *WordPerfect*, I use hard spaces (<Home><Space>) to separate leading hyphens, bullets, and list numbers from associated text. *WordPerfect* normally varies the width of standard spaces as necessary to align the margins in a justified paragraph. As a result, text that follows a bullet or numeral doesn't start in the same column from paragraph to paragraph. The discrepancy is especially noticeable in paragraphs that include a hanging indent. Hard spaces cure the problem.

BUY SMART. USE SMART.

PC World guides business buyers through the entire buying process, from purchase to integration to upgrade to trade-in. First, we deliver the essential product information and unbiased reviews they need to make smart PC buying decisions. Then we follow up, month after month, with the answers, power tips, and advice they need to use their PCs more productively. To them, *PC World* delivers more value than other PC books.

No wonder more business buyers depend on *PC World* than any other PC publication.

PC World delivers more to its advertisers, too. More objective reviews. More receptive business buyers. More sales. Which makes *PC World* a very smart place to sell your product.

PC WORLD

Find out what's in it for you.

Lazier Formfeeds

I was delighted to see the wonderful 11-byte formfeed program ["Lazy Formfeeds," *.* , *PCW*, February 1989]. I accomplish the same feat with the DOS command

```
ECHO <Ctrl>-L > PRN
```

I store this line in a batch file named FF.BAT and type FF <Enter> to formfeed the printer.

**NEW
FOR 1989**

386 SYSTEMS

MAXIMIZE PRODUCTIVITY

Here's how...

It's the future of personal computing. For power and speed, 386 PCs outclass all other machines.

For large spreadsheets and databases, the 386's dramatically faster performance is ideal. And for emerging applications like networking, desktop publishing, CAD, statistical analysis, expert systems and real-time animation, the 386 is *essential!*

You can expect to see an increasing number of programs that run efficiently *only* on a 386 system. To maximize the multitasking capabilities of OS/2, its tremendous processing power is a must.

But should you buy *now* — or *wait* for still further improvements? Which system is best — and what specific configuration suits your needs?

The choices are many — and potentially confusing. There are 16MHz, 20MHz and now 25MHz 386 machines. Huge differences in performance. Exaggerated promises by vendors. *Among the variables you must consider:* OS/2 capabilities, disk and memory caching, clock speeds, display adapters, real and protected modes, compatibility, expandability...and more.

New report has the answers.

Now there's a solution. *PC Digest's* authoritative, comprehensive report on 386 systems. It's just off the press. With concrete recommendations based on objective laboratory tests. Including OS/2 multitasking tests for the 386.

Our technicians evaluated each machine for ease of installation and handling, applications-based performance, features, documentation, and software incompatibilities.

In *PC Digest's* new 386 report, you'll find an in-depth tutorial covering 386 technology (including memory caching, memory architecture and numeric co-processors)...Detailed writeups on each machine...Performance test results... Complete specifications (including configurations, options, prices, support and warranties... And a Master Summary Chart that shows *at a glance* our ratings and recommendations for each PC tested.

From PC World's official research facility.

Nothing else can match the systematic comparative ratings of *PC Digest*. That's why, last year *PC World* chose NSTL as its official testing facility.

Like *Software Digest*, its well-known companion publication, *PC Digest* is fiercely independent and impartial. We accept no ads. We pull no punches.

Our performance tests are *applications-based*. We test machines with popular software like the major spreadsheet and database programs. In contrast, many magazine reviews use misleading "raw processing" benchmarks that bear little relation to real-world business tasks.

Not surprisingly, *PC Digest* has become the single most trusted resource for objective evaluations of PC hardware.

Special offer to qualified computer professionals.

PC Digest's 386 report normally sells for \$40. But as part of a campaign to identify DP/MIS professionals and PC coordinators, we are offering it for just \$20.

There are some reasonable conditions to this offer. To demonstrate that you qualify, *you must include your business card or letterhead* with the coupon below. If you phone in your order, the operator will ask for your company, title and department. At this low price, we cannot bill. Check or credit card are accepted. If you're dissatisfied for any reason, we'll refund your payment.

Expanding software applications and capabilities will push PC hardware to its maximum potential. 386 technology will revolutionize business computing. Are you prepared?

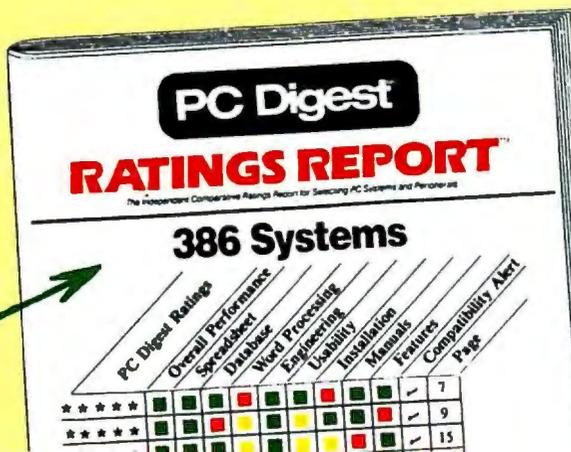

The base cost of a 386 system can range from \$2,599 to \$11,295. For just \$20, this remarkable new report can help you decide *whether* to buy, *when* to buy, and how to choose the *right* system.

Share Printers, etc...

SL

Only \$500
plus \$100 per 256KB
up to 4MB

**NOW
38,400
BAUD**

Why Use The SL Sharing Device?

Saves Money By Sharing

When you can't afford to buy a laser for each PC, using the SL™ is the inexpensive way to let everyone share - not just your lasers, but printers, plotters and modems as well. You will get more efficient use of your peripherals because greater access by more users reduces unproductive idle time and the need to purchase more of these expensive devices.

Increases Office Efficiency

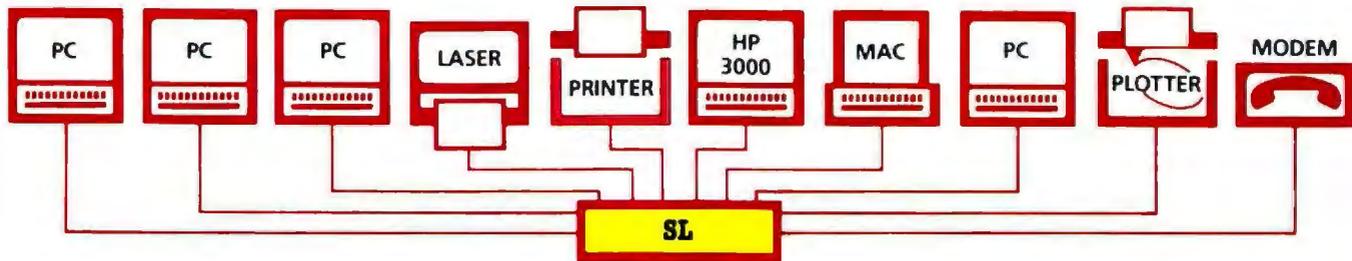

An SL with memory improves PC productivity by allowing all users to simultaneously send their print jobs and release their PCs to continue working without being delayed by other users or slow printers. Memory in the SL is a more sensible investment than additional memory in each printer since SL memory is shared by all users and all peripherals.

More For Your Money

If you don't need E-mail or access to shared files, the SL is an alternative to a LAN at a fraction of the cost. When you compare the price and capabilities of the SL with any similar devices, we believe you will agree with thousands of well-informed professionals that the SL is the best value available anywhere!

Some SL Features

- **Ten Channels:** four parallel and six serial, all can be software configured as either input or output.
- **Pop-up Menu:** keyboard selection of printers, macros and many other control functions.
- **Automatic Switching:** no software needed if always sending data to only one printer.
- **Interface Conversion:** automatic parallel to serial, serial to parallel, or serial to serial parameters.
- **Simple Installation:** just plug in the cables and run the menu-driven installation software.
- **Compatible With Minis Or Mainframes:** any RS-232-C asynchronous serial or parallel connection.
- **User Upgradeable Memory:** from 0 to 4MB buffer.
- **45 Day Money Back Satisfaction Guarantee**

Smaller Buffers

All Parallel Ports

AS-31 3 inputs to 1 output automatic switch without buffer for only \$200.

XL 2 automatic inputs to 2 electronic switch selectable outputs with from 256KB up to 2MB buffer from \$400.

CP 1 input to 1 output with from 256KB up to 4MB buffer from \$300.

EW 1 input to 2 software selectable outputs with from 256KB up to 4MB buffer from \$325.

Serial and Parallel Ports

MI 1 parallel or 1 serial input to 1 parallel or 1 serial output with from 256KB up to 2MB buffer from \$425.

NETWORK Q & A

Tips and strategies for departmental networking

Setting up a LAN server means evaluating a variety of options—and deciding whether to buy a proprietary unit or soup up a PC.

David Ferris

Q. *My department is installing a 27-node LAN, and we've narrowed our choices to Novell's NetWare and 3Com's 3 + Share. What should we use for a server? We've heard good things about 3Com's proprietary 3S/401. Are there similar servers for NetWare? Or should we just use a PC? If so, what options should we choose?*

Frank Swift
Idaho Falls, Idaho

A. Choosing the right server and equipping it properly are key to a LAN's success. A server is a computer (usually a PC) that holds the bulk of the LAN

operating system (LAN OS) and shares its resources with workstations. In most LANs, a single server stores shared files and software and is hooked up to printers, tape drives, and modems that all connected users can tap. As a LAN grows, you may spread these functions over several servers; you may even need separate data management and communications servers.

Typically, a LAN outgrows a server at about 40 users, but the limit depends on your applications. If 20 users frequently access a shared data base, several servers may be necessary. Note, too, that the server should be dedicated to LAN tasks. Using the server as a workstation degrades network performance and may crash the LAN.

Proprietary Servers Versus Adapted PCs

One of the first decisions you'll make is whether to buy a standard PC and customize it with third-party add-ons, buy a PC bundled with server features, or go with a proprietary unit. Proprietary servers are usually modified 80286- or 80386-based PCs sold by LAN OS vendors. Typically, the servers have an AT-compatible bus, but their proprietary ROM BIOS often forces you to buy expansion options sold by the vendor.

However, because the options are designed for a particular LAN OS, you avoid incompatibil-

ities that crop up with a standard PC—for example, some third-party backup systems and power supplies don't work reliably with some LAN operating systems. Because proprietary servers are already installed with options (including the LAN OS), setup is easy.

Another plus: Proprietary units such as 3Com's 3S/401 and Banyan's 68000-based DTS Server are optimized for their specific LAN OS. For example, the 3S/401's triple-port memory architecture speeds disk I/O by providing equal access to RAM for the disk controller, the CPU, and an 82586-based ethernet coprocessor.

The 3S/401, a custom 80386-based PC designed specifically for *3 + Share* and *3 + Open*, is an excellent choice. The \$14,995 price tag sounds expensive, but when you add up the costs to customize a comparable PC, the 3S/401 wins out (see **FIGURE 1**).

Novell doesn't sell proprietary servers per se, but you can buy regular 386 PCs dedicated to *NetWare* from vendors such as Acer, Samsung, or Maxar. Although these units ship with *NetWare*-formatted drives and offer server-oriented features such as keyboard keylocks, they're not optimized for *NetWare* and offer no clear advantages over a modified PC. Accordingly, the vast majority of Novell users buy standard PCs and purchase third-party hard disk sub-
(continues)

FIGURE 1

3Com Server—Power for Less

3Com's proprietary 3S/401 server beats out a comparably configured Compaq by almost \$1800 and tosses in an extra 40MB of storage and 15MB of tape backup to boot.

Features	3Com 3S/401	Compaq Deskpro 386/25 Model 110
Base price	\$14,990	\$10,299
Hard disk storage	150MB	110MB
Tape backup unit	included (150MB)	\$1999 (135MB)
Ethernet adapter	included	\$495
2MB RAM	included	\$799
LANOS	included	\$3040
DOS	included	\$120
Total	\$14,990	\$16,752

systems formatted with *NetWare*.

Although the 3S/401 breathes new life into the proprietary concept, adapting a PC may be the best long-term bet for most LANs. Thanks to the PC's open architecture, you can replace obsolete boards and drives with newer technology. Also, many new 386 PCs are targeted at the server market, offering fast hard disks and other server features (see "25-MHz Speedsters—A Buyer's Market" in this issue).

Option Shopping List

What should you look for in a server? Whether you go the proprietary route or buy a PC, consider the following options:

Storage. A fast hard disk and disk controller are vital to server performance. A disk with a 40ms average seek time is too slow for most LANs. Try a 20ms to 30ms disk, and if you expect a lot of traffic, consider a 16ms speed demon such as the drive used in

the 3S/401. A typical 5-megabit-per-second (mbps) ST506 controller can bog down on a busy LAN, so check out subsystems compatible with 10-mbps SCSI or ESDI controllers.

How much storage you'll need depends on your applications and the hard disk storage available on networked PCs. If you want to store a lot of shared files on the server, think big. As a rule of thumb, plan on 5MB of server storage per year for every user; for your 27-user LAN, a 300MB drive should suffice for a few years. If you expect your LAN to grow, get a disk controller that can daisy-chain several drives together so you can add storage as you need it.

Some high-end PCs (such as Compaq's Deskpro 386/25) support up to 700MB, but most disk controllers top out at 300MB. Fortunately, you can buy third-party subsystems that package fast, higher capacity controllers and drives. To save time, you can buy subsystems from Core (Los Angeles) and Racet (Brea, California) that are preformatted with the LAN OS of your choice.

Cache RAM. The more memory assigned to caching the server's hard disk, the faster the server—and the LAN OS—will run. Between 2MB and 5MB of RAM should do the job. Disk caching can speed access to hard disk data. It stores in RAM the last data read from the drive plus the next few sectors, gambling that the software will request that data next. Fetching data from the cache is much quicker than getting it from the disk.

You can boost performance further by using a disk controller that incorporates a dedicated cache of high-speed RAM. The 3S/401 and the Deskpro 386/25 employ variations on this technique, as do third-party subsystems such as the Impulse drive from Plus Development (Milpitas, California).

CPU. A server based on a 10- to 12-MHz 80286 CPU will usually suffice, but if your LAN is especially busy, turn to a server with a 16-, 20-, or 25-MHz 80386. A 27-node LAN could get by with a 286 server, but if five or more users regularly access a data base at the same time, go with a 386. Make sure the system uses a CPU with the fewest wait states; zero wait states is best, and two is too many.

Backup. Your server should be equipped with a tape backup unit that can hold all the files you want to back up. A 60MB tape drive is the minimum; 150MB or more is preferable. The backup software should be compatible with your LAN OS, back up all system files, run while the server is on line, and perform reliably while unattended.

Power Supply. A multifunction server should pack a built-in *(continues)*

Strategic Information Management
Executive Conference

Strategy Productivity Profit

June 20-21 New York City

Buying Smart:

Pacing Your Information Systems Portfolio

Maintaining the competitive advantage requires managing the information systems effectively and efficiently. This track discusses which technologies will yield the most benefits and how to pace your investment.

One of six session topics includes:

Multivendor Integration: Detente in the Data Center

Larry DeBoever, DeBoever Associates

Winning Strategies:

Information Systems and the New Corporation

The interaction between systems and structure requires a workable balance between strategic control and freedom of access. This track provides an opportunity to analyze just how your IS plan and corporate business plan interrelate.

One of six session topics includes:

MIS as a Profit Center

Bill Dunn, Dow Jones

Mandate For Change:

Information Systems in the 1990's

Your information systems will reshape the way your company does business well into the next century. Looking ahead enhances your ability to maximize current technologies while planning for the future.

One of the six session topics includes:

The Office of the Future: Technology to Watch

Stewart Brand, Publisher, Whole Earth Review

Your company deserves the competitive advantage.

power supply of at least 500 watts. To safeguard data and hardware, consider an uninterruptible power supply (UPS) as well. In the event of a blackout, a UPS can keep the server running for up to an hour. Some UPSs can even close open files on the server and shut down the system in an orderly way. (See "Buyers' Guide: Safe Power for PCs" in this issue.)

Expandability. A multifunction server needs plenty of expansion ports. Slots fill up quickly with RAM cards, printer boards, disk and backup controllers, network adapters, communications gateways, and security key cards.

However, depending on the LAN OS, you may be able to skip the keyboard and monitor—the administrator can access the server from another workstation.

Freestanding "tower" systems make good servers—they not only save desk space, they come with hefty power supplies and have plenty of bays for adding hard disks and tape drives.

Thinking Servers

If you have the time and expertise, customizing a standard PC is usually preferable to buying a proprietary server. You can pick from a variety of options and keep pace with new technology. Yet integrating add-ins means headaches and extra work—you may prefer the convenience of a no-fuss proprietary server. If in doubt, let price and performance be your guiding lights. ●

PC WORLD

“How does *PC WORLD* help smart advertisers?”

By helping readers Buy Smart and Use Smart.

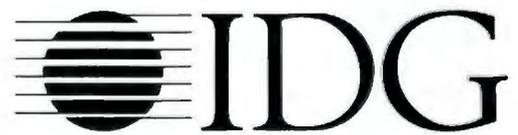

PC WORLD's technical editor, Karl Koessel answers readers' pressing questions every month. Whether it's questions about hardware/software compatibility, upgrading or buying new equipment, or solving any of the other problems that affect PC users (and their purchase decisions), Koessel's answers help make PCs the productive, powerful tools readers want them to be.

Koessel's monthly column is part of *PC WORLD*'s overall commitment to help its readers “Buy Smart and Use Smart.” *PC WORLD* guides business buyers through the entire buying process. First we deliver the essential product information readers need to make smart buying decisions. Then we follow up month after month, with the answers, power tips and advice readers need to use their PCs more productively.

Giving business buyers the answers they need gives *PC WORLD*'s editorial environment the credibility your advertising needs. To find out more about how *PC WORLD* can help you sell smart, call Director of Advertising Sales Mark Glasner at **415-978-3178**.

PC WORLD is part of IDG's worldwide family of publication, exposition and research companies providing the best in information on the information technology industry.

Answers for the Information Age.

Which PC business software and which will give you big

Now you can know for certain—with the unique comparative ratings resource

Every single day, a new business software package hits the market. Each claims to be "the best." But who's kidding whom?

How can you be *sure* a program will do all it claims? That it will meet your system requirements? That your people will be able to master it?

Shouldn't there be a place to turn for answers? An authoritative and *objective* resource that helps you make the *right* choices, so you can select *exactly* the programs that fit your needs?

There is. It's called *Software Digest*. It's the *single, most trusted resource* for impartial, systematic evaluations of IBM-compatible PC software.

“We've recognized the increasing need for performance testing that measures products from a real-world perspective...That's why we have selected National Software Testing Laboratories of Philadelphia, Pa. as the exclusive test facility for all products reviewed in *PC World*.”

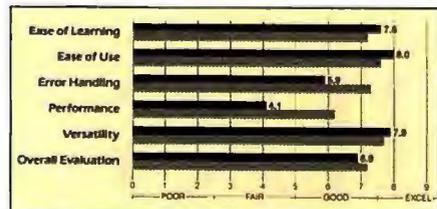

— Richard Landry, Editor, *PC World*

The ultimate software reference tool.

Software Digest is the ultimate reference source.

It's not for everyone. But if you need to go *beyond* the ads and the reviews...if you require a *higher, deeper level of analysis*...if your work calls for *accurate, comprehensive, scientific* evaluations...then this is the place to turn.

Software Digest has pioneered an original, exclusive methodology for evaluating

Side-by-side bar charts show how programs score on 5 key test criteria.

Each program is subjected to an exhaustive series of "hands-on" tests by typical computer users at all experience levels.

software. It combines technical testing with practical, "hands-on" sessions involving typical users at all experience levels.

Under these controlled conditions, we scrutinize each program, and compare all of them head-to-head. Each is tested not just once, but *many times*, under strict rules that ensure consistency and objectivity.

A systematic series of tests measures *ease of learning, ease of use, error handling, versatility, performance* and more.

The result is an absolutely unparalleled set of *comparative ratings* for a wide range of IBM-compatible PC software — including *every major business application*:

- ✓Spreadsheet programs
- ✓Databases (multi-user, relational, SQL and file managers)
- ✓Word processing (both simplified and advanced)
- ✓Project management
- ✓Business graphics
- ✓Free-form graphics
- ✓CAD
- ✓Communications
- ✓Accounting
- ✓Desktop publishing
- ✓Integrated programs
- ✓Backup systems
- ✓Local area network software
- ✓And more

Couldn't the concrete, research-based data supplied *only* by *Software Digest* help you improve your product selection decisions?

From *PC World's* official research facility.

Software Digest has a firm policy of accepting *no ads*. We are 100% subscriber-supported. That gives us the freedom to be *fully objective and unbiased* in our product evaluations.

Without vested interests of *any kind*, we can be *totally impartial*. We're free to print *exactly* what our tests reveal — and we don't pull our punches. We tell the *whole truth* — and let the chips fall where they may.

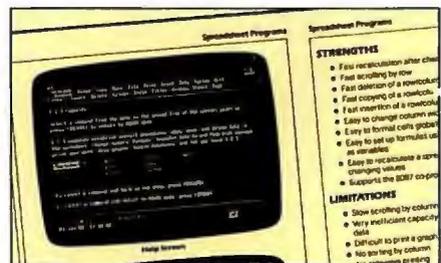

Last year, *PC World* selected us as their official testing facility.

In a major editorial in the October 1987 issue, *PC World* Chairman David Bunnell commented: "NSTL has the reputation for undertaking the most comprehensive performance and versatility tests of hardware and software products in our industry.... They're going to tell it like it is — not sell it like it is."

Monthly "Buyer's Alert" keeps you on top.

Another important plus: We monitor the fast-changing software marketplace for you on an *ongoing* basis.

Each issue of *Software Digest* includes *Buyer's Alert*. This useful monthly supplement covers program upgrades and enhancements, performance testing updates, previews of new products we're evaluating ...and much more.

Each program receives its own detailed two-page report.

Users applaud *Software Digest's* graphic format. Test results are *clear, readable and accessible*. You can see *instantly* how competing programs stack up against each other.

Perhaps most important, *everything you need to know is in one place*. So you don't have to plow through stacks of material searching for answers.

“*Software Digest* is the 'Consumer Reports' of software.”

— Richard Concalidl, Dearborn Chemical Co., Lake Zurich, Ill.

How long would it take you and your staff to match this kind of research and analysis? How much would it cost?

Imagine the investment in time, money, effort, manpower! To test just *one category* of software for a typical issue of *Software Digest* requires 3,000 man-hours and an expenditure of \$50,000.

will meet your needs . . . trouble?

PUBLISHED BY NSTL
(National Software Testing Laboratories)
— the official research facility of
PC WORLD

that gives you reliable answers before you buy!

That's why we say a subscription to *Software Digest* is like hiring a full-time team of software researchers — but at far less cost.

More changes ahead! Will you be ready?

Warning! The personal computer environment is changing *faster than ever* before. The pressures will intensify. Will you be prepared?

“*Software Digest* is the one true source of unbiased evaluations. Ratings are comprehensive, factual and easily understood. Simplifies the selection process and reduces the time it takes.”

— L.J. Callaghan, Nabisco, Hanover, N.J.

Right now, a new generation of software is evolving. New programs — and changes to existing programs — will appear at an accelerating pace. OS/2 will soon be baseline technology — and generate a host of new applications. The 386 machines will accelerate the proliferation of software choices.

Today, with DP budgets tighter, with the new emphasis on documenting computer productivity and bottom-line payoff, you'll be required to *justify* your purchasing decisions more than ever before.

Software Digest gives you the hard data you need to *confirm* your decisions, and *defend* them. You can make rational, *confident* judgments on the basis of *solid data*.

Features that say value ...

Economical: \$1,000 less than other large format plotters.

Compatible: Operates with all popular CAD software supporting DM/PL™

Multiple Media Sizes as small as 3½" x 11" or as large as 36" x 48" eliminates the need for a second plotter.

Practical speed you can really use: 10" per second assures good drawing throughput while optimizing the speed at which most plotter pens can draw without skipping.

Repeatability and Resolution: .004 assures quality suitable for the most demanding applications including PCB artwork.

Vacuum Paper Hold Down guarantees perfect registration.

CALL NOW AND WE'LL SEND YOU A FREE SAMPLE PLOT.

Adult Relationships

COMPUTER DATING IN REVERSE

Now you can use your personal computer to help you find your perfect mate. LifeMate™ is an amazing program which can give you tremendous insight into your love-life:

- Analyze your personality and reveal what type of person is ideally suited to you.
- Discover how to meet your perfect match. Learn where to go and what to do.
- Quickly determine if a prospective partner has potential by asking just a few simple questions. Avoid heartbreaking affairs.
- Evaluate a new or even an existing relationship so you can objectively decide whether you should continue with it.
- Recognize a good love from a bad love. Know when to make a romance permanent, and when to look for someone else.

EASY TO USE — Like talking to a friend.

ORDER TODAY — Special limited time price only \$49.95! (After Jul. 1, 1989, price is \$69.95.) Please add \$3.00 shipping and handling, plus \$3.35 tax in AZ. Indicate whether you are male or female to be sure you receive correct version.

MONEY-BACK GUARANTEE: If you are not satisfied with LifeMate™ you may return it within 30 days for a full refund.
System requirements: IBM-PC, XT, AT, PS/2 or 100% compatible, 256K RAM, two 5 1/4" drives OR hard disk, and Dos 2.0+. Printer recommended.

Security

HANDS OFF THE PROGRAM® PC SECURITY

HANDS OFF THE PROGRAM is an all software, privilege based, system security utility that prevents unauthorized access of your PC's subdirectories, files and disk drives.

HANDS OFF THE PROGRAM provides a sophisticated technique to separate up to 64 users of a PC, by privilege, into their own separate areas on the hard disk. Users may access only their own areas and any other area protected with a lower privilege.

HANDS OFF THE PROGRAM protects files on your hard disk by preventing unauthorized users from modifying the DOS file attributes (Read Only, Hidden, System). For example, use the READ ONLY attribute to prevent virus programs from invading your system.

HANDS OFF THE PROGRAM restricts access to your hard disk via "disk locking". A "locked" hard disk may not be booted, accessed by applications software or formatted via the DOS FORMAT command until it is "unlocked".

HANDS OFF THE PROGRAM incorporates advanced security techniques on PC's running PC-DOS V3.0 or higher. The DOS FORMAT of Drive C is prevented while the PC is in use, the security manager is protected against Control Break and a boot from floppy results in the automatic locking of Drive C.

HANDS OFF THE PROGRAM also provides:

- Disk Encryption
- User Access Reporting
- Stops Common Viruses
- Mailbox
- Read Only and Execute Only privileges by user
- Auto Installation

America is worth fighting for.

From the Atlantic to the Pacific, the Arctic to the Gulf, our land is constantly under attack from the polluters and despoilers.

That's why Sierra Club Legal Defense Fund attorneys are pursuing dozens of cases nationwide in defense of wildlife, rare habitats, the air we breathe and the water we drink.

Most of our support comes from individual contributors like you. Please help us win. Because America is worth fighting for.

I enclose my tax-deductible contribution to save what I love most about America. Send me your quarterly newsletters in return.

RGB Color Monitor

by Samsung

\$199

These 14" monitors were purchased from a large PC manufacturer who was overstocked. They are brand new with one year warranties and are made by Samsung. They are fully CGA compatible and work with PC compatibles. A CGA (640 x 200 resolution) card is just \$49 and comes with a printer port. This is the perfect video combo for your new XT or AT clone.

SPECIALS

WordPerfect 5.0

\$215

The most popular word processor is now even better than ever! Version 5.0 adds multiple font support, graphics integration, page preview and much more. WordPerfect 5.0 still retains its feel and ease of use that made it #1. Combine this with the best support in the industry and you can't lose.

FoxBASE+

\$185

FoxBase+ 2.10 is simply the fastest dBASE compatible database software available. FoxBase+ also adds many enhancements to the dBASE language. And it's user-friendly too, its FoxCentral uses pull-down and pop-up menus and you can perform every important database operation without programming! There are even LAN, runtime, and 386 FoxBase versions available.

Fax: 717-494-1441

Why shop at Lyco Computer?

Lyco Computer is one of, if not the largest, and most established firms to provide only quality name brand computer products at prices 30% to 50% below retail. We've set many industry standards, and we are setting the pace for many more in the future. Our standards include: a separate department for customer service; a price guarantee; guaranteed factory fresh merchandise; diverse payment and shipping policies, including a C.O.D. policy which allows customers to have products in their hands before paying anything. Selection places Lyco at the forefront of the industry. Due to our in-stock volume, we cannot advertise all of our products. If you do not see the product you want advertised, call Lyco Marketing toll free.

How do I know I will get the product I need?

Our marketing staff is well-educated in the computer industry. They receive continuous formal training by our manufacturers which enables them to develop and maintain a high degree of expertise on the products they represent. Though our strict guarantee on providing only new merchandise prohibits free trial periods and a guarantee on compatibility, a wealth of knowledge is available to our customers to help with the purchasing decision. As thousands of people every week capitalize on our savings and services, we hope you too, will make Lyco Computer your first choice.

What about warranty or service?

We decided several years ago that a Customer Service Department was needed in the industry. Unfortunately, few of our competitors offer this service. Our Customer Service Department is available at (717) 494-1670 to provide assistance in all warranty matters. Our product line enjoys "name brand recognition", and we back all of our manufacturer's stated warranty terms. Many manufacturers will allow defective products to be exchanged. Before returning any item that appears to be defective, we ask that you call our Customer Service Department to assist you in determining if the product is defective. If the product is determined defective, they will give you a special authorization number and speed processing of your order.

Will you rush an item to me?

Since 1981, we have set the standard in the industry by processing orders within 24 hours—not 4 to 6 weeks. We offer next day air, two day air, standard UPS, and postal international shipping services. Our records show we fill 95% of our orders daily. Temporary shortages are normally filled within 10 days. If an order cannot be filled within 60 days, we refund your money in full, unless you choose to wait for the order and benefit from the price savings. Any time prior to shipment, you may cancel or change the out of stock product by contacting our Customer Service representatives.

How do I order?

Send your order to Lyco Computer, P.O. Box 5088, Jersey Shore, PA, 17740. Or, call 1-800-233-8760 or (717) 494-1030. We provide four payment methods. We have always accepted C.O.D. orders through UPS. Prepaid cash orders over \$50 are shipped freight-free. For orders under \$50, please add \$3 for freight. Orders prepaid by a certified check or money order are shipped immediately. Personal and company checks require a 4 week waiting period prior to shipping. Visa and MasterCard orders are accepted for your convenience, but we cannot pass along the 4% discount offered for cash. Purchase orders are accepted from Educational Institutions. We only charge sales tax on items delivered in Pennsylvania. For APO, FPO, and international orders, please add \$5 plus 3% for priority mail. Advertised prices and availability are subject to change. Not responsible for typographical errors.

THE \$29 MONEY MANAGEMENT SOLUTION.

"An exceptional value."

Tom Badgett, PC Clones

**"I was impressed.
It wins the cost-effective award."**

John Dvorak, PC Magazine

**"This is a great program: logical, easy
to learn, and fast and easy to use."**

Lloyd Edwards, Palmetto PC Chronicles

**"This program has all the features
and capabilities of money management
programs costing 10 times as much."**

Leonard Hyre, PCM Magazine

GUARANTEED.

If you're looking for a complete money management/accounting program that offers outstanding value, we invite you to examine the evidence on MONEYCOUNTS. **It's the clear choice for home and business.**

MONEYCOUNTS is CPA designed, easy to use, menu-driven with on-line help, and requires no accounting experience. You'll appreciate the ease with which MONEYCOUNTS 5.0 . . .

- Manages your cash, checking, savings, & credit cards
- Prepares your budget
- Balances your checkbook
- Prints 5 types of financial statements (including net worth)
- Prints 6 types of inquiry reports
- Prints any type of pin-feed check & updates your records automatically
- Prints general ledger & accountant's trial balance
- Handles up to 999 accounts & 100,000 transactions a year with its fast financial data base
- Estimates your personal income tax
- Analyzes financing options & savings programs — computes interest rates & loan payments — prints amortization and accumulation schedules
- Manages mail lists — zip and alpha sorts — prints labels and index cards
- Displays and prints three-dimensional graphics — works with monochrome or color monitors
- Provides password protection, fiscal year support, pop-up notepad, and much more!

Hard to believe the low price? Don't worry! There's no catch. MONEYCOUNTS has a proven track record, has been on the market over four years, and is continuously receiving rave reviews. **If you're not 100% satisfied, return MONEYCOUNTS within 30 days for a full refund** (excluding shipping). Over 50,000 users have decided in favor of MONEYCOUNTS! Order today and judge for yourself!

EPSON®

LQ-2550

Epson's powerful LQ-2550 is sophistication made simple.

Superb Letter Quality.

Highest quality 24-pin technology for superior high-resolution text and graphics up to 360 x 360 dpi. Prints in seven colors, in a variety of Letter Quality resident fonts.

Paper-Handling Versatility.

Handles fanfold paper, single sheets, envelopes and forms. Epson's exclusive SmartPark™ lets you change between these different types of paper with the touch of a button.

Advanced Features.

Printer modes, printer settings, SmartPark operations and page-format pre-sets are easily selected via Epson's exclusive LCD SelectType front control panel. Print speeds up to 400 characters per second (12 CPI) in draft mode and 133 CPS in Letter Quality mode (12 CPI). Optional dual-bin cut sheet feeder, pull tractor and 32K buffer board.

The LQ-2550 is backed by Epson's one year limited warranty.

High-performance printer.

EPSON®

WHEN YOU'VE GOT AN EPSON,
YOU'VE GOT A LOT OF COMPANY.™

Epson is a registered trademark of Seiko Epson Corporation.
SmartPark is a trademark of Epson America, Inc.

Circle 60 on reader service card

MORE FREEDOM OF INFORMATION!

PC World Reader Service makes it easy to get all the free information you need to make sound PC purchase decisions.

Just look up the card in the back of this issue, find the product or company name in our product indexes, circle the right number(s) on the card, and mail it in.

We've even paid the postage. Information doesn't get any freer than that!

More Features Than Any Other Accounting System at Any Price!!

Cougar Mountain has been supplying small and large businesses with accounting software since the beginning of the microcomputer age. Its ease of use, flexibility, and user defined accounts and reports make Cougar Mountain the perfect choice for even the smallest business. Its advanced accounting features, multi-company capability and unsurpassed audit trail make it the choice of any business of any size. Use any single module, use two or more modules as an integrated accounting system, or grow into the Cougar Mountain Act 2 Multi-user Accounting System. With features matching systems selling for \$2,500 and more, Cougar Mountain has become the leading accounting systems developer.

GENERAL LEDGER

- Uses preformatted chart of accounts and reports and/or...
- Infinitely flexible user defined chart of accounts and reports
- Full multi-company capability
- Maintains account history for up to 100 years
- Provides inquiry into individual accounts on screen or to printer

ACCOUNTS RECEIVABLE

- Includes preformatted statement or...
- User may design 9 different statement formats
- Retains your current customer numbering system
- Sorts reports by customer number, name, zip code, customer type, salesperson code or biller code
- Instant review of customer's account on screen or to printer
- Prints all accounts receivable reports, collection reports and mailing labels at any time

INVENTORY

- User defined stock numbers up to 15 characters
- Product descriptions up to 45 characters
- Supports FIFO, LIFO, Standard Cost and Weighted Average methods of inventory valuation
- Prints 12 different inventory reports and worksheets sorted by stock number, vendor account, item description, or product type
- Allows up to 4 decimal places for cost and price

ORDER ENTRY/INVOICING

- A complete POINT OF SALE processing system
- Use as a stand-alone system or as part of the complete integrated system
- Infinitely flexible sales tax tables, invoices, discounts, pricing and sales reports

- Shows gross profit per invoice
- Automatically updates inventory

ACCOUNTS PAYABLE

- Uses preformatted checks or up to nine user designed check formats
- Accommodates processing of handwritten checks
- Supports automatic invoicing and payment of regular monthly obligations
- Examines the status of a single vendor on screen or to printer at any time
- Prepares vendor reports, master lists, payment records, and check register reports for up to 5 user designated periods

PAYROLL

- Provides federal, state and local tax tables which may be easily updated by the user as needed
- Allows for up to eighteen pay rates per employee
- Prints all required payroll reports
- Handles bonus payments, per diem pay, hourly, weekly, contract and piece work and every other method of payment
- Allows 15 user defined benefits and deductions per employee

Cougar Mountain offers low cost direct toll free support for the ACT 1 series.

ACT 2 SERIES The multi-user version of the Cougar Mountain Accounting System (completely upward compatible) \$999.50

LYNX converts data from other accounting systems into Cougar Mountain. Exports data to Lotus 1-2-3, dBASE and any other software system that can read ASCII files allowing the user even more flexibility in customizing Cougar Mountain Software ... \$99.50

TIMESLIPS III, the Time and Billing System from North Edge Software is completely compatible with Cougar Mountain Software \$247.50 (\$197.00 when purchased with Cougar Mountain Software).

User Object Programming

*Roland J.
Cole*

Every successful application—whether word processor, data base, or spreadsheet—offers a set of features that are unique or better implemented than their equivalents in rival packages. But inevitably, these same programs also include features that suffer by comparison with the competition—that only imitate better keyboard macros or printing routines.

Wouldn't it be great if all programs were modular and we could choose the discrete "user objects" from each that fit our style of working—loading only as many as we need, when we need them?

I'd like to pick my own team of all-stars from each program and turn them loose on all my computer tasks. In this dream world, my favorite text-editing object would work equally well on a sentence, a data base field, or a spreadsheet label. My favorite printing object would give me proportionally spaced Times Roman output from any application.

I can approximate this ideal by loading all the programs I need under an environment like *Windows* or *Desqview* and then using the environment's mark-

and-transfer features to apply the user object I want to the file I want. But even with an 80386 PC and megabytes of memory, that's an awkward process.

It would be much simpler to load only the user objects I want from each application. *SideKick* is one of the rare programs that lets me choose how many objects to load—for example, the calculator and notepad, but not the phone book. Few other memory-resident packages are this modular, but many are small enough and tolerant enough that I can load several at once—picking the macro processor from one and the pop-up calculator from another.

Full-blown applications, on the other hand, tend to be much more tightly written, and their user objects tend to be picky about the type and format of data they will deign to handle.

Why can't programs be created as a series of separate files like the DOS external commands or *Norton Utilities*? Each file could be loaded into memory only when needed and removed from memory when not required. We'd be able to employ command-line switches like *WordPerfect's* /R switch, which tells the program when to keep overlay files in memory.

Perhaps programmers could exploit the dynamic linking and dynamic data exchange capabilities of OS/2 and multitasking environments like *Desqview* and *Windows* to create applications that would let us pull certain user objects into our own customized packages without including all of them.

I know that creating such capabilities poses a serious challenge to programmers, but the end result would be worth the effort. By using object-oriented programming and graphic environments, vendors could give us some ability to mix and match features, at least, even if only within their own families of applications. When each of us can assemble a customized set of user objects, computing will become easier and more productive. ●

Keep your power at hand, no matter where your computer is. Master Piece® Remote.

If you use an IBM PS/2® Model 60, Model 80, or other PC that doesn't sit on the desktop, Master Piece Remote is the perfect power center for you.

Like all our power centers, it protects and organizes your entire system. What makes it unique is its two-part design. Its Outlet Strip hides behind your desk, while its Remote Control keeps your power switches in easy reach.

Master Piece Remote organizes your power with five outlets, a master switch, two individual switches, and one continually powered outlet.

And it protects your entire system with heavy duty surge suppression and noise filtering circuitry, two phone jacks for modem/phone line protection, and an anti-static nameplate. All for just \$169.95.

Call 800-535-4242 or 212-475-5200 for a dealer near you. Or write to us at Kensington, 251 Park Ave. South, New York, NY 10010.

The Experts in Accessories

CURTIS

DIAMOND SP-1

Switched; adapts to duplex outlet; • 6 Outlets, 15 Amps Total 125 Volts, 1875 Watts • Operating Temperature: -40°C to +85°C • Peak Pulse Power Dissipation @ 25°C, 585,000W for 20 Micro Sec. • Maximum Clamping Voltage @ Test Current 50A (8/20 Micro Sec.) 340V Clamping Occurs Line to Line (Normal Mode) and Line to Ground (Common Mode) • Clamping Response Time: 1 Nanosecond (1 x 10⁻⁹ sec.) • Dielectric Test: 3000 VAC 60 Sec. • Forward Surge Rating @ 25°C, 1440 Amps for 1/120 Sec., Lifetime Warranty

Retail \$59.95

RUBY SPF-2

Switched; EMI-RFI filtered; plugs into duplex outlet; 6 ft. power cord. Built-in Circuit Breaker • 6 Outlets, 15 Amps Total 125 Volts, 1875 Watts • Operating Temperature: -40°C to +85°C Peak Pulse Power Dissipation @ 25°C, 585,000W for 20 Micro Sec. • Maximum Clamping Voltage @ Test Current 50A (8/20 Micro Sec.) 340V Clamping Occurs Line to Line (Normal Mode) and Line to Ground (Common Mode) • Clamping Response Time: 1 Nanosecond (1 x 10⁻⁹ sec.) • Dielectric Test: 3000 VAC 60 Sec. • Forward Surge Rating @ 25°C, 1440 Amps for 1/120 Sec. • Mode Noise Protection, Normal and Common Mode • Noise Rejection Frequency: 150KHZ-30MHZ • Attenuation: 5DB-58DB. Lifetime Warranty

Retail \$99.95

EMERALD SP-2

Switched; plugs into duplex outlet; 6 ft. power cord. Built-in Circuit Breaker, 6 Outlets, 15 Amps Total 125 Volts, 1875 Watts From Single or All Combined • Operating Temperature: -40°C to +85°C • Peak Pulse Power Dissipation @ 25°C, 585,000W for 20 Micro Sec. • Maximum Clamping Voltage @ Test Current 50A (8/20 Micro Sec.) 340V Clamping Occurs Line to Line (Normal Mode) and Line to Ground (Common Mode) • Clamping Response Time: 1 Nanosecond (1 x 10⁻⁹ sec.) • Dielectric Test: 3000 VAC 60 Sec. • Forward Surge Rating @ 25°C, 1440 Amps for 1/120 Sec., Lifetime Warranty

Retail \$69.95

SAPPHIRE SPF-1

Switched; EMI-RFI filtered; adapts to duplex outlet; 3 Outlets, 15 Amps Total 125 Volts, 1875 From Single or All Combined • Operating Temperature: -40°C to +85°C • Peak Pulse Power Dissipation @ 25°C, 585,000W for 20 Micro Sec. • Maximum Clamping Voltage @ Test Current 50A (8/20 Micro Sec.) 340V Clamping Occurs Line to Line (Normal Mode) and Line to Ground (Common Mode) • Clamping Response Time: 1 Nanosecond (1 x 10⁻⁹ sec.) • Dielectric Test: 3000 VAC 60 Sec. • Forward Surge Rating @ 25°C, 1440 Amps for 1/120 Sec. • Mode Noise Protection, Normal and Common Mode • Noise Rejection Frequency: 150KHZ-30MHZ • Attenuation: 5DB-58DB. Lifetime Warranty

All Curtis Surge Protectors meet or exceed IEEE standards 587-1980 Guide for Surge Voltages in AC Power Circuits.

The Ones To Ask For

Curtis Electronic Surge Protectors are built to provide surge protection for any microcomputer for a lifetime. Constructed with precision, using advanced semiconductor technology, the Curtis Jewels prevent damage to microcomputer systems and data from powerline overvoltage

"surges, spikes and glitches." Surge protection from the Curtis Jewels is your guarantee of the best line of defense for your valuable hardware and data, at a price that won't shock you. Get your computer the protection it deserves with Curtis — the experts in accessories.

Curtis products are available nationally from leading Dealers, Distributors, and Retail Chains.
